A SCHEME FOR AN IMPERIAL MATRICULATION EXAMINATION.

By R. W. HINTON.

THE Report on Examinations which has been recently published by the Consultative Committee contains much matter of great value to teachers for their immediate guidance; it will also lead people to think of other matters, and may provoke an inquiry into certain principles and details which control existing examinations. The Committee recommends the institution of a General Schools Examination, organized by a Representative Examinations Council in co-operation with the Board of Education, which should have a definite uniform value as a whole, with considerable variety in its constituent parts. Among existing Schools Examinations

tions those of the University of London are conspicuous; they comprise (a) the Junior Schools Examination for "well educated boys or girls of the age of about fifteen," (b) the Schools Examination, Matriculation equivalent, for those of sixteen and over, and (c) the Higher Certificate Examination, suitable for those over eighteen. Very rightly, none of these is described or regarded as an examination for a "Leaving Certificate." The second examination in this list is of the greatest importance. It is open only to candidates who give evidence of continuous training in an approved secondary school, under inspection by the University examiners, and with an approved curriculum; nearly all of these schools are also under the inspection and control of the Board of Education. For the examination special papers are set in several subjects adapted to varying syllabuses, but one standard of proficiency is maintained. For the Open Matriculation, candidates must pass at one and the same time in each of the five, and only five, subjects they are allowed to take, two of which must be English and elementary Mathematics. For the Schools Matriculation more subjects are allowed to be taken, but the Matriculation pass standard must be reached in five. The majority of experienced teachers deprecate specialization in school until after the Matriculation age, and up to this period the pupils are invariably studying in balanced proportions probably eight to ten subjects. Why should they not be allowed to present them all? If one candidate offers only five, a higher percentage of the total marks obtainable would equalize his examination with that of another candidate who desired to present all his ten, with a reasonably lower percentage standard in his case. Five pass subjects might still be required from him, but they should be any five; a few marks wanting in any single subject, even English or Arithmetic, should never involve the rejection of a candidate who passes sufficiently well *on the whole*. The due recognition of all subjects studied and offered by the candidate is simple justice, and also a useful stimulus to him and to his teachers. Every subject rightly taught in school has full claim to be regarded as having good educational value, and may be made an equally good test of both acquirement and ability. Details as to the relative mark-values of subjects, requirements as to groups of subjects to discourage ill-balanced results, &c., would be quite manageable when principles are accepted—e.g. to prevent frivolous entries for many subjects, the cancellation of marks below a certain percentage necessitating a consequent higher percentage in others would be a simple corrective. Candidates who have already laid down the course of their continued future studies would naturally offer subjects bearing thereon; those with no definite aim, and the majority who will take up business, are helped by the opportunity to get credit for all they know.

There is one sphere of school discipline which hitherto has been completely ignored as contributory in a material sense to the School Certificate, although a record is entered of some extraneous subjects on the London Certificate. Intellectual ability combined to a small extent with practical skill is amply tested, but not school training which shall develop special efficiency for what may be called "Service," including religious, imperial, physical, social matters. These are of supreme value in the formation of character, are of the highest educational value, and are therefore worthy of pre-eminent encouragement by a University. It is to be hoped that the Congress of Universities of the Empire will do something to delimit the borderland between school and University, and to agree upon a scientific boundary line which may be crossed at any point, and so reduce the bewildering variety of entrance tests for the different Universities, the professions, and the public services. If agreement can be secured as to one General Certificate, the few supplementary special requirements for special careers can easily be satisfied separately. It is here suggested that the objects desired would be greatly facilitated and school training made more natural and more effective by the adoption of the following principles:—(1) great freedom in the number and choice of subjects offered; (2) all school subjects to be admissible with due regard to standard; (3) no single subject to be obligatory, and no single failure to be

fatal; (4) the General Certificate to be the resultant of the aggregate record and appraisal; (5) for certain subjects (as in Groups E, F, following) a Pass to be credited with mark-value towards the General Certificate on approved testimony from a responsible external body when this is more convenient than direct examination by the University.

The following is an outline scheme for the General Examination which might be found to work well for all types of schools. The number of subjects admissible to be six to ten, four at least in at least three of the Groups A to D; Groups E, F quite optional; possibly only one in Group F. (In Group A *any* two languages, therefore English not obligatory?)

Group A.—1. English Language and Literature. 2. Latin. 3. Greek. 4. French. 5. German. 6. Any other approved language (as in University of London Matriculation).

Group B.—1*a*. British History. 2*a*. General Geography. Or 1*b* with 2*b*. European History and Industrial Geography (both of nineteenth century). Or 3. Ancient History with Geography dependent thereon.

Group C.—1*a*. Elementary Mathematics. Or 1*b*. More advanced Mathematics (to carry higher marks). 2. Constructional Drawing (applied mathematical): geometrical, mechanical, architectural (any two only). 3. Mechanics.

Group D.—1*a*. Physics. 2*a*. Chemistry. Or 1*a* with 1*b*. Elementary Physics with Chemistry (one paper). 3*a*. Nature Knowledge. Or 3*b*. Biology. Or 3*c*. Home Science (might be combined with E 4). 4. Any other approved Science (as in University of London Matriculation).

Group E.—1. Art: Drawing, Painting, Mechanical skill. 2. Music: Theory and Practice. 3. Commerce. 4. Home Crafts (might be combined with D 3*c*).

Group F.—1. Religious Knowledge. 2. Imperial Service: Certificate A, of O.T.C., or something similar. 3. Physical and Social Service Efficiency, especially School Games and School Administration.

A GRAMMARIAN'S FUNERAL.

NOUN, ADJECTIVE, ADVERB-CLAUSES: ARE THERE SUCH THINGS?

By G. H. CLARKE.

A READER who has dipped into books on grammar—particularly on the grammar of modern languages—published in America, Germany, and France, will have found that in place of the English terms "noun, adjective, adverb-clauses" the following names are used, largely, if not exclusively, in many works: "subject, object, predicate clauses; attribute clauses; appositive clauses; modifying or circumstantial clauses." Yet he will know few writers in this country daring enough to break away from the traditional English titles. In the face of such disparity it may be interesting to inquire into the two methods of naming clauses and to consider their comparative worth.

The terms recommended in three recent reports on grammatical terminology, issued by Committees, are of use to indicate the trend of opinion in this particular.

1. In "Simplification et Unification des nomenclatures grammaticales" (1909) we find:

	Dans les subordonnées on distinguera	
	La proposition sujet	
	—	apposition
	—	attribut
Au point de vue de	—	complément de nom
la fonction	—	d'adjectif
	—	de verbe
	—	circonstanciel, &c.

2. The English Committee (1911) talks of noun, adjective, adverb-clauses.

(Continued on page 534.)

DUSTLESS SCHOOLS

For the Anhydrous, economic and effective LAYING of DUST and DIRT not only during each Sweeping, but also throughout all the intervening periods — which is of greater hygienic importance — the Unequalled ODOURLESS, or POWERFUL GERMICIDAL

USE

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

On all School, Laboratory, &c., Floors and Linoleums of every description
In Schools—**Very EARLY In SUMMER VACATION** for best results.

NOT MORE THAN THREE TIMES A YEAR, as each application lays the dust and dirt for two to twelve months, according to wear. It costs little, and is easily applied. Not sticky—the dust, &c., absorb the "Florigene" from the impregnated floors and become "weighted." The ordinary daily dry sweeping alone required to clean during each term, without sprinkling of any kind.

"Florigene" is an aid to the prevention of throat and other diseases, and has been awarded the BRONZE MEDAL of the ROYAL SANITARY INSTITUTE.
Two well-known SCHOOL MEDICAL OFFICERS have jointly reported on the advantages of "Florigene"—as the result of bacteriological experiments in four departments—as follows:—
1. Economy of labour in cleaning the room.
2. Prevention of the rising of dust once deposited; hence a healthier atmosphere for breathing.
They also favour its more general adoption, especially in rooms where drill is carried out.
"Florigene" is also strongly recommended by many other high authorities.

"Florigene" has been used for many years on the floors of The Royal Naval Colleges, H.M. Science and Art and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, Libraries, Museums, Offices, &c., throughout the United Kingdom and Colonies with approval.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

LEKSTUGAN.

A collection of Swedish Folk Dances, with the Folk Tunes.

Messrs. CURWEN have purchased the British rights in this important work issued by ABR. HIRSCH, Stockholm, and they will shortly issue an English translation and adaptation by Miss LINDLÖF, who has long been settled in England as a teacher of Swedish Physical Culture. The importation of the English version published in New York is illegal and the trade are warned not to deal in it, nor to import copies of the original Swedish edition.
24 Berners Street, W., July, 1912.

3. A Report, "Gebilligt vom Wiener neuphilologischen Verein" (Vienna, 1912), recommends the titles *Subjektsatz*, *Objektsatz*, *Prädikatsatz*, *Attributsatz*, *Beisatz*, *Umstandssatz*.

The French and Austrian Committees are thus largely in agreement.

Aliens.

The origin of the names of clauses used in England is due to a German, who invented them about ninety years ago. They have always been criticized in the country of their birth, and are now falling into disuse. Their prevalence in England is probably to be attributed to the influence of Kennedy and to our dislike of change. Now that the labours of Delbrück, Brugmann, Sweet and Bradley, and many others, have placed the science of language on a different plane to that of even forty years ago, it is time to reconsider our position. Grammar is a historical science, and a science that will not admit of inaccuracy under the plea that what is strictly correct is difficult.

Attempts, then, are here made to show that the terms commonly used in England are inaccurate, and to emphasize the convenience of the newer scheme. As a test, let the reader decide how to analyse the following sentences after the usual fashion, and then let him treat them according to the explanations given below:—

1. Who checks at me to death is dight.
2. Give me what you have there.
3. He said: "I will not come."
4. I ask what you are thinking of.
5. I am what you will be.
6. Here we have a fact that the speaker ignored.
7. The story ran that he was a stowaway.
8. The aeroplane fell when it was over the shed.
9. We are so glad that we went.

Objections to the usual Scheme.

In it the names of certain parts of speech are employed to designate elements of the sentence. Surely this is illogical; for what are called "parts of speech," elusive as they are, are abstractions from the sentence, while subordinate clauses are the result of the combination of simple sentences. (It is well known that sentences were first combined in parataxis, and that combination in hypotaxis was a later step. Hence arose subordinate clauses, the synthesis of simple sentences. Parts of speech were not invented for the purpose of sentence making. They are the results of the analysis of the simple sentence.) We are then applying the names of their own descendants to the elements of the sentence.

Terms Inappropriate.

Further, are the terms in themselves appropriate? Within the recollection of many the customary explanation of an English grammar was: "When a noun or noun phrase is expanded into the form of a proposition it is called a noun clause." More recent books say: "Noun, adjective, and adverb clauses do the work of nouns, adjectives and adverbs." The old definition is responsible for the belief that noun, adjective, and adverb clauses grew out of nouns, adjectives, and adverbs—a belief demonstrably false. Is the modern definition more accurate?

In "Macaulay, who wrote a history, was a Whig," "who wrote a history" is to be called an adjective clause because it does the work of an adjective. But does it? We may substitute "Macaulay the historian was a Whig," and show that the "adjective clause" ("who wrote a history") does the work of a noun ("the historian"), and that—by our definition—it ought to be called a noun clause. "The man is tall. The man is *what he makes himself*." Can we call the predicate clause ("what he makes himself") an adjective clause, as it does the work of the adjective "tall"? Neither adjectives and attributes nor adjectives and predicative words are coextensive in meaning and in application. If a general term, such as "attribute" clause in the first example, and "predicate clause" in the second, were used, we should be calling the clause by a more logical name, for the work of an attribute may be done by other than adjectives.

In "He returned from India, and was then an old, worn-out man," we have two co-ordinate clauses. The sentence is equivalent to: "He returned from India, old and worn out"; comparing the sentences, we see that the second clause of the first does the work of the adjectives in the second, so (by def.) it should be called an adjective clause. Which is absurd!

The principles, too, on which the system rests are obscure. Under present conditions grammarians hesitate to call certain clauses standing as objects "noun" clauses, and do not know what title to give them. If "I will not" in "He said I will not" is not to be considered a noun clause, as some grammarians assert, might not the term "object clause" be helpful?

The application of the names "noun" and "adjective" to clauses which are thought to do their work is, then, likely to lead to confusion. Why the custom of designating elements of a sentence by the names of words ever came into use is hard to explain. Simple sentences are exclamations, statements, questions, &c. Complex sentences consist of combinations of these elements. It is easy to avoid the terms, "noun clause," &c., and to speak of dependent exclamations, statements, questions, &c. If a more precise designation is required, these subordinate clauses may be labelled subjective, objective, predicative, &c.

The remaining two kinds of subordinate clauses serve as attributes of some qualified word, or as modifiers of a characterized word. "Attribute clauses" and "modifying clauses" seem fitting titles for them.

Old Scheme Inadequate.

The common scheme is inadequate because it does not differentiate subordinate clauses. Grammarians divide clauses into main and subordinate, generally placing all the latter on the same level. It would be more scientific to say that (a) dependent "subject (&c.) clauses" are indispensable elements, while (b) "attribute clauses" are mere qualifiers, and "modifying clauses" simply explain the circumstances of the case. Under certain conditions the two last clauses can be removed from a sentence without destroying it, possibly without greatly altering the sense. This can never be so in the case of dependent clauses.

Synopsis of the Complex Sentence.

A complex sentence contains a main clause (or main predicate) and one or more of the following subordinate clauses:—

- (a) Dependent subject clause (noun clause)
object clause
predicate clause.
- (b) i. Qualifying or attribute clause (adjective clause)
ii. Modifying or clause of circumstance
..... (adverb clause)

ANALYSIS OF EXAMPLES GIVEN ABOVE.

COMPLEX SENTENCES.

		SUBORDINATE CLAUSES.
(a)	<i>Main Predicate.</i>	<i>Subjective.</i>
1.	To death is dight	who checks at me.

DOMESTIC SCIENCE.**By R. H. JONES, M.Sc., F.C.S. Crown 8vo, **2s. 6d.**

This book shows that science can be adequately taught in the kitchen without a previous training in elementary science, by drawing upon everyday experience and by the aid of kitchen utensils and commodities.

"The book marks the beginning of a new era."—*Education*.
"The author shows how fascinatingly interesting the subject is."—*T.P.'s Weekly*.**A New Reader for Top Classes.
ELEMENTARY
BUSINESS TRAINING.**By VICTOR H. ALLEMANDY. Crown 8vo, **1s. 6d.**

Business men complain that children leave school useless or unsatisfactory to them. It is because some knowledge of the machinery of business, its routine, customs, &c., is indispensable to a boy or girl, no matter what else they have been taught, and what walk of life they may enter. This book has therefore been written in simple language by a practical teacher to give young persons an intelligent knowledge of the details and duties expected of them in a business career. It forms a Business Reader for day and evening classes, as well as an elementary textbook for commercial schools.

FROM THE PREFACE :

The necessity for a new edition having arisen, the publishers have taken the opportunity to reset the work entirely and to incorporate with the text several special features which have been suggested to them in order to enhance its usefulness to students preparing for the various public examinations. At the request of many teachers, larger type has been employed in the Exercises and Conversations, and many pages of the text of the Lessons, hitherto rather crowded, have been modified so as to allow of increased prominence to leading features, so that "the eye may aid the memory"; but the identity of the work has been scrupulously preserved and no material change has been made in its plan or arrangement.

*The Publishers will be happy to supply a free copy of this work to teachers
who make application for same with a view to its introduction.***London: HIRSHFELD BROTHERS, Limited,

Vol. I. *For Junior Scholars.*—From the Coming of the English to the Armada. Illustrated, 1s. 6d.
Vol. II. *For Senior Scholars.*—The Struggle for Power and Greater England. Illustrated, 1s. 6d.

Scotsman.—"If history can be given a form likely to make it palatable to young folks, 'F' has succeeded in doing so in these 'Stories of the English.' It is no exaggeration to say that the book represents not only a masterpiece in literature for children, but a work of no slight value for the national good."

THE STORY OF THE WORLD.

Adopted by the London County Council Education Committee.

THE STORY OF THE WORLD. In Five Books. By M. B. SYNGE. Author of "Stories from European History," &c., &c. Coloured Frontispiece, numerous illustrations and maps. Book I.—On the Shores of the Great Sea, 1s. 4d. Book II.—The Discovery of New Worlds, 1s. 6d. Book III.—The Awakening of Europe, 1s. 6d. Book IV.—The Struggle for Sea Power, 1s. 9d. Book V.—Growth of the British Empire, 2s.

(Prize Edition) Complete in Two Volumes, 3s. 6d. net each.

Uniform with the above.

THE WORLD'S CHILDHOOD. In two Books.

1. STORIES OF THE FAIRIES. 10d.
2. STORIES OF THE GREEK GODS AND HEROES. 10d.

With numerous illustrations by BRINSLEY LE FANU.

BLACKWOODS' LITERATURE READERS.

Edited by JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

BOOK I ... Pp. 228. Price 1s.
BOOK II ... Pp. 275. Price 1s. 4d.

BOOK III ... Pp. 303. Price 1s. 6d.

BOOK IV ... Pp. 381. Price 1s. 6d.

BLACKWOODS' ILLUSTRATED CLASSICAL TEXTS.

With or without Vocabulary. From 1s. 6d. Full List on application.

Ossar—Gallio War, Books I-III.

Ossar—Gallio War, Books IV, V.

Ossar—Gallio War, Books VI, VII.

Ovid—Metamorphoses (Selections).

Xenophon—Anabasis, I, II.

Homer—Odyssey, Book VI.

Cicero—In Catilinam, Books I-IV.

Horace—Odes, I, II.

NEW VOLUME: CICERO—SELECT LETTERS.

A FIRST LATIN READER. With Notes, Exercises, and Vocabulary. By K. P. WILSON, M.A., Fettes College. Crown 8vo, 1s. 6d.

FIRST LATIN SENTENCES AND PROSE. With Vocabulary. By K. P. WILSON, M.A. 2s. 6d. Also in Two Parts, 1s. 6d. each.

LOWER LATIN PROSE. By K. P. WILSON, M.A. 2s. 6d.

LOWER LATIN UNSEENS. Selected, with Introduction, by W. G. LOBBAN, M.A., Classical Master, Girls' High School, Glasgow. 2s.

BLACKWOODS' ENGLISH CLASSICS.

SCOTT—LADY OF THE LAKE; MACAULAY—LIFE OF JOHNSON; GOLDSMITH—DESERTED VILLAGE; &c., &c.

From 1s. 6d. Full List on application.

A HISTORY OF ENGLISH LITERATURE. By J. L. ROBERTSON, M.A. 3s.

OUTLINES OF ENGLISH LITERATURE. By the same. 1s. 6d.

ENGLISH EXERCISES. For Junior and Senior Classes. By the same. 1s.

ELEMENTARY GRAMMAR AND COMPOSITION. 1s.

PARAPHRASING, ANALYSIS, AND CORRECTION OF SENTENCES. By D. M. J. JAMES, M.A. 1s. Also in Two Parts, 6d. each.

THE SCHOOL ANTHOLOGY (Chaucer to the Present Day). By J. H. LOBBAN, M.A. In Two Parts, 1s. net each. One Vol., 2s. net; Prize Edition, 5s.

THE TUTORIAL HANDBOOK OF FRENCH COMPOSITION.

By ALFRED MERCIER, L. ès L., Lecturer on French Language and Literature in the University of St. Andrews. 3s. 6d.

ALL FRENCH VERBS IN TWELVE HOURS. By A. J. WYATT, M.A. 1s.

A FIRST BOOK OF "FREE COMPOSITION" IN FRENCH. By J. EDMOND MANSION, B. ès L., Royal Academical Institution, Belfast. 1s.

Adopted by the L.C.C. Education Committee.

A PRACTICAL GERMAN GRAMMAR, READER, AND WRITER. By LOUIS LUBOVITZ, Ph.D. Part I.—Elementary. 2s. Part II. 3s.

A GERMAN READER FOR TECHNICAL SCHOOLS. By E. F. SECKLER. 2s.

SPARTANERJUNGLINGE. A Story of Life in a Cadet College. Edited, with Vocabulary and Notes, by J. MORRISON, M.A. 2s.

OUTLINES OF GERMAN LITERATURE. For the Use of Schools.

By JOHN G. ROBERTSON, Ph.D., Professor of German in the University of London. 3s. 6d. net.

A SPANISH GRAMMAR. By WILLIAM A. KESSEN. 3s. 6d.

FORTY ELEMENTARY LESSONS IN CHEMISTRY. By W. L. SARGANT, M.A. Illustrated. 1s. 6d.

HIGHER ARITHMETIC. 128 pp. Paper, 6d.; cloth, 8d. With Answers, cloth, 11d. Answers separately, 3d.

Full Educational Catalogue sent post free on application to—

WILLIAM BLACKWOOD & SONS,

45 George Street, Edinburgh; and 37 Paternoster Row, London, E.C.

METHUEN'S MODERN SCHOOL BOOKS

ENGLISH

- STORIES FROM AMERICAN HISTORY.** By ALICE BIRKHEAD. With a Map. Crown 8vo, 1s. 6d.
A new volume in "Stories from the History," edited by E. M. Wilmot-Buxton.
- JUNIOR ENGLISH.** By F. J. RAHTZ, M.A., B.Sc., Senior Lecturer at Merchant Venturers' Technical College, Bristol. Seventh Edition. Crown 8vo, 1s. 6d.
- HIGHER ENGLISH.** By F. J. RAHTZ, M.A., B.Sc. Sixth Edition. Crown 8vo, 3s. 6d.
- ENGLISH COMPOSITION.** By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 1s. 6d.
- ENGLISH COMPOSITION FROM MODELS.** By C. ROONEY, B.A., LL.B. Crown 8vo, 2s. 6d.
- ENGLISH LITERATURE.** By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 2s. 6d.
- SELECTIONS FROM ENGLISH LITERATURE.** Vol. I (1350-1700). By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, 2s.
- SELECTIONS FROM ENGLISH LITERATURE.** Vol. II (1700-1900). By H. N. ASMAN, M.A., B.D., Second Master of Owen's School, Islington. Crown 8vo, 2s.
- TOMMY SMITH'S ANIMALS.** By EDMUND SELOUS. With 8 Illustrations by G. W. ORD. Eleventh Edition. Fcap. 8vo, 1s. 6d.
- TOMMY SMITH'S OTHER ANIMALS.** By EDMUND SELOUS. With 12 Illustrations by AUGUSTA GUEST. Fifth Edition. Fcap. 8vo, 1s. 6d.
- HEALTH READINGS FOR ELEMENTARY SCHOOLS.** By C. J. THOMAS, M.B., B.Sc., D.P.H., University Scholar in Medicine, Member of the Examining Board of the Royal Sanitary Institute. Crown 8vo, 1s. 6d.

FRENCH

- SIMPLIFIED FRENCH TEXTS.** Edited by T. R. N. CROFTS, M.A., Head Master of Roan School, Greenwich.
This series, consisting of 16 volumes, provides pupils who have been studying French for about two or three years with simple translation books which they can understand, and at the same time complete stories, instead of a succession of little anecdotes. It thus makes possible the more rapid reading of a greater variety of authors. Vocabularies have been added, in which the chief idioms are explained. Each volume is fcap. 8vo, 1s.
- L'Equipage de la Belle-Nivernaise.** **Le Docteur Mathéus.**
L'Histoire de Pierre et Camille. **Le Conscrit de 1813.**
Mémoires de Cadichon. **La Bataille de Waterloo.**
L'Histoire d'une Tulipe. **Jean Valjean.**
La Bouillie au Miel. **Abdallah.**
Edmond Dantès. **Deux Contes.**
D'Ajaccio à Sainte-Hélène. **La Chanson de Roland.**
M. de Beaufort à Vincennes. **Remy, Le Chevrier.**
- ADVANCED FRENCH TEXTS.** Edited by T. R. N. CROFTS, M.A., Head Master of Roan School, Greenwich.
This series aims at supplying translation books for fairly rapid class-reading among pupils who have already been through some of the volumes in the Simplified Texts, or who have acquired a good working knowledge of elementary French. Each volume is Crown 8vo, 2s. The first volumes are:—
Bernard de Merger. **Ursus et sa Troupe.**

GERMAN

- SIMPLIFIED GERMAN TEXTS.** Edited by T. R. N. CROFTS, M.A., Head Master of Roan School, Greenwich.
The aim of the series is to provide pupils who have been studying German about two or three years with simple translation books which they can understand, and which at the same time provide complete stories, instead of a succession of little anecdotes. Vocabularies have been added, in which the chief idioms are explained. Each volume is fcap. 8vo, 1s.
- Der Müller am Rhein.** **Undine und Huldbrand.**
Die Geschichte von Peter Schlemihl. **Die Nothelfer.**

HISTORY

- A JUNIOR HISTORY OF GREAT BRITAIN.** By E. M. WILMOT-BUXTON, F.R.Hist.S. Crown 8vo, 2s.
- A SHORT HISTORY OF MODERN ENGLAND. 1714-1910.** By ERNEST BOWYER, B.A., B.Sc. Crown 8vo, 2s. 6d.

MATHEMATICS

- DOUBLE ENTRY BOOK-KEEPING.** A Complete Treatise on its Theory and Practice. By JAMES CUSACK, LL.D., Principal of the Business Training College, Finsbury Square. Crown 8vo, 3s. 6d.
- PRACTICAL GEOMETRY FOR SCHOOLS.** By SIDNEY A. SWITZER, Art Master and Honours Medallist in Geometry, Examiner to the Examination Board of the N.U.T. Fully Illustrated. Crown 8vo, 2s.

METHUEN & CO., Ltd., 36 Essex St., London, W.C.

THE JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page	... £5 10 0	One Column (½ page)	£3 0 0
Half Column (¼ page)	1 15 0	One-Eighth Page	0 17 6
Per Inch in Column, 8/-.			

SCHOOL ANNOUNCEMENTS—

- Scholarships, Official Notices, School Transfers, Partnerships, &c.**—6d. per line; minimum charge, 5s.
Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.; *prepaid rate*.
Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; *prepaid rate*.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—
"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

UNIVERSITIES OF THE EMPIRE.

IT was fitting that the Congress which was opened on Tuesday, July 2, should meet at the University of London and be welcomed by its Chancellor; for the first suggestion of such a gathering came from its Principal, Sir Henry Miers, and the late Dr. R. D. Roberts devoted to it for the last year of his life his unrivalled powers of organization. *Hæ tibi sint artes.*

LORD ROSEBERY took for his text Universities as a Factor of Imperialism, well defined as "co-operation in high and noble tasks, with the common sympathy, affection, and energy which would characterize the members of an immense family." In 1830 such a Congress would have consisted of eight representatives—two English, four Scotch, one Irish, and one Canadian. Had Daniel Webster lived to deliver his eulogy on the British Empire, would he not have added to his famous figure of the drum-beat of the Empire that it was now belted with Universities?

In defining the functions of a University, Lord Rosebery approached a more debatable and, to him, a less familiar topic. Few would agree that research is certain to follow sufficient endowment or that the higher intelligences can be trusted to take care of themselves. That the main duty of a University is to train the rank and file of Pass men is a democratic sentiment that provoked applause, but all will not approve the kind of training suggested. The chief object, according to Lord Rosebery, is not to turn out capable lawyers, doctors, teachers, and leaders of industry, but to furnish the Empire with men fitted to carry on its work—Prime Ministers and Civil Servants. It is well to exalt character above cleverness and to discount the factitious value attached to an Honours degree; but character is not peculiar to Poll men, and it is not the *telos* of a University to train politicians.

Divide et Impera.

The first paper, on "Division of Work and Specialization among Universities," was read by Sir ALFRED HOPKINSON.

His conclusions were mainly negative. To allow the State or any external authority to assign or delimit the subjects to be taught would be a fatal policy, and any formal agreement between the several Universities would be equally inadvisable and impracticable. The limitation must proceed from within. Each University, after providing for the architectonic faculties, such as mathematics and literature, must take for its motto "*Quam quisque norit artem in hac se exerceat*," and not be tempted by rivalry or ambition to establish a department for every new science.

Dr. T. H. WARREN, who followed, held that the danger of multiplication of faculties, especially in applied sciences, might be partly met by an interchange of teachers and students.

Sir ARTHUR RÜCKER deprecated the unlimited increase in the number of Universities. A few fully endowed and equipped centres of learning would do more good than a number of colleges which barely attained the minimum demanded for recognition as Universities.

Sir CHARLES WALDSTEIN maintained, on the contrary, that a University was bound to take all knowledge for its province and teach the best that was known in the best way possible. He contrasted the beggarly pittance paid to University teachers in England with the lordly incomes enjoyed by German professors, and commended the free migration of the latter from one University to another.

Post-Graduate Work.

Principal PETERSON contributed a paper (almost a pamphlet) on "Inter-University Arrangements for Post-Graduate and Research Students." As an Oxford man, a Carnegie Trustee, and the Principal of McGill University, he has had ample opportunity for examining the problems on all sides, and we must here be content to note only some of his conclusions. Unlike Lord Rosebery, he reckons post-graduate and research work as the *signum stantis Universitatis*. In America, Johns Hopkins, Columbia, and Chicago graduate students make up one quarter of the whole enrolment, and in Canada, McGill and Toronto are not far behind. Oxford and Cambridge are assuredly no less well equipped for the work, but they have not laid themselves out to attract Colonials; "they have not studied the art of putting their wares in the window." If a man already possesses a B.A. degree it is no great stimulus to be admitted to study for another B.A. degree or a reduced period of residence. Principal Peterson would have the English Universities offer the Ph.D. degree or an equivalent, and, like the American Universities, allow the candidate to qualify for it by approved graduate work partly pursued elsewhere.

State super antiquas vias.

On the second day Lord CURZON presided at the morning and Mr. BALFOUR at the afternoon session. The Chancellor of Oxford, while extending the right hand of fellowship to newer foundations, was careful to assert the prerogatives of the ancient Universities. He hoped that a century hence, when the Universities of the Empire would be numbered, not by tens, but by hundreds, they would still "look upwards to the old and famous and God-fearing Universities of the Mother Country as unto the hills whence cometh their help." Technological training they were content to leave to the younger Universities, but it was found that business men were increasingly demanding for their sons and higher employes what was known as a "gentleman's education," and Oxford was engaged in framing a mercantile curriculum to meet their need. As a Pro-Consul, and for a time the head of the most efficient Civil Service in the world, he bore testimony to the college and tutorial system of Oxford and Cambridge. It offered the best guarantee for character, which, in the conduct of government and administration, particularly in distant lands, was "more precious than rubies and more potent than regiments of armed men."

Mr. STANLEY LEATHES, First Civil Service Commissioner, contributed a paper discussing the ideal University training for Civil Servants. It must be solid, and include a grounding

in mathematics, but the humanities—history, poetry, the drama, rhetoric—should constitute the substantial core. Like Hector, in "*Troilus and Cressida*," he thought young men "unfit to hear moral philosophy." A little philosophy might serve as a whetstone of wit, but too much encouraged the purblind arrogance of intellect, and political economy was for immature minds a very *vinum dacmonum*. His ideal University course was not at present to be had, but the nearest approach to it was to be found in the classical schools of our older Universities.

Prof. SMITHELLS (Leeds) supplied a corrective to this one-sided glorification of a literary education, in which science is not even mentioned, in a paper pleading for the recognition by the Universities of professional and technological subjects as an integral part of their work.

The discussion was continued by Sir ISAMBARD OWEN, who deprecated the confounding of University degrees with professional diplomas, and Prof. CONWAY (Manchester), who advocated classical study as a bond of union between the classes.

Eastern Universities.

In opening the afternoon session on "Oriental Universities," Mr. BALFOUR confined himself to a statement of the problem without attempting to suggest any solution. In the West our traditional beliefs and customs had been gradually and almost imperceptibly modified by science. At each stage there had been mutual adjustment. In the East there was a sudden and inevitable collision between the latest science of the West and an old-world civilization that had been unchanged for centuries. The shock must be faced, but he hoped that this afternoon's discussion would show how best the benefits might be secured and the dangers mitigated.

Sir FREDERICK LUGARD, Chancellor of the University of Hong-Kong, explained how the founders of the Chinese University proposed to meet the difficulty: (1) Any religious body may establish a hostel and teach any form of religion, provided the students conformed to University regulations; (2) other students will reside in the University and be subject to the moral influence of a carefully selected staff, who will not only teach, but take part in their recreations; (3) high ideals of life and conduct will be instilled by the lives of great men, poetry and history chosen as textbooks. These, he allowed, were but palliatives, and the one essential requisite was that teachers of Orientals should adapt their methods to the requirements of the East instead of attempting to foist on the East the very form and pressure of Western civilization.

Sir THEODORE MORISON stoutly denied that the much-abused secular education in India had been a failure and on the moral side a misfortune. It had confessedly freed the public services from corruption, raised the standard of honesty in professional and commercial life, and led to national movements of social reform.

Residential Colleges and Hostels.

The subject was introduced by Mr. E. B. SARGANT in a paper describing the accommodation at present provided for students in Home and Colonial Universities. An inquiry held in 1904 showed that, outside Oxford and Cambridge, quarters for only 470 men students were provided by residential halls in the Universities of Great Britain. The superiority of such halls to private lodgings, in spite of the higher cost, was universally admitted, and the debate turned mainly on the question whether they should be self-administered or under the direction of a Warden appointed by the University. Prof. Geddes, speaking from experience, strongly deprecated the segregation of students in separate hostels for teachers, doctors, Churchmen, &c.

A Common Entrance Test.

The morning of the third session was devoted mainly to this practical question. All the speakers were agreed on the desirability of mutual recognition, but it was acknowledged that this must be gradually brought about by individual action, and that to frame an entrance test that would be accepted by all Universities was not an undertaking on which this or any Con-

gress could embark. Thus, Mr. P. E. MATHESON, the introducer, looked forward confidently to the day when all the Universities of the Empire would become accessible to all who deserved access to them; but he laid equal stress on the two principles of unity and variety, and did not suggest that his own University should remove the fatal bar of Greek. Lord RAYLEIGH, who presided, speaking as a professor of science, deplored the neglect of English, and held that English should be the basis of a common test; and the same point was pressed home by Sir EDWARD BUSK. Sir ALFRED HOPKINSON did not think that a common portal was desirable, but thought that Universities might be grouped under Joint Boards.

University Extension.

Lord Haldane was prevented by official duties from attending, and his place was taken by Lord KENYON, Deputy-Chancellor of the University of Wales. The history of the movement was related in a joint paper by Mr. J. A. R. MARRIOTT and the Rev. D. H. S. CRANAGE, the Oxford and Cambridge Secretaries. They showed how the local centres established in nearly three hundred towns had led as a direct result to the foundation of no less than seven University Colleges, and how these in turn had developed, or were in process of developing, into Universities. But when a College or University was established the extensionist work was not accomplished. It touched a large class which the college could not touch. Its object was not to give professional culture, but to raise the general level of culture. It offered knowledge for its own sake, with no bribe of scholarships and prizes or hope of advancement.

No speech in the whole course of the Congress elicited more applause than that of Mr. MANSBRIDGE, Secretary of the Workers' Educational Association. His lifelike description of a workers' class at Oxford reminded us of a dialogue of Plato; youths of sixteen and greybeards of sixty gathered round a University Socrates, who is not so much a professor as a president of debate—all eager, not only to learn, but to ventilate his own views and contribute his own *eranos* to the symposium. They want no diploma or degree, and no impending examination distracts their interest. No wonder that, under such conditions, essays are written that would be marked *A+* in Oxford Greats, and that the teachers profit no less than the taught.

The other feature of the afternoon was the account given of the University of Wisconsin, recently visited by Dr. BARRETT, of Melbourne University. No less than £25,000 a year is spent on University Extension, and it might be said that the State and the University are practically synonymous. Whatever the professors demand the Government grants without demur.

A Central University Bureau.

The last day of the Congress was devoted to the consideration of a permanent Bureau of Information, and the scheme which was framed by Dr. Parkin and endorsed in principle at an after-meeting of the delegates is a practical result which of itself would justify the convening of the Congress. No more fitting Chairman could have been selected than Lord Strathcona, who, as Chancellor of Aberdeen and of McGill University, serves as a link between the Old World and the New, as not only an Empire builder, but a patron of learning. He recalled the fact that, when he went to Canada, now seventy-five years ago, there were only three Universities. Since then six had been added. Among the national traditions which Anglo-Saxon settlers carried with them none had been more persistently followed or more generously endowed than higher education.

Dr. G. R. PARKIN, Organizing Secretary of the Rhodes Scholarship Trust, advocated a Central Bureau which should crystallize and give practical effect to the conclusions of the Congress. At present there was not even an attempt to record and utilize the vast range of educational experience represented by the Universities of the Empire. "The old Universities go on their way without any complete information about what is being done in the new; the new have

to feel their own individual way along the untried paths of development, with little consultation between each other and little opportunity to learn from the old."

The Bureau should be created by the Universities themselves and remain under their exclusive control. In Germany the work was carried out by the State; in America partly by the Bureau of Education at Washington and partly by two Associations of Universities, State supported or independent. It is the latter that we should take for our model. The first work of the Bureau would be to produce and publish a Year-book giving detailed information as to the work, members, staff, &c., of each University. Secondly, the Bureau might collect and disseminate information concerning vacant professorships and lectureships, without attempting the more delicate task of filling them. Thirdly, the Bureau could direct the increasing number of Colonial students who desire to complete their "education" at home as to the University or technical college best fitted to suit their requirements and perform the same office for emigrants from the public schools. Such a Bureau Dr. Parkin calculated could be run at a cost of £1,500 a year as a maximum. A subscription of £50 from ten of the greater Universities, of £25 from twenty lesser Universities, with smaller sums from the remainder, would furnish an adequate financial basis.

At the afternoon meeting of the delegates it was resolved to form a committee of fourteen, seven to represent the home Universities and seven the Universities overseas—two for Canada and one each for Australia, New Zealand, the Cape, India, and the Crown Colonies.

Place aux dames! We must not conclude this fragmentary and imperfect sketch of the Congress without mention of the paper on the position of women in Universities, contributed by the Principal of Alexandra College, Dublin. Miss WHITE noted the momentous change wrought in the last half-century by the admission of women to Universities, a revolution that provoked in a narrower circle no less violent opposition than the question of the franchise for women was now provoking. London led the way, and the National University of Ireland, which admitted women to the highest appointments, was the first, and so far the only, University to carry to its logical conclusion the now accepted principle of *carrière ouverte*. University life had created a new ideal of womanhood.

THE IMPERIAL TEACHERS' CONGRESS.

LONDON is having a surfeit of educational conferences this summer. The most vigorous among us has scarcely been able to keep an edge on his appetite; and the morning press, a very delicate barometer of public feeling, was tempted to give scanty recognition to the Imperial Teachers' Congress, held at Caxton Hall, Westminster, from the 13th to the 17th of last month. Caxton Hall was embannered for the occasion, so that the walls were gavenough. I mention this seemingly irrelevant fact because many of us could not for whole sessions hear the speakers, so bad were the acoustics; and our eyes, at any rate, found some measure of excitement among the scarlet of the decorations. It seems a shame that delegates from overseas had to attend what was for hours together nothing more than a dumb show. The papers were in print, however, and can be read at leisure—if ever this happens, so numerous are they.

The Conference justifies itself in collecting from different parts of the Empire a series of essays on phases of education, ranging from the curriculum and organization of rural schools to the teaching of Virgil. There were fifty-five papers in all for twelve sessions in four brief days, and we had merchandise from East and West. I should suggest to any teacher who wishes to profit by the Conference without leaving his arm-chair that he write to Mrs. Ord Marshall, the Hon. Secretary of the League of Empire, at the Caxton Hall, Westminster, S.W., and ask for copies of the papers. New South Wales sent six official delegates, Victoria eleven, South Australia nine, New Zealand one, South Africa eighteen, India six,

the Crown Colonies four, Canada fifty-seven. These figures do not include the colonial visitors who swelled the audiences.

The majority of these delegates were actual teachers—many of them in lonely places of the earth where the firstfruits of civilization have scarcely as yet been reaped—and one's imagination was fired by the sight of their bronzed faces. It must have been worth the journey to see London and join hands with other teachers, solitary as they. The Duke of Argyll and the President of the Board of Education gave addresses of welcome; so, too, the Permanent Secretary of the Board, Mr. Selby-Bigge, who spoke very cautiously, emphasizing the liberty of experiment which teachers are to enjoy under the new Code.

The discussion on Rural Schools followed the line of appeal for better staffing and a closer obedience to local conditions. In the debate on "Co-ordination in Education," Mr. J. L. Paton pleaded for a closer connexion between elementary and secondary schools in England.

Papers on "The Training of Teachers," "The Recognition of Teachers' Certificates throughout the Empire," "The Migration of Teachers," "The Teaching of the Classics," and "The Value of Housecraft and Handicraft" followed in bewildering succession on the Monday of Congress. Tuesday was occupied with a long discussion on "Technical Education." Mr. R. W. Ferguson, B.Sc., gave a fascinating account of Messrs. Cadbury's scheme of compulsory attendance at evening classes. The debate, which took place the following morning, on "English Language and Literature" (though the latter was scarcely touched upon) was of the highest importance. Sir Gilbert Parker presided. In a few chaste impromptu remarks he urged upon teachers the necessity for nurturing among their scholars the taste for literature rather than that they should insist upon reading so many pages of a set book in class. The Head Master of Winchester promised an address on "The Teaching of English Literature," but was unable to attend.

Ex-Principal Burrell, of the Borough Road Training College, gave a summary of Prof. Stanley Kidd's paper on "The Pronunciation of English." It contained a solemn warning against the divergence from standard English pronunciation in the United States and the colonies. Prof. Kidd, who is in the Chair of English at the Rhodes University College, Grahamstown, appealed for the establishment of a standard of speech throughout the Empire. It is a subject which may well have days of discussion. One delegate asserted that the most perfect utterance of English was to be found among the Maori.

Miss Althaus, of Leeds, whose book on "The Sounds of the Mother Tongue" was praised in special terms by Prof. Daniel Jones, of London University, was called upon to speak. She lamented the defective hearing among English children. "In a class of thirty, perhaps only one is capable of distinguishing subtlety of sounds and of imitating. Culture of the ear is most urgently needed, and I find that dictation is the best of all ear-helps."

Dr. Hoogenhout, of Pretoria, gave a humorous account of difficulties with which he has to deal at his Normal College. Seven nationalities are represented among as many members on his teaching staff. "Fling all these into the melting-pot, and what strange English will result!" But South Africa is aware of its deficiencies, and a committee of teachers is busy drawing up a scheme of phonetics for training colleges. The debate proved that there is need of a Language Commission to inquire into the whole question of speech purity and spelling reform. English is in peril of deterioration in more than one portion of the Empire.

The papers submitted in regard to "History and Geography" were of a technical nature, bristling with practical suggestions. Lord Selborne presided over the discussion on "The Place of History in Education," and gave the closing address at this Imperial Conference. We all value the privilege of sitting together for a few days at a common table, as in a tavern by the cross-ways, where we may compare notes with pilgrims of our craft from the furthestmost parts of Empire. After all, to meet them was the thing that mattered; the Conference was but the occasion.

SYDNEY WALTON.

THE first meeting of the recently constituted Senate of the University of Western Australia has been held at Perth. Sir Winthrop Hackett was appointed Chancellor, and Mr. Cecil Andrews, Pro-Chancellor. The Governor of the State opened the University by an address to the Senate, and expressed his satisfaction at the cordial support accorded to the founders of the new University and at the generosity of the public in aiding them with gifts of money. Sir W. Hackett is a graduate of Trinity College, Dublin, and Mr. Andrews of Oxford.

THE HEALTH CONFERENCE AND EXHIBITION.

THIS conference was held in the Horticultural Hall, Westminster, under the auspices of the National Health Society, in the last days of June, under very exalted patronage including an Archbishop, six duchesses, seven societies, and an imposing array of the chief men and women of the medical profession to the number of fifty. Perhaps each was counting on the presence of the other, for on the whole, the exhibition did not seem well attended, and the afternoon conferences were certainly neglected. It is to be hoped that the attendance was not an indication of that indifference to the national health which every lustrum seems to write more unmistakably in the physique of the younger generation.

Perhaps nothing was more extraordinary in the conferences than the way in which nearly all the papers, speeches, and discussions were left to men—always a bad omen in things dealing with the home, for it seems to point to an imposing of reform from without rather than its evolution from within. How often have we not been told that the home is woman's sphere. When a conference is held on the care of infants and every one of five speakers is a man, the sole exception being the chairman, Lady Helmsley, who reserved a few minutes for her own talk and illustrations of *crèches* at the close of the afternoon, one wonders whether woman has a sphere at all, and whether she is not reduced almost entirely to the function of the queen bee. Apart from this onesidedness, some useful information was obtainable, not without interest for those teachers who seek causes at the back of effects, and who complain of the poor, dull, weak, listless human material that congregates in the vast classes of our infant departments in the schools. The medical profession in Britain has, generally speaking, an enthusiasm equal to Rousseau's for mothers nursing their own children, a desire to destroy in one huge holocaust all the vast array of bottles, for the most part dirty, which slaughter annually many thousands of babies. But zeal for this reform is somewhat damped when the medical profession tell us that 30 oz. daily of milk of good quality is necessary for the proper nutrition of the average child. Close examination and accurate weighing of infants after feeding in Marylebone, Kensington, and Hackney showed that large numbers were getting far less than a proper quantity (leaving poor quality out of consideration), and were literally starving on 9–12 oz. of mother's milk daily.

Dr. A. Banks Raffle, School Medical Officer to the South Shields Education Committee, pointed out at the last Conference held in connexion with the Health Exhibition that the real remedy lies in the teaching of *practical* domestic economy in schools. Very much of what has already been taught for more than a quarter of a century he regards as a terrible failure, and most of us have to admit that, even when the teaching of domestic science is excellent, it has a way of never getting through to the homes. Why not? Because these homes are too degraded to be reached by any machinery we have yet discovered.

It is not too much to say that we stand in need of a root-and-branch reform with regard to women's labour. We need a change of mental attitude before anything durable and solid can be effected. Women have in this country a degraded position, and all their work suffers because of it, both in estimation and payment. It is an axiom of our political and domestic economy that to build Dreadnoughts is a work of first-class importance, deserving the highest consideration and pay; to rear, to nourish, to work for the race itself, to cook, wash, clean, keep house and so forth, is work that scarcely counts; any fool can do it, any reward will suffice. President Loubet declared that the destinies of France are bound up in her cooks: when shall we admit in our *practical* social and domestic economy that the continuance and well-being of our great Empire rests every whit as heavily on the shoulders of women as of men?

Dr. Raffle pointed out that among slum children an admirably equipped workman's cottage often fails to produce any real effect in the slum neighbourhood; whereas a simple kitchen, just a little better than what the people had themselves, furnished with such an equipment as a poor household can always have, with simple lessons in cleaning, cooking, mending, washing, &c., produces far better results than the most modern equipment of a well-appointed flat. It may be scientific to teach a child the amount of proteid in a joint of meat; but the fact has no relation to what her home conditions will let her assimilate or reproduce. The ideal for slum-land must be within easy reach of attainment, a degree or two beyond present achievement.

Dr. Raffle stated that from a fifth to a fourth of the children under his observation show malnutrition, defective clothing, want of personal cleanliness; he considers that they will take their place in society injured as a result of their bad conditions, and he adds that reference to the reports of other medical officers and to the general report of the Board of Education shows that in all industrial centres the conditions are pretty much the same. This malnutrition is not due to poverty,

but to lazy mothers who send children breakfastless to school; to "tea-dinner" and late supper; to the ignorance of the value of different foods; to the want of economical management of the house; to the child's choosing what it will eat owing to want of parental discipline. These, says Dr. Raffle, are some of the factors that work havoc in the home. But there is another vastly important one where it is necessary *chercher l'homme*, and that is, too many children in the home without any help afforded to the mother. Your representative has more than once seen a young woman manage fairly well a husband and two children in decent comfort and cleanliness. The same woman with four children—no grinding poverty nor drink to crush her—had degenerated into dirt and disorder; at the present rate of *dégringolade*, with six children to toil for, nothing will remain of her youth, good looks, good temper, good intentions. Why do our social reformers so rarely allude to one of the most potent causes of child neglect? The real beast of burden in our civilization is the working man's wife—overworked, underfed, insufficiently rested—the marvel seems not that some drink, but that so many have the heart to go on. As a matter of sound common sense, it is the old error of all civilizations that ails our own: the under-payment of the workers of society that the wealthy may wallow in senseless luxury; and the under-payment and depreciation of women simply because they are women, which brings a host of evils in its train, evils that recoil on men, particularly on the men of the working classes.

Dr. C. B. Moss-Blundell, School Medical Officer, Hunts, made an excellent speech on the necessity for further manual training in our public elementary schools. It is certain that numbers of our children will not, under present conditions, make good "scholars," and doubtless that all children be taught thoroughly the three R's and elementary drawing is desirable. He seems to leave out what should certainly be added—singing for lung development and gymnastics for the physique. But, even with this modest program, one easily reaches the age of thirteen, and we do not agree that eleven and a half is a good age to begin manual training to the extent of devoting half a day to it. The age of fourteen is ample time for this, and we are, let us hope, within measurable distance of demanding that the school-leaving age in this wealthy country be sixteen. Dr. Moss-Blundell considered that boys of eleven and a half years might be apprenticed to local tradesmen to learn a craft; but a craftsman is not necessarily a useful teacher of his craft, however much he himself may excel in it, a fact which adds enormously to the difficulty of apprenticeship and which has already resulted in the opening of trade schools both here and on the Continent. There is also the consideration that numbers of men and women ready to take apprentices excel neither in their craft nor yet in the art of explaining it to would-be learners. Far more will yet need to be made of the disposition of manufacturers to have properly taught classes in connexion with their various businesses, classes which should always be under the supervision of the Education Authorities. As in Germany the time for such classes should be during the day, the manufacturer's day, as it is the worst possible economy to work young people day and night.

One afternoon conference was devoted to the question of better housing, every speaker declaring from experience how feeble is the hold of the Local Government Board over Local Authorities of the do-nothing type, who fold their hands and cry for a little more sleep, a little more slumber. The idea of a little coercion for such bodies has a pleasant savour. England does at present seem in danger of forgetting what Lord Beaconsfield tried to impress on British politicians forty years ago, an attempt that failed completely: "The health of the people is the statesman's first consideration."

C. S. B.

THE TEACHING OF CHEMISTRY.

A PROTEST BY JESSIE WHITE, D.Sc.

AN article bearing this title appeared in the April number of *The Journal of Education* above the initials "G. F. H." It dealt with the teaching of boys, and the experience upon which it was based was evidently derived from a school or schools preparing pupils for the Higher Certificate, and in which the Senior and even the Junior Cambridge Local Examinations are not despised. It is to be regretted that a writer who deals with so important a subject in a professional journal did not give his name and fuller indications of his experience.

The object of the article is to advocate a modification of the heuristic method by a reinstatement of the lecture and the use of a textbook. The ostensible reason for this advocacy

is the necessity for a quicker pace in covering the ground than is possible by the slow, purely heuristic method if boys are to be entered in chemistry for various school examinations.

Now, the heuristic method is a pedagogic method of teaching science opposed to the antiquated methods of lecture and textbook. The essence of it is that it brings the pupil into direct contact with matter. It sets him to ask questions and to find the answers to these questions himself as the outcome of his own experimenting. It avails itself of the curiosity natural to youth and satisfies his yearning for activity. It does not stifle this curiosity by setting down before him, either by means of a textbook or of a lecture, a number of ready-made facts which he might himself have arrived at by experimenting or observation had he been allowed squarely to face matter. The attitude of the pupil is one of discovery; hence the name "heuristic." It is a method in which the pupil finds answers to questions which he understands. It is by no means tied down to one syllabus. It is quite a mistake to think that, because the pupil's attitude is genuinely one of discovery, he is to work without guidance or that no supplementing is ever to be given by the teacher.

That such supplementing requires lectures and lecture experiments I do not admit. "G. F. H.," however, says: "It will be generally conceded that a certain amount of the time must be devoted to lectures and lecture experiments. To follow out a subject to its logical conclusion, there are some experiments which cannot be done by the class. The consequence is that beginners in chemistry spend a large proportion of their limited time in getting down into their notebooks a more or less verbatim report of the lecture, and in sketching the lecture apparatus." From this it is evident that "G. F. H." has never grasped the inwardness of the heuristic method, or he would have realized that it has no need of lectures, and would never allow of experiments for the sake of following out a subject to its logical conclusion.

Sometimes, of course mainly for economic reasons, the heuristic teacher has a lecture-table experiment, but he takes care that the class regards this as a joint experiment, and he tries as much as possible to keep their attitude what it would be if each pupil or pair of pupils had a separate apparatus. Just as in their own experimenting they sketch the apparatus, so they do in the joint experiment. And this sketch, together with the description of the experiment given in his own language, is put straight away in the pupil's best and only notebook.

It is evident that "G. F. H." has taught in schools in which H.M.I. has not yet spread his beneficent influence. Otherwise he would have learnt that rough notebooks, and the copying of notes into best notebooks for home work, are inadmissible, and that such a thing as copying a lecture from the blackboard belongs to the days of "talk and chalk," and not to the days of the heuristic method. One only needs the gentle encouragement of H.M.I. to discover that the pupils can, when this same gentle encouragement is passed on, write there and then clear and interesting accounts of their experiments in good simple English. The time may arrive when the science-master himself and his colleagues will realize the value of the science lesson as an instrument in the mastery of English. Now and then it may be necessary to dictate a definition, but it is only when corrections of numerical problems set for home work have to be given that there is need of copying from the blackboard.

I do not deny that assistance in linguistic difficulties has to be given at first, and to some pupils more than to others. But such help is given, when it is needed and asked for, by a teacher who spares no pains in getting into direct relations with the minds of his pupils, and who for this reason does not shirk the continuous exacting work of correcting the notebooks directly after each fresh piece of work is done.

"The heuristic method," says "G. F. H.," "requires that the average boy shall be able to reason in an intelligent and logical manner, and thereby to draw conclusions from his experiments, which, if not the correct ones, will at least have some reasonable appearance of being so." He thinks that chemistry masters will concede that 50 per cent. of the boys just

starting chemistry have no reasoning and deductive powers at all, and that two thirds of the remaining 50 per cent. will draw any conclusion but the correct one. The example which he furnishes suggests that for "the correct one" we should read "the one the master wants." This example throws illumination on what "G. F. H." considers the heuristic method.

A boy, he tells us, heats some copper and finds that it thereby increases in weight. He is asked what conclusion he would draw from his experiment. His answer, we are told, will most likely be, "Well, I should say that there is an increase in weight." This answer is taken as denoting absence of reasoning power. Why it should be so taken I fail to see. It seems to me to point to sound common sense on the part of the boy. He is a sane human being whose actions are purposive. He likes to know why he is doing things. His object in first weighing, then heating, then cooling, and reweighing the copper is to find whether heating causes it to increase in weight. There is no *a priori* reason why it should increase—it might just as likely remain the same weight or decrease. In the state of knowledge in which the boy is, there is no more reason to expect one of these three alternatives rather than any other. But he finds that it balances a larger weight at the second weighing, and he finds, if the various weighings made by the different pairs of workers are written on the blackboard, that his experience agrees with that of his fellows. He concludes, therefore, that it has increased in weight. This is the answer to the question he put, and in giving this answer there is reasoning involved. Having gained this answer, he may go on to ask why this happened; but to do this is to ask a fresh question which demands fresh experiment, and not to draw a conclusion from the experiment already done. It is, no doubt, owing to the fact that chemistry masters are not content to let boys ask and answer one question at a time that they come to the conclusion—if, indeed, they do—that 50 per cent. of their beginners have no reasoning power at all.

"G. F. H." naively remarks that in many cases the boys cannot distinguish between an observation and a deduction. But observation and inference are so interwoven that what we often call in common parlance observation is largely inference. The more familiar we are with a subject the more inference is involved in our perception, and the inexperienced teacher finds difficulty in putting himself in the place of the child whose perceptions have not yet gained this fringe of inferences. The first task of the heuristic teacher is to let the child amplify his perceptions through his experiments, and if the questions asked are unambiguous and understood, there will be no difficulty on the child's part in gathering from the experiment just the answer wanted. As we have seen, each answer leads to a fresh question. Sometimes such questions will have to be deferred because they cannot easily be answered, or answered satisfactorily, at this stage; but in answering the fresh questions adopted by the class the methods and ideas involved in previous experimenting are made use of. Each experiment ought to mark an advance. The wider the field becomes the more use can be made, and consciously made, of analogy. Nothing plays a more important part in building up system in chemistry than analogy. It is in the use that they are able to make of analogy that the difference in power of the various pupils is most plainly seen. This depends on difference of memory power. It involves a sweep over the whole field surveyed. Whereas such a sweep comes easy to the more intelligent members of the class, it certainly does not to the least intelligent. It would be a great help to the heuristic teacher of chemistry if he had detailed knowledge of the memory power of the backward pupils. He feels that it is a lack of memory which prevents their making the same progress as the others. He recognizes that it is quite a delusion to believe, as the originators of the heuristic method did, that doing will entail remembering. Sad experience convinces him that they cannot remember even what they have done many times. The problem for him is how to keep them from a discouragement which will prevent their working the experiments with all the intensity of which they are capable. The

teacher's ideal is undoubtedly to keep every member of the class working to the extent of his capacity; to permit of individual differences of treatment without sacrificing the collective character of the work of the class.

The so-called heuristic textbook is, to my mind, no aid in the solution of this problem, which only the resourcefulness of each teacher in face of his class can solve. Its effect is to hamper. To the more intelligent pupils it gives too much. They need only the barest suggestions as to apparatus and method when once the aim of the experiment is understood, and they are quite capable of recognizing what the result of their experiment means. To the least intelligent it cannot supply the place of the suggestion and supervision of the teacher, and, if the apparatus used by the class differs in any particular from that assumed in the book, these pupils have not sufficient adaptability to avoid confusion. It further prevents the teacher from recognizing the real powers of his pupils, and thus prevents him from supplying to them material which suits their needs.

It is on this account that heuristic teachers who believe in their method do not use a textbook, although this entails making the task of science teaching more exacting than that of teaching any other subject.

With some of the criticism of first-year courses in chemistry offered by "G. F. H." I am in agreement. I regard it as essential to give as soon as chemistry proper—that is, the study of substances and their behaviour under conditions that produce change—is begun, the distinction between elements and compounds. I do so because of the fundamental nature of this distinction and because it is one which rests on the collective experience of a succession of workers, and which cannot possibly be reached by the child. It is a distinction which is easily understood. Supplied with it the pupil can attempt the solution of questions as to constitution and reaction heuristically; without it he may add to his concrete knowledge of substances, but he can make no real advance towards that logical systematization of his knowledge which is the goal which his teacher has in view for him. Consequently to postpone the giving of this distinction until some time after the treatment of combustion is a mistake. When once the child's interest is set on substances and the changes which they undergo, provided we wish him to advance in the study of chemistry, it is pedagogically unwise to digress to such subjects as the structure of a candle or coal-gas flame or to return to such physical subjects as solubility, crystallization, and crystallography. These subjects are best treated before combustion. They afford a very wide and useful field of interest, lead to first-hand knowledge of a number of substances which will afterwards be dealt with from the point of view of constitution, and they yield a number of questions involving numerical answers such as are particularly valuable in requiring a high standard of carefulness and in impressing on the child the idea of uniformity. A teacher soon becomes aware of the powers of his class, and, if solubility curves which they make are likely to turn out "useless and weird," they had best be omitted at a stage when they obviously make too great a demand on the child's technical skill. The study of these topics is not bound up with the heuristic method.

As I said before, the heuristic method does not commit us to any one syllabus. Chemistry proper, in which constitution and reaction become the main points of view from which our questions are asked, seems to me to afford the very finest field for its exercise. The child worms his way into the science by his own experiments. He asks one question at a time, and answers it. When he has reached some new distinction, such as that between a basic and acidic oxide, he reviews and reorganizes the field already surveyed.

Perhaps one illustration serves to show how such a method differs from the older method of procedure. Having reached the idea of oxygen through his study of air and water, he does not prepare it in the usual manner from potassium chlorate, because this substance contains elements as yet unheard of by him. But he takes it from an oxygen cylinder, and experiments with it to find how it reacts with heated carbon and sulphur. This opens up many new paths of inquiry. The principle is

to enlarge the field of knowledge bit by bit, and to organize wherever possible. A network of relations is the goal.

But why require a textbook or a lecture? The small boy and the small girl need neither unless, indeed, by reason of some secondary aim in the teaching beyond that of progress in the science.

JOTTINGS.

A TESTIMONIAL is being raised to Miss Minasi, for nearly thirty years Head Mistress of the Highbury and Islington High School, which was closed last Christmas by the G.P.D.S.T. During that period nearly one thousand seven hundred girls have passed through her hands. Subscriptions will be received by Miss Hilda Harwood, 25 Aberdeen Park, N.

THE Cambridge University Press will publish shortly a complete edition of Rousseau's political writings, with an introduction by Mr. C. E. Vaughan, of Leeds. The MSS. in the libraries of Geneva and Neuchâtel have been collated and various fragments, hitherto unknown, have been added.

MR. C. P. TREVELYAN spoke with a refreshing candour before the Joint Committee of Lords and Commons on the question of the preservation of ancient monuments. The Board of Education, he said, is encouraging in every possible way the visits of school-children to places of historic interest. It would be a good thing if they had a Kenilworth Castle near every school. As to the money difficulty, which someone always raises on these occasions, the Parliamentary Secretary of the Board confessed he did not know where the money came from—presumably, therefore, not from the Board—but he did not think any question of money should be allowed to stand in the way. Our impression is that the widening of the conception of school education which these visits imply is more considered in elementary than in secondary schools. We should be the last to criticize the tradition of steady work during school hours, of which our secondary schools may well be proud. Nevertheless the educational value of properly organized visits to museums, picture galleries, and places of historic interest ought not to be overlooked.

THE question of the supply of officers for the Army seems to go from bad to worse, for, while Lord Haldane is assuring the Duke of Bedford in the House of Lords that all is well, the War Office is sending out printed letters to ex-cadets of the Officers' Training Corps, as to whose capacity to command they are practically without information, inviting them to join the "General Reserve of Officers." These so-called officers are to be under no obligation to undergo training, but will be required to come forward in a national emergency. Action of this kind on the part of the War Office is really the negation of administration which could only be justified in a supreme national emergency. We are indeed in a parlous state if, in time of peace, the King's Commission can be obtained by replying to a printed letter from the War Office without any obligation except to send once a year a notification of one's existence, and to come forward if required.

HEUREKA! Mr. J. T. Faragher, of Lawrence Road Elementary School, Liverpool, has discovered the *Pou Sto*, "a new and powerful lever calculated to upraise the masses, beginning with the children," which "gives the world a great push in the right direction and helps to make this earth a heaven." It is all as simple as Columbus's egg, and the teacher has only to provide himself with a supply of gilt buttons, shields and medals, and—a cane. It would not be fair to give away the secret, which is revealed in "Faragher's Medal System," price 3d.

SIR SWIRE SMITH and Mr. C. Stephenson, of the City of Bradford School of Art, have been appointed members of the Standing Committee of Advice for Education in Art.

THE Report of the National Committee of Fifteen on Geometry Syllabus, which has been under consideration for nearly three years, has finally been published in a pamphlet of eighty pages and is ready for distribution to teachers of geometry and all others interested. This report was prepared under the joint auspices of the American Federation of Teachers of the Mathematical and

Natural Sciences and the National Education Association. It includes an historical introduction and sections on axioms and definitions, on exercises and problems, in addition to the syllabus of plane and solid geometry. It is hoped by the Committee that this report may be of great service to all teachers of geometry, and to this end that it may have a wide distribution among all interested. Copies may be secured gratis upon application to the Commissioner of Education, Department of the Interior, Washington, D.C.

THE *Manchester Guardian* gives an account of a marvellous calculating boy of fifteen, a native of Tinnevely. Questioned by the Postmaster-General of Madras, he answered almost instantly the cube of 6,613, and the cube root of 79,507, and divided a line of sixteen figures by one of six. He is illiterate both in English and Tamil, looks like an idiot, and is very shy.

UNIVERSITY OF BRISTOL.—At a special meeting of Council held on July 19, Miss Amy Mullock, M.Sc., Vice-Principal of the Cambridge Training College, was appointed Mistress of Method in succession to Miss Marian F. Pease, who is retiring at the end of the present session.

THE Glamorgan County Council will hold its annual Summer School at Barry from July 29 to August 24, under the direction of Mr. A. Sutcliffe. The fees for students outside the county are £3 for four weeks and £2. 10s. for three weeks. A full prospectus may be obtained on application to Secretary, Education Department, County Hall, Cardiff.

THE Scheme and Regulations for the Examination for Certificates in French and German of the University of London are now issued. The examination will consist of an essay in English and one in the foreign language; translation from it into English; dictation; phonetics; an oral examination of half an hour, for which the candidate will submit three prepared books. The examination, it will be seen, is specially designed for teachers native and foreign, and the first will be held next August.

WE mentioned last month the production in the Perse School, Cambridge, of two plays, written as part of their ordinary school work in English composition by the boys who acted them. These plays have now been published by W. Haffer & Sons, Cambridge; and Mr. H. Caldwell Cook, the English master to whose inspiration and guidance the success of these literary and dramatic efforts is due, has written an introduction explaining his methods of work.

THE Insurance Act will be presenting no easy problem to hundreds of head masters and head mistresses during the next few weeks. When the salary is paid it is necessary to fix stamps on the employer's card for the period covered by the payment. This, in the case of the assistant teacher, includes the holidays. Payment should therefore be made by means of the stamps on the card for the whole period covered, beginning with July 13—i.e., in many cases up to September. The card may be left in the hands of the employer. As all assistants compulsorily insured will probably be joining the Secondary, Technical, and University Teachers' Insurance Society, 35 John Street, W.C., the most convenient method for all parties will be to let the cards remain in the hands of the head master and to be forwarded together when full.

FRANCES LADY SHELLEY, in her recently published *Diary*, gives us a glimpse of Pestalozzi, whom she met in her Swiss travels. They conversed in French and German, but he was equally unintelligible in both languages. "It is, of course, possible that this woolly-headed exponent of an obscure method of teaching may have a genius for clearing the ideas of his scholars. I am sure I hope so." We are reminded of Goethe between Lavater and Basedow: "Propheten rechts, Propheten links, das Weltkind in der Mitte."

THE Arthur Hugh Clough Scholarship has been awarded to Miss A. Yoxall (St. Paul's Girls' School and Newnham College), who attained the standard of a First Class in this year's Classical Tripos. This scholarship was founded by Mrs. Clough in memory of her husband. It is of the value of £40 a year, and is awarded annually to a candidate who has resided at Newnham College for three years and who wishes to continue her studies there for a fourth year.

THE Council of the London (Royal Free Hospital) School of Medicine for Women, has made the following awards:—The

St. Dunstan's Medical Exhibition, value £60 for three or five years, to Miss A. M. Kerr, of the Clapham High School. The School Scholarship, value £30, to Miss E. M. Scarborough, of Trinity Hall, Southport. The Phipson Post-graduate Scholarship, value £40, to Miss C. L. Houlton, M.B., B.S. Lond.

IN accordance with the Order in Council, a preliminary meeting of the Teachers' Registration Council was summoned by the Board of Education, and met at the Offices of the Board on July 22. There was a full attendance, and the members were welcomed by the President. The proceedings were private, but we understand that a vote was passed requesting Mr. Arthur Acland to allow himself to be nominated as Chairman. The first formal meeting will be held in the first week of October.

REGISTRATION COUNCIL.

THE following is a complete list of members, with the bodies by whom they are appointed:—

The Dean of Christ Church	... University of Oxford.
Mr. W. Durnford	... Cambridge.
Mr. H. B. Jevons	... Durham.
Sir Henry Miers	... London.
Prof. J. J. Findlay	... Manchester.
Prof. A. Hughes	... Birmingham.
Prof. Campagnac	... Liverpool.
Prof. A. Smithells	... Leeds.
The Vice-Chancellor*	... Sheffield.
Prof. Wertheimer	... Bristol.
Sir Harry Reichel	... Wales.
Misses Broome, Cleghorn, Conway, Messrs. Bentliff, Croft, Marshall Jackman, G. Sharples	National Union of Teachers.
Miss Goodwin, Mr. Iliffe	Nat. Assoc. of Head Teachers.
Miss Phillips, Mr. Underdown	Nat. Feder. of Class Teachers.
Dr. James Gow	Head Masters' Conference.
Dr. McClure	Head Masters' Association.
Miss Douglas, Miss Gadesden	Head Mistresses' Association.
Miss E. S. Lees	Assistant Mistresses' Association.
Mr. F. Ritchie	Preparatory Schools.
Mr. Rushbrooke	College of Preceptors.
Mr. F. Storr	Teachers' Guild.
Miss E. R. Murray	Froebel Society.
Mr. F. Wilkinson	Technical Institutions.
Mr. P. Abbott	Teachers in Technical Institutions.
Mr. Carpenter †	The three Art Societies.
Dr. H. W. Richards	The seven Music Societies.
Mr. A. Nixon	Shorthand, &c.
Miss Marsden	Domestic Science.
Mr. W. Pearson Smith	Manual Training and Handwork.
Mr. Guy M. Campbell	Physical Education, &c.
Mr. A. J. Storey	Deaf.
Lady Frances Campbell	Blind.
Prof. John Adams	Training.

* When appointed. † Appointed by the Council.

REVIEWS AND MINOR NOTICES.

The Learning Process. By S. S. COLVIN, Ph.D.
(5s. 6d. net. Macmillan.)

We have here a curious mixture of the best that is to be found in the old and the new methods of dealing with the practical problems of school education. The great complaint against the older books was that psychology and education were kept apart. The newer complaint is that psychology is disappearing altogether, and nothing but a *résumé* of empirically obtained principles is left. In this book we have both sound theory and intelligent practical advice, though it has to be admitted that the theory is more prominently brought forward. It is really a psychological treatise with an educational bias. There is a general thesis running through the whole book: that the manipulation of consciousness is the funda-

mental problem of education. The work might quite fairly be entitled "The Incidence of Consciousness in Education." Le Bon's motto: "L'éducation est l'art de faire passer le conscient dans l'inconscient," might well stand at the head of Prof. Colvin's contribution.

Along with the element of purpose, which with Welton and other recent writers our author keeps well in view, is the distinction between the two worlds, the inner and the outer. Education may be said to be the process by which the individual absorbs and is at the same time absorbed by his environment. But Dr. Colvin is careful to avoid the dualism to which this conception is apt to lead. He tells us quite bluntly that: "The two worlds, the imagined and the real, are not finally two worlds. Eventually the imagined must be realized, and the ideal must be made a part of my concrete achievement." Underlying the whole argument of the book is the conception of the object as "in the last analysis something to which we make an adjustment." This view preserves the activity of the mind throughout all mental process. Where a certain difficulty arises in following our author is in his treatment of those reactions that precede the appearance of that form of consciousness that is usually called self-consciousness. Dr. Colvin is not very successful in making the transition from what Herbart calls the objective will or character to the subjective. It may be impossible to bridge the gulf between the objective and the subjective state, but the existence of the gulf should be acknowledged. For example, what meaning are we to attach to those *mimetic images* that Dr. Colvin tells us "are the deepest and most subtle things in our thinking"? They evidently fall within our consciousness, but do they come within the range of our self-consciousness? The mention of these images rouses an uneasy feeling that they and similar influences may determine a great deal of our thinking without coming under our control, in the sense of being amenable to our reason. Of course there is the possibility of making use of the intellect in wrong places. As Dr. Colvin remarks at a later stage, "It may be that intellectualizing what ought to be an emotional attitude is a dangerous procedure." Indeed, he adopts the position underlying the German *Bewusstseinslage*. His rendering of the term is "attitudinal feel," and he uses the conception to produce a state of uniformity that is a little bewildering to those brought up on the more cut-and-dry distinctions of the older psychology. There has always been a difficulty in marking off perception from apperception, but Dr. Colvin goes the length of accepting perception, conception, and judgment as being merely different stages of the same mental process. In his recent little book on Bergson, Mr. Carr describes this Frenchman as "the philosopher of change." But as a modern Heraclitean Dr. Colvin may claim equal rank with Bergson. However, he makes a compensating change to enable us to make ourselves at home in our surroundings. "That which best fits into experience, which most uniformly satisfies the intelligence, is the truth; and since experience must ever change, there is no truth that is absolute and that will stand the test of the ages." We are willing to accept this compensating fluctuation in truth, but in the above statement the word "intelligence" rather suggests intellect, and, if this be so, intellect and experience seem to be identified in a way that hardly squares with Dr. Colvin's general scheme.

Of the utmost consequence to educational theory is the view advanced by Jung and Freud that various early formed thought complexes are of much more importance than they are usually thought to be. Dr. Colvin points out that if their view is right, then "the crises of life are perhaps to be found in its earliest years, and the great educative problems of the race are to be solved in the nursery and the kindergarten, rather than in the high school and the university." From this it follows that the elementary teacher should rank much higher than he does at present, and further, that the necessity for consciousness in the educative process is not so great as is generally supposed. But here Dr. Colvin seems to miss the point that while the early period may determine the great ruling tendencies of life, the consciousness is the one portal by

which these great tendencies may be approached: it is the one means at the educator's disposal for manipulating forces already existing.

The reader is not to imagine that the book is entirely given up to such more or less abstract speculations. It has an intensely practical bias. We are brought into touch with school problems at every turn. Many of the chapters, notably the two on Attention, and that on "Economy in Memory and Association," are full of practical suggestions that all intelligent teachers will welcome. It is cheering, for example, to find that a professor of psychology is able to assure teachers that one of the greatest distractions in learning is to be made to sit quite still. Dr. Colvin cuts the knot of the interminable tangle round voluntary, involuntary, non-voluntary, and spontaneous attention. He recognizes merely the two kinds, active and passive, and these two will be found to serve all the teacher's needs.

Into the quagmire of formal discipline it is surely unnecessary to follow our author, though he devotes three whole chapters to what is certainly a very important stage in the development of education. But the battle is now over. Formal discipline as an active theory on the old lines has been for some time dead, though many practical teachers do not yet seem to have received funeral notices. What is left of the theory, the element of truth that has been involved in it all along, is excellently set forth in this volume.

The general impression left by the whole book is that of an extremely vigorous and well-informed treatment of a subject of great range and difficulty. Probably it will appeal more to teachers in actual practice than is usual with books dealing with such matters, for the reason that experienced teachers will be able to supply the background necessary to get the full advantage of the writer's valuable generalizations.

The Teachers' Encyclopædia. Vol. VII. Edited by J. P. LAURIE. (8s. 6d. Caxton Publishing Co.)

"Encyclopædia" is defined in "The Oxford Dictionary" as "an elaborate and exhaustive repertory of information on all the branches of some particular art or department of knowledge, especially one in alphabetical order." "The Teachers' Encyclopædia" does not pretend to satisfy this definition, and, as we pointed out in our notice of the earlier volumes, it is in fact a series of monographs on certain branches and aspects of education by "eminent educational writers, thinkers, professors, and teachers of the day." The General Index, both in what it admits and omits, indicates the character of the work. We naturally turn first to find new light on the burning questions of the day, but under "Examination," "Inspection," "Registration," "Pensions" we draw blanks. "Public Schools" is also a blank, and we find "Clifton College" and "Stonyhurst," but not "Winchester" or "Eton." "Chimney-sweeping Acts" are there, but not the Education Acts of 1870 and 1902. Of Royal Commissions there is no mention. We have "Scissors, how to hold," and "Doll's Garments" (twice), but of "Women's Colleges" there is not a trace. Under names we miss Matthew and Thomas Arnold, Edward Thring, Goethe, J. P. Richter, Pascal (Port Royal), and all recent French and American educators. Under Theory "Apperception," "Intensive Study," "Humanist," "Reformed Methods" are to seek. For some of these omissions doubtless the Index alone is to blame, but the teacher who relies on the title will be disappointed at finding no "Globe of Precepts" as in the ancient Schmid or Rein or Buisson.

The concluding volume is occupied with the history of educational thought and intended "to weld together and place in their relation to the past the many subjects discussed and the views expressed in the earlier volumes." Prof. Darroch and his assistant, Mr. Drevor, who contributes the first chapter on Greece and Rome, write what the editor claims to be a complete textbook of the subject, and, with certain reservations, we may allow the claim. The student will find a clear exposition of the main epochs and leaders of thought which might serve him as an introduction to Prof. Adams's more philosophic and abstract treatise reviewed in our last

number, but there are many lacunæ that he will have to supplement. Thus, at one end, the education of the Hebrews, which supplied the model for Puritanism, and, at the other, the renaissance of Japan, are movements in the world's history which deserve some notice. We may further complain that the bibliographical references at the end of each chapter are worthless for research. The same familiar textbooks—Quick, S. S. Laurie, Adamson, Monroe, O. Browning, Compayré—appear over and over again.

The volume ends with a miscellaneous supplement: two articles on "Training of Teachers" in Scotland and England respectively by Dr. A. Morgan and Mr. T. Rayment; "The Teacher's Library," by Prof. Adams; and "The National Union of Teachers," by Sir James Yoxall. Prof. Adams gives us a suggestive causerie, which the teacher would do well to consult if he is deliberating what books to take away with him for the summer holidays. We cannot, however, avoid contrasting it with "Bibliographie" in Buisson—an article that would fill some sixty pages of this Encyclopædia.

There are not a few misprints. Compayré appears as "Compayné," "Compayne," and "Compaire"; Bass Mallinger as "Mullingar" more than once, and the latter is credited with the barbarism *ornamentata*.

Poetry and Prose. By ADOLPHUS ALFRED JACK.
(6s. net. Constable.)

The sub-title, "Essays on Modern English Poetry," defines more exactly the contents of this volume, and a still more accurate definition would be "Lectures on certain modern English poets." It is true that there is a single idea underlying the whole, and each essay may be represented as an attempt to illustrate from a particular point what is poetry and what is not; but the formal thesis is disposed of in a preliminary lecture, modestly called a note, and throughout we miss what the title leads us to expect, a treatment of the language and rhythm of poetry as distinguished from prose. Of the seven poets thus analysed—Gray, Burns, Wordsworth, Byron, Emerson, Matthew Arnold, and Meredith—five are household words, and the Professor has purposely chosen familiar themes in order that he may bring home to every reader what he consciously or unconsciously feels about poetry. One reader, as he followed the Professor's acute, subtle, and often profound analysis, was reminded of a Platonic dialogue in which Socrates convinces an ignorant slave that he is a born geometrician. For a lecturer to credit his audience with more wits than he knows they can possess is a trick of the trade, and few readers will resent the assumption. They may, however, with some justice, object to the somewhat artificial labels attached to each name. For instance, the first label, "social or prose poetry," is wholly inadequate to characterize Gray, a scholarly recluse and a consummate artist in language. The label for Arnold, "critical poetry," is nearer the mark, and we remember Arnold's erratic definition of poetry as criticism of life; and yet to us Arnold appeals not as the *vates dubitantium*, but as the painter of still life, of description tinged by emotion, by "Thyrsis and The Scholar Gipsy," "Tristram and Iseult," and "The Forsaken Merman." "The poet as teacher" would apply no less to Wordsworth than to Emerson. Perhaps we have unduly emphasized this defect. The lecturer, like the preacher, is bound to take a text, but not bound to stick to it, and here the digressions are the most valuable part of the discourse. In the analysis of Emerson's poems he is breaking almost virgin soil, and he makes us understand why Emerson was the late Prof. Tyndall's favourite poet.

On Byron it is hard to be original, and this is the weakest of the lectures. It is difficult to reconcile "no bigger or more generous heart ever beat in human bosom" with "at bottom he was an ordinary man, exempt from hardly one of society's brassier vices. Of 'English Bards and Scotch Reviewers' we read: 'Its clangour, its 'vim' (sic), its random brutality, exactly caught the fancy of Byron's public. John Bull with a genius, he lived before John Bull was deceased.' The critic seems here infected with the Byronic style."

We have criticized freely, and the chief merit of the volume is that it provokes criticism. If Prof. Jack fails to make his readers think with him, he will have compelled them to think. He is himself a poet and no mean judge of poetry.

Pitt and Napoleon: Essays and Letters. By J. HOLLAND ROSE. (10s. 6d. net. Bell.)

This may be described as an overflow volume from Dr. Rose's "Life of Pitt." It consists of essays, dealing for the most part with particular aspects or episodes of Pitt's career, and of letters written to or by Pitt, or relating to him. It opens with an appreciation of Pitt's oratory, and goes on to discuss his relation to Lord Fitzwilliam's viceroyalty, to the Quiberon disaster, and to the occupation of Corsica, and his efforts to amend the Poor Law. Whether Napoleon really meant to invade England, and what was the true significance of Trafalgar, are examined with the care and thoroughness which always mark Dr. Rose's work. As regards invasion, his conclusion is that Napoleon was determined to make the attempt, and that his preparations were no mere feint, but that his purpose fluctuated, to some extent, from time to time. The significance of Trafalgar was that it was the starting-point of Napoleon's Continental system, which, beginning with the Berlin Decrees, led him in due course to Spain and to Russia, and eventually proved his ruin.

There is an essay on Marbot's Memoirs, in which fresh evidence of their untrustworthiness is brought forward; and there is one on Napoleon's conception of the battle of Waterloo, which seems to be due rather to the irresistible attraction of the subject than to any new light which Dr. Rose has to throw upon it. These are hardly in place in a volume which is practically a supplement to the life of Pitt. The same may be said of the interesting "Interview with Napoleon in Elba" by Major Vivian, which is reprinted. It would have been better to reserve them all for some future volume of Napoleonic studies.

On the other hand, Pitt's letters, and those to Pitt from George III, Lord Grenville, Windham, Canning, and Lord Harrowby are a most valuable addition to the biography, and one would gladly have had more of them. They often supply important links, as Dr. Rose points out, to correspondence printed in other collections, such as the Dropmore Papers. This is the case, for instance, with Grenville's letters to Pitt and Dundas in April 1800, which show how eager he was that fifteen thousand men should be sent to the Mediterranean to help the Austrians in dealing with Masséna, a step which would have changed the course of the Marengo campaign. Canning's letters are very characteristic. In one of them, after the *coup d'état* of Brumaire, he confidently predicts a Royalist restoration, Bonaparte playing the part of Monk. In November 1805 he is vehemently urging an expedition to Walcheren, for which, when it proved a failure four years afterwards, he blamed Castlereagh. In the same letter he shows impatience of Moore, as a man so careful of his military reputation that he makes objection to whatever is proposed. By the by, the editor of "Moore's Diary" is mentioned in a foot-note as Sir F. D. Maurice, a confusion of father and son; and Novossittzoff is spoken of as one of the Czar's *confidantes*.

Great Educators of Three Centuries. By F. P. GRAVES, Ph.D. (5s. net. Macmillan.)

As a *πάρρηγορ* and during the intervals of his larger work on the history of education (the third and last volume of which has yet to appear), Dr. Graves has given us this short summary (an outgrowth of his lectures, he tells us) of the lives, aims, and influence of the more important "educators" since the Renaissance, "broken lights," as it were, emphasizing the salient features of each man without any attempt at historical perspective. But, although that is all the author claims for it, is more than a mere summary. Connecting links are not given explicitly, but Dr. Graves's lucidity makes it easy for us to trace the main lines of development running through the different biographies. At the beginning there is prominent the influence of Bacon's pansophic method, put into practice by Comenius (the first exponent of the "educational ladder"), and reaching its

logical extreme in the hands of Locke. Then (in education as in philosophy) the centre of gravity shifted to Germany, where the far-reaching influence of Francke and Basedow put the theories of Rousseau and Pestalozzi into more extensive practice than elsewhere, while the growth of psychology as a basis for education, first dimly seen in Rousseau's "Emile" with its recognition of stages of development, suddenly filled the horizon when Herbart founded a system of education on a psychology he had himself worked out. We miss in this connexion an account of the educational theories of Kant, who was, after all, the first really to found education on a self-made psychology. Other names find a place also—Froebel and his kindergarten, Lancaster and Bell, and Herbert Spencer, to whom Dr. Graves gives, perhaps, less than his due. The author, who follows, where possible, the excellent method of letting the exponent speak for himself, has succeeded in condensing details without obscuring the connecting links in the chain, and we are grateful for a most useful summary. A comprehensive bibliography is appended to each life.

Local Government Handbook on Education. By H. OSMAN NEWLAND. (6s. net. Griffin.)

This Handbook supplies in a convenient form a fairly comprehensive and complete review of educational machinery in England, with chapters on education in Wales, Scotland and Ireland, and other lands. It is informative rather than critical, and is intended, as the author says, as a book of reference for "the councillor, the manager, or other officer who has to deal with education, or the parent, the educationist, or other person interested in scholastic matters." In these days of administrative change and progressive legislation it is doubtful whether it is wise to attempt to cover, in one volume, the various aspects of the educational problem which Mr. Osman Newland includes in his book. It contains a considerable amount of information of permanent value; but, on the other hand, it deals with matters, administrative and legislative, which have no security of tenure. Codes and regulations are modified so frequently that any handbook reprinting them requires an annual revision. However, the author of this handbook has conscientiously endeavoured to present, in a convenient and readable form, the many-sided developments of our educational system, and his efforts merit appreciation.

The Revolt. By PUTNAM WEALE. (6s. net. Methuen.)

A man who hates his brother and loves his brother's wife; a wife who despises her husband and adores his brother before she has so much as set eyes upon him; a dark, foreign chauffeur, and an "infamous" count blessed with the euphonious name of Jastazt—what more is needed for raw material by any novelist? As one might almost have guessed, the brother-hater is named Jasper, and the husband-despiser Jeanne. Jasper loves Jeanne and kills his brother, and that is all. Jasper, as his name implies, sneers at everybody and everything. Evidently he had a bad time with the classics, for he speaks of "what are somewhat ironically called the Humanities—a system which teaches you to know a few books at the price of never knowing men." As a matter of curiosity, we are puzzled to discover how, when, and where Jasper learnt the official method of hanging and the prison regulations thereunto appertaining—and why? Perhaps because Jasper was an engineer. As for the melancholy, dark, foreign chauffeur, so skilful was he in the handling of a car that he could drive "a high-powered Panhard" at a lively rate of speed and yet find time to turn round and look steadily at a passenger. Of Jeanne what shall one say, save to express the hope that her personal appearance was less over-elaborated than her letters to Jasper? For our own part we fear that a lady who writes of "plastered old age" and of turning country houses into "potential counting-houses" would never rest content with that complexion which Nature bestowed upon her. That "the singular story unfolded in these pages" is a chronicle of real events compiled by one who actually took part therein is a threadbare figment.

The Theory of Toleration under the later Stuarts. By A. A. SEATON, M.A. (Pp. vii, 364. 6s. Cambridge University Press.)

Mr. Seaton's volume embodies an Essay which secured the Prince Consort Prize in 1910. It gives a thoroughly competent survey of the growth of the idea of toleration from the Restoration to the death of Queen Anne. Toleration is defined by the author as "the practical recognition of the right of the individual to form and act upon his own opinions on the great issues of life generally, as against the claim of external authority to prescribe limits to thought and practice." Mr. Seaton gives an admirable summary of the literature of the period that touches the question; and from this it is apparent how much and how long the true issues were obscured by political prejudice. A general review, and some appendixes which include a summary of the principal Penal and Test Acts between 1660 and 1714, bring to a conclusion a volume which will be found invaluable by historical students.

The Castles and Walled Towns of England. By ALFRED HARVEY. (7s. 6d. net. Methuen.)

Now that local topography is recognized as an important branch of geography teaching, this latest edition to "The Antiquary's Books" should find a place in every teacher's library. For the particulars of individual castles the teacher must consult Sir John Mackenzie's or Mr. D'Auvergne's volumes or the "School Series of Counties" issued by the Cambridge Press; but here he will find a general account of their architectural development, an explanation of their respective sites, and of the structural modifications that converted them from fortresses to residences. The last two chapters cover comparatively new ground: the circumvallation of all the walled towns of England is indicated and, in the case of the more important—as York, Southampton, Winchester—elaborated. There are forty-six illustrations, sketches, photographs, and plans.

Old Greek Folk Stories. Told anew by JOSEPHINE PEABODY. (2s. 6d. net. Harrap.)

To tell effectively twenty-one of the most famous Greek myths in what would be the equivalent to as many pages of *The Journal* is an impossible feat, and it is only in the simpler stories, as in "Arachne" and "Pyramus and Thisbe" that the author succeeds. The tale of Oedipus is told almost as briefly as the Argument to a Greek play, and the variants from the Sophoclean myth are not an improvement. Here Laius, not Jocasta, gives the babe to be exposed, and the herdsman leaves him hanging to a bough by his heels. Oedipus is driving in a chariot when he meets Laius on the mountain pass, and Laius' driver provokes him by killing one of his horses. "Jocasta died and Oedipus took the doom upon himself and left Thebes." So the tale ends. Of the apotheosis there is not a word.

Burke's Speech on Conciliation with America. By F. G. SELBY. (1s. 6d. Macmillan.)

The reissue of Mr. Selby's edition of this famous classic in a separate form will be welcome to those teachers who wish to take it up with their classes apart from the other American speeches. It will be especially welcome to teachers in the United States, where this statesmanlike treatment of the relation of the colonies to the Empire has for a long time been a required book for admission to the Universities.

Outline of German Grammar. By A. E. WILSON. (1s. 6d. Frowde.)

Condensed compendiums of grammatical principles are becoming quite common now, and have a distinct mission in facilitating the teaching of the average boy. It is of great assistance, especially in revision, to be able to require of the pupils all that is in the textbook as essential to knowledge, provided the application is understood clearly. We like especially in this book the treatment of prepositions, of model auxiliaries, and the classification of verbs, taking the object in different cases.

Geometry for Schools. Vols. I-IV. By W. G. BORCHARDT and A. D. PERROTT. (3s. 6d. G. Bell.)

This is one of the best of the new school geometries, framed for teaching according to the newer methods. There are a considerable number of new and original methods for presenting geometrical principles not ordinarily found in such textbooks—as, for example, in the treatment of loci, algebraic formulae, areas, and circles. Especially interesting is the treatment of the circumference and area of the circle on pages 282-283. A faithful use of this book will give the pupil a broad and practical knowledge of the subject.

A Lyttel Booke of Nonsense. (3s. 6d. net. Macmillan.)

New rimes for cuts at least four hundred years old, so "R. D." informs the reader. The cuts are quaintly comic, and enhance the wit of the limericks, mostly topical.

- "There was a young housemaid at Ashdown
Who strained herself putting the sash down;
Being duly insured
She was months being cured,
But the doctor insisted on cash down.
- "There was an old lady of Nice
Whose home was a haven of peace;
But they all got so warm
Over Tariff Reform
That they had to call in the police.
- "There was an old fellow of Leek
Who believed in compulsory Greek,
As from being at college
He'd no other knowledge,
The reason was not far to seek."

We only wish we could reproduce the cuts to match.

The Clarendon Press send us four *Wall Pictures* enlarged from the coloured illustrations by H. J. FORD to Messrs. Fletcher and

Kipling's "School History of England." The pictures, quite apart from their historical significance, are works of art, and would adorn the walls of any schoolroom. We admire in particular "Prince Rupert leading his Cavaliers out of Oxford." The price is 4s. 6d. net, or 16s. net for the set.

The Teachers' Book of Constructive Work for Elementary Schools. By ED. J. S. LAY. (3s. 6d. net. Macmillan.)

The object of this book is to provide applications of handwork to ordinary school subjects. It is eminently practical, and the illustrations are from photographs of objects made by children in a County Council school. History and geography are the subjects that best lend themselves. The historical tableaux in paper and cardboard and the floor models, built up with wooden blocks covered with paper, representing geographical scenes, are most effective.

Secrets of the Hills. By STERLING CRAIG. (3s. 6d. net. Harrap.)

The elements of geology are imparted in the form of *Reisebilder*. A schoolboy explores a lead mine and a coal mine; he visits Dunbar and compares it with Tantallon Castle; he walks up the Devon Valley from Dollar to Glen Quey, and discovers how the reservoir has been made. Throughout his travels he is accompanied by his guide, philosopher, and friend the Geologist, who suggests the problems to be solved and solves them. The machinery of the story is slight, and some boys will be inclined to resent it as the gilding of the pill; but there is no trace of the priggish pedantry of Mr. Barlow, and the explanations are simple, lucid, and well within a boy's comprehension, and the numerous woodcuts form a graphic commentary. There is, moreover, a literary flavour about the book which will recommend it to older readers who are not geological students.

The Monkey Folk of South Africa. By F. W. FITZSIMONS. (5s. net. Longmans.)

Mr. Fitzsimons is Director of the Port Elizabeth Museum, and he has cast in a popular form the natural history of the monkeys represented in his museum. As in Mr. Kipling's "Jungle Book," the beasts tell their own tales, and we doubt not that for all the author has good authority; but this is not a bow that every one can bend, and when the Chacma Baboon informs us that the prickly pear is an exotic introduced from Mexico, or when the Mokoli Lemur warns the city arab against cigarette smoking and bids him go out into the bush and observe the wonderful works of the Creator, the lecturer peeps out behind the animal mask. In spite of this obvious defect, the animal life of South Africa is well portrayed and the narrative is well illustrated. We were not aware that the French *guenon* meant "one who grimaces," or that there is a Greek word *Colobos*, meaning "docked."

Jules Verne: Martin Paz. Edited by W. M. POOLE and E. L. LASSIMONNE. (1s. 6d. Murray.)

A thrilling story of adventure dealing with the relations between Spaniards, Indians, and half-breeds in the City of Lima. The battles, murders, and hairbreadth escapes, of which this book is full, provide more suitable reading for boys than for girls; but it is unfortunate that the old Jew money-lender in it plays such an ignoble part as would make us reluctant to put it into the hands of either. The editing is very thoroughly and carefully done and takes the form of interleaved *Questions de Sens* and *Questions de Grammaire*, with a few explanatory notes at the end entirely in French. The grammatical questions deal chiefly with verbs, adverbs, and personal pronouns, or suggest parallel constructions. For the most part they furnish very useful exercises, but every now and then they tend to be too obscure to be really useful—as, for example, "Mettez à la même personne du présent le contraire de succéder"; "Elle ne pouvait lui appartenir." The *Questionnaire* is full and good and well varied in form.

Four French Adventurers. By STODDARD DEWE. (2s. net. Nelson.)

These stories of "born scamps and wives such as scamps have" (the author's description) are taken from the Napoleonic era. That of Charles of Navarre, the putative Dauphin, is familiar, but M. Collet Pontis de Sainte-Hélène and the Marsilly pair will be new to most readers. The old-fashioned woodcuts reproduced from Armand Fouquier's penny numbers match well these veracious picaresque tales.

Problems and Exercises in British History. Vol. III, Book D: *The Second Anglo-French Struggle, 1688-1837.* By J. S. LINDSEY. (3s. 6d. net. Hefler.)

The latest volume in this well known series of cram-books for history examinations has the virtues and faults of its predecessors. Undoubtedly they do teach by illustration the proper way to attack questions in history in order to satisfy the examiners, but it is to be questioned whether the practice of this method promotes the best aims in historical teaching.

"English History Illustrated from Original Sources."—*From the Earliest Times to 1066.* By SARA MELHUISE. (2s. 6d. Black.)

This volume, covering the Roman and Saxon occupation of England, makes this excellent series of source books complete down to the beginning of the Hanoverian dynasty. When properly used to supplement, and not to supplant, the standard textbook, such *subsidiæ* are of very great value to the pupil in making vivid to him the past and in acquainting him with the contemporary sources from which the true facts of history have been garnered. This is one of the best of such series of books for secondary-school pupils.

A Study of Words. By E. M. BLACKBURN. (3s. 6d. Longmans.)

The title is a misnomer, or, at any rate, misleading. We anticipated a treatise or essay on etymology, and we find instead a dictionary with derivations—or, if the author prefers it, let us say a select glossary. The principle, he informs us, that he has kept in view is "the selection of such materials as seem calculated to help young minds and furnish food for thought." There are sermons in stones and food for thought in any dictionary, but we cannot say that this one promises to be helpful. Assuredly it will not teach the rudiments of philology. Against most words is placed the Greek, Latin, French, or German word from which it is derived, or rather with which it is most nearly related; but there is nothing to show from which of these languages it came into English or what changes it underwent. The young mind will undoubtedly conclude that "egg" is derived from Ger. *ei*, and this from Lat. *ovum*; "landscape" from *Landschaft*, "duty" from *devoir*, &c. Nor will "young thought" be much helped by bare statements, as that "cockney" is lit. "cock's egg," that "parson" is lit. "person," &c. For modern words, such as "argon," "radium," "eugenics," "pragmatism," "a strike," "blackleg," he will search in vain, and the definitions of words are too meagre to be of any real assistance.

The Girls' School Yearbook (Public Schools) 1912. (3s. 6d. net. Yearbook Press.)

Now adopted as the official book of references by the Head Mistresses' Association, this annual is in its seventh year. Its size has been increased by the addition of secondary schools for girls under the control of the London County Council, and of the Kent County Council. Lists of University Scholarships and Honours gained by women in 1911 have also been added.

Grieben's Guide Books: Switzerland. (3s. net. Williams & Norgate.)

This might well be called the "A B C Guide to Switzerland." It gives in the smallest compass the maximum of information as to routes, inns, rates, and objects of interest. The maps are plentiful and clear, and it will go conveniently into the breast-coat pocket. It is not adapted for the mountaineer, but the ordinary tourist will find all he requires.

To travellers on the Continent we can recommend Messrs. Marlborough's *Travellers' Practical Manual*—English, French, German, Italian. It gives in conversation form the everyday phrases that are essential for comfort, and the needs of the cyclist, the motorist, and the photographer are not overlooked. There is besides a vocabulary of common words. The price, according to binding, varies from 1s. to 2s. 6d. net.

FRENCH CLASS BOOKS.

Second French Course. By A. R. FLORIAN. (2s. 6d. Rivingtons.)

The "Second French Course" preserves, as Mr. Florian claims for it, the essential features of the "First," with the difference that the lessons are now based on a continuous narrative. This means a gain in interest to the pupil, and the choice of "Les Trois Mousquetaires" is a happy one, as it is a story certain to appeal to children of the age for which the reader is intended—*i.e.*, from thirteen to fourteen years. The edition is a most thorough and systematic piece of work, extremely useful from the teacher's point of view. The text, which is only slightly abridged, occupies the left-hand page, and opposite is a detailed *questionnaire* for oral work, followed by an analysis of any new grammatical points to be gained from the passage read. These are summed up and tabulated in a few pages at the end, headed "Grammar," in which many of the examples are again drawn from the text and referred back to it. This Grammar does not profess to be complete, but should be very useful as a means of recapitulating the year's work. Especially good is the help given in the use of the infinitive and, among the exercises, those on the personal pronouns. On the other hand, there are one or two weaknesses—the rules on the subjunctive seem to be unnecessarily subdivided by the putting of *bien que* and *quoique* into a different category from the other conjunctions given, and again, in the demonstrative pronouns, *cela*

is given as "referring to things"—surely a most misleading statement. The grammar is entirely in English and the exercises nearly all set in that language; but, though reformers will feel that more might have been done in French, it must not be forgotten that there are still a great many teachers who prefer to do all their grammar work in English. The few poems are popular and well chosen, and altogether the book strikes us as worthy of warm recommendation.

Ch. Nodier: Contes de la Veillée. Edited by C. G. HOLLAND, M.A. (8d. Blackie.)

Though there is nothing in the description of this selection of Nodier's "Contes" to distinguish it from others of the "Longer French Texts," it is evidently meant for older pupils than most of the other books of the series. There is no *questionnaire*; the retranslation exercises are pieces of continuous prose of some difficulty, and the vocabulary omits words similar in form and spelling to the corresponding English. Moreover, the style and ideas, if not the actual words, of all but the last of the stories are unsuitable for young children, notably the tale of the half-idiot Jean le Bas-Bleus, with his prophetic hallucinations, and that of the desolate mother who sees visions of the Virgin promising her that she shall find her son again. But the selection offers good examples of Nodier's sympathetic and varied powers of story-telling, and there is much to attract older pupils. The notes are brief and to the point, and the fact that one or two of them are in French makes one regret that the experiment should not have been persevered in, since so much help had already been given in the mother-tongue. We notice a good many misprints: *que* for *qui* (page 7, line 7), *ses phrase* (page 9, line 16), *nous a* (for *y*) *suppléerons* (page 31, line 23), and others.

"Dent's Classiques Français."—*Les Pensées Choies de Pascal.*

With a Preface by M. EMILE BOUTROUX. (1s. 6d. net.)

We welcome each new volume of Messrs. Dent's delightful "Classiques Français." They are so daintily got up and of such a convenient size as at once to prove attractive, and there is nothing of the school edition about them. M. Boutroux's admirable preface to the "Pensées" is just what is needed to set the reader on the right path, and, by his clear exposition of Pascal's fundamental view of mankind, he gives the key to much in him that is puzzling from its very originality. The "Pensées" themselves have been grouped into twenty-four chapters, leading up from the questions of the value and proof of true religion to the culminating facts of Christianity, and thence to the recognition of man's inherent weakness and sinfulness. The more fragmentary of the "Pensées" have been omitted, and the edition is certainly one to bring this great thinker more within reach of the ordinary intelligence.

Grammaire Française Pratique. By W. G. HARTOG, M.A. (3s. 6d. Rivingtons.)

There has been a real need in English schools for an advanced grammar written in French to meet the difficulties of English pupils, and this need Mr. Hartog has gone far towards meeting in his "Grammaire Pratique." Moreover, he has written it entirely on the inductive method, invariably giving a large number of examples first and basing the rule on them. In Part I, which can also be had separately as an elementary grammar, the formulation of the rule is left to the learner, who can only find it ready made by reference to a separate section of the book. In Part II, where the work is more advanced, the rules are given, but again only after they have been illustrated by numerous examples. Throughout both parts are excellent exercises in French, providing thorough drill in the rules so mastered. Especially noteworthy are the exercises on the verbs, both on the actual forms and on the use of moods and tenses, and those on the pronouns, which are well varied in form and difficulty. Where so much is good we are surprised to note the omission of one or two points of syntax which we should have expected to come within the scope of such a grammar, as it professes to carry the pupil up to the standard of the London Intermediate. Nothing, for example, is given on the past participles beyond the three elementary rules. Again, the rule for the object of *faire* followed by an infinitive is entirely omitted, as are also all questions of the spelling and use of *quelque*, though an exhaustive study is made of similar difficulties in the case of *tout*. We should, further, much like to see the book provided with a good subject index, so that it might serve as much for a book of reference as for the straightforward learning of grammar. On the whole, we can strongly recommend it to all teachers—of any but the most advanced forms—who are anxious to work entirely in French and at the same time to train the children in thoroughness of knowledge and clearness of thought.

Senior French Unseen. Edited by L. J. GARDINER, M.A. (1s. University Tutorial Press.)

This book of extracts, as we learn from the preface, is specially

intended for the use of candidates for the Cambridge Senior Local Examination, and it should prove very useful in preparing for a paper two-thirds of which consist of pieces for translation into English. The extracts are well chosen, of just about the right standard of difficulty, interesting, and sufficiently independent of their context to be readily understood, provided the knowledge of French is adequate. Over a hundred pieces of prose are followed by some sixty of verse, which are, quite rightly, relatively easier than the prose as to vocabulary, while providing the harder problems of metrical construction. Some brief notes on French versification are prefixed to the whole and should prove useful. Surely, however, it is misleading to say that the *enjambement* is strictly forbidden in the classical alexandrine: even if it be correctly defined as "the continuance of meaning of one line into the next in such a way as to render a pause impossible," the word is certainly used more loosely to mean the carrying on of a sentence from one line to the next, as in Corneille's

"Tout autre que mon père
L'éprouverait sur l'heure,"

or Molière's

"et mes tendres soupirs
Vous ont assez prouvé l'ardeur de mes desirs."

Mémoires d'un Collégien. Par ANDRÉ LAURIE. Edited by O. B. SUPER. (1s. 6d. Heath.)

A capital story of a French schoolboy capably edited. The vocabulary, too often *fait à la diable*, is here full and exact. Our only criticism is that the English of the exercises is not sufficiently idiomatic: "He made a real competition among the pupils. The teacher gave me a division in which I did not fail." The story is judiciously abbreviated. The fortunes of the tame lizard are delightfully told, but the plot to make the porter drunk savours rather of "Stalky & Co."

SAFE NOVELS.

The Big Fish. By H. B. MARRIOTT WATSON. (6s. Methuen.)

A man called Raymond once found a hoard of treasure, which had come to be known by the name of "The Big Fish," buried by the Incas. Forced by circumstances to re-hide it once more, he barely escaped with his life, and fell among rogues. The rogues get hold of the clue to the whereabouts of the treasure, as also, by mere chance, does the hero, Poindexter. Concerning the adventures of the latter and his friend Cassilis, of two ladies with whom they respectively fall in love, and the direful perils which they encounter by reason of the fell and fearful machinations of the rogues, the author has much to tell us. Not a day passes but is stained by murder, torture, treachery, and other customary pleasantries of the professional rascal. But *magna est virtus et praevalent*; and so in this case it did, for Werner kills Houston and Houston kills Werner, after those arch-knaves have respectively disposed of the remaining members of the gang, and the Big Fish remains to be found. And all these things happen in a conveniently remote spot somewhere near the Andes or the Cordillera or the Montana, we forget which; wherefore we doubt whether any reader will find sufficient information in these pages to make it worth while to equip a fresh expedition in the hope of landing the Big Fish at last. All the same, one may spend a pleasant evening in the company of rogues as dastardly as ever stepped upon the stage of the novelist's fantasy. The humour, such as it is, is supplied by an irrepressible cockney who rejoices in the name of Coop.

The Sign. By Mrs. ROMILLY FEDDEN (Katharine Waldo Douglas). (6s. Macmillan.)

There are many well-authenticated instances of religious hysteria reaching such intensity that the subject, as the result of contemplated brooding upon the Crucifixion, produced in himself or herself the stigmata of which we read in the life of St. Francis of Assisi. So was it with Mönik Bosek. Mönik was a gentle little Bretonne maiden filled with a sense of the wickedness of her fellow-villagers. As the price of their spiritual redemption she was persuaded that she must die by crucifixion. On the Jour des Morts she died. "And Mönik lay, as if upon her cross, in the place at Le Kloar, the nail-prints in her hands. The Beggars found her. They, who follow the Seven Great Ways, are wise beyond seeing. They knew that it was well." The sombre figures of the Beggars trail across the wistful background of the tale ever and anon. In the foreground stands Samuel Sturd, the seriously inclined young painter for whom "Art for Art's sake" is anathema. He, like Mönik, becomes endowed with the passion of service. In the little square lies Mönik dead. "He saw the gleam of a golden crozier, the

scarlet of cassocks, and to him came the tinkle of a bell. Madame met him at the threshold. She looked old and shaken. She nodded at the sound. 'The Church, monsieur, coming to claim her,' she said in a harsh, tired voice. 'Too late.' Sturd shook his head. 'Nothing is ever too late, madame.'" Other characters there are, every one of them skilfully drawn: Walden, the successful painter, wedded to his art, recking not of the anguish of the gloriously beautiful Tekla Dorven, whom he paints, and wins, and leaves to her fate; Gower, the painter of platitudes; Jaume, the cobbler, and Yves, the sweet little brother of Mönik Bosek. And over all floats that mystic, sweet veil of tenderness and pity which one used to think the peculiar attribute of Maurice Maeterlinck.

COLONIAL AND FOREIGN NOTES.

UNITED STATES.

The report of the Commissioner of Education for the year ended June 30, 1911, is a rich mine of information upon the progress of education in the United States and elsewhere. A survey of what was achieved at home in the first decade of the century shows a remarkable advance. We quote verbatim: "Never have the people shown more clearly their interest and faith in education and in schools of all kinds and grades. Within the decade the average length of the public-school term in the country as a whole increased twelve days, or $8\frac{1}{2}$ per cent. The average number of days attended by each child enrolled in the public schools increased $13\frac{1}{6}$ days, or a little more than 13.7 per cent. The number of teachers in the public schools increased nearly 20 per cent. The average monthly salary for male teachers increased about 35 per cent.; for female teachers about 25 per cent. The value of all public-school property increased more than 75 per cent., the income of public schools more than 83 per cent. . . . The number of public high schools in the country increased more than 70 per cent.; the number of public high-school pupils more than 76 per cent. The appropriations of public funds for normal schools for the education and professional training of teachers increased 140 per cent. The number of students in professional courses in public normal schools increased 68 per cent. The productive endowments of Universities, colleges, and schools of technology increased 65 per cent. The incomes of such institutions, exclusive of additions to endowments, increased 173 per cent. Professors and instructors increased 61 per cent., and the number of students 67 per cent. The standards of high schools and colleges have been raised perceptibly. . . . Within the decade the percentage of illiteracy for all classes of people of the United States has decreased from 10.7 per cent. to 7.7 per cent.; for native whites from 4.6 per cent. to 3 per cent.; for coloured people from 44.5 per cent. to 30.5 per cent."

In England there has been talk of a University for Brighton, to be followed, we suppose, by sister Universities at Shoreham and Worthing. The educated people of the United States would give a star from the national banner to get rid of a few score of their Universities. In the Educational Directory appended to the Report more than one hundred and sixty academies described as Universities are enumerated. The worst offender seems to be the State of Ohio with its seventeen Universities; New York and Tennessee have each ten; even in Texas there are six. Is it astonishing that diplomas conferred by American Universities expose those who use them abroad to ridicule, or even to the attentions of the police? The number of American "Doctors" in England has occasionally been reduced by the public hangman. We regret to learn from the report that the number of institutions bestowing degrees of uncertain value has increased rather than decreased in recent years. The terms upon which a "D.D." may be got from Odessa University, Washington, will be seen from a

letter, dated September 21, and addressed to the assistant pastor of a large church in Washington, D.C.:—"Dear Sir,—It has been represented to me that you are well entitled to the Degree of Doctor of Divinity, by reason of your work in the Congregational Church. If you care to send ten dollars for our library and answer a few questions, a Diploma for that Degree will be sent you. A Fine Diploma hung on the wall of your Study will enlarge your reputation." An English agent for the distribution of these Odessa degrees is named in the report.

Yet in the true Universities and professional schools higher education shows orderly development. Of more interest than the details will be a note—we jump from the top of the ladder to the bottom—on the progress of the kindergarten movement. In 1900 there were about 250 cities (towns having a population of 4,000 or more) in which public kindergartens were maintained; in 1909, the latest year for which statistics are available, the number of such cities was about 400. The teachers rose from 3,326 to 5,887; the children, from 131,657 to 185,471. In the South the kindergarten is seldom included in the school system; the North is more progressive. Some of our readers will be glad to have the paragraph of the report, which we reproduce:—"It has been said that, while the philosophy upon which the kindergarten was founded is German, the development of this form of school work has come to be peculiarly American. To this may be added the fact that the American *Kindergärtner* is rarely able to understand the more or less mystic philosophy of Froebel, and has therefore shaped her work to suit the practical life of the American people. It is to be hoped that this tendency will not go too far and rob the work of that splendid element of idealism which should be the heart and soul of all kindergarten training. To meet more successfully the demands implied in the name, the work must not be allowed to degenerate into another form of indoor teacher-directed activity."

When a banquet is rich, it is unseemly to complain that certain dishes are lacking. We may say, however, that we are sorry the report does not contain data from which the extent to which the high schools are being vocationalized might be estimated. But we learn that they "are more effectively reaching all classes and adapting their work to meet the needs of the masses in a very significant and vital fashion." The number of high schools increased by more than 70 per cent. in ten years; of teachers in them by 100 per cent. If we compare private with public high schools we find that the number of private secondary schools has decreased during the decade, and that the number of teachers has increased by only about 10 per cent. The number of students in private high schools has increased by only about 7 per cent. Of the high schools in general it is stated that only a small percentage of the pupils complete the four years' course. Are not many of them, then, really what in Europe would be called higher primary? We are curious to know how far the true secondary schools are being vocationalized. The point is important; for Mr. Pease and the Board of Education have decided, we are told, to vocationalize, at least in some measure, all our secondary schools! We cite Mr. Pease's words as reported in the *Times* of June 7:—"One of our first objects is to widen the character of the education in our secondary schools, and to give it an increased commercial, industrial, or agricultural bias, according to the needs of various localities." Thus Eton, being in a district mainly agricultural, will study artificial manures instead of chemistry; Harrow, nearer to the City, will concentrate its strength on book-keeping! Yet educated opinion in Germany, Austria, France, and England is strong for the defence of liberal education—to injure which in England were the one inexpiable offence. We need hardly repeat that our wish is to entrust vocational instruction, so far as is possible, to continuation schools, without drawing, however, too sharp a line.

GERMANY.

The Prussian Kultusministerium has issued regulations upon the means to be used for the maintenance of discipline in higher girls' schools. We summarize them briefly. The first aim to prevent the girls from committing offences. But offences will come. The head master must look to it that there is some uniformity in the application of punishment, when punishment has become necessary; and it is the more imperative that he should bring his assistant teachers to employ a moderate and graduated scale of punishment, since with girls periods of detention (*Nachbleibstunden*) are not permissible. The punishments that an assistant teacher may inflict independently are reprimand with entry in the class-book and reprimand with written notice to the parents. The first form of reprimand is called *Rüge*; the second, *Tadel*, and this is

entered in the girl's half-yearly report. A more severe disciplinary measure is a reprimand agreed on by the class teachers in conference, and communicated by the head master to the parents. The next step is the threat of expulsion; the last, expulsion. No form of corporal punishment is allowed, nor may any teacher rebuke a girl in words likely to wound her *Ehrgefühl*. An assistant teacher may not order a girl to come to his or her house.

We do not usually mention books in our foreign columns. But, as we have written in these notes about religious instruction in Germany, we may remind our readers again of the *Evangelisch-theologische Bibliothek* (Quelle & Meyer, Leipzig). Of the two volumes of the series that we have before us, "*Der Brief an die Hebräer*," by Prof. Seeberg, of Rostock, will be valuable to the teacher who is reading the "Epistle to the Hebrews" with a Sixth Form; and "*Dogmengeschichte der alten Kirche*," by Prof. Wiegand, of Greifswald, invaluable to those whose business is with Church history. We refer to these books here because they suggest that religious instruction in Germany is at once more liberal and deeper than instruction in England.

In Germany, as in England, cinematographic theatres are springing from the ground like mushrooms, and in the lower social strata life is incomplete without "the pictures." The nature of the exhibitions causes anxiety in pedagogic and other circles, for what is shown is generally sensational and often indecent. In Württemberg the new Director of Police asks for authority to establish a central office for the examination of films before they are used. Prussia, too, is awake, and the *Kultusminister* has issued a decree (*Erläss*) in reference to the visiting of cinematographic theatres by school children. The exhibitions at these theatres, says the Minister, are often as pernicious as the *Schundliteratur*, against which war is waged. The visiting of them must be placed under the same restrictions as the school lays on the visiting of dramatic and musical performances.

AUSTRIA.

In view of Mr. Pease's threatened attack on liberal education in England, an article by the Vice-President of the Austrian Reichsrat, E. Pernerstorfer, in the *Sozialistische Monatshefte* is of much interest. It deals with the value of *die antike Bildung*. Mr. Pease will find that the Vice-President, a Socialist, not only approves of liberal education, but even defends the *Gymnasium* and its Greek. We translate a few words: "Latin and Greek are inseparable; both are needed to reveal ancient life, the significance of which for human culture is so immeasurable and fundamental that we were poor to the veriest beggary were it removed from the history of mankind." A Socialist leader in England has likewise claimed classical and mathematical education for the child of the working man.

There is nothing that they do not urge us to teach in schools. Something pretty and useful the children of Austria are now to be taught. A Ministerial decree (Z. 14.145) relates to the diffusion of a knowledge of the Alpine signal of distress (*Notsignal*). The German and Austrian Alpenverein has called attention to the fact that since 1874 a uniform signal has been recognized. The climber in distress gives a sign six times within a minute and at regular intervals; then there is one minute's pause, after which the six-times-in-a-minute sign is repeated; and so on until help comes. The sign may be given with a flag (e.g., a fragment of clothing attached to an Alpenstock or ice-axe), with a lantern, by raising and lowering some object such as a board, or by flashes from some rude form of mirror. This is the signal that is to be made known among the pupils of Volks-, Bürger-, and Mittelschulen, Girls' Lyceen, and commercial and nautical schools. It will be observed that in Austria the children are being taught to help in relieving distress when it is signalled. In England they are holding out signals of distress, and the Board of Education puts the telescope up to its blind eye.

INDIA.

Baroda, with compulsory education and progressive tendencies, is always an interesting State. The Report for 1910-11 indicates continued advance. This year we confine ourselves to a notice of what is being done for the education of women—still called in some Education Departments "females." The number of girls' schools at the end of the year was 347; in them there were 26,346 pupils, against the 24,495 of the year 1909-10. These figures do not include the girls learning along with boys in mixed schools, who numbered

28,083, against 21,488 of the preceding year. The total number of girls attending school at the end of the year was 54,479, against 45,983. These figures show that the number of girls going to school has increased satisfactorily during the year owing to the greater vigilance in registration and stricter enforcement of the Compulsory Education Act. A Lady Inspector is busily at work, and more are to be appointed; at present in remote places the girls have to be examined by men Inspectors. Zenana classes impart instruction to women who cannot attend regular girls' schools owing to the pressure of domestic duties or to the marked disparity between their age and that of the small girls. Reading, writing, casting accounts, needlework and embroidery are the chief subjects taught. The classes are held in the afternoon from 2 to 5 p.m. Embroidery, drawing, and practical art of cooking as subjects of domestic science are taught in six girls' schools. Most schools teach needlework, and tailors are engaged in teaching sewing during school hours. Music is also taught in three schools and to the scholars of the Women's Training College, which continues to flourish, there being in it 69 women during the year under report, against 44 in the preceding year.

BRITISH COLUMBIA.

During the past few weeks Miss Ravenhill has been delivering two series of lectures on "Child Study," one series given to the Normal School students, the other attended by the teaching staff of the Vancouver City Schools. Those who knew Miss Ravenhill's work in England will not be surprised to learn that her addresses were full of fruitful suggestions, and the City Educational Authorities showed alike their wisdom and their progressive attitude in securing the services of so notable an authority.

Much interest is being taken just at present in the preparations for the new University of British Columbia, which, according to the Minister of Education, is to begin its work in 1913. Convocation has been summoned to meet at Victoria in August next, but the University is to be located on the mainland. Its home is to be Point Grey, the western residential suburb of Vancouver, and here it will occupy a magnificent site of many acres, situated on a slight eminence and overlooking the Gulf of Georgia. For situation, it will probably be unsurpassed, facing the healthful breezes from the Pacific on one side, and the most majestic mountain scenery on the other, while at its back lies the thriving industrial city of Vancouver, with her 150,000 inhabitants. Generously endowed by the Government, the classes are to be free, so that British Columbia will possess a complete system of free education from the elementary schools to the University—something unique, even in these days of rapid educational advance.

Continuation work is making rapid strides here as elsewhere. As is only fitting, Vancouver, the largest city in the province, has shown worthy zeal and enterprise in making provision for this much needed development of educational work. In the annual report of the School Board, it is suggested that, "in connexion with the continuation schools, a Special Committee be formed, with power to add to their number from Committees of the Board of Trade, industrial associations, and other bodies interested in this work, so that the efficiency and usefulness of the continuation classes may be still further promoted." Instituted only two years ago, this branch of educational activity bids fair to become one of the most effective and useful contributions to the needs of the city, and a similar policy is being adopted in other cities of the province.

Most platform speakers agree with Talleyrand in pronouncing public schools as detestable, with or without the Prince's qualification, and it is an agreeable variety to hear them belauded by a philosopher as the best of all possible educations in the best of all possible worlds. At the Eugenics Congress Mr. F. C. G. Schiller confessed that the system was non-intellectual and turned on the two poles of scholarships and athletics. But scholarships were the best of stimulants, appealing to the two motives of competition and the love to excel. A First in Greats was valued by Jowett at £8,000; but a "Blue" was a greater asset and a much greater advertisement than a First for a schoolmaster, a lawyer, a business man, or even a clergyman. Its market value Mr. Schiller did not venture to estimate.

CORRECTION.—Amongst the members of the Executive Committee of the Head Mistresses' Association, for Miss M. F. Holland, Graham Street, read Miss A. R. Morison.

UNIVERSITIES AND SCHOOLS.

LONDON.

The momentous decision of the Senate of the University of London in favour of the Foundling Hospital site for the new headquarters of the University is the first step in a reorganization which will have a great effect on education in this country and in the Empire at large. The approved site has obvious advantages. It is spacious—a compact site of nine acres is not easy to find in the middle of London—it is free from dust and noise, the existing building is substantial and adaptable for certain University purposes, and it is conveniently situated in reference to the railway system and the great London institutions. An indirect advantage, the removal of the foundlings to the country, is certainly not the least important. A great opportunity is offered to the Government to do something handsome for a University which, whatever faults it may have, has always been true to democratic ideals. As to the wealthy benefactors whose money, Lord Haldane has hinted, may not now be available, we can only wait and see. The "ideal" site behind the British Museum has gone by the board, but any true friend of University education will recognize the right of the Senate to select a site most suited to the needs of the University which they govern.

The National Union of Teachers has issued to Local Education Authorities and others concerned an official letter and memorandum on the possible abolition of external degrees in London University, containing draft resolutions protesting against any such abolition. The objections are cogently stated, but we do not notice any reference to the effect of the external system in deterring students from seeking a University education in its complete sense. Lord Rosebery did well in his opening address at the Congress of Universities to call attention to the Empire's need for men. A vast amount of effort has to be expended before a sufficient supply of real University students is forthcoming. Is it not, for example, astounding that the medical profession—in spite of the fact that medical schools are subsidized to the extent of thousands of pounds by the State, and the profession under the new Insurance Act is indirectly subsidized by the State to the extent of millions of pounds—is practically closed to any boy or girl whose parents cannot find £1,000 to pay for his or her professional education? But in suggesting that much earnest thought must be given to the selection and teaching of students, we should hesitate to advocate the peremptory abolition of the system of examination for external degrees, which does serve in special cases a most useful purpose in our educational system.

A decision has now been reached by the University College Committee as to the action to be taken in consequence of the death of Miss Rosa Morison, who had held the office of Lady Superintendent to Women Students since 1883. It has been decided to appoint a Tutor to Women Students. Miss Winifred Smith, B.Sc., formerly 1851 scholar and a former student of the College, has been appointed to this office, upon the duties of which she will enter as from September next.

KING'S COLLEGE FOR WOMEN.—The Senate has authorized the issue by the College of an Appeal in connexion with the efforts to obtain a larger site. The Readerships which have been instituted in the subjects of History and English Language and Literature have not yet been filled up; it is hoped that the appointments will be made in the course of next term. In Home Science and Economics Miss Janet Lane Claypon, M.D., D.Sc., has been appointed Lecturer in charge of the Department of Hygiene and Physiology. The scholarship for the three-year course in Home Science and Economics has been awarded to Miss Phyllis Garbutt, Croydon High School for Girls.

SCHOOL OF ECONOMICS AND POLITICAL SCIENCE.—Miss Mabel Craven Buer, B.Sc. (Econ.) London, has been elected to a Hutchinson Research Studentship of the value of one hundred guineas a year for two years. Hutchinson Medals for research have been awarded to Miss Olive Jocelyn Dunlop for her thesis on "English Apprenticeship and Child Labour," and to Mr. Ivan Gwilym Gibbon for his thesis on "Unemployed Insurance." Sir Harry Johnston, G.C.M.G., and Mr. H. D. Harben have been elected Governors.

WESTFIELD COLLEGE.—Entrance scholarships have been awarded as follows:—Christobel Howard (Nottingham High School) and Doris Stead (Thoresby High School), Drapers' Company's Scholarships of £50 a year for three years. Dorothy E. Marsh (James Allen's Girls' School) and Elsie V. Edgley (St. Saviour's and St. Olave's Grammar School), Goldsmiths' Company's Scholarships of £50 a year for three years. Florence A. Ascott (Blackheath High School), Mr. Story's Scholarship of £50 a year for three years. Agnes R. Cooper (Bath High School) and Mattie R. Cullen (Guildford High School), College Scholarships of £50 a year for three years. A research scholarship of £40 a year for two years has been awarded to Miss W. W. Blackwell, a student of the College.

OXFORD.

Term has been over now for more than a month, but the Long Vacation seems to become busier every year. We have entertained members of the Congress of Universities of the Empire and members of the Royal Society. The summer classes for the students of tutorial classes are in full swing and promise to be even more successful than last year. A Summer School of Theology was held in the last week of July, and, though the regular summer Extension meeting is to be held this year at Cambridge, the Oxford Extension Delegacy has its annual school for foreigners in August.

Appointments.—Mr. H. H. E. Craister, of All Souls College, has been appointed a Sub-Librarian of the Bodleian Library. Mr. Collingwood, of University College, has been selected for an official Fellowship at Pembroke College. Mr. T. W. Chaundy, B.A., Lecturer of the House, has been appointed to an official studentship at Christ Church. The Right Hon. Lord Kilbracken, the Right Hon. Sir George Farwell, and Mr. Andrew Cecil Bradley have been elected honorary fellows of Balliol College. The annual studentship granted by the Gilchrist Trustees to the Association for the Education of Women in Oxford has been awarded to Miss Mary L. Gordon, of St. Hugh's College. Miss Gordon obtained a First Class in the Honour School of Literae Humaniores in 1911.

SCOTLAND.

The Carnegie Trust has issued its award of research fellowships, scholarships, and grants for the academic year 1912-13. Twenty-six fellowships are awarded, of which ten go to Glasgow, eight to Edinburgh, four to St. Andrews, and four to Aberdeen. Of the thirty-four scholarships, Glasgow and Edinburgh receive eleven each, and St. Andrews and Aberdeen six each. Ten of the fellowships and ten of the scholarships are awarded to women. One of the scholars is a Chinese graduate of Edinburgh. Seventy-four applicants receive grants in aid of research, and the total sum expended for the year is upwards of £9,800.

At a conference of representatives of the four University Courts, held on June 20, inclusive fees in medicine, applied science, and law were determined for suggestion to the Universities. Edinburgh University declined to take any part in fixing an inclusive fee for medicine, on the ground of difficulties about extra-mural and clinical classes; but the fees in medicine suggested by the Conference were, for the degrees of M.B., Ch.B., ninety guineas for instruction other than clinical, and forty guineas for clinical courses. The fee suggested for the degree of B.Sc. in engineering was sixty guineas. Some of the Universities have already approved these suggestions. The Conference also considered various representations from the General Council of Glasgow University, suggesting modifications of its proposals, and resolved in every case to adhere to its original findings.

A Conference has been held between St. Andrews University Court and the Council of Dundee University College regarding the questions in dispute between the University and the College, to which reference was made in these notes last month (page 472), and it is understood that agreement has been obtained on all the main points at issue and that a committee has been appointed to adjust the details of a settlement. Mr. J. Martin White, of Balruddery, Dundee, has offered to the St. Andrews University Court a sum of £300 a year for four years for the institution of a lectureship in sociology in the University, in connexion with which lectures are to be given at St. Andrews and Dundee. The Court has accepted Mr. Martin White's offer, and it is hoped that in course of time the Lectureship may lead to the foundation of a Chair. On June 27, the freedom of the City of St. Andrews was conferred on Sir James Donaldson, LL.D., Principal of the University, in recognition of his services to Scottish education, his contributions to literature, and his work as Principal and Vice-Chancellor. Mr. J. Laird, M.A., Assistant to the Professor of Moral Philosophy at St. Andrews, has been appointed Professor of Philosophy at Dalhousie University, Halifax, Nova Scotia.

At a meeting of Glasgow University Court proposals were submitted for the extension of the buildings of the Zoology department. The proposals were referred for further consideration and report. It was mentioned that a sum of £1,500 had been collected for a memorial to William and John Hunter, to whom the University owes the Hunterian Museum and Library. It is proposed that the memorial should take the form of the architectural embellishment of two windows in the south front of the Hunterian Museum. The University Court and the General Council have had under consideration the new proposals of the Carnegie Trust requiring the Leaving Certificate as a condition of the payment of fees in the case of all candidates who have had an opportunity of taking this certificate. At the General Council meeting there was some ill informed talk.

ditional payment of one shilling per annum.

Subscriptions should be addressed to the Publisher,
Printing House Square, London, E.C.

about the supposed injustice of the regulation in the case of poor students; but both the Court and the Council accepted the explanations of the Carnegie Trust as satisfactory. The University has sustained a severe loss in the early death of Dr. George Henderson, Lecturer in Celtic, an able scholar and author and one of the chief authorities in his subject. The University Court has appointed Mr. D. Hay Fleming, LL.D., Edinburgh, to be Lecturer in Scottish History, and Prof. G. Gregory Smith, University of Belfast, to be Lecturer in Scottish Literature, for next academic year. These lectureships will cease after next year, as it is expected that a Professor of Scottish History and Literature will be appointed before the beginning of session 1913-14. Mr. A. A. Bowman, M.A., Lecturer and Senior Assistant in Logic at Glasgow University, has been appointed Professor of Logic at the University of Princeton, New Jersey, in succession to Prof. J. G. Hibben, the successor of Dr. Woodrow Wilson as President of Princeton. Trinity College, Dublin, has conferred the honorary degree of D.Sc. on Profs. Bower, Sir William Macewen, and Muir, of Glasgow University. Mr. John A. Todd, B.L., a graduate of Glasgow University, has been appointed Professor of Economics at University College, Nottingham.

In connexion with the Universities Congress, Aberdeen University has conferred the honorary degree of D.D. on the Rev. Thomas W. Powell, President and Vice-Chancellor of the University of King's College, Windsor, Nova Scotia, and the honorary degree of LL.D. on Mr. Charles Chilton, D.Sc., Professor of Biology at Canterbury University College, Christchurch, New Zealand.

At the summer graduation at Edinburgh University, the honorary degree of LL.D. was conferred on the Lord Rector, the Earl of Minto; Lt.-Col. Bailey, R.E., formerly Lecturer in Forestry; Prof. Cash, Aberdeen University; Mr. J. S. Flett, Geological Survey, Edinburgh; Mr. W. Warde Fowler, D.Litt., Oxford, formerly Gifford Lecturer; Lord Johnston; Prof. McIntosh, St. Andrews University; Mr. Robert Munro, M.A., M.D.; Sir James Porter, K.C.B., the Admiralty; Sir Thomas Raleigh, K.C.S.I.; and Mr. J. L. Robertson, M.A., LL.B., Chief Inspector of Schools.

Glasgow School Board has resolved to build the first open-air school in Scotland. It will be a school for defective children, and it will accommodate two hundred physically defective and eighty mentally defective pupils. The site is a very open one, and the building will be so constructed that the front of the classroom on the ground floor (for the physically defective) can be thrown open by means of folding doors. There will also be a veranda in which the children can be taught in the open air. Most of the playground will be sown in grass, and there will be trees and shrubs. The estimated cost is £9,600.

IRELAND.

The Senate of Dublin University held a meeting for conferring degrees, on June 29, at which honorary degrees were conferred on the Right Rev. Charles Dowse, the newly elected Bishop of Killaloe (D.D.), and on Sir William Launcelot Gubbins (M.D.), both graduates of the University.

"Trinity Week" has been an unusually exciting one this year, owing to the Bicentenary Festival of the Medical School. The usual events of the week, the University Boat Club Regatta and the College Races, were for once of minor importance. The sun, an infrequent visitor throughout June, came to aid the celebrations and shone steadily throughout the week; and his presence was all that was needed to make them a complete success. Dublin was full of delegates and visitors from all parts of the civilized world, a large number of them, of course, of the medical profession, and for a few days scarlet gowns were not an uncommon sight and lent a welcome touch of colour to the city streets. The Festival began on Thursday afternoon, when guests and delegates were received by the Chancellor of the University and the Provost in the Library. In the evening the delegates were entertained by the graduates of the Medical School at dinner in the Round Room of the Mansion House; whilst a reception was held at Trinity Hall (the women students' hostel) for ladies only. After Dr. Mahaffy's address came the central function of the celebration—the reception of congratulatory addresses from the deputations of Universities and other Corporations at home and abroad. As each delegate approached the dais to present his address to the Chancellor, an appropriate national air was played on the organ. Space would fail to give the names of all the delegates, among whom was one woman, Dr. Aldrich-Blake, from the London Royal Free Hospital School of Medicine for Women. In the afternoon Lord Iveagh gave a garden party for the guests of the Bicentenary Festival, and in the evening, Goldsmith's comedy, "She Stoops to Conquer," was performed in the Queen's Theatre by the University Dramatic Society, an ode composed for the occasion by Dr. Oliver St. John Gogarty being read as a prologue.

Saturday's proceedings began in the morning with the unveiling of the memorial bronze medallion of the late Dr. Daniel Cunningham, who was Professor of Anatomy for twenty years until his transference to Edinburgh. The medallion, which is the work of the well known artist Mr. Oliver Sheppard, was unveiled by Dr. James Little, Regius Professor of Medicine, who delivered an address on its subject. In the afternoon at 3 o'clock a special meeting of the Senate was held in the Examination Hall for the purpose of conferring honorary degrees on the distinguished visitors. After the conferring, the Provost gave a garden party in the Senior Fellows' garden, at which the scarlet gowns of the doctors and the gorgeous vestments and insignia of some of the foreign delegates threw the ladies' dresses quite into the shade.

Trinity College has come in for a valuable bequest through the death of Mrs. Lecky, widow of the historian, who has left (in accordance with her husband's wishes) lands in Queen's County and Co. Carlow to endow a chair of modern history, which is to be called "The Lecky Chair of History"; as well as all his manuscripts, note-books, and commonplace books (with power of publication at discretion), and a bronze bust of him by Boehm.

Cardinal Logue presided at the prize distribution at Maynooth, on June 25, and took advantage of the occasion to define his views (and presumably those of the Hierarchy) on the attitude of the Church towards the Universities. He combated the idea that it was now open to Roman Catholics, if they liked, to enter Trinity College. "The same prohibition that existed against Catholic young men going to Trinity College before the establishment of the National University holds at present, and we have the same objection to it for the same reasons." However, the Cardinal has no personal animus against Trinity, which he described as "a magnificent old establishment," and to which he wished every success so long as it confined its work to "its own people." He even commended it highly for two reasons: one, because it had avoided "that unseemly mixture of sexes" which was to be found in the colleges of the National University and which was introduced to meet the wishes of those "masculine females" who wanted not only to be equal to men but to supplant them. (But has Trinity College avoided it?) The other, because Trinity College had kept the religious flag flying—even though a Protestant flag. As for the National University, it was at present "a Pagan bantling," but, added the Cardinal, "please God, if we can, we will baptize it and make it Christian"—there's more hope, it appears, of making something out of a Pagan than a Protestant.

Queen's University, Belfast, held its annual graduation ceremony on July 18, when the Chancellor, the Earl of Shaftesbury, who presided, gave a very satisfactory account of the work and progress of the University, which, he said, united among its students all classes and all the chief creeds of the North of Ireland in peace and harmony. He referred to recent benefactions by which the University had profited, amongst them a gift of £25,000 from the Misses Riddell of Belfast, for the erection of a residence for women students, one of £1,200 from Mrs. Reid Harwood (a former student of Queen's College) for the foundation of a scholarship in modern languages, and a bequest of £3,000 from the widow of the late Dr. John Magrath for a clinical scholarship. One important matter effected during the past year was a junction between the University and two outside institutions, the Belfast Municipal Technical Institute and the Royal College of Science, Dublin, whereby candidates for the degree of B.Sc. would be able to avail themselves of the instruction and apparatus in engineering in the former, while students of agriculture could obtain theoretical and practical training in the latter.

The resolution of the Senate of Queen's University, passed last April, to raise the lectureship in Celtic Languages (at present held by Canon O'Connell) to a professorship, has since been rescinded on financial grounds. A public meeting was recently held in Belfast to protest against this action, at which Dr. Dowse, Dean of Down and Connor, and others interested in Irish studies spoke, and it was decided to send a deputation to the Senate on the subject. The Belfast Gaelic League and other friends of the Language Movement have offered the Senate £250 a year for the next four years (the current term of engagement) to subsidize the Celtic Chair.

The rules and program of the Intermediate Examinations for 1913 have been issued as a Parliamentary paper during the month and laid on the table of the House of Commons for the customary forty days before becoming law. The new rules contain some important features, chief among them the abolition of the Preparatory Grade. Henceforth all students of fourteen years of age may compete in the Junior Grade. There are also some alterations in conditions for awarding exhibitions and prizes; of which more anon.

The Annual Oireachtas was held in the Rotunda, Dublin, during

(Continued on page 556.)

A NOTABLE WORK.**NATURE NOTES WITH PEN AND PENCIL.**

Simple Lessons on Trees, Plants, and Flowers.

By JANE B. DICKENS,

Superintendent of Special Schools, and Principal of Classes for Training Teachers in Froebelian Methods and Principles,
Manchester Education Committee.

Crown 4to, 112 pp., with over 130 Illustrations in Black, and 5 Full-page Plates in Colours.

Net 3/- (Postage 4d. extra).

This book is the outcome of many years' careful study and experiment. It shows how the subject of Nature-Study may be treated throughout the year, and is altogether free from the scrappy unconnected style that often prevails in so-called Nature-Study Manuals. The illustrations, both in black and in colours, are admirable, and just what Teachers need.

The Language Movement.

the first week of July. There were the usual features—competitions, dramatic performances, open air pageants, and exhibitions of Irish arts and industries. At the inaugural meeting on Monday evening the President, Dr. Douglas Hyde, and Canon O'Connell, of Queen's University, delivered orations in Irish; on Wednesday evening there was a social reception for delegates and visitors in the Mansion House; and on Friday evening the prize-winners' concert was held. Throughout the week the *Ard-Fheis* (Central Representative Committee) held its session, at which chiefly matters connected with education were discussed, and several resolutions were adopted and forwarded to the National Board, asking, among other things, (1) that in Irish-speaking districts Irish should be the medium of instruction in all subjects; (2) that it should be taught to all children in every primary school; (3) that no student should be admitted to a training college or receive a teacher's certificate on leaving it without a knowledge of Irish; and (4) that inspectors ignorant of Irish should not be sent to Irish-speaking districts. Some of these demands, especially the second and third, are hardly likely to be successful. Those who were at the Oireachtas this year and were able to compare it with the meetings of former years were conscious of a lack of the old enthusiasm, in spite of increased numbers and more elaborate organization. This was partly, no doubt, due to the fact that with the beginning of July many of the most zealous workers in the language cause in Dublin depart for a sorely needed summer holiday; while those who remain to attend the Oireachtas are generally taken up with the *Ard-Fheis* or other committees and have no leisure to attend the competitions and public performances. It has been decided this year to try a change and hold next year's meeting in Galway or some other centre in the Irish-speaking world.

A conference of delegates from the *Gaedhealtacht* or Irish-speaking districts was held during the Oireachtas, at which arrangements were drawn up for the distribution of about £1,000 during the coming year in paying district teachers in Irish-speaking districts.

SCHOOLS.

BEDFORD.—Speech Day was July 3. Sir J. J. Thomson, who distributed the prizes, commended the School as the first in time and rank of day schools. It took account of a factor neglected in most schemes of education, the parent. The Head Master, Mr. Reginald Carter, commenting on the year's honour list, said it included nine direct passes into Woolwich (E. F. Tickell second), and fourteen into Sandhurst. He deprecated the lowering of the age for Army examinations and said the alternative for the future was better pay for officers or universal compulsory service. The School had won three open scholarships at Oxford and Cambridge, besides exhibitions.

BROMSGROVE SCHOOL.—Election to School Scholarships—V. C. Bach (Mrs. R. S. Lea, Nuneaton) and E. V. M. Hughes (Miss Pacy, Birkdale); to House Exhibitions—M. A. Forquaharson (Mr. Clayforth, Oakmount, Southampton) and A. S. Ivens (Mr. Bennett, Styne School, Worthing).

CANTERBURY, KING'S SCHOOL.—The following elections to entrance scholarships have just been made:—L. H. Thomas (Rev. S. Shilcock, Kenley), P. J. F. Cooper, R. E. Page, F. K. Stranack, A. G. Cole, F. R. G. Shephard (Mrs. Edwards, S. Godstone), W. West (The College, Herne Bay), L. Dade (Mr. Hayman, Beckenham). To a House Scholarship:—C. E. V. Philipps (King's College Choir School).

CLAPHAM HIGH SCHOOL FOR GIRLS.—M. Potter has been awarded a scholarship of £40 a year for three years for English at St. Hugh's College, Oxford; B. Hood Barrs, a scholarship of £60 a year for three years for classics at the Royal Holloway College; L. Newman, a scholarship of £50 a year for three years for classics and French at the Royal Holloway College; and J. Petrie, an exhibition for History at Somerville College, Oxford. A. Tregaskis and M. Holloway have been placed in Class III of the Natural Science Tripos; G. Nicholls, in Class III of the Mathematical Tripos, Part II; E. Elligott, in Class II of the Honour School of Natural Science; B. Nicholls, in Class II of the Honour School of French Language and Literature, with distinction in spoken French. F. Carey shared the Greek Testament Prize offered by Newnham College, and M. Hennings gained the Savory Divinity Prize offered by the Royal Holloway College.

HAILEYBURY COLLEGE.—The prizes for Latin Prose and Greek Iambics have been awarded to C. J. Richards; Greek Prose and Translation into English, to A. D. Burnett-Brown; Mathematics, English Verse and an English Essay, to H. B. Usher; the Shakespeare and Hanbury History Prizes to R. M. Haythornthwaite; the Jackson Art Prize, to G. C. F. Ramsden; the French Prizes, to R. H. Lawson and D. K. Leclercq; the German Prize to D. K. Leclercq; the Physics and the Chemistry Prizes to N. W. Birkett.

In the list of distinctions for the year are the following:—R. Dendy, Classical Exhibitioner of Balliol College; J. C. Grant, Historical Exhibitioner of Exeter; R. H. Lawson, Classical Scholar of Sidney Sussex; D. Henderson, Historical Scholar of Clare; J. Burnaby, Craven Scholar, Cambridge; H. G. Vincent and G. S. Walley, First Class, Mathematical Tripos, Part I; K. G. Digby, First Class, Div. 2, and H. Burnaby, First Class, Div. 3, Classical Tripos, Part I. The following have passed into the Royal Military Academy, Woolwich, from the School, A. C. Hancocks, G. J. Wellesley, M. E. Dennis, and L. Gurney. On July 5 and 6, the School, which opened under the Rev. A. G. Butler, in September 1862, celebrated its Jubilee. On July 5 the usual Speech-day prize-giving took place, followed by scenes from "Le Bourgeois Gentilhomme," "The Critic," and "The Frogs." An exceptionally large gathering of parents and other friends of the School was present. In the evening there was a torchlight procession of the whole School through the Avenue and Quadrangle, ending with a parade and evolutions on the Terrace Field, where some of the traditional school songs were sung. On July 6 the foundation-stone for a new Big School, to be built on the site of the present one, was laid by Princess Henry of Battenberg, after a service in the school chapel, at which the Visitor, the Archbishop of Canterbury, preached. In the evening about three hundred Old Haileyburians, and past and present members of the staff dined in the school hall. The Bishop of Southwell was in the Chair. Other speakers were the Master, who received a hearty welcome, the Head Master of Eton, Major-Gen. C. W. Park, C.B., the Right Hon. W. Hayes Fisher, M.P., and C. E. Longmore, Esq., C.B.

HARROW, THE COUNTY SCHOOL.—Mr. P. Holgate, B.A., of the Portsmouth Municipal Secondary School, has been appointed Junior French Master. Mr. J. O'Sullivan, B.A., has been appointed Junior English Master. On July 2 a Display of Physical Exercises was given, under the direction of Mr. Paterson. On July 9, the second Speech Day was held, when the Bishop of London distributed the prizes and delivered a stirring address to the boys. E. Heath has won a Junior Corporation Scholarship at the City of London School. During the summer holidays two camps will be held, one a standing camp for 120 boys on the south coast and the other a tramp camp in the Black Forest.

ST. OLAVE'S GRAMMAR SCHOOL.—Speech Day was celebrated here on Thursday, July 25, the prizes being distributed by Sir Sidney Lee, who in the course of his address alluded to the many problems, political, social, and economic, which the next generation of citizens would have to solve, and dwelt upon the necessity of a system of education which should not allow the faculty of reason to "rust in us unused." The honours list for the year include four First Classes in the London Matriculation Examination, two in the Intermediate Science, two open scholarships and one exhibition at Cambridge, one Third, five Second, and three First Classes in Cambridge Triposes, a diploma in Agriculture at Cambridge and one in Economics at Oxford, six Bachelor degrees at London, and the first place in the examination for Student Interpreters. L. E. Neal gained the English Literature Prize; N. C. Hamilton, the Nutt Prize for Classics; A. F. Pullinger, the prize for Mathematics; L. Y. Sanders, that for Chemistry and Physics. D. A. G. B. Ryley gained the seldom awarded prize for an English poem; while F. Norris was awarded the Ruskin Prize, the Virgil Prize, and the Epigram Prize. The subject of his epigram may be left to conjecture: its first line ran "Unus homo nobis cunctum cine (restitutum) rem." At the close of the day the School bade farewell to Mr. F. P. Hartley, who is retiring after forty-one years of service. In his place we shall welcome, next term, Mr. G. A. Le Chavetois, an Old Olavian, who has been till now on the staff of Emanuel School, Wandsworth.

PRIZE COMPETITIONS.

The Translation Prize for July is awarded to "Eicarg."

Winners of the Translation Prizes for June are Miss F. L. Ghey (Latin), St. Mary's Hall, Kemp Town, Brighton, and Miss E. Bidwell (French), 34 Lee Terrace, Blackheath.

Ce grand cardinal de Richelieu, comme tous les hommes qui ont laissé dans l'histoire la marque de leur passage, se trouve avoir fondé bien des choses auxquelles il ne pensait guère, certaines même qu'il ne voulait qu'à demi. Je ne sais, par exemple, s'il se souciait beaucoup de ce que nous appelons aujourd'hui tolérance réciproque et liberté de penser. La déférence pour les idées contraires aux siennes n'était pas sa vertu dominante, et, quant à la liberté, on ne voit pas qu'elle eût sa place indiquée dans le plan de

BLACK'S SCHOOL TEXT-BOOKS

JUST PUBLISHED.

REGIONAL GEOGRAPHY OF THE WORLD.

By J. B. REYNOLDS, B.A.

Demy 8vo. 360 pages. **3/6** With 147 Diagrams.

NOTE.—The first part of this book, which deals with Britain and the mainland of Europe, is written on rather simpler lines than the sections on the remaining continents which follow. In standard it is suited for the middle and upper forms of secondary schools and the preparation for such examinations as the Oxford Locals and Matriculation, or for a first year's course in a training college. The method adopted in the description of each continent is regional, but revision chapters are inserted after each continent in which the distributions of geographical phenomena over the whole area are summarized, and generalizations are formulated which the students have been prepared by the preceding work to understand. Similarly the consideration of the world-wide geographical distributions is deferred till the end of the book, but teachers can vary this arrangement if desired.

l'édifice qu'il bâtissait. Et pourtant, voici qu'à deux cent cinquante ans de distance, l'âpre fondateur de l'unité française se trouve, dans un sens très réel, avoir été le fauteur de principes qu'il eût peut-être vivement combattus, s'il les eût vus éclore de son vivant. Cette Compagnie, qui est après tout la plus durable de ses créations, qu'est-elle, Messieurs, si ce n'est une grande leçon de liberté, puisque ici toutes les opinions politiques, philosophiques, religieuses, littéraires, toutes les façons de comprendre la vie, tous les genres de talent, tous les mérites, s'assoient côte à côte avec un droit égal ? La règle de la maison de Mécène, vous l'observez :

" . . . Nil mi officit unquam
Ditior hic aut est quia doctior, est locus uni
Cuique suos. . . "

Réunir les hommes, c'est être bien près de les réconcilier, c'est au moins rendre à l'esprit humain le plus signalé des services puisque l'œuvre pacifique de la civilisation résulte d'éléments contradictoires, maintenus face à face, obligés à se tolérer, amenés à se comprendre et presque à s'aimer.

By "EICARG."

And so it comes to pass that this great Cardinal Richelieu, like all men who have made their mark on the pages of history, founded much of which he little dreamt, some things, indeed, whose full development was far from in accordance with his will. I am not aware, for example, that he cared much for what we nowadays call mutual toleration and freedom of thought. Deference for ideas opposed to his own was not his most striking characteristic; and, as to freedom, we do not find it had a niche in the plan of the edifice he purposed raising. And yet here we have this determined founder of French unity proving himself, 250 years after his death, to have been, in a very real sense, the pioneer of principles which he would, perhaps, have bitterly opposed had he seen their actual genesis in his lifetime. This Academy, which is after all the most lasting of his creations, what is it, gentlemen, but a great object-lesson in liberty of thought, since here professors of all shades of political, philosophic, religious and literary belief, exponents of all theories as to the true meaning of life, men remarkable for genius in very varied spheres, and men who have merited their position by deeds on very different fields, set side by side, endowed with equal rights and privileges? Here, indeed, is fully observed the law that governed the household of Maecenas:—

It troubles me no whit
If this man richer, that more learned be.
To each his proper place.

To bring men face to face is a great step towards making them friends; it is, at the very least, to do for the human mind the greatest service possible, since the peaceful work of civilization results from opposing elements brought into touch with one another, bound to mutual toleration, and thus led on to true understanding—nay, almost to love—one of the other.

We classify the 126 versions received as follows:—

First Class.—Elephant, Emil, Borealis, Menevia, S.E.H., Lydia K. Moorcroft, Peripatetic II, Nutcracker, Annulus, D.E.G., Eicarg, Old Savilian, E.M.F., Martin, Mergy.

Second Class.—Moth, C.L.G., Alexis, Cunctator, St. Quintin, Gwen, Keddie, Cairngorm, Dane, Amaryllis, Constantine, Peck, Great Western, Dunboy, Odette Boussier, Olga, Pendragon, A.S., Pont-Ste-Maxence, Chingleput, March, Jappy, U.D.C., Bardolph, B.B.B., Kento, J.H.D.M., Fortes et Fidelis, W.J.D., Esbie, Myra Han, Vigdeniensis, Mahatz, Skerryvore, Hibernia, Henricus, A.R.H., Bianca, Caliban, Margaret Robins, H.L.H., Gothicus.

Third Class.—Florizel, Flebotomy, Shakspeare, Tony, E.M.F. Rix, E.A.D., Gryphon, H.A.G., I.R.P., Andromache, E.F.G.H., Craig Dhu, Balgowan, Muguet, Siena, Daphne, Ever the same, Benita, Hesperus, Burlington, Coö, Soangetaha, Côte d'Emeraude, W.B.D., Cecilia, Logan, A. Loreburn, Charity, M.C., Piano, I.S., A.J.R., Gorse, Mornya, B.C.H., Aline, Francesca, Judy, Ydak, Vhig, Verner, Little Nell, Sir Isumbras.

Fourth Class.—Enfant gâté, A.G.H., Deirney, A.G.M., H.M.A., M.E.M., A.D., Bear and forbear, Ryder Reid, Moor-down, Rufus, C.J.B., J.J.W.W., Selaginella, Jacques, Suamak, Anglaise, Shamrock, Chinkapin, Binx.

Fifth Class.—P.M.I., Rosetti, Romeo, Salve, Russ, Mistral, U.T., Missie, Plage, Hudson, Frère, Oro, M.A.T., First try, Linden, XL.

The quotation from Horace was generally left in the original, or else misrendered. In a prize competition it should certainly have been translated, either in the text or in a note, and preferably in verse:—

(Continued on page 560.)

THE LONDON Central Institute for Swedish Gymnastics, 16, 17, & 18 Paddington Street, Marylebone, W.

Telephone: 872 Mayfair.

The School World says: "This college for men students . . . will provide a first year's course fitting students for posts in elementary schools, and a second year's course enabling the graduate to take charge of any school of whatever standing. Anatomy, physiology, theory of movements, hygiene, and kindred subjects necessary for a complete grasp of physical training will be taught by experienced teachers. This will be a noteworthy addition to the facilities for training in this subject. . . . this new college has been most cordially welcomed by the Parliamentary Secretary representing the Board. . . . As a sign of progress, and in the hope of a better future for the physique of the youth of the nation, the new 'Central Institute' will be cordially welcomed."

PUPILS ARE NOW RECEIVED.

The Institute also undertakes the instruction in Physical Exercises on the Swedish System for Schools in the neighbourhood.

Recreative Classes—Gymnastics and Fencing—are held in the afternoons and evenings.

For particulars apply to the Principal—

ALLAN BROMAN,

From the Royal Central Institute of Gymnastics, Stockholm.

GIRLS' SCHOOL TRANSFERS.

Messrs. GABBITAS, THRING & Co.,
36 SACKVILLE STREET,
PICCADILLY, W.
(Established 1873.)

TRANSFERS OF AND PARTNERSHIPS IN GIRLS' SCHOOLS.

Messrs. GABBITAS, THRING & Co. have a large number of Girls' Schools on the books of their Transfer Department, but issue no list of such Schools. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her.

The following are a few of the Schools now on their books:—

No. **PARTNERSHIP** suitable for a lady 4,982. wishing to move a School to the Sea, in good-class Boarding and Day School on the South Coast, containing 14 Boarders and 8 Day Pupils. Accommodation for 25 Boarders. Prospectus Fees for Boarders 36 to 48 guineas, Day Pupils 6 to 12 guineas.

No. **TRANSFER** of flourishing Home School 4,981. at favourite South Coast Health Resort, containing rather over 30 Boarders at prospectus fees of 60 to 75 guineas, and 9 Day Pupils at prospectus fees of 9 to 12 guineas. School practically full as to Boarders. Gross receipts over £2,000 and net profits over £900, both showing substantial increases over the average of the last three years. Excellent premises, on lease for 99 years. Price for property, Goodwill, and furniture, £4,800. Property good security for a substantial mortgage.

No. **TRANSFER** of nucleus of high-class 4,980. Home School in a Southern County, containing 8 or 10 Boarders and 3 or 4 Day Pupils. Prospectus fees for Boarders from 105 to 135 guineas, and for Day Pupils 30 to 35 guineas, exclusive of

GIRLS' SCHOOL TRANSFERS.

extras. Excellent premises in a very good position in a beautiful neighbourhood, with good social advantages. Goodwill 10 per cent. of the first year's fees of any Pupils handed over.

No. **TRANSFER** of good-class School in 4,978. healthy London Suburb, carried on successfully by present Principals for over 20 years. They wish to retire. Over 50 Day Pupils, at prospectus fees of 4½ guineas for Kindergarten up to 9 guineas, and considerable extras. 2 weekly Boarders at 15 guineas. Receipts from the School £460, and from letting School Hall, &c., £140, during the last year. Goodwill £300.

No. **TRANSFER or PARTNERSHIP** to 4,977. succession, of School in a Northern Seaside place, established over 40 years, purchased by the present vendors about twelve years ago. Strictly for gentlemen's daughters and with a very high educational standard. 30 Boarders at prospectus fees of from 63 to 66 guineas, and 30 Day Pupils and Day Boarders, prospectus fees from 9 to 27 guineas. Gross receipts nearly £1,000, and net profits about £800. Price of whole Goodwill £2,000, but one-third or one-half share would be sold in the first instance.

No. **TRANSFER** of Day Connection of 4,976. flourishing Boarding and Day School near an important Northern City, containing nearly 100 Day Pupils. Prospectus fees 6 to 12 guineas. Nearly 30 Boarders; the majority of the Boarders would probably follow the Principals, who wish to move to another locality and conduct a small School there. Gross receipts considerably over £3,000. From Day Pupils alone about £1,400. Goodwill at capitulation fees.

No. **TRANSFER** of good-class Boarding 4,973. School at a favourite health resort receiving regularly Pupils from Orphan Association maintained by certain Banks, which always has at least 10 Pupils at the School. Now 26 Boarders. Prospectus fees from 40 to 60 guineas, paying from 26 to 50 guineas. Gross receipts nearly £700. Owing to the illness of one of the Principals the School would be sold outright for £300, though the furniture and equipment are probably worth more than this.

No. **PARTNERSHIP** in flourishing School 4,963. for Gentlemen's Daughters in the Home Counties. Partner required to assist in extension. About 12 Boarders and 30 Day Pupils. Prospectus Fees of £75 to £100 and about £30 per annum respectively. To be divided into different departments in separate houses. Present profit about £300, and pupils being refused.

GIRLS' SCHOOL TRANSFERS.

No. **TRANSFER** of old-established, large, 4,890. and flourishing Boarding School for gentlemen's daughters at South Coast Health Resort. Principals retiring. Full with 60 Boarders. Prospectus fees 60 to 75 guineas. Gross receipts of last twelve months considerably over £4,000, and profits over £1,200. Goodwill £2,000.

No. **TRANSFER or PARTNERSHIP** 4,880. with a view to succession. Flourishing School for Boarders only, at a favourite South Coast Resort. Steadily full, with rather over 30 Girls. Prospectus fees of 90 guineas, besides extras. Gross receipts about £4,400 last year. Average annual receipts of last four years about £4,000. Net profits for those periods over £750 and over £720 respectively. Goodwill of half share £1,000.

No. **PARTNERSHIP** in Boarding and Day 4,874. School in residential locality close to important Midland town, containing 7 Boarders and about 25 Day Pupils and Day Boarders. Prospectus fees 60 to 75 guineas and 15 to 42 guineas respectively. Gross receipts about £1,000. Profits between £200 and £300. Goodwill of half share £250.

No. **PARTNERSHIP** with a view to succession in Boarding and Day School for Gentlemen's Daughters in a very healthy locality near the South Coast. Nearly 20 Boarders. Prospectus fees from 75 to 90 guineas, and 12 Day Pupils, 9 to 18 guineas. Excellent premises. Gross receipts about £1,200 and net profits about £200 per annum.

No. **TRANSFER** of Boarding and Day 4,856. School for Gentlemen's daughters in residential seaside district in the Northern Midlands, containing 6 Boarders and between 30 and 40 Day Pupils. Boarders pay from 45 to 80 guineas and Day Pupils from 9 to 50 or more guineas per annum. Gross receipts over £1,400, and profits nearly £200. One term's fees for Goodwill, or a lump sum of £500.

No. **PARTNERSHIP**, possibly to succession, in Boarding and Day School in healthy Northern Suburb of London. A few Boarders paying on the average about £60 per annum, and about 40 Day Pupils, and Day Boarders, paying fees varying from 9 guineas for the youngest up to 24 guineas per annum, and considerable extras. Gross receipts over £1,000. Goodwill by capitulation fee.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require full particulars before arranging introductions to their clients. No charge is made to Purchasers.

"Never by wealth or learning here oppressed,
I rank their equal, as your honoured guest."

In the first sentence "this great Cardinal" and "finds himself" were common errors. "To Cardinal Richelieu, as to all great men who have left their mark on history, we must ascribe the origin of many reforms that he hardly contemplated, and even of some that he himself would scarcely have approved." "Mutual tolerance" or "toleration," not "reciprocal." *Dans le plan*: "in planning his Institute." *L'âme fondateur*: "the austere statesman who laid the foundations of national unity." I prefer "Society" to "Company" and "object lesson on liberty" to "lesson of liberty." "All opinions . . . sit" is a strained metaphor in English, and instead of watering down the "sit" it is better to turn "men of all opinions, political, &c., . . . from whatever point of view they regard life." *La règle*: "the rule that was followed by Maecenas and his friends, you still maintain." Maecenas was often misspelt and the statement turned into an imperative. *Réunir*: "to bring together," not "to unite," or, worse, "to reunite." *Résulte d'éléments*: "is the resultant of conflicting elements, kept in close contact, driven to mutual toleration, and so led to understand one another—I had almost said to love."

HOLIDAY PRIZE COMPETITIONS.

Prizes to the amount of Ten Guineas are offered for the following subjects:—

LITERARY.

1. An Essay (limit 1,000 words) in the style of Bacon, or Addison, or R. L. Stevenson, on (a) Window-breakers, or (b) Stamp-licking, or (c) The first day of the holidays.
2. A suitable passage, French, German, or Latin, for the Translation Prize, with a fair copy.

PHOTOGRAPHS.

1. A set of six kodaks, illustrating a seaside or country holiday.
2. A group illustrating some scene in history or fiction.
3. A study of animal life.

ARITHMETICAL PUZZLES.

1. I sent a messenger to obtain change for a sovereign. He brought back eleven silver coins, and I found that I was unable to make a payment of ten shillings with them. What were the coins?
2. I was paying my tailor and said that I should expect him to allow discount. He was about to deduct 12s. 10½d. when I remarked: "You are cheating yourself of 4½d. It was discount, not interest, I asked for." What was the amount of the bill?
3. The birthdays of my two sons, both under twenty, are on the first day of the month. One of them is 2,279 days older than the other. When were they born respectively?
4. Three bullocks in 2 weeks eat off the grass in two acres of meadow and the grass which grows there during those 2 weeks. Two bullocks in 4 weeks eat off the grass in two acres and the grass which grows there during those 4 weeks. How many bullocks are wanted to eat off in 6 weeks the grass in six acres of meadow and the grass which grows there during those 6 weeks?
5. A cyclopædia is published in twenty-eight volumes, each of which contains between 600 and 700 pages. Each volume is paged separately. The number of figures employed would have been greater by 54½ per cent. if the work had been paged continuously to the end of Vol. 28. How many pages are there?
6. Jones and I live the same number of doors from the North-East corner of our square. The number of my house is a multiple of the number opposite me. His number is a multiple of the number facing him. How many houses are there in the square? (N.B.—There are more than four.)

[Unsuccessful competitions, if accompanied by a stamped and addressed envelope, will be returned.]

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by September 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

These School and Teachers' Advertisements are continued from page 559.

MADAME

BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studios, is situated on very high ground, gravel soil, on the confines of an extensive beath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnasium Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers.

Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIUM TEACHERS. Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

University Tutorial College, LONDON.

GIRLS' SCHOOL TRANSFERS.

Messrs. GABBITAS, THRING & Co.,
86 SACKVILLE STREET,
PICCADILLY, W.
(Established 1873.)

**TRANSFERS OF AND PARTNERSHIPS
IN GIRLS' SCHOOLS.**

Messrs. GABBITAS, THRING & Co. have a large number of Girls' Schools on the books of their Transfer Department, but issue no list of such Schools. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her.

The following are a few of the Schools now on their books:—

No. **PARTNERSHIP** suitable for a lady 4,982. wishing to move a School to the Sea, in good-class Boarding and Day School on the South Coast, containing 14 Boarders and 8 Day Pupils. Accommodation for 25 Boarders. Prospectus Fees for Boarders 36 to 48 guineas, Day Pupils 6 to 12 guineas.

No. **TRANSFER** of flourishing Home School 4,981. at favourite South Coast Health Resort, containing rather over 30 Boarders at prospectus fees of 60 to 75 guineas, and 9 Day Pupils at prospectus fees of 9 to 12 guineas. School practically full as to Boarders. Gross receipts over £2,000 and net profits over £900, both showing substantial increases over the average of the last three years. Excellent premises, on lease for 99 years. Price for property, Goodwill, and furniture, £4,800. Property good security for a substantial mortgage.

No. **TRANSFER** of good-class School in 4,978. healthy London Suburb, carried on successfully by present Principals for over 20 years.

Sale or Transfer.

FOR SALE, immediately, through ill health, **GIRLS' SCHOOL**. Excellent premises, low rent, good suburb large West of England town. 37 day, 2 boarders. Receipts £350. Growing connexion. Goodwill moderate, furniture at valuation. Address—No. 9,423*

MRS. HOOPER, 13 REGENT STREET, LONDON, is requiring for a Lady Client whose school she sold last year, a **BOYS' PREPARATORY** or **GIRLS' DAY** with a few boarders. Good class essential, and good neighbourhood. Capital £700. Pupils connexion, 12 years' experience. Full particulars solicited, which will be treated as strictly confidential. Absolutely no charge to vendors until sale is effected. Established 1881.

To be Let or Sold.

ALDERLEY EDGE HIGH SCHOOL TO BE LET or SOLD by Private Treaty; the buildings are very suitable for a school or for conversion into a hostel or some such institution, having ample accommodation for large dining-room, billiard-room, sitting-rooms, numerous bedrooms, and several bathrooms; the property is well elevated from the road, and stands in about two acres of land, subject to a chief rent of £25 a year, and can be acquired on favourable terms; five minutes' walk from Alderley Station. For further particulars apply to **PHILIP SWANWICK, TERRAS, & Co., 64 Cross Street, Manchester.**

GIRLS' SCHOOL TRANSFERS.

They wish to retire. Over 50 Day Pupils, at prospectus fees of 45 guineas for Kindergarten up to 9 guineas, and considerable extras. 2 weekly Boarders at 15 guineas. Receipts from the School £460, and from letting School Hall, &c., £140, during the last year. Goodwill £300.

No. **TRANSFER or PARTNERSHIP** to 4,977. **succession**, of School in a Northern Seaside place, established over 40 years, purchased by the present vendors about twelve years ago. Strictly for gentlemen's daughters and with a very high educational standard. 30 Boarders at prospectus fees of from 63 to 66 guineas, and 30 Day Pupils and Day Boarders, prospectus fees from 9 to 27 guineas. Gross receipts nearly £4,000, and net profits about £800. Price of whole Goodwill £2,000, but one-third or one-half share would be sold in the first instance.

No. **TRANSFER** of Day Connexion of 4,976. flourishing Boarding and Day School near an important Northern City, containing nearly 100 Day Pupils. Prospectus fees 6 to 12 guineas. Nearly 30 Boarders; the majority of the Boarders would probably follow the Principals, who wish to move to another locality and conduct a small School there. Gross receipts considerably over £3,000. From Day Pupils alone about £1,400. Goodwill at capitation fees.

No. **TRANSFER** of old-established Boarding 4,967. and Day School, at a South West Coast Resort, owing to the Death of the Principal. 15 Boarders, prospectus fees from 75 to 90 guineas, and 4 Day Pupils. Price to include Goodwill, Furniture, and Effects from £500 to £600.

No. **PARTNERSHIP** in an old-established 4,954. Boarding and Day School on the South Coast. 12 or 14 Boarders, prospectus fees from 30 to 60 guineas, and 8 or 10 Day Pupils, prospectus fees from 9 to 18 guineas. Gross receipts and profits for 1911, £950 and £250 respectively. £250 for half share in Goodwill.

No. **TRANSFER** of old-established, large, 4,990. and flourishing Boarding School for gentlemen's daughters at South Coast Health Resort. Principals retiring. Full with 60 Boarders. Prospectus fees 60 to 75 guineas. Gross receipts of last twelve months considerably over £4,000, and profits over £1,200. Goodwill, £2,000.

No. **TRANSFER or PARTNERSHIP** 4,880. with a view to **succession**. Flourishing School for Boarders only, at a favourite South Coast Resort. Steadily full, with rather over 30

GIRLS' SCHOOL TRANSFERS.

Girls. Prospectus fees of 90 guineas, besides extras. Gross receipts about £4,400 last year. Average annual receipts of last four years about £4,000. Net profits for those periods over £750 and over £720 respectively. Goodwill of half share £1,000.

No. **PARTNERSHIP** in Boarding and Day 4,874. School in residential locality close to important Midland town, containing 7 Boarders and about 25 Day Pupils and Day Boarders. Prospectus fees 60 to 75 guineas and 15 to 42 guineas respectively. Gross receipts about £1,000. Profits between £200 and £300. Goodwill of half share £250.

No. **PARTNERSHIP** with a view to **succession** in Boarding and Day School for Gentlemen's Daughters in a very healthy locality near the South Coast. Nearly 20 Boarders. Prospectus fees from 75 to 99 guineas, and 12 Day Pupils, 9 to 18 guineas. Excellent premises. Gross receipts about £1,300 and net profits about £200 per annum.

No. **TRANSFER** of Boarding and Day 4,656. School for Gentlemen's daughters in residential seaside district in the Northern Midlands, containing 6 Boarders and between 30 and 40 Day Pupils. Boarders pay from 45 to 80 guineas and Day Pupils from 9 to 50 or more guineas per annum. Gross receipts over £1,400, and profits nearly £200. One term's fees for Goodwill, or a lump sum of £300.

No. **TRANSFER** of small school for Board 4,614. ers only, on the South East Coast. Containing 12 or 14 Boarders. Fees of £30 to £70. Receipts for last year £434, besides £80 for letting during the vacations. Goodwill at capitation fees.

No. **TRANSFER** of Educational Home in a 4,600. Continental Capital, now containing 12 Boarders. Fees 130 guineas per annum. Gross receipts of the last 12 months £3,000. Goodwill, lump sum or capitation fee.

No. **PARTNERSHIP**, possibly to **succession**, 4,476. in Boarding and Day School in healthy Northern Suburb of London. A few Boarders paying on the average about £60 per annum, and about 40 Day Pupils, and Day Boarders, paying fees varying from 9 guineas for the youngest up to 28 guineas per annum, and considerable extras. Gross receipts over £1,000. Goodwill by capitation fee.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require full particulars before arranging introductions to their clients. No charge is made to Purchasers.

Partnership desired.

J. & J. PATON,
143 CANNON STREET, LONDON, E.C.

Other Transfers and Partnerships are on page 631; other School and Teachers' Advertisements are continued on pages 632, 633, 634, and 635.

GEORGE GILL & SONS, Ltd.

Just Issued.

A SIMPLE MANUAL OF GRAMMAR

ON ORGANIC LINES. By CHARLES and ARTHUR LOCKE. Price 1s. 6d.

This manual deals with the subject on bold and practical lines. Its plan is entirely original, its style fascinating and yet simple, and though it contains no heresies, it inaugurates

A New Era in the Teaching of Grammar.

CLEAR. - BRIEF. - ORIGINAL. - INTERESTING.

Some Salient Features.

- GENERAL IDEA** *The sentence as the unit in the teaching of Grammar.*
- MANNER OF EXPOSITION**
1. A continuous and lucid explanation, instead of a series of disconnected paragraphs.
 2. Progress from the known to the unknown.
 3. Avoidance of definitions and technical terms, except at points where their aid will be welcomed.
 4. Insistence on principles rather than on exceptions (these being in the main relegated to Appendixes).
 5. Variation of method, to prevent interest flagging.
- METHOD OF ANALYSIS** *A new and simple method, involving the use of only 4 columns.*
- EXAMPLES AND EXERCISES.** These range over all literature, and are varied in substance and style. Men of action are quoted as well as great writers, and care has been taken to make even the shortest passages forward the general aim of the book, which is to carry on, at the same time with the teaching of Grammar, the inculcation of a love of good English, of noble behaviour, and of such simple virtues as patriotism and citizenship.

The Publishers confidently recommend this Manual to all Teachers.

"It is destined to play a great part in the revival of English."

IN EVERY WAY A REMARKABLE BOOK.

The best of the old, with much that is new.

It will *assist the Teacher*;
interest the Student;
 and *repay perusal by the general reader.*

A SIMPLE MANUAL OF GRAMMAR
ON ORGANIC LINES.

By CHARLES and ARTHUR LOCKE. Price 1s. 6d.

BELL'S NEW BOOKS

GEOMETRY FOR SCHOOLS.

By W. G. BORCHARDT, M.A., B.Sc., and The Rev. A. D. PERROTT, M.A.

JUST PUBLISHED.

Vol. V (Proportion). 1s. Vols. IV & V. In One Volume. 2s.

PREVIOUSLY PUBLISHED.

Vol. I.—Covering Stages I and II of the Board of Education Circular, No. 711, 1909. 1s.; Vol. II.—Properties of Triangles and Parallelograms. 1s. 6d.; Vol. III.—Areas. 1s.; Vol. IV.—Circles. 1s.; Also Vols. I-III in One Volume, 2s. 6d. Vols. I-IV in One Volume. 3s. 6d.

READY SHORTLY.—Vol. VI (Solids).

Vols. II to VI cover Stage III of the Board of Education Circular.

This new Geometry, by the well-known authors of "A New Trigonometry for Schools" (which has now reached its seventh edition), is written upon the most modern lines and embodies the recommendations of the Board of Education Circular, No. 711 (1909), and Sections I and II of the Syllabus of the Committee of Public and Preparatory Schoolmasters.

Vols. I-IV cover the ground for the Oxford Local Examinations, and for the Cambridge Locals, Part I.

BELL'S LATIN PICTURE CARDS.

Speculum Imperi Romani.

Edited, with Vocabularies and Exercises, by **FRANK S. GRANGER, M.A.**, Professor of Classics, University College, Nottingham.

A Set of 16 Cards, printed in Colours, with Vocabularies and Exercises on the back of each card. Price 1s. 3d. net per set.

These Cards are a direct outcome of the discussion on methods of Latin teaching at the Bangor Summer School of Latin, and are intended for use in the Third and Fourth years of Latin, when the more advanced authors begin to be read. The Vocabularies furnish materials for conversation and composition, and cover fully the subject illustrated.

BELL'S SIMPLIFIED LATIN CLASSICS.

Edited, with Notes, Exercises, and Vocabulary, by **S. E. WINBOLT, M.A.**

With numerous Illustrations. 1s. 6d. each.

NOW READY.

CAESAR'S INVASION OF BRITAIN.

Edited by **S. E. WINBOLT, M.A.**

AN INTRODUCTION TO ENGLISH INDUSTRIAL HISTORY.

By **HENRY ALLSOPP, B.A.**

Vice-Principal of Ruskin College, Oxford. With Maps and Plans. 2s.

This book attempts to make a really interesting, simple, and suggestive introduction to industrial and economic history. It contains a clear survey of the whole subject, a specially designed plan of a manorial village, and two maps, together with a descriptive list of the best books for further study.

MATRICULATION PRÉCIS.

WITH A KEY.

By **S. E. WINBOLT, M.A.**

1s. net; or, with Key, 1s. 6d. net.

This book is intended primarily for use by candidates for the London Matriculation Examination, but it is hoped it may be used with profit by pupils in any kind of school between the ages of fifteen and seventeen.

A FIRST YEAR'S COURSE IN CHEMISTRY.

By **JAMES SINCLAIR, M.A., B.Sc.**, and
G. W. McALLISTER, M.Sc., 1s. 6d.

This book is an attempt to arrange a First Year's Course of School Chemistry on similar lines to Mr. Sinclair's Course of Practical Physics.

THE CALCULUS FOR BEGINNERS

By **W. M. BAKER, M.A. 3s.**

In this volume Mr. Baker has prepared an introduction to the Calculus (Differential and Integral), covering all the ground required for a first course in the subject.

London: G. BELL & SONS, Ltd., Portugal Street, Kingsway, W.C.

RIVINGTON & CO.'S NEW BOOKS.

AN OUTLINE OF BRITISH HISTORY.

By ARTHUR D. INNES. Crown 8vo, 4s. 6d.
 CONTENTS.—Section I.—Political Outline to 1558—The Anglo-Saxon System—Feudalism—The Growth of Towns—The Rural Population—Industry and Commerce under the Tudors—The Great Transition—Mediæval English Literature.
 Section II.—Political Outlines, 1558-1760—Imperial Expansion—Ireland—Scotland—Capital and Commerce—Town and Country and the Poor Law—National Finance—The Elizabethan Age—The Age of Puritanism—The Era of Rationalism.
 Section III.—Political Outlines, 1760-1910—Ireland—Colonial Expansion—India—The Industrial Revolution—Laissez Faire—State Intervention—Combination—Literature under George III and George IV—The Victorian Era.
 "It is needless to say that Mr. Innes has set before himself a very difficult task, but he has done it well. The book is well arranged, clear, and comprehensive."—*Morning Post*.
 "The treatment is interesting and scholarly throughout."—*Scotsman*.
 "The leading idea has been well conceived and skilfully carried out."—*Glasgow Herald*.
 "Mr. Innes has a rather unusual gift and neat arrangement and lucid expression, and he is able also to take comprehensive and balanced views. The chapter on India is particularly good."—*Guardian*.

JUNIOR SCHOOL BRITISH HISTORY.

By ARTHUR D. INNES. Small Fcap. 8vo, with Maps, 2s. 6d.
 CONTENTS.—Before the Norman Conquest: 1066—The Making of a Nation—National Growth—The Tudor Period—Under the Stuarts—The Georgian Era—From George IV to George V.
 "It is written in better style than most textbooks of the sort, and takes more cognizance of (a) literature, (b) social conditions."—*Preparatory Schools Review*.
 "It is really an interesting and concise history, well adapted for juniors, carried out on the same lines as the author's 'Outline of British History.' There is good reason for thinking it will be acceptable to junior classrooms."—*School Guardian*.
 "This is an excellent little 'History' for junior forms, and is based on the author's 'Outline of British History.'"—*Secondary Education*.

ENGLAND'S INDUSTRIAL DEVELOPMENT: A Historical Survey of Commerce and Industry.

By A. D. INNES. Crown 8vo, 5s. net.
 The book traces the development of England from a self-contained agricultural community, or group of communities, into a maritime, commercial, and colonizing nation, ultimately transformed by coal and steam into the first manufacturing state in the world.

THE STORY OF ENGLAND. A History for Junior Forms.

By W. S. ROBINSON, M.A., Author of "An Illustrated History of England," 3s. 6d. With numerous Illustrations, Maps, and Plans. Crown 8vo.
 Part I. From Early Times to 1272. 2s.
 Part II. 1272 to 1603. 2s.
 Parts I and II may be had in One Volume. 3s. 6d.
 Part III. 1603 to 1760. 2s.
 Part IV. 1760 to 1910. *In the press*.

NOTES ON BRITISH HISTORY.

By WILLIAM EDWARDS, M.A., Head Master of the Middlesbrough High School. Crown 8vo.
 Part I. Prehistoric Times to Richard III. 1485. 2s. net.
 Part II. The Beginning of Modern History, 1485 to 1660. 2s. net.
 Part III. From the Restoration to the Treaty of Versailles, 1660 to 1783. 2s. net.
 Part IV. From the Treaty of Versailles to the Death of Queen Victoria, 1783 to 1901. 4s. 6d. net.
 Parts I to IV may be had complete in One Volume. 10s. 6d. net.

The notes comply, to a considerable extent, with the suggestions as to the teaching of History contained in the recent circular of the Board of Education. They deal with the leading events of European History, the great inventions of the Middle Ages, and the geographical discoveries of the sixteenth century.

JUNIOR BRITISH HISTORY NOTES.

By the same Author. Crown 8vo.
 Part I. B.C. 55 to A.D. 1485. 1s. net. Part II. 1485 to 1660. 1s. net.
 Part III. 1660 to 1783. 1s. net. Part IV. 1783 to 1901. 2s. net.
 These are adapted for Junior Scholars from the "Notes on British History."

FIRST BOOK OF GERMAN ORAL TEACHING

on the Direct Method, written throughout in German.
 By A. R. FLORIAN, M.A., Author of a "First and Second French Course." Crown 8vo, 3s. 6d.
 The lessons are followed immediately by questions, grammar, and exercises. The grammar is reduced to essentials but is thoroughly dealt with. Besides the lessons there is a selection of pieces for reading and of poems. Reproduction exercises have been added in a separate section.

RIVINGTONS' DIRECT METHOD GERMAN

TEXTS. Edited by Professor D. L. SAVORY, M.A. In Twelve Volumes. Small crown 8vo. Each Volume, 1s. 6d.

A complete list sent post free on application.

FIRST LESSONS IN LATIN GRAMMAR AND

TRANSLATION. By W. GREENSTOCK, B.A., Assistant Master at Malvern College. Author of "A Primer of Greek Exercises." Crown 8vo, 2s. 6d. [Lately published.]

This book forms an introduction to continuous narrative and contains 115 exercises, with Latin-English and some English-Latin sentences illustrating graduated lessons of Accidence and Syntax. All the necessary grammar and rules are given in the book, and the vocabulary is based on Caesar. Questions on grammar, parsing, and frequent revision of previous exercises are special features of the book.

ELEMENTARY LATIN PROSE EXERCISES.

By the Rev. A. E. HILLARD, D.D., High Master of St. Paul's School, London, and C. G. BOTTING, M.A., Assistant Master at St. Paul's School. Crown 8vo, 2s. 6d.

A Latin Version. 3s. 8d. net, post free direct from the Publishers only to Teachers.

LATIN PROSE COMPOSITION.

For the use of Middle Forms of Schools. By M. A. NORTH, M.A., Assistant Master of Clifton College, and the Rev. A. E. HILLARD, D.D., Authors of "Greek Prose Composition." Crown 8vo, 3s. 6d.

A Latin Version. 6s. 2d. net, post free direct from the Publishers only to Teachers.

ENGLISH GRAMMAR AND COMPOSITION.

Part I. First Year Course. 1s. Part II. Second Year Course. 1s. 6d. By GEORGE A. TWENTYMAN, B.A., Assistant Master at Manchester Grammar School.

OLD TESTAMENT HISTORY.

A continuous narrative from the Creation to the time of Christ. Illustrated by typical selections from the text of the Hexateuch, the text of the Historical Books, and the text of the Prophets. Suitable for the Upper Forms of Schools or for the general student. With Notes, Maps and Plans.

By the Rev. A. R. WHITHAM, M.A., Principal of Culham Training College. Crown 8vo, One Vol., 4s. 6d.; or, in Two Parts, 2s. 6d. each:—

Part I. The Creation to the Death of Saul.
 Part II. King David to the Time of Christ. [Shortly.]

GRAMMAIRE FRANCAISE PRATIQUE BASEE

SUR LA METHODE INDUCTIVE. By W. G. HARTOG, M.A.

New and Revised Edition. Crown 8vo, 3s. 6d. complete.

Part I, forming a Complete Elementary Grammar, may be had separately. 2s. 6d.

FIRST FRENCH COURSE.

By A. R. FLORIAN, M.A., Head Master of the Priory County School, Shrewsbury. Author of "A First Book of German Oral Teaching." Crown 8vo. With Illustrations. 2s. 6d.

The First Course, consisting of 88 Lessons, is intended for beginners. Whilst retaining the essential feature of the *Direct Method*, plenty of Oral Practice, the book lays special stress on Grammar.

There are illustrations of French life, suitably adapted to the text.

SECOND FRENCH COURSE.

The Text consisting of extracts from "Les Mousquetaires," specially adapted and forming a complete narrative. With *Questionnaires*, Grammar, Exercises, and a complete Grammatical Section and Vocabulary. By A. R. FLORIAN, M.A., Crown 8vo, 2s. 6d.

The above books have both been placed on the London County Council's requisition list for Senior Departments of Public Elementary Schools.

FLORIAN'S FRENCH GRAMMATICAL READERS.

Crown 8vo, 1s. 6d. each. [Just published.]

Series A.—*Le Blocus*. Par ERCKMANN-CHATRIAN.

Series B.—*Nouvelles Gènes-voises*. Par RODOLPHE TOFFIER.

L'Évasion d'Edmond Dantès. Par ALEXANDRE DUMAS.

Le Capitaine Pamphile. Par ALEXANDRE DUMAS.

Other Volumes to follow.

These Readers are issued in two series each containing 30 lessons, the lesson being immediately followed by a *Questionnaire* and Grammatical Section. At the end of the book come Exercises, a Grammar, and in Series A a Vocabulary. In Series B there are no vocabularies, but French notes are added.

Each of the two series has a definite scheme of grammatical instruction, though the same order is not necessarily observed in each book.

MASSARD'S SERIES OF FRENCH READERS according to the New or Direct Method. [Just published.]

Junior Series. With Vocabularies. 1s. 6d. each.

LA MARE AU DIABLE, par GEORGE SAND. QUATRE CONTES, par PROSPER MÉRIMÉE. LETTRES DE MON MOULIN, par ALPHONSE DAUDET. Other Volumes to follow.

Senior Series. No Vocabularies. 2s. each.

BUG-JARGAL, par VICTOR HUGO. PÉCHUR D'ISLANDE, par PIERRE LOTI. COLOMBIA, par PROSPER MÉRIMÉE. Other Volumes to follow.

The notes are all in French, but no hesitation is shown in giving the English equivalent, where this is found advisable. To the notes of each chapter has been added a short *Recapitulation*, for the revision of grammar, idiomatic expressions, and lexicology, as well as a passage for retranslation, and in the Senior Series will be found a list of *Sujets à développer*, drawn from the subject matter of the texts. As regards form, it has been thought desirable to have the Notes bound separately from the text, but they are not sold separately. It is felt that this arrangement will be of material assistance to the student in his preparation.

OCCASIONAL NOTES.

MR. J. L. PATON, to whom we always look for inspiration, is not so happy as usual in his *Contemporary* article on the new Register for teachers.

He starts with two serious errors of fact. The first Register, he tells us, was put under the charge of a State official and therefore failed. It is true that the Council had no voice in the regulations which were prescribed by the Board of Education acting on the advice of the Consultative Committee, but its administration was uncontrolled. Next it is stated that on the new Council the Board of Education will be represented. As our readers are aware, all the forty members are chosen by educational bodies, with the exception of the Chairman, who is to be nominated by them *ab extra*. Lastly, we are told that, after settling qualifications, the most serious business of the Council will be to decide, as do the Medical Council and the Law Society, what is "infamous conduct in a professional respect"—a work that the first Council could not undertake because it was a mere piece of Government administration. As a matter of fact, such powers were given to and exercised by the first Council, and, doubtless only by an oversight, this clause was not repeated in the recent Order in Council. These are flaws on the surface, and the body of the article is admirable both in sentiment and diction. All that Mr. Paton says as to the collegiate spirit and the abolition of class distinctions we heartily endorse, but we wish he had thrown some light on the initial problem of a

common qualification for all teachers and more explicitly stated that, in his opinion, professional training (the word does not occur in the article) should be an essential.

THE summer holidays always bring with them the question of the value of holiday courses in modern languages. A considerable sum of public money is now being spent by the Local Authorities in providing Bursaries for teachers tenable at holiday courses, and it is not clear whether the money is in all cases spent in the best possible way. In the first place, a three weeks' holiday course can do no more than freshen up knowledge which has become dulled; it can furnish no opportunity for thorough study. Secondly, those whose special need is to practise conversation frequently find themselves in an environment that is as much English as French or German. But the Local Authorities insist on their teachers going to these courses, probably because certificates for attendance at lectures are given and frequently also diplomas. We should like to see the uniformity of this practice broken, first by the diversion of some of the money to providing bursaries tenable for longer periods, three or four months at least—these would help teachers who want opportunities for genuine study; secondly, by permission being sometimes given to teachers who are particularly weak in conversation to spend their time in private families. There are many varieties of modern language teaching, and all its practitioners do not require the same thing.

EVERY year the organizations for providing the children of elementary schools with something to do in the long holidays increase their activities. The essence of the vacation school is that the work of the masters and mistresses is reduced to guiding and superintending, whilst the children are free, within certain limits, to choose their own occupations. Much of their time is spent out of doors, and when wet weather drives them into the school building handwork of various kinds is the principal resource. It seems more than possible that these schools will exercise a considerable influence over the teaching in term time, especially that of the lower classes. For these classes the self-activity of the children—guided, and controlled, by the teachers—should be a very large part of the aim of the life of the classroom, and in the vacation schools masters and mistresses must be gaining valuable experience in the methods by which that aim can be best attained.

UNDER "Schools and Scholars," last month, "A. S. D." drew a glowing picture of the modern side in Utopia. The staple of instruction will be English in the widest sense of the word—literature and composition (both prose and verse), modern history, politics, and economics. For the rest of the time there will be free option between mathematics, science, and modern languages. Boys of real ability who may win scholarships at the University will have no difficulty in carrying on the Latin and Greek that they have begun in the junior school to the standard of Responsions. "G. K.," while criticizing, accepts, in the main, this ideal scheme, but contends that it is not a vision of the dim future, but an actuality that is slowly but surely being brought to pass. Classical and modern he pronounces fictitious distinc-

tions; literary and scientific would be more appropriate. But if, as he desires, English, including politics and civics, are taught on both sides, linguistic and scientific would be nearer the mark. Both would abandon Greek as a compulsory subject, but "G. K." holds fast to Latin as the one foundation of a liberal education and would have Latin thoroughly taught on both sides. He affirms by recent instances the old argument that the classically trained boy will beat the moderns on their own ground. The argument, as we have before remarked, seems to us fallacious. The majority of the head masters are classics, all the prestige and most of the prizes still attach to the classical side, and the modern side is still a siding where the failures in Latin and Greek are shunted. As a German master once remarked, under provocation, "It is true what I was told. You are the *orfal* of the school." A single instance goes for little, but we might counter "G. K.'s" record of the classical boy who carried off the prize for modern history by mentioning that one of the most brilliant Firsts in Greats of recent years, followed by a Fellowship, was gained by a modern-sider.

CIRCULAR 808, "Suggestions for the Teaching of English," is a revised edition of the Memorandum of 1905. The first Memorandum was confessedly tentative, and in the seven years the Department has gathered much from inspectors and teachers, and not been too proud to modify its former conclusions. An official document addressed *urbi et orbi* must perforce be guarded and cautious, and the teacher is likely to complain that the directions are too vague and general to admit of particular application. Yet, if he attend only to the negative advice, he will probably be warned of some bad practice that he should eschew. For instance, he will not set himself to eradicate provincialism or to correct the Northumbrian "burr." The insistence on oral teaching throughout and on the postponement of reading for the first two years of school life is commendable, and not less at a later stage the emphasis laid on matter *versus* form in reading and composition. To note a few defects, classes of fifty or sixty are still regarded as normal; phonetics are not once mentioned, and simplified spelling is tacitly ruled out of court; formal grammar teaching is reduced to a minimum, but no hint is given as to when it should begin, and parts of speech precede analysis of sentences. The Circular ends with a word to the teachers themselves. They are warned against pedantry and affectation, tall talk and fine words. Their pronunciation was doubtless considered too delicate a subject to handle, but we may add from our experience that, if *viva voce* formed part of the Government Certificate Examination, a considerable percentage would be rejected for Cockney accent and misplaced aspirates. A late distinguished grammarian, offended with a boy's definition of a pronoun and told that it was in Morrell, exclaimed: "Don't quote Morrell to me; 'e don't know no more of grammar than a 'ippopotamus."

Teaching of English in Elementary Schools.

WE are glad to learn that, at the next Trade Union Congress, the Miners' Federation will make an attempt to procure the deletion from the annual program of the motion in favour of secular education. We find it difficult to believe that the majority of working men really desire that their children should receive no religious instruction, and we are quite certain that, of all the

possible solutions of the religious question, the secular solution would be the least popular. In the discussions on the recent Education Bills it found scarcely any support in the House of Commons outside the Labour party. Its adoption would furnish no permanent solution of the question, as the experience of some of our own colonies has shown, whilst the difficulties in which it would involve the schools will be appreciated by those who have observed what is going on in France.

MR. A. R. PICKLES, Director of Education for Burnley, has backed the Radicals who demand a complete reorganization of our secondary education. In a paper reprinted in the *School Government Chronicle*, he points out that the secondary-school child costs the rates £7 and the elementary-school child £2. How is the sorting to be done? Not, says Mr. Pickles, by the scholarship system. He has no faith in "the setting of printed questions by an invisible examiner to remote children." He denounces the stimulation of young children to work at high pressure by competitive examinations, and therefore advocates the abolition of competitive examinations for scholarships and the substitution of a better system. We shall await with interest the findings of the Royal Commission on the somewhat similar question of the selection of candidates for the public service.

THE perplexing question has been raised whether the private "coaching" of elementary-school children for scholarships ought to be allowed. Obviously the aim of the scholarships is to a great extent defeated if poor children are deprived of scholarships because children whose parents can afford special tuition do better in the competitive examinations. In Bristol the question has been taken up by labour organizations, and the Education Committee has referred it to the Scholarships Committee. It is not easy to suggest a way out of the difficulty; for, as Dr. Cook, the Chairman of the Bristol Committee, suggested, it may well be that, in removing one objection, the Committee may find itself in worse straits. He was definitely opposed to a system of nomination or selection entrusted to others than members of the Committee.

THERE has been a frank discussion at the London County Council on the question of an increased grant to the Imperial College at South Kensington, which, it will be remembered, was the outcome of Lord Rosebery's letter in July, 1903, to Lord Monkswell, Chairman of the Council. The original proposal was for a great college of applied science working in co-operation with the Royal College of Science and the Central Technical College. The Council fell in with the idea, but the Government upset it by bringing the other Colleges definitely into the scheme. We are disposed to agree with Mr. Cyril Jackson that, so long as the undergraduates are there, the College cannot do its best work. Energy has been dissipated and progress has been slow. The Council, has, however, agreed to increase their grant from £8,000 to £13,000 for five years, and the Board of Education has also promised a substantial additional subsidy. Before that period elapses, the Royal Commission on University Education in London will no doubt have reported.

Secular Education.

MR. KENNETH BELL contributes to the *Cornhill* a study of the University of Toronto, where he passed two years as a teacher of history. All should read it who care to know not only what the Canadian undergraduate, but also what life in Canada, is like. We can only glance at some of the most striking features as here portrayed. The first impression is that culture is still to seek. It is not imparted in the common schools, admirable as these are *qua* day schools, nor is it found in the home where nothing is read but an inferior sort of *Daily Mail*. Toronto is the University not only of the province, but of the people. Rich and poor, men and women, all meet on an equality. Mixed education is not an unmixed blessing. It tempts the Canadian boy to a rather sickly dangling after his girl classmates in an atmosphere redolent of candy. The word "boy" is deliberately chosen, for, though the Canadian in years and knowledge of life is a man compared with the Oxford undergraduate, in mental development and social *savoir faire* he is a raw schoolboy. But, unlike his congener, he takes his studies seriously and is even more a slave to examinations. And, lastly, he is more truly patriotic. In England we talk of the Government, the upper classes, or the Socialists as *they*—making or ruining the country, as our political opinions may be; in Canada it is *we*. In Canada the world is all before them; we English look more with reverted than with forward eyes.

IN the holiday month the thoughts of even a journalist will turn sometimes to sport. There has been perturbation in many quarters because we got well beaten in the Olympic games at Stockholm, and sportsmen have been writing to the newspapers to complain that athletic sports are not taken seriously enough at schools and Universities. We hope that this grumbling will have no effect. Of all forms of outdoor recreation these sports are, whether looked at from the physical or the moral point of view, the least worthy. They appeal to the few only, they are purely individual and selfish, the boy playing for himself and not for a side, and they easily degenerate into show or into pot-hunting. They have little of the exhilarating and stimulating influence of football and cricket and none of their moral influence. The humble place they occupy in the outdoor life of schools is as good as they deserve.

THE new spirit at Whitehall, of which we wrote recently in connexion with the Teachers' Register, was in evidence when Mr. Selby-Bigge spoke at Stratford-on-Avon on the possibility of introducing folk song and dance into elementary schools. The Board, he said, were quite prepared to approve it if any Local Authorities wished to make the experiment. The valuable elements in these exercises were fun, disciplined and orderly effort, and a certain form of artistic emotion. It may strike some people that the first and second elements are to some extent in contradiction. Fun and discipline are strange bedfellows. Indeed, the supporters of the movement at the Conference were clearly divided into two camps, which may be called "the camp of joy" and "the camp of accuracy"—those who wished dancing taught as a means of enjoyment and those who wished it taught as an educational exercise.

OUR sympathies are mainly with the first camp. The principal object of teaching dancing and singing must be to cultivate the capacity and provide the means for invigorating and exhilarating physical and social enjoyment. It is no doubt melancholy that there should be any need for such instruction. Singing, indeed, has always been taught more or less in this and other countries; we know how widespread singing-schools were in the Middle Ages; but we may be sure that our medieval forefathers did not need to learn dancing at school. However, regrets of this kind are useless; since Puritanism and industrialism—and we attach far more importance to the second than to the first as the cause of the drabness of modern life—have between them nearly killed the capacity for wholesome natural pleasure; we must look to the schools to revive it, just as we look to schools to teach those elementary domestic arts which our grandmothers learnt in their own homes. A Hampstead Heath crowd is one of the most depressing sights in the world, not because the enjoyment is coarse or rough, but because the holiday makers have so few resources for enjoyment, except those that are provided by some kind of mechanical apparatus—a merry-go-round or a cinematograph.

WHAT we have said applies also to music in elementary schools. We should like to see singing treated less as an art and more as the expression of natural emotion—to see boys and girls taught to sing not in order that they may make pretty displays at school functions, but rather in the hope that they may be infected with the joy of singing and may grow up to sing spontaneously on all social occasions. The first desideratum is songs into whose sentiments they could really enter. The rather comic spectacle of a mass of young barbarians gently trilling "Drink to me only with thine eyes" or "Robin Adair" would no longer be possible. The result of the present treatment of singing is that, while the appreciation and cultivation of music have extended widely in the country, singing is still to the Englishman—or, at least, the Southern Englishman—something artificial, something to be rehearsed and performed before an audience, not the natural overflow of the heart, the spontaneous expression of gladness and sorrow.

OF all the advice given to schoolboys on this year's speech-days, we like best that of the Speaker of the House of Commons: "Don't be sloppy." It is advice which teachers as well as boys and girls might well take to heart. For "sloppiness" is the besetting sin of contemporary education. The schools which are described in the Board of Education's Circular on Modern Language Teaching as subordinating accuracy in speech and writing to conversational facility; schools which put into the hands of children a grossly partisan and flagrantly inaccurate history of England because it is written in a sensational style which makes it easy reading; schools in which the principle is accepted that it does not matter whether children understand the poetry they read provided they enjoy it—these and others might well take the Speaker's advice to heart. It is quite certain, then, that any teaching which seeks merely to excite interest and emotion, and neglects intellectual discipline and training in accuracy

Sloppiness.

and thoroughness, is certain sooner or later to be discredited.

THE speech made by the Under-Secretary for India in introducing the Indian Budget was largely concerned with education—a tremendous problem indeed in a country with 230,000,000 of people, 90 per cent. of whom live in villages and scarcely one-tenth of whom can read. There are, it is true, 120,000 primary schools in India, but then there are 600,000 villages, to say nothing of the towns. The Government has produced a program which provides for something like the doubling of the number of schools, and it is hoped that the school-going population will be quite doubled. The great difficulty will be the provision of teachers. The supply of trained men is scanty, and the small salaries offered do not attract educated Indians. Evidently it will take a long time to carry out the Government's scheme. Mr. Montagu also criticized trenchantly the rote-teaching now given in Indian schools, but he did not say what it was proposed to substitute for it.

UNIVERSITY education in India has not hitherto excited much enthusiasm in England. It has been too much a mere matter of cramming students for examination. Healthy corporate life and the social and moral influences of University life have been almost wholly lacking. Yet it is fair to remember that Anglo-Indians agree that, in spite of all this, English education has had a favourable influence on the tone of the young men who have sought it. The growth of efficiency and honesty amongst Indian officials has been marked during the last generation, and, in part at least, it is to be attributed to education. It is in this side of University education that Mr. Montagu finds most hope for the future. The Government of India propose to spend largely in establishing boarding houses and hostels for students, so that social life may be fostered. The policy, already begun, of breaking up the large federal Universities and turning the local colleges into genuine teaching and residential Universities, is to be further developed in the future. On the whole, the outlook for education in India is promising.

A MERE drudge who could be dismissed almost without notice and who enjoyed a miserable average salary of £82—such is Mr. Birrell's description of the assistant master in Irish secondary schools. There have been hitherto no Exchequer grants for such schools. However, even in Ireland there is sometimes a ray of light. Mr. Birrell has succeeded in getting £40,000 a year out of the Chancellor of the Exchequer, though it is not quite clear whether the grant is to be permanent or not. He hopes soon to be able to provide a teacher for every forty-two pupils, and the minimum salary is to be £120 for men and £80 for women. This will be some improvement on present conditions, but even then we fear that it will still remain true that, as the Irish Secretary says, there is no occupation in life one would not recommend a friend to adopt rather than that of a secondary teacher. But is not that true of England also?

EDUCATION is as hard to define as poetry, and the Archbishop of York's description of an educated man, quoted the other day by Lord Morley, as one who

Education and Credulity.

knows what is evidence, and when an assertion is proved and when it is not, did not profess to be a complete definition. But it suggests the important question how far education has influenced the intellectual habits of the community. Its effect in some directions is fairly evident: interests are wider and there is desire for information; the working classes, in spite of occasional outbreaks of violence in times of excitement, are more self-controlled; drunkenness and brutality have diminished. But whether there are more people now than there were fifty years ago who know when an assertion is proved and when it is not is not so clear. To judge from political controversy, both on the platform and in the press, we should say that credulity flourishes as much as ever it did. Mendacity in politics was never more brazen or more violent, and mendacious writers and speakers no doubt understand their public. In a wholly different sphere the extraordinary vogue of patent medicines and faith healing points the same moral—that our present education does not succeed in developing any critical faculty in the masses, whatever success it may have had in other directions.

LOCAL AUTHORITIES.

THE transformation of the Local Education Authority from a "scholastic agency" into what Mr. Sidney Webb has termed "the organ of the community for maintaining and securing the national minimum of child nurture" is the significant result of recent legislation. There are those who lament this result and who would not impose upon public authority responsibilities which can be discharged by the individual. On the other hand, it may reasonably be urged that interference with parental discretion in one direction carries with it obligations in others. If the Authority must compel the child to attend school, it follows as the proper business of the Authority to see that the child is in a suitable physical condition to undergo the school process. The Authority may also, perhaps, where parents cannot be made to do their duty, find it necessary to provide food, raiment, and medical treatment. But these extraneous duties having been discharged, a Local Education Authority is now called upon to accept the responsibility of influencing the choice of employments.

THE adoption of the Education (Choice of Employment) Act, 1910, by a Local Education Authority is, of course, an optional matter. The duties of an Authority under the Act includes (1) giving advice to parents with regard to their children remaining at school or in the choice of employment; (2) receiving and registering applications for employment from children who are still at the elementary school or who have not left more than six months. It is assumed by the Government Departments that the detailed work will be entrusted to a special sub-committee, and this sub-committee should have at its disposal the services of an executive officer. Towards the salary of this officer the Board of Education, subject to a variety of conditions, is prepared to contribute one half of the amount fixed.

AT a recent meeting of the Wigan Education Authority Mr. Brierly, in recommending the appointment of a Juvenile Employment Sub-Committee, stated that they had been directed by the legislature to take steps to find out what the bent of children was—what they desired to do. A friend of his, he remarked, always said that whatever the bent of a child was he ought to go exactly the contrary way because the child was not the wisest person to decide what his future career in life was going to be. It may be questioned whether, under present conditions, the majority of children

can be said to choose their employment. It is chosen for them by their circumstances and opportunities. And there is no doubt that advice and supervision are needed. At the same time, there is not of necessity any relation between the standard of attainment in the elementary school and the nature of the employment. An investigator in Manchester was surprised to find no proof that the youths who had passed the sixth standard in the elementary school were in any better position than those who had not risen beyond the fourth. We are not surprised, for the obvious reason that in a large number of employments the advantages of the sixth standard are not an asset of immediate value. The real point of attack should be to improve the conditions of such employments.

Hull. THE unofficial person, aware of the elaborate system of Labour Exchanges established by the Board of Trade, may find a difficulty in understanding why it is necessary to enable Local Education Authorities to set up another system for the special benefit of juveniles. The natural course would seem to be for the official Exchanges to organize juvenile departments. At a meeting of the Hull Education Committee, a few weeks since, this was the course recommended, the Committee indicating its desire to render to the Exchange all necessary assistance in carrying out the work. This proposal, however, was not adopted without opposition, on the ground that the Authority ought not to regard their duty as finished when a child left the schools at the age of fourteen.

Liverpool. A LARGE number of Authorities, especially in county boroughs, apparently hold the view that they can deal with the question of juvenile employment more effectually than the Labour Exchanges, and schemes have been adopted in accordance with the Education (Choice of Employment) Act, 1910. The intention was that any Juvenile Employment Committee appointed under a scheme drawn up by a Local Education Authority should co-operate as closely as possible with the Labour Exchange. In some cases this requirement has occasioned difficulty. At Liverpool, for instance, the original scheme submitted was not satisfactory to the Board of Trade, who, it is stated, "sought a more direct and almost joint control" over the Bureau. After some pressure, the Board of Education approved the scheme without reference to the Board of Trade, and the Education Committee can work it on their own responsibility.

Leeds. THE Education Committee for Leeds established an Advisory Committee for Juvenile Employment, in conjunction with the Board of Trade, before the Act of 1910, and its constitution has not been modified. During 1911 the Committee found 1,847 places for boys and 1,390 places for girls.

Birmingham. THE City of Birmingham has adopted a comprehensive system, including (1) a Central Juvenile Employment Exchange and branches, and (2) an organization of Care Committees (central branch and school) for the friendly oversight by voluntary agencies of all young persons from thirteen and a-half to seventeen years of age. While the Employment Exchange is under the control of an officer of the Board of Trade, who is responsible for registration, he selects suitable applicants for vacancies, in the case of children who have recently left school, in consultation with a member of the Central Care Committee. This Committee is a representative body of voluntary workers. An interesting part of the scheme is the School Care Committee which acts under the regulations of the Central Committee.

Birmingham School Committees. THE procedure of a School Committee is as follows: Three months before a child is due to leave school the head teacher reports concerning him on a form provided for the purpose. A voluntary helper then visits the case, advises as to employment, further education, &c., and reports. This report is sent to the Central Care Committee, and the Juvenile Employment Exchange is furnished with a copy about a month before the child leaves school. There are now School Care Committees dealing with about seventy schools, and four branch juvenile employment exchanges have been opened. These are confronted each month with about five hundred applications from persons under seventeen years of age.

Brighton. THE scheme of the Brighton Education Committee arranges for an employment bureau for the registration of applicants at the Education Offices. A sub-committee is being appointed containing members of the Education Committee, of the Women's Employment Committee, the employers, workpeople, teachers, and others concerned, and a lady Employment Officer has been appointed to work under the supervision of the Secretary. It is believed to be an advantage for the officer to be a woman, on the ground that men find a difficulty in placing girls, and also because the officer delegated by the Board of Trade Labour Exchange to advise in conjunction with the Education Committee will be a man. Finding places for girls will be an important feature, as, owing to the local conditions, there are many opportunities for women's employment in laundries, in the millinery trades, and in domestic work. As regards domestic service, Mr. Toyne, the Secretary, points out that it is a great advantage for the bureau to be established under the authority of the Education Committee, as the Board of Trade exchanges are not permitted to deal with this employment. It is also proposed that committees for the after-care of children should be formed in various districts.

Administrative Counties. THE organization of juvenile employment agencies is comparatively simple in large urban districts, and the regulations issued by the Board of Education and the Board of Trade do not meet the conditions of administrative counties. The President of the Board of Education stated, in December last, however, that his Department desired to remove any difficulties, and invited Local Authorities to put forward voluntary schemes of their own.

Lancashire. THERE is, unquestionably, an opportunity for good to be done in the counties, although, of course, Education Committees, especially in agricultural areas, hesitate to embark upon any new undertaking which will involve an addition to the rates. The Lancashire Education Committee, after carefully considering the memorandum issued by the Government Departments, expressed the opinion that it would not be wise to exercise the powers conferred upon them. In view, however, of the statement made by the President of the Board of Education, the Committee intimated that it would be prepared to reconsider the question when the proposals foreshadowed in the President's speech were officially issued.

Other County Authorities. A FEW County Councils—Hertfordshire, Lincolnshire (Lindsey and Kesteven), Nottingham, Suffolk (West), and Norfolk, among others—have already decided not to give effect to the Act. The Buckinghamshire Committee objects to the scheme of financial aid offered, and is of opinion that not less than 50 per cent. of the extra cost of administration should be met by the Government. The Committee believe in the efficacy of Care Committees of an informal character. In Kent and Surrey the Committees are not in favour of adopting the Act, and desire to leave the matter to the Board of Trade. The Middlesex Authority had come to no definite decision a few months ago regarding their area as a whole, but agreed that, if any of the thirteen large autonomous areas in the county desired to undertake the work at their own cost, they might do so.

Oxfordshire and Cumberland. THE Local Education Authorities for Oxfordshire and Cumberland have resolved to exercise their powers under the Act and have prepared a scheme. The scheme of the latter county provides for (1) appointment of an executive officer, (2) School Attendance Committees to render assistance, (3) Committee of Control to be the Technical Instruction Committee, (4) each School Attendance Committee to be a juvenile employment district for the purpose of collecting information; and for this work the services of the attendance officers will be utilized.

THE Governors of the London School of Economics are enabled, by a gift from an anonymous donor, to offer a prize of £100 for an essay on one of six prescribed subjects of economic politics, such as Consumption of Wealth, Old Age Pensions, Factory Legislation, the Land Question. An offer of this kind undoubtedly stimulates young students to original work, and directs their studies to a definite end, with a reasonable chance that the literature of the subjects proposed will be permanently enriched.

SCIENCE NOTES.

International Congress of Mathematicians. THE fifth International Congress of Mathematicians was opened at Cambridge on August 22 by an address from this year's President, Sir George Darwin. Previous meetings were held at Zürich in 1897, at Paris in 1900, Heidelberg 1904, and Rome 1908. The membership is about equal in numbers to that of the House of Commons, and includes representative mathematicians from practically all countries. The department dealing with the teaching of mathematics is particularly vigorous. The Board of Education has collected nearly two hundred special reports containing information as to the practice and trend of mathematical teaching in Great Britain, and similar compilations have been presented by Germany and other countries.

Ante School. THE August number of the *Child* contains a verbatim report of the address delivered by the President of the Local Government Board at the inauguration of the National Association for the Prevention of Infant Mortality and the Promotion of the Welfare of Children under School Age. The increasing number of teachers who take an interest in the conditions affecting children before they enter school will find much of interest in this and other papers.

Etna. THERE have been several bursts of renewed activity in the craters of Etna and Stromboli during July and August. Etna has some hundreds of vents, and from a new one formed on May 28, 1911, there have been pronounced eruptions this August, clouds of steam with ashes and lapilli being ejected. On one occasion the vapour column reached a height of ten kilometres.

Science Museums at Kensington. WE have received a copy of the reports for the year 1911 on the Geological Museum and the Science Museum at South Kensington. We note that teachers who intend to conduct classes over any of the galleries are invited to visit the collections beforehand. By previous application they may obtain assistance during these preliminary visits from officers of the museum. During the past year some two hundred teachers received special facilities, and the number of pupils thus instructed exceeded three thousand. In the list of acquisitions by the Scientific Apparatus Division we note a valuable collection of early microscopes, which have been placed in the biology section. The comparative inaccessibility of the Science Library is a serious hindrance to its use by teachers, and we are not surprised to observe that two-thirds of the visits to the Library were made by students from the Imperial College. The reports on the two museums and that of the Solar Physics Committee show that useful work is being done; but the account of the work is such as to repel rather than to invite public interest. While this policy is pursued it is possible that the funds available for the work will be commensurate with the paucity of public appreciation.

City and Guilds Institute. THE program of the Technology Department of the City and Guilds Institute has just been issued. The Institute registers and inspects classes in eighty technological subjects, and also awards certificates for teachers of manual training and domestic subjects. The volume just issued extends to 370 pages, and includes syllabuses and lists of works for reference which give useful guidance to teachers and students in provincial centres. The registered classes of the Institute are held in every quarter of the United Kingdom. The City and Corporation of London thus evince a broad-minded, national conception of their educational work.

The Higher Way in Manchester. WHILE certificates provide a necessary stimulus to the many whom we wish to attract to technical instruction, there is somewhat lacking in any educational institution which gives excessive prominence to examinations and diploma-hunting. It is with a strong sense of satisfaction that we turn to the journal just issued by the Manchester Municipal School of Technology, of which two hundred and sixty quarto pages are filled with records of investigations undertaken during the past year by members of the teaching staff and students of the school. A certificate is a well earned recognition of industry; but to have added even a small contribution to scientific knowledge is a service and an inspiration.

Eels and Elvers. THE theory that the spawning places of the eel are in the depths of the Mediterranean has been generally accepted since Grassi published his discovery that *Leptocephalus brevirostris* was the larva of the *Anguilla vulgaris*, the common eel. Recent research has in no way altered this discovery; but the idea that the Straits of Messina are the principal spawning ground is shown to be erroneous. A thorough investigation is being conducted by a Danish Commission, and, although many problems are yet unsolved, we can safely conclude that all the eels of the North of Europe, and the greater part even of the Mediterranean eels, come from the Atlantic. The spawning places lie in the North Atlantic beyond the Continental Slope. Possibly the Sargasso Sea is a principal spawning region, and it is quite possible that the birthplace is the intermediate layers and not the bottom.

THE PARENTAGE OF THE DOCTRINE OF FORMAL TRAINING.

By Dr. F. H. HAYWARD.

THE pedagogical doctrine known as "formal training," less ambiguously as "faculty training," and still less ambiguously as that of "mental transfer," may be defined as that way of regarding mental life which sees in any school subject or school process a general and not merely a specific value. Practice in the "observation" of one kind of material is regarded as practice in "observation" in general; at any rate, a general power is alleged to be, in some way or other and to some degree or other, conferred by the practice with the specific material. So also with "reasoning," "accuracy," and other processes. There is asserted or assumed to be "transfer" from one kind of activity—e.g. reasoning about numerical relations—to some, most, or all other kinds of activity called by the same name—e.g. to reasoning about civic or social relations. The transfer is sometimes admitted to be but moderate or even small in amount; at other times, however, ambitious claims are made on behalf of the doctrine, and it is appealed to in justification of numberless circuitous and symbolic details of school procedure, as, for example, the teaching of civics "indirectly" through games or through the activities of the balance room. The doctrine has been exhaustively criticized during the last ten years and more locally and casually during the greater part of the last century, and at the present moment its status is so "suspect" that nothing short of restatement is likely to save it.

First, however, the antecedents of the doctrine must be traced. Self-interest has been so frequently operative in the realm of human opinion that whenever a doctrine is found to be in high favour without having gone through the usual historic stages of enunciation by a few, ridicule and opposition by the many, and ultimate acceptance by all, we have a right to surmise that egoism or convenience has been the chief factor in its popularity. Still, even the most flattering doctrines do not win a wide acceptance unless they possess some superficial plausibility. This has been the case with the doctrine of formal training. Claptrap and quackery though it mainly is, it is plausible claptrap and seductive quackery. Let us study its plausibility first before tracing its egoistic parentage.

1. *The Influence of Words on Psychological Thinking.*

The "realists" of the Middle Ages, following the idea of Plato, held that every general term must have, somewhere in the universe, its corresponding concept or prototype. A.B. is "good," C.D. is also "good," and so is E.F., but there is also "goodness" *per se*. To hold, as the "nominalists" held, that only the word "good" existed over and above the individuals A.B., C.D., and E.F. was, in the opinion of the "realists," destructive of the "reality" of goodness.

This controversy was one of the many bypaths of thinking into which the invention of language had lured

mankind. Indeed, as the historian reflects on human evolution, he is sometimes tempted to doubt whether that invention was so advantageous to the human race as it is commonly supposed to have been. Certainly it has provided human thought with a powerful tool, but this tool, like so many other human inventions, has taken to itself a kind of independent life, has ceased to be the mere instrument of its creator, and has become in a hundred affairs of life his master. It is difficult to conceive what would have been the course of human progress had a different means of communication than that through speech been invented. Certainly the whole history of "orthodoxy" (in religion, science, and the like) would have been different. Creeds might never have existed, though ceremonies and sacraments—with all controversy about them latent or impossible—would have acquired an even vaster importance than they actually have; thought might have kept closer to human instinct, and therefore might have been far more intimate and intense than it is. But the astonishing agility given to thought by being linked to the airy nothings of speech would have been absent—for ill or for good.

Turning now to the question in hand, we see that human language suggested to the first advocates of formal training the existence of a series of fictitious entities. The word "observation" surely stood for something—the "faculty of observation." The word "memory" surely stood for something—the "faculty of memory." There were not only specific acts of "observation" or "memory," there was something more. As, moreover, the words "observation" and "memory" were distinct, the two supposed "faculties" must be distinct also. Thus human thought slipped into the pit which it had dug for itself by the invention of speech. The instrument had become the agent; the servant had become the master; words had imposed their laws upon thought.

This double function of words needs constantly to be kept in mind. Words may be servants, but they may also, by slow process or by quick, become masters, without, however, altogether ceasing to be servants; and when acting in this dual capacity they appear to function in at least three ways. Their influence upon thought may be (1) exhilarating, (2) depressing, or (3) fantastic. Words may expedite thought, they may retard thought, or they may lead it astray. "Wings, weights, will-o'-the-wisps"—this alliterative formula may serve the purpose of summarizing the threefold influence.

Whoso first applies a strong and familiar word to an unfamiliar situation is the conqueror of a new province of thought. Whoso, checked by the unfortunate or conventional associations that have gathered around a word, fails to apply it where a new application would be illuminating, is a slave chained to his own dullness. The third case is that of the man who, misled by the virility or convenience of a word, uses it as a guide or a tool, but fails to look at it with critical eyes. This last has been the case with the supporters of "formal training." They imagine that words like "observation" stand for more than they really do; that observation implies, in addition to this and that specific act of observation, a faculty of a general kind; that the observant man is not merely specifically but generally observant. So, too, with the other alleged "faculties."

There is no doubt that if historical or professional causes had operated to stress in common speech such qualities or functions as "amicability" or "vociferousness," pedagogues would, at the present moment, be fighting on behalf of these two "faculties." Indeed, there is hardly a limit to the number of faculties and sub-faculties that can be supposed to exist, because there is hardly a limit to the number of abstract nouns which we can invent.

2. The Prejudice against Precept and Verbalism.

The popularity of the "formal training" notion has been increased, particularly in English-speaking countries, through another circumstance. Two conflicting views of education are everywhere and have long been in evidence. There is the

view that the child, being inexperienced, wilful, and perhaps fundamentally corrupt, needs to receive systematic guidance and instruction from adults, which things have accordingly to be supplied by Church and State through various organizations. Opposed to this is the view that the child's innate corruption is a figment of theologians, that his wilfulness is a delusion of overworked or unimaginative parents, and that his inexperience is apparent, not real, the child being, in the Wordsworthian and Froebelian philosophy, actually wiser than the adult.

It is rarely the case that an educationist can do justice to both of these views. Usually, as the result of some narrow experience of his own—*e.g.* too stringent control in youth by the representatives of the former system, or personal observation of the failure of the second—he becomes a blind advocate of one or the other; or, more probably, adopts fragments of each, keeps these fragments separate in his consciousness, and perhaps even advocates each in turn without recognizing their need for correlation or supersession. In modern education this latter phenomenon is widespread and almost universal, and it undoubtedly, like all compromises, intentional or unintentional, contributes for a time to national and educational peace. The only difficulty is that, as Mr. Birrell points out in his essay "*The Via Media*," "the world is (ultimately) governed by logic; truth . . . is always on the side of the strongest battalions. An illogical opinion only requires rope enough to hang itself. . . . Middle positions frequently seem to afford the final solution of vexed questions, but this . . . delusion seldom outlives a generation. . . . Logic is the prime necessity of the hour. . . . Some opinions, bold and erect as they may still stand, are in reality but empty shells. The shove would be fatal." For logic, as Newman, quoted by our author, says, "teaches us the direction in which truth lies, and how propositions lie towards each other."

Now it is quite clear that the two views of education above described are either mutually destructive or, as is more probable, in need of a synthesis which hitherto has been lacking. As things are, teachers in all grades of education admit at one moment the supremacy of the one ideal, at another moment the supremacy of the other—that is to say, they know the catch phrases of each system and see dimly a little of the truth of each; but how these phrases and these fragments of truth "lie towards each other," they do not know, and if they conjecture or suspect they must needs be silent.

Now, among the many catch phrases which darken educational counsel are a series which deprecate the use of instruction. The blunders of past generations of teachers and clerics, their unpedagogical methods during centuries when pedagogy was unknown and pedagogues mostly despised—the literature of a generation or two ago is full of the records of such blunders—have given a factitious popularity to such maxims as "Example is better than precept," and "Practice is more important than theory." And as there is real truth behind these otherwise absurd maxims, as "practice" means content and "theory" means form, and form without content is empty, the teacher who is really anxious for the welfare of his pupil readily falls into the trap laid by the doctrine we are here discussing, which now seems wonderfully "practical." He decides that the best way to acquire all kinds of efficiency, industrial, moral, and civic, is by "practice" with Latin, cricket, and the like. No "lecturing," no "moralizing," no giving of rules or precepts.

But here comes the humour of the situation. Formal training, in so far as it is divorced from the despised elements of "theory" or "precept," is really not formal at all. It is training in mere "content," in Latin *per se*, in games *per se*, not in Latin or games as types of other and wider activities. The one medium by which it might be made general or formal in its effects is the one medium—namely, speech—which the "formal trainer" ignores or regards as out of the question. If form without content is empty, content without form is blind. Speech, as

we have seen, has a generalizing function; it gives a wider significance to narrow circumstances; it gives form to content. The cricket match acquires form when it is made, through language, a symbol of life. But the formal trainer distrusts "moralizing." Formal training, therefore, remains ineffective just because it ignores "form."

3. *The Facts of Mental Correlation.*

A third cause has also operated to give plausibility to the formal training doctrine. Mental qualities usually vary directly, not inversely, with each other.* Contrary to popular belief, statistics show that the man who is strong in one respect tends to be strong in others. There are, no doubt, individual instances of inverse relations, congenital or acquired; in other words, there are individual instances of the apparent operation of a "principle of compensation" in human nature, strength in one direction compensating for weakness in another. But, on the average, the opposite principle to this is found to hold good. A good memory is no sign of feeble reasoning power or of impaired imagination.

It is not surprising, therefore, that a boy who, at school, was found to be good in, say, Latin, is found, when an adult, to be good at business or at organization. The training in Latin did not confer the skill; but the fact that the boy did succeed in the one occupation was a presumption that he would succeed in others. Again, as said above, there may conceivably be inverse congenital relationships—though these have never yet been conclusively proved—as well as various training influences, favourable or unfavourable: e.g. to devote much time to one subject necessarily abstracts time from others; but clearly, if the above general statement holds good, it will explain many of the facts alleged in favour of the doctrine under discussion. These facts are, indeed, not merely facts of hereditary equipment. Environment is also to be considered. That boys who come from this or that type of school—a type in which hunger, bad air, premature toil, &c., are unknown—should in many cases show exceptional ability, is no proof that the educational methods of that school are good. *Post hoc, ergo propter hoc* (to which we might add *Cum hoc, ergo propter hoc*) is a fallacious type of reasoning.

4. *The Fact of Apparent Transfer.*

Anyone who will examine the large mass of experimental work done on formal training during the last ten years will find that, though actual "transfer" from one kind of skill to another of an alien kind does not take place, there is an apparent transfer in some special cases. The examination of the nature of this transfer will show why formal training has a certain superficial plausibility, closely akin to the plausibility already discussed under the third heading.

For example, since the researches of Thorndike on "accuracy," the important part played in transfer by "common elements" has been recognized. The common elements may take various forms; there may be a transfer of an ideal, of a method, or of actual knowledge-material. Obvious cases of the last are when a violinist transfers his acquired knowledge of musical notation to the study of the pianoforte, or when a girl transfers her knowledge of figures from the classroom to the kitchen. Prof. Brown has recently shown that the apparent correlation between skill in geometry and skill in algebra is really a false correlation; the real correlation is between each of these subjects and arithmetic. Using Thorndike's terminology we may say that the "common element" is arithmetic, and this acts as the mediating agent.

Transfer of ideals and of principles of method may also take place and are of great importance in education, but it must be effected quite consciously and expressly if it is to be effective, whereas in times past the formal trainer has avoided this open-air treatment and has laid stress on "unconscious" training.

5. *The Impossibility of Conferring much Actual Knowledge.*

No doubt the sheer immensity of the field of knowledge has also tempted teachers to adopt any theory that seemed to promise a compact curriculum. Every decade the task of introducing the child to the most important of the rapidly accumulating facts of even a single science becomes heavier. "It is almost impossible to keep pace with the growth of knowledge, and absurd to add perpetually to the burden imposed upon the student. Moreover, it is unnecessary."*

The writer just quoted urges that if we dropped our "fact-megalomania and taught principles and their application, or expounded the meaning of one-tenth of the facts we now lay before the student . . . nine-tenths might safely be jettisoned." Very much the same advice has come from Prof. Karl Pearson and other men with scientific antecedents, who always tend to depreciate "mere facts" and to lay stress on the "principles" underlying the facts.

This, as already said, seems at first sight a promising policy in view of the hugeness of the field of knowledge. Unfortunately, however, we must have come into contact with a large mass of fundamental facts—i.e. concrete experiences—before the need and pertinence of their "principle" is felt or perceived. The proposed remedy is therefore no real remedy. It warns us to attempt, if possible, an economizing of school material, but it gives little practical guidance, and it might, quite conceivably, be a remedy worse than the disease; "principle-megalomania" is just as dangerous as "fact-megalomania." If content without form is blind, form without content is empty.

6. *The Egoism of Certain Professional and Social Classes.*

But though all the above points are of importance, egoism of several kinds is mainly responsible for the vitality, as distinct from the delusive plausibility, of the formal training doctrine. The first kind is that form of self-glorification to which not only pedagogues but priests, doctors, and all men are subject who have a profession of conventionally recognized value. That their own profession is the most important of all is a conviction that few men can resist who have gone through any arduous preparation for it and have continued laboriously to exercise it. These exercises in Latin, through which we put our scholars, *must* be useful; to doubt it would be humiliation. In much the same way as, on Nietzsche's view, the humble and oppressed have tried to extract consolation from their very condition and to believe that their quieter virtues are surer of ultimate reward than the noisy achievements of the imperious; in much the same way as, on Charles Lamb's view, the false maxim that "bullies are always cowards" has been begotten in the hearts of the bullied; so the pedants who have been engaged in ploughing the sands of a palpably barren educational region, have sought to convince themselves and others that the region is not barren and that their toil has not been in vain. Faced by a growing demand for modern subjects, but familiar only with the subjects of the mediæval or renaissance curriculum, pedagogues were driven in self-defence to attribute to the latter a miraculous (because not obvious) virtue. "A new theory must be found to justify [the classical type of] education. This new theory was, in a word, that the important thing in education was not the thing learnt but the process of learning."† In making this claim pedagogues naturally received support from such pupils of theirs as attained any measure of fame and from that greater number who achieved any success, however mediocre or conventional, in life. It is hard for anyone to admit that his youthful years were wasted, wholly or in part; it is hard for him to admit that, ignorant of science, of history, of English literature, of modern languages, he is a badly educated man; thus a pæan from past students joins with a pæan from the pedagogues to swell the praise of the educational system with which they have been connected. Very similar claims proceed from persons educated under

* Thorndike, "Educational Psychology," pages 183-4.

* Prof. Armstrong, "The Mosely Commission Report," page 10.

† Munroe, "History of Education," pages 505-68.

other systems, for defensive egoism is the characteristic of no single class of human beings.

Another circumstance, more distinctive of British and European conditions than of American, has contributed its quota of popularity to the doctrine.

Administrational offices in England were, until the middle of the nineteenth century, filled by nomination—*i.e.* by nepotism and wirepulling—and were filled, moreover, from the ranks of the well-to-do. The introduction of an examination system threw open many minor posts to the general public, but the change was more apparent than real, as success at the examinations involved coaching of an expensive kind; still, nepotism and wirepulling were no longer effective in connexion with these minor posts. The higher and better paid posts, however, continued to be filled in the old way. Both policies implied that specific training for an administrative post was not necessary, the only difference between them being that, whereas the passing of an examination guaranteed the possession of a certain mental ability, appointment by nomination did not imply anything of the kind. (At the same time, there is no doubt that, if appointment by nomination meant appointment after a careful investigation of abilities and an exacting interview—practically an informal *viva voce* examination—it would possess advantages of its own in the case of appointments for which personal appearance, *savoir faire*, and *savoir vivre* were peculiarly important. Most appointments in reality were not made on any such judicious and exacting basis, but it is only right to mention the possible virtues of a genuine system of nomination. It selects qualities which a paper examination leaves unrecognized.) Division of labour, with the consequent increase in the specific skill of each kind of workman, is the recognized policy (despite its many dehumanizing influences) in all the "lower" walks of industry. The merchant asks for a shorthand clerk, and will not accept, in place of it, alleged skill in Latin or high reputation in cricket. Division of labour, indeed, has, since the time of Adam Smith's famous exposition of the subject, become more and more minute. But in the "higher" appointments it has never been recognized. "Formal training" has there been the implied principle of appointment, and clearly, if it could be proved to be a valid principle, it might justify the monopoly of the higher posts by men of certain social and educational "antecedents."

INCOMPETENT TEACHERS.

By GERALDINE E. HODGSON, D.Litt.

IN the July number of *The Journal of Education* there were two passages which could hardly be intended to go unchallenged. One was a sentence attributed to Miss F. R. Gray, alleged to have been uttered during the discussion on the training of teachers at the Head Mistresses' Conference. The words quoted run: "The tenderest-hearted head mistress might be trusted (unlike the training colleges) to reject the failures."

The writer of the "Notes" which occupy the opening pages of *The Journal* made the charge in that more measured language which always may and possibly did arise from experience: "The one charge to which the training colleges lay themselves open is that they will not or cannot weed out students who show inaptitude for their future work."

"The one charge!" Well, this is high praise for the present whipping-boys of the secondary world. In that joyous lightness which must ensue when a long black-list is reduced to a single crime, let one of them make, in all humility, a few suggestions.

First, it is not to the interest—which if a vulgar is a practical, satisfactorily British consideration—of any training department to turn out failures. A few years of such a

course brings its own reward—students from that centre would be avoided.

Secondly, the matter is not so easy as it looks. I should be surprised if other persons of my trade would not back up my statement that it is the capable, as a rule, who are diffident and the "conies" who are persuaded that they are "teachers by the grace of God." The lecturer may exhaust every art of criticism, every will of persuasion, the student of that particular fatuity remains convinced of his own ability, of the "staff's" utter failure to recognize ability and merit when they meet it. In vain may every other method of gaining a livelihood be unrolled before the aspirant's imagination. "I have always meant to teach" is the mulish response, and it is only unusual grace which prevents the retort: "It certainly is not what Nature meant." Now these cases are very rare, but they do exist. Who will suggest the method, the practical method, of weeding them out? I venture to say no one will, because no one can, propose a plan of absolute veto. But there is the opportunity of saying, and I have known it said, "I would not trust my own children, had I any, to you, therefore I will not give other people's into your hand, therefore I do not give you a testimonial." If any head mistress choose, as one or two have, to take a student without *any* reference to those who trained her, she has only herself to blame. Is not this power of refusing, in the last resort, a testimonial quite as much power as any of us ought to have in our hands?

It is the fashion to sneer if any one uses the word "personality" without or with a capital P. Individuality will serve as well, and, whether people like it or not, individuality plays a vital part in the educational world. Perhaps in no other profession is incompatibility a more important and unsettling factor than in the teaching, whether it be between teacher and taught or between colleagues. If we could really admit the likelihood that people, whether adults, or adults and children—picked up, let us remember, often practically at random and forced into extremely intimate relations—may prove incompatible, just unsympathetic, we should have done something; we should have done infinitely more if we could obtain a general admission that such a state of affairs has nothing essentially wrong in it. It is so silly to pretend that it has. "Why in the world should I 'like' a given person or he or she 'like' me?" is the question each of us might profitably ask himself sometimes. No doubt, as Richard Rolle told us, we should "love our even-Christians"; but that "love" is not the curious "feeling" that makes or unmakes the state described by the Italian word *simpatica*. And it is just that feeling of sympathy which is requisite in school relationships. A little tact, a little less conventional grooviness—above all, a little humour—how much those might do where regulations and rules must fail. But there will still remain cases, even many, of incompatibility. A "sabbatical year" for all teachers might not be without avail, for it is a dangerous pinnacle of power on which pedagogues perch, and too many a "Head" grows into a pope, devoid, alas! of anything approaching infallibility.

Considering all things, is not the power to refuse a testimonial as much as any one ought to have? For it must be recognized—it is not supposition, but fact—that we may, any of us, misjudge another. It is an exceedingly interesting "fact of experience"—a phrase Pestalozzi was fond of using—that a student who fails in a given school, who is banned by Head and staff, and who is miserable herself, may yet, if the people responsible for her have the sense to move her, enjoy the very opposite of all these conditions in some other school. It is idle to dispute the fact—instances could be brought of actual cases. I believe this to be an important matter.

As a school mistress and as an academic lecturer, I have advised the removal of a child to another school, of a student to another training college, with better results in both cases, and I am not indisposed to believe that I might conceivably manage an individual who was not flourishing somewhere else. This is urged without prejudice to any institution, to any teacher, or to any pupil or student. I put forward per-

sonal experience only as a plea for the recognition of the obvious facts that no one of us is perfect, that we are not all equally compatible, that there is, in short, an element of supply and demand even in the most intimate of human relations. To fancy that one is—I will not say the best, but even a good teacher *for all and sundry* is a form of pride and self-conceit of which any of us should be ashamed, and which is extremely deleterious to public interests.

But there is another weapon which the heads of training colleges and departments can and do use—viz., the ordinary testimonial and the informing letter. Sir Joseph Thomson, at the Congress of Universities, observed that if testimonials had any weight it depended on the recipient knowing the writer. Well, many of us do know each other, more of us can know "of" each other. The one desideratum seems to me to be a general determination to give honest testimonials. Those who do are soon well known to do it. A head of a training department can do that as well as a head mistress. None of us has any conceivable right to a more flattering testimonial than we deserve. If students know that at the end of their course an even-handed description of their merits and lacks will be forthcoming, that is no small incentive in itself. No doubt we should not work for reward—perhaps some day a few more of us will give up doing it. At present consequences have a wholesome effect on the majority. I venture to think this imputation on the colleges of glibly turning out failures is largely a fiction, and where it occurs is incidental to the requirements of the larger justice. Until some of us at least are omniscient, we cannot be trusted with the terrible power of wrecking youth's future at the outset. The utmost that can be asked of us is that we should give honest testimony to those entitled to ask for it. I should be interested to hear of any certified case where anything else happened. Even if a recommended student has failed in a given school, that is no necessary proof that she was incompetent; it may, as I have already suggested, have been a case of unfortunate incompatibility. Sir William Ramsay

recently observed at London University that "human nature is extraordinarily uncertain." We all knew it, but it is well that we should be reminded of it, since it is the peculiar viciousness of dropping into a groove that we come to suppose that human problems are fixed and foretellable.

Miss Gray seemed to suggest that the whole of the fault lies in the training colleges and their depraved staffs! But, as a matter of fact, does it? Would the schools do any better? It would be interesting to know if, in those cases where a student happens—it is not a good plan, but is occasionally inevitable—to train in her own old school, it does not sometimes turn out that the staff are far more lenient in judgment of her than they are of students from other schools. We are all human, even schoolmistresses, though there may be rash cynics who deny the fact.

The first Principal of Newnham College never wearied of impressing on some of her students, at any rate, the wisdom of seeking experience of human nature wherever and whenever opportunity offered. It is no secret, I suppose, that the nascent movement for the training of secondary teachers found in her no headlong supporter. Could she have realized the unrivalled opportunity a post in a training college or department offers to a student of human nature, she would, I think, have reckoned it a big entry on the credit side of the movement.

COLONIAL AND FOREIGN NOTES.

FRANCE.

In England prizes are for the children, whilst the instructor looks on and sees them distributed. France shows an increasing tendency to stimulate the teachers themselves by means of awards for merit. Thus, the Fondation Eugène-Monnier—M. Monnier was a member of the Society of Architects—provides a reward for the primary teacher, man or woman, who has had most success in the

Introduction
and Notes
1s

The plan of this book is to some extent new. Usually the tales have been given in an isolated form, and thus they lose much of their interest as part of a larger work, but here an attempt has been made to exhibit the general scheme and conduct of *The Canterbury Tales*, including the Prologue and some of the conversations of the pilgrims on the road which form so interesting a feature of the original.

Beaumont and Fletcher: Plays and Poems. Volume X (completing the edition). The text edited by A. R. WALLER, M.A.

"Messrs. Godfrey and Bell's excellent arithmetic consists mainly of sets of exercises, many of them oral, very carefully graded, and charmingly fresh and varied. . . . This admirable textbook will rank high amongst its fellows, and it would be difficult to find a school arithmetic more worthy of general use."—*Nature*

The Calculus for Beginners. By J. W. MERCER, M.A., Head of the Mathematical Department, Royal Naval College, Dartmouth.

Crown 8vo
6s
Exercises only,
3s

This book follows the lines on which the subject has been taught to boys of sixteen during the last few years at the Royal Naval College, Dartmouth, and is intended primarily for those who are or will be in applications of the Calculus to Physics and Engineering. No great amount of previous mathematical knowledge is assumed.

Elements of the Differential and Integral Calculus. By A. E. H. LOVE, M.A., D.Sc., F.R.S., Sedleian Professor of Natural Philosophy in the University of Oxford.

Crown 8vo
5s

"This book is an outcome of the experience gained in teaching the elements of the calculus to classes consisting chiefly of students of chemistry and engineering. . . . This book should find a place in the library of every teacher, and may be unreservedly commended to all who wish to gain some insight into the principles of the most powerful analytical weapon which the intellect has devised."—*School World*

Higher Algebra for Colleges and Secondary Schools. By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham.

Demy 8vo
6s

"Starting from the Binomial Theorem, this book traverses in its comprehensive sweep the subject as generally studied immediately after the completion of the normal Secondary School course. . . . The author's introduction of subjects for essays is, in our opinion, an innovation which may lead to considerable changes in the method of teaching mathematics."—*Athenæum*

Analytical Geometry: A First Course. By C. O. TUCKEY and W. A. NAYLER, Late Scholars of Trinity College, Cambridge, Assistant Masters at Charterhouse.

Crown 8vo
5s net

This book, which is on original lines, is especially adapted for Engineering and Army Students: it should also prove suitable as a first course for Mathematical Specialists. It contains both Plane and Solid Geometry.

The Method of Archimedes Recently Discovered by Heiberg. A Supplement to *The Works of Archimedes*, 1897. Edited by Sir THOMAS L. HEATH, K.C.B., Sc.D., F.R.S., Sometime Fellow of Trinity College, Cambridge.

Crown 8vo
2s 6d net

Nothing is more characteristic of the classical works of the great geometers of Greece, or more tantalizing, than the absence of any indication of the steps by which they worked their way to the discovery of their great theorems. In the *Method* however, so fortunately recovered, Archimedes tells us how he discovered certain theorems in quadrature and cubature, and the treatise is therefore of the greatest interest.

Experimental Science: Part II, Chemistry. By S. E. BROWN, M.A. (Cantab.), B.A., B.Sc. (Lond.), Head Master of Liverpool Collegiate School.

Crown 8vo
2s

"The distinguishing feature of this book is that it teems with clearly expressed accounts of well-chosen experiments that must be made by the student in order that the principles of the science may be intelligently grasped."—*Athenæum*
(Part I.—*Physics* will be ready shortly)

Examples in Applied Electricity. By C. G. LAMB, M.A., B.Sc., A.M.I.E.E., Clare College, Cambridge.

Crown 8vo
2s 6d net

The following collection of questions has been compiled from the various test papers set to the students in the Cambridge Engineering Laboratory, supplemented by questions from the papers set in the Mechanical Sciences Tripos. The questions are grouped into short papers for the convenience of teachers.

Algebra for Secondary Schools. By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham. In one volume 6s, or in two volumes 3s each. (Without answers, 2s 6d) Vol. I. To Quadratic Equations. Vol. II. From Quadratic Equations. Exercises only, with answers, 3s; without answers, 2s 6d

Crown 8vo
6s

"A refreshingly scholarly treatment characterizes the whole volume. Although many textbooks on these lines have been issued in the last few years, we have seen nothing which can compare with Dr. Davison's treatise."—*Guardian*

Algebra for Beginners. By C. GODFREY, M.V.O., M.A., Head Master of the Royal Naval College, Osborne, and A. W. SIDDONS, M.A., Assistant Master at Harrow School.

Crown 8vo
With answers
2s 6d
without answers
2s

In this book the authors have followed the lines laid down in the Report of the Mathematical Association Committee on the teaching of Elementary Algebra and Numerical Trigonometry (1911): they are also indebted for valuable ideas to the Board of Education Circular on the teaching of Geometry and Graphic Algebra (Circular 711, March 1909). The book will also be found to fit in with the Algebra Syllabus suggested by the Head Masters' Conference. A prospectus will be forwarded on application.

A School Algebra Course. By F. GORSE, M.A., Head Master of the Intermediate School, Bootle. With or without answers. In one volume or in three parts without answers.

Crown 8vo
3s
Parts 1s each

The three parts (without answers) are divided as follows:—
Part I.—To Simple Simultaneous Equations (including Factors), with Appendix.
Part II.—Factors to Quadratic Equations with Appendix.
Part III.—Surds to the Binomial Theorem, with Appendix.

Cambridge University Press

NEW AND STANDARD MATHEMATICAL TEXTBOOKS

A Shorter Geometry. By C. GODFREY, M.V.O., M.A., and A. W. SIDDON, M.A. In one volume or in four parts. Part I, 1s; Parts II, III, and IV, 10d each. Notes and Answers to Exercises, 6d

Crown 8vo
2s 6d

A well-arranged and clearly expounded school textbook which covers the three stages distinguished in a recent recommendation of the Board of Education. It is, in short, a valuable development and continuation of the excellent 'Geometry for Beginners' written by the same authors."
—*Scotsman*

Elementary Geometry: Practical and Theoretical. By the same authors. Crown 8vo, 3s 6d, or in two volumes, 2s. each; or in five sections, 1s each. Or in two parts: Part I, Experimental Geometry, 1s; Part II, Theoretical Geometry, 3s. Answers to the examples, 4d. Solutions of the Exercises, 5s net

Crown 8vo
in one vol
3s 6d

The aim of the authors has been to produce a book which will help to make Geometry an attractive subject to the average British boy or girl. The new Schedule of Geometry recently adopted at Cambridge has been taken as a basis of operation.

Solid Geometry. By the same authors. Paper boards. 81 figures.

The arrangement of this book, which is intended to provide an informal course, is as follows:—An informal discussion of the main properties of lines and planes; properties of the principal solid figures, including mensuration; some account of co-ordinates in three dimensions, plan and elevation, perspective.

Crown 8vo
1s 6d

Solutions of the Exercises. By C. L. BEAVEN, M.A. 5s net

Solid Geometry is also published bound in one volume with the same authors' **Elementary Geometry**, price 4s 6d, also with the **Shorter Geometry**, price 4s.

Modern Geometry. By the same authors. Solutions of the Exercises, 4s net

Crown 8vo
4s 6d

"This treatise covers the schedule of modern Plane Geometry required for the special examination in mathematics at Cambridge, and is intended also to serve as an introduction for those who will afterwards specialize for scholarship work."—*Guardian*

Plane Geometry for Secondary Schools. By CHARLES DAVISON, Sc.D., and C. H. RICHARDS, M.A., Mathematical Masters at King Edward's High School, Birmingham.

Crown 8vo
4s
Or in
Four Parts
1s each

"The plan of the present volume is good. Whilst the leading propositions appear in the form of bookwork, others scarcely less important are discussed as working riders. A full complement of exercises for individual practice in original solution is, moreover, included, the questions being sometimes set as exercises on special propositions, and sometimes classed together as miscellaneous problems and theorems."—*Educational Times*

The Elements of Solid Geometry. By CHARLES DAVISON, Sc.D.

Crown 8vo
2s 6d net

"The geometry of line in space, polyhedron, cylinder, cone, and sphere is here given, forming an admirable course in the elements of solid geometry."—*Educational News*

Geometrical Drawing. With Notes and Examples. By W. H. BLYTHE, M.A. Part I, Plane and Elementary Solid. Part II, Solid or Descriptive Geometry.

Fcap 8vo
1s 6d each

This book is intended for Candidates reading Geometrical Drawing for the Science and Art Department, South Kensington, Elementary Stage, for Sandhurst and Woolwich and for the Cambridge Preliminary and Junior Local Examinations.

Practical Measurements. By A. W. SIDDON, M.A., Mathematical Master at Harrow School, and A. VASSALL, M.A., Senior Science Master at Harrow School.

Fcap 4to
1s 6d

"That science and mathematics need to be brought into closer correlation at the early stages of study has long been recognized, but practical steps in that direction have been slow to follow. This excellent little book, however, goes far to supply the need, and may be recommended accordingly. It should be added that this book is the result of long experience, which has shaped it into this more or less final form."—*Guardian*

Numerical Trigonometry. By J. W. MERCER, Head Master of the Mathematical Department, Royal Naval College, Dartmouth.

Crown 8vo
2s. 6d.

This book is an attempt to indicate the kind of work that can be done by boys of 13 to 15, who, having no particular mathematical bent, yet take very kindly to numerical problems connected with geometry, physics, mechanics, &c. The range of such problems is greatly increased if the learner has an elementary knowledge of Trigonometry.

Trigonometry for Beginners. By J. W. MERCER, M.A.

Crown 8vo
4s

"The author is to be congratulated on having produced a very notable textbook of Elementary Trigonometry, and one that is worthy of adoption in the secondary, technical, and public schools throughout the country."—*Nature*

A Class Book of Trigonometry. By C. DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham.

Crown 8vo
3s

The present volume contains a short introduction to Plane Trigonometry as far as the solution of triangles, with applications to the geometry of the triangle and easy problems in surveying.

Elementary Trigonometry. By F. T. SWANWICK, M.A.

Crown 8vo
4s

"The work is a scholarly treatment, and evidently based upon an intimate practical acquaintance with Mathematical Teaching."—*Educational News*

An Elementary Treatise on Plane Trigonometry. By E. W. HOBSON, Sc.D., F.R.S., and C. M. JESSOP, M.A.

Extra fcap
8vo
4s 6d

"The book is designed for use in schools, and answers its purpose admirably by giving a simple, plain exposition and good arrangement of its subject, and a large number of examples. It will be specially welcome to students who have to pass the Cambridge University Local Examinations."—*Scotsman*

The Elements of Trigonometry. By S. L. LONEY, M.A., Professor of Mathematics at the Royal Holloway College (University of London). Third edition.

Extra fcap
8vo
3s 6d

This work consists of the easier portions of Part I of the "Plane Trigonometry" (by the same author). In the logarithmic part of the book the work is generally confined to four- and five-figure logarithms, though a certain number of questions involving seven-figure logarithms are included.

Plane Trigonometry. By S. L. LONEY, M.A. Ninth edition. In one volume or in two parts: Part I, An Elementary Course, excluding the use of imaginary quantities, 5s; Part II, Analytical Trigonometry, 3s 6d

Crown 8vo
7s 6d

A complete elementary textbook for Schools and the Pass and Junior Honours Classes of Universities.

Solutions of the Examples. In two parts, 6s each

Mechanics and Hydrostatics for Beginners. By S. L. LONEY, M.A. Twelfth edition.

Extra fcap
8vo
4s 6d

This book is strictly elementary, being intended for those whose knowledge of Geometry and Algebra does not extend beyond Euclid Books I and II and simple Quadratic Equations.

The Elements of Statics and Dynamics. By S. L. LONEY, M.A. Thirteenth edition. In one volume, extra fcap 8vo, 7s 6d; or in two parts:

4s 6d

Part I.—**Statics.** This is a working textbook for the use of Junior Students. There is a very large number of examples, most of them of an easy type.

3s 6d

Part II.—**Dynamics.** This book aims at being useful for Schools and the less advanced students of Colleges; the examples are, in consequence, large in number, and generally of a numerical and easy character.

The Elements of Hydrostatics. By S. L. LONEY, M.A. Fourth edition.

Extra fcap
8vo
4s 6d

This book is intended to be a continuation of "The Elements of Statics and Dynamics" by the same author.

A Treatise on Elementary Dynamics. By S. L. LONEY, M.A. Seventh edition.

Crown 8vo
7s 6d

An attempt to write a fairly complete textbook on those parts of Dynamics which can be treated without the use of the Infinitesimal Calculus.

Applications from teachers for specimen copies should be addressed to J.E., Cambridge University Press, Fetter Lane, London, E.C., with a statement as to the number of copies likely to be required if the books are adopted for class use

teaching of drawing. This year it has been bestowed on Mme Perrin, a teacher at Saint-Laurent-les-Mâcon (Ain), who received a large silver medal and a sum of 200 francs. Two other teachers received silver medals, and five honourable mention. Teachers, too, will be eligible for the *prix de vertu* established by the late Mme Lebouteux, which is for savants or their assistants who give proofs of devotion and disinterestedness in the exercise of their vocation.

The chief prize, it will be observed, was awarded to a woman teacher, and three of those honourably mentioned were women. Communities are beginning to learn that, in determining their obligations to the teacher, sex should have no moment. We welcome a noteworthy sign that the conscience of France is awakening to this fact. M. Louis Marin has introduced a Bill of which the first clause is to the following effect: The salaries of women teachers in primary schools, and of all women functionaries dependent on the Ministry of Public Instruction, are to be placed on the same footing as the salaries of men teachers and men functionaries of the same class. A meeting to promote equality of payment was lately held at the Hôtel des Sociétés Savantes.

Salaries of Women.

GERMANY.

Schundliteratur has been driven back; the receipts for the worthless stuff, which in 1909 were 60,000,000 marks, fell to 55,000,000 in 1910, and a further decline of 10,000,000 is estimated for last year. Yet the average issue of a *Schundroman* is still ten thousand copies, and the Wiesbaden Volksbücher—reprints of stories worthy to be reckoned as literature—have not had quite the sale that was expected. Now, however, it is the cinematographic theatre that troubles pedagogue and moralist most. Children flock to theatres whose attraction consists in the exhibition of pictures advertised as "Nur für Erwachsene" (for adults). Dr. G. Fritz, of Charlottenburg, has collected statistics upon the subject. At the beginning of 1910 there were in thirty-three large towns of Germany no fewer than 480 cinematographic theatres; in Greater Berlin at the present moment there are nearly 300. A cautious estimate puts the number of spectators in Berlin at more than 100,000 a day. At Düsseldorf in a recent year

910,000 tickets of admission to cinematographic theatres were sold, as against 684,000 for concerts and 396,000 for dramatic performances. Many of the pictures shown are certainly gross and demoralizing; one series, for example, represents the adventures of a woman described as "a Slave of Love." On the other hand, endeavours are being made in Germany (as in England) to press the cinematograph into the service of education. At Darmstadt Herr Schulrat Münch, Head Master of the Realgymnasium, has succeeded in adapting it for the teaching of mathematics. At a meeting of the local Natural Science Society he showed what could be done with it, and an audience of *Fachmänner* followed with interest and delight the transformation of the circle into the ellipse (the two foci being moved out from the centre of the circle), the production of the sections of a cone, and so forth. In Thüringen the primary school of Zella Sankt Blasii has the honour of being the first school in Germany to make systematic use of it for the purposes of instruction. At great cost cinematographic appliances have been obtained to help in Nature study and in the teaching of geography. At Leipzig the Students' "Märchenausschuss" has devised a new means of attracting children: as pictures are thrown on to a screen, the *Märchen* that they illustrate are told.

The Director of Police in Württemberg has not received the authority that he asked (as we reported last month) to examine cinematographic films before they are used. But Württemberg is, in general, progressive. The Gemeinderat of Stuttgart has resolved to introduce an eighth year of obligatory attendance of the *Volkschule*. The introduction is to be gradual and will be complete in 1918. At the same time the normal number of children in a class will be reduced to forty. These reforms involve large expenditure. Ninety new school buildings must be provided, at the cost of 1,500,000 marks, and ultimately an annual additional outlay of 400,000 marks will have to be met. The Germans are not investing all their money in Dreadnoughts.

At Cottbus, in order to train children to work and to awaken in them a love of gardening, a manufacturer has given a considerable sum of money, whilst the town has offered a suitable piece of land to assist the scheme. Already a hundred children have applied for work. Each receives ten square metres of land, which, under skilful

DUSTLESS & HYGIENIC SCHOOLS

ON ALL

School, Laboratory, &c., Floors and Linoleums of every description

USE

the Unequalled ODOURLESS, or POWERFUL GERMICIDAL

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

EARLY this SUMMER VACATION for best results.

"FLORIGENE" is an aid to the prevention of throat and other diseases, and has been awarded the BRONZE MEDAL of the ROYAL SANITARY INSTITUTE.

It costs little, and is easily applied. Not sticky—the ordinary daily dry sweeping alone required to clean, without sprinkling of any kind—scrubbing being optional.

MEDICAL and OTHER UNDENIABLE TESTIMONY

A well known **COUNTY SCHOOL MEDICAL OFFICER** reported 18th March, 1912, to his Education Committee on "Florigene" as follows:—

"I cannot help feeling, however, that as a matter of sanitation, as well as a matter of economy, it would be very desirable to utilize in some of the larger schools one of those substances now sold for the diminution of dust. I may call your attention to the fact that I presented a Report to your Committee on the use of the preparation known as 'Florigene,' and I should be glad to see the larger Schoolrooms and Classrooms treated with this substance, as is customary now in so many Secondary Schools so that less dust would be raised by the ordinary Educational use of the Premises."

Two well known **SCHOOL MEDICAL OFFICERS** have jointly reported on the advantages of "Florigene" as follows:—

1. Economy of labour in cleaning the room.

2. Prevention of the rising of dust once deposited; hence a healthier atmosphere for breathing.

They also favour its more general adoption, especially in rooms where drill is carried out.

"Florigene" is also strongly recommended by other expert authorities.

The Principal of a Ladies' Training College writes:

"I am pleased to state that for two years we have used 'FLORIGENE,' and have found it quite satisfactory."

"It is now possible to brush the large dining hall floor without removing the linen, as practically no dust arises in the process. The use of 'FLORIGENE' has also led to a considerable saving of labour."

(Repeat orders since received.)

A Head School Mistress writes:

"I am glad to have the opportunity of recommending 'FLORIGENE.' We have used it regularly on both wood and linoleum, and found its effect most beneficial, both in laying the dust and preserving the surface. The linoleum scarcely shows wear after six years."

(Repeat orders since received.)

The Sub-Warden of a Ladies' College Hostel writes:

"For more than twelve months we have used 'FLORIGENE' for the floor of the study of this hostel, and its use has proved most satisfactory. It saves labour in sweeping and dusting—the books and shelves being practically free from any accumulation of dust."

(Repeat orders since received.)

Numerous other Testimonials can be supplied if desired.

"Florigene" has been used for many years on the floors of The Royal Naval Colleges, H.M. Science and Art and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, Libraries, Museums, Offices, &c., throughout the United Kingdom and Colonies with approval.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for 2 to 12 months, according to the traffic. Not only during each sweeping, without sprinkling of any kind, but also throughout all the intervening periods—which is even of greater hygienic importance.

Send for particulars, Medical Reports and Testimonials to the Sole Manufacturers—

Contractors to Admiralty, War Office, H.M. Office of Works, L.C.O., &c.

guidance, he is to cultivate. Implements and seeds are supplied gratis, and the produce of the soil becomes the property of the little gardener.

Prof. Graf Wolf von Baudissin, who has been appointed Rector of the University of Berlin, ranks with the most distinguished of German theologians. A student of Theology and Oriental Languages under Fleischer and Delitzsch, he made his mark by editing an Arabic Manuscript of the Book of Job, and his articles in the "Protestantischen Real-Enzyklopädie" attracted widespread attention. He was born in 1847; acted, in his early days, as *Privatdozent* at the University of Leipzig; later filled the chair of Theology at the Universities of Strasburg and Marburg; and, during the last decade or more, has taken a leading part in academic life at the University of which he now becomes Rector.

In the middle of last month, Leipzig commemorated the eightieth birthday of its famous University Professor, Wilhelm Wundt, who made a world-wide reputation by his "Grundzüge der physiologischen Psychologie" and his "System der Philosophie." At the beginning of the year, the Order of Merit was conferred on the veteran philosopher.

UNITED STATES.

Secondary education in England, we have been told, is to be vocationalized; thus, if a secondary school be in the country, the education that it gives is to be made more agricultural. The Board of Education has taken the idea from the United States, where the vocationalized high school flourishes in rural districts. Let us see what it all means. In some of these American schools there are girls' clubs, and competition among them is encouraged by means of prizes. For example, it is proposed that the club which produces the best ten samples of tomatoes grown on its own plot shall receive a banner or a set of gardening tools, whilst the girl who can label the greatest number of canned tomatoes in ten minutes is to be rewarded with money or a free trip to a fair. It is in Oregon that agricultural education is most highly developed. There five thousand children already grow all the popcorn and melons they can consume, and have a surplus *the sale of which brings them pocket money*. This year they will enter into competitions in the raising of vegetables, grain, pigs and poultry; also in carpentry, sewing, and cooking. The prizes will be provided by the State Bankers' Association and by other societies. An American newspaper, the *Saturday Evening Post*, grows eloquent in the praise of this New Model. "There is infinitely more true education in raising a melon or making a pie than in learning by rote 'that a verb that makes an assertion by coupling an attribute complement to the subject is called a copula.' The melon and the pie justify themselves and satisfy the mind." Is it not clear whence our Board of Education, that "unrivalled body of experts," borrows its notions? In England the country secondary school will now blot complements and copulas from its vocabulary; it will educate its pupils mainly in the growing of potatoes and vegetable marrows. Higher education will enable them to get starch from potatoes, and, with the addition of sugar and chemicals, to convert vegetable marrows into any required kind of jam. The Board of Education, of course, knows what is best for them. Yet, some of us still think, in an old-fashioned way, that a man is more than a market-gardener or a greengrocer, and regret that any secondary school should have as its product young folk whose minds are satisfied with "the melon and the pie."

Howlers, as we have said before, are not peculiar to any country; we add that it is not children alone who make them. The *Ohio Educational Monthly* prints some answers given by young teachers in an examination for a professional certificate which show that none of us (except a German *Volksschullehrer*) is infallible. A budding instructress gave a new and exquisite distinction between the active and passive voice: "'The boy loves the girl,' active voice; 'The girl loves the boy,' passive voice." Another offered the following definition: "A volcano is a mountain with a hole in it, out of which saliva sometimes flows." The examiners in physiology were told that "soft soap" should be used for bathing purposes; we have known head masters put it to quite a different use. Cabinet Ministers ought to reflect on the hint furnished by the candidate who said: "The question of greatest national importance at present is 'Suffragettes'." To the inquiry "Who wrote the 'Biglow Papers'?" one answer submitted was "Teddy Rosenfelt *sic*"; to the young American he seems to have done most things. The palm should perhaps be awarded to the teacher who explained that "an apiary is a place in which milk is kept. It should be located in a cool place." We need hardly ex-

HARRAP'S LATEST PUBLICATIONS

AN ENTIRELY NEW SERIES. JUST READY.
To meet the requirements of the Board of Education.

A Treasury of Prose and Poetry

For Learning by Heart. In Six Graded Parts. Compiled by AMY BARTER.

Part I, 64 pages. Stiff paper, 4d.; limp cloth, 5d.
Parts II to V, 96 pages each. Stiff paper, 5d.; limp cloth, 6d.
Part VI, 128 pages. Stiff paper, 6d.; limp cloth, 8d.

Extract from the Official Circular No. 753 on "The Teaching of English":—"In every class repetition from memory should form an essential part of the instruction in Literature. There is no reason for restricting learning by heart to poetry, as is commonly done; passages of good prose should be learnt by heart also. Nor need all the pupils in a class invariably learn the same piece."

A Special Prospectus of this New Series will be sent post free on application.

The Poetry and Life Series

General Editor, Professor WILLIAM H. HUDSON, Staff Lecturer in Literature to the University Extension Board of the University of London.

A new series of Monographs on the Poets, in which the principal work of each poet is shown in its proper relation to the life of its author. Each volume contains a representative selection of the poet's work printed in chronological order in the story of his life.

NEW VOLUMES.

Spenser and His Poetry. By S. E. WINROLT, M.A. 160 pages, 10d.
Mrs. Browning and Her Poetry. By KATHLEEN E. ROYDS. 136 pages, 10d.

Milton and His Poetry. By WILLIAM HENRY HUDSON. 184 pages, 1s.
Scott and His Poetry. By A. E. MORGAN, B.A. 160 pages, 10d.

Other Volumes in preparation.

A Descriptive Circular with Professor Hudson's General Preface will be sent to any address.

NEW SERIES.

Harrap's Dramatic History Readers

(In Five Books). Edited by FRED. E. MELTON. Fully Illustrated.

NOW READY.

Part II.—**Saxon and Danish England.** 128 pages. Limp cloth, 6d.

Part III.—**The Conquest to Crécy.** 160 pages. Limp cloth, 10d.

Part IV.—**Edward III to Queen Elizabeth.** 224 pages. Cloth boards, 1s. 3d.

Part V.—**And Teachers' Handbook to all Five Parts.**—In preparation.

Cave, Mound, and Lake Dwellers

By FLORENCE HOLBROOK. With nearly 100 Illustrations. 140 pages. Crown 8vo, 1s.

This little book covers briefly the whole field of prehistoric life, and while not written in story form, like "Days before History" and "The Cave Boy," forms an interesting introduction to the subject for young readers.

FRENCH AND GERMAN

Alternative Extracts for Composition in French

For Middle and Senior Classes. Compiled and Edited by J. E. MANSION, B. ès L., George Watson's College, Edinburgh. With Vocabulary. Crown 8vo, 1s. 6d.

This volume is somewhat easier than the same author's previous book, but is edited on the same plan, which has proved so acceptable to teachers.

A Rudimentary French Composition Book

By CLARA FAIRGRIEVE, George Watson's Ladies' College, Edinburgh. With Notes and Vocabulary. 84 pages, crown 8vo, 1s.

This first introduction to French composition may be used as early as the second year. It consists of stories told in very simple language. Each extract has its own vocabulary, followed by notes and reminders dealing with every difficulty of word-order and syntax. These reminders occur with sufficient frequency to ensure that even the shortest memories will be firmly impressed with the essential rules.

Elementary German Grammar

By Professor E. C. WESSELOHFF, Joint Author of "Heath's Practical German Grammar." 272 pages. Crown 8vo, 2s. 6d.

This book is designed for young beginners. It is clear and simple in statement, slowly progressive, the rules well illustrated, the exercises simple, practical, and provided with daily drills and occasional reviews. Though fairly brief, it contains all the essentials.

N.B.—The Publishers will be glad to forward to any address their Special New Descriptive List of Works on Modern Languages, comprising more than 400 volumes: Prospectuses of above and many other Books and Series on New and Interesting Lines.

The New Outlook Geography

A new series of Geographies on the most modern principles. Profusely Illustrated in Line and Half-tone. By W. C. BROWN, M.A., F.C.P., F.R.G.S., and P. H. JOHNSON, B.A., L.C.P.

Book II.—**The Home of Man.** Supplying the pupil with a good grounding in Physical and General Geography. The scientific principles forming the basis of geographical research are investigated as required.

Part II.—**Europe.** 240 pages, profusely Illustrated, 1s. 6d.

Ancient Peoples and their Heroes

Modern Nations and their Famous Men

By H. B. NIVER. In Two Volumes. Fully Illustrated. 192 pages. Crown 8vo, 1s. each.

Told Through the Ages. 34 Volumes

Large crown 8vo, 256 pages. 16 Plates. Cloth boards, 1s. 6d.

LATEST VOLUMES.

Stories of Pendennis and the Charterhouse. Selected from Thackeray by AMY BARTER.

Sir Guy of Warwick. Retold by GORDON HALL GERROLD.

Heroes of the Middle Ages. By E. M. TAPPAN, Ph.D.

The Story of the Crusades. By E. M. WILMOT-BUXTON, F.R.Hist.S.

All Time Tales. 25 Volumes

Each with at least 8 Full-page Illustrations. Printed in clear type and bound in limp cloth.

LATEST VOLUMES.

Northland Sagas. Retold by HENRY GILBERT. 160 pages, 9d.

Heroes of Old Britain. Retold from Geoffrey of Monmouth by DAVID W. OATES. 128 pages, 6d.

Tales from the Kalevala. Retold by N. WEBB. 160 pages, 9d.

Fairy Tales and Story Poems. Collected by CHARLES ELIOT NORTON. 176 pages, 9d.

The Last of the Mohicans. Arranged from Fenimore Cooper by MARGARET N. HAIGHT. 160 pages, 9d.

Barons and Kings (1216-1488)

By ESTELLE ROSS. Uniform with the Author's earlier books. With nearly 200 Illustrations. Crown 8vo, 320 pages, 2s.

The Struggle with the Crown (1603-1714)

By E. M. WILMOT-BUXTON, F.R.Hist.S. With 150 Illustrations. 224 pages, 1s. 6d.

The Story of the Roman People

By E. M. TAPPAN, Ph.D. With more than 100 Illustrations, Maps, Chronological Table, and Index. Crown 8vo, 256 pages, 1s. 6d.

Cinquante petites Lettres en Français

Par S. J. WEISGERBER. With Exercises and Vocabulary. 64 pages, 6d.

La Littérature Anglaise.

Pages Choies de Taine. Edited, with Notes and Exercises, but without Vocabulary, by R. T. CURRALL, M.A. 96 pages, 8d.

Molière en Récits

By Mlle CHAPUZET, Wakefield High School, and W. M. DANIELS, M.A. Lond., D.Litt. Paris, Westminster City School. Illustrated. 224 pages, small crown 8vo, 1s. 6d.

Extraits des Prosateurs Français du Dix-Neuvième Siècle (1800-1870)

A l'usage des Classes Supérieures. Edited by J. E. MANSION, B. ès L., George Watson's College, Edinburgh. With Notes, &c. No Vocabulary. 320 pages, crown 8vo, 2s. 6d.

Das Nibelungenlied

By Dr. VILMAR. Edited, with Introduction, Notes, Exercises, and Vocabulary, by E. HUGLSHOFER, Dumfries Academy. Crown 8vo, 1s. 6d.

Deutscher Humor

Aus vier Jahrhunderten. Selected and Edited, with Introduction, Notes, and Vocabulary, by F. BEITZ, M.A., Editor of "Till Eulenspiegel" and "Die Schindknecht." Illustrated. Small crown 8vo, 152 pages, 1s. 6d.

London: GEORGE G. HARRAP & CO., 9 Portsmouth St., Kingsway, W.C.

patiate on the importance of keeping this paragraph from the eyes of school children. 286

These are but the sins of immaturity, and we cast no reproach at the sinners; we are none of us infallible, not even the youngest. Let us turn to the ripe schoolmen and their annual conference. The

Meeting of the N.E.A. meeting of the National Education Association at Chicago, July 6 to 12, was the third largest on record, being attended by about fourteen thousand members. We notice here briefly the Presidential Address, which treated of impending changes in education imposed by the new social and industrial conditions. The President looked forward to the co-operation of school and workshop. "Among the necessities pressing upon us most heavily is that for finding some opportunity for children to work. We pass laws to keep them out of mills and factories, and off from coal breakers; we must assume the responsibility for finding, in connexion with suitable school privileges, a privilege equally important—an opportunity for the children to bear some responsibility for helpful tasks and fruitful labour. Our children must not be allowed to grow up without the power to work with their hands or to apply themselves to useful and homely duties during their most impressionable, formative years."

It is the fashion now to give part of the news in French, and we will borrow an item from the *Journal des Débats*: "M. Butler, président de l'Université de Columbia, a reçu du gouvernement de la République la croix de commandeur de la Légion d'Honneur." It is a distinction well deserved, on which we congratulate President Butler.

CAPE OF GOOD HOPE.

The education report just received deals with the year ending September 30, 1910. In it the Acting Superintendent General draws attention "to the evidence of satisfactory progress along all the various lines of educational activity, with one important exception—the provision of needful school accommodation. This progress is due in part to the increased importance which the people of this Province generally attach to education, in part to the interest School Boards take in their work, and not least to the faithfulness with which the great

majority of the teachers perform their duties." As to the extension of obligatory education, we observe that by the end of the year in question out of a total of 119 School Boards 87 had passed resolutions in favour of compulsory attendance. The number of European children registered in the schools was 82,315, an increase of 4,668 on the previous year; whilst the average attendance worked out at the rate of a little over 96 per cent. of the enrolment. Formerly the weakness of education in the Cape of Good Hope was in the inadequate supply of qualified teachers. It has now been got over. The percentage of certificated teachers rose from 59.94 in 1909 to 62.23 in 1910; and the five training institutions for European teachers, the twelve for native and coloured teachers, were well attended. A curious fact is revealed by extracts from the reports of Inspectors. The children are prone to indistinct utterance, the slurring of final consonants and the faulty pronunciation of vowels. Do what we will, the causes which produce dialect are still operative, as well as the causes which elevate a dialect into a language.

From the *Education Gazette* we learn that a Joint Committee of the two Teachers' Associations of the Province was appointed lately to deal with the question of adopting the recommendations of the English Committee on Grammatical Terminology. At its first meeting this Joint Committee accepted fully the English Committee's recommendations for the teaching of English, French, German, Latin, and Greek, and suggested that resolutions in these terms be submitted at coming conferences of teachers. Further, it was resolved that a Committee should be formed to translate the recommendations into Dutch, in order to see how far they can be made applicable to the teaching of Dutch in South Africa.

CANADA.

Throughout the greater part of the world there is quickened interest in Continuation; in England, in Portugal, and in China the official mind remains unmoved. Meanwhile, the daughter colonies are beginning to set their mother a good example. The province of Ontario, Canada, has passed a law empowering local School Boards to require the attendance of boys and girls up to eighteen years of age at day or evening classes.

Few People have more writing to do than the busy Teacher. That's the reason why only a few Teachers are without a

'SWAN'

FOUNT PEN.

Are you one of the few?

Get your **"SWAN"** to-day

—the Fountain Pen that never fails in its object—writing. The "SWAN" is made to write, and it always writes when you want it to write—the ink responds instantly you put pen to paper, and the same "just ample" flow continues to the finish.

Sold by all Stationers and Jewellers.

"The undertaking bids fair to prove of real value as an educative influence. . . . The information that they give, far from being scrappy, is wonderfully complete and clearly presented, and the judiciously chosen bibliographies at the end of each volume will help their readers to pass on from these capable treatises, which are something more than introductions, to a fuller study of the several subjects."—*Times*.

The Associated Board holds Examinations throughout the United Kingdom, and in the Colonies, in both Theoretical and Practical Music.

The Examinations are as follows:—

- (1) **Local Centre Examinations**, including Intermediate and Advanced Grades, conducted by two Examiners. Theory Examinations are held in March and November at all Centres in Great Britain and Ireland. In Practical Subjects they are held in March-April at all Centres, and in the London district and certain Provincial Centres in November-December as well as in March-April.
Entries for the November-December Examinations close Wednesday, October 16th, 1912.
Full particulars will be found in Syllabus A, which will be sent on application to the Secretary.
- (2) **School Examinations**, including Higher, Lower, Elementary, and Primary Divisions. Candidates for these Examinations may be entered either by Heads of Schools or by individual Teachers. In the latter case, neither the Teacher nor the Candidate need necessarily be connected with a School.
The School Examinations are held throughout the British Isles at three periods, viz., October-November, March-April, and June-July. They are conducted by one Examiner.
Entries for the October-November Examinations close Wednesday, October 9th, 1912.
Full particulars of the School Examinations, including the **General School Examination** and the **Class-Singing Examination**, will be found in Syllabus B, which will be sent on application to the Secretary.

These Examinations are of graduated difficulty, so as to provide a complete series of tests from the Primary Division School to the Advanced Grade Local Centre Examination, suited to Candidates of all degrees of proficiency. The subjects for Examination are as follows:—

PRIMARY THEORY.
RUDIMENTS OF MUSIC.
HARMONY and GRAMMAR OF MUSIC.
COUNTERPOINT.
PIANOFORTE.
ORGAN.
VIOLIN.

VIOLA.
VIOLOCELLO.
DOUBLE BASS.
HARP.
WIND INSTRUMENTS.
SINGING.
BAR TRAINING AND SIGHT SINGING.

The Board offers annually **Six Exhibitions**, tenable for two or three years at the R.A.M. or R.C.M. These Exhibitions are limited to Candidates in the Local Centre Examinations who are under twenty years of age, and who fulfil certain conditions set forth in each Syllabus.

Forms of Entry, Theory Papers set in previous years, and all information can be obtained from the Central Office, 15 Bedford Square, London, W.C.

Syllabuses A or B for 1912 or for 1913, forms of entry, the new Syllabus in Ear Training, and any further information can be obtained on application to the Central Office.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

EDUCATION IN INDIA.

ARE the East and the West beginning to understand each other better? It would seem so. Mr. Montagu, in the recent Indian Budget debate, declared that "the golden thread of Oriental idealism is being woven into the rather drab web of our scheme of life," and it must be confessed that in the sphere of Western politics the East is again asserting an unexpected degree of prestige and power. Such time-honoured phrases as "the unchanging East" are sadly out of date. Even Matthew Arnold's sonorous lines,

The East bowed low before the blast
 In silent deep disdain,

&c., have lost much of their force. It is true that that specious half-truth "East is East and West is West" is still occasionally employed to stifle inquiry and to dull reflection, but the East is busily engaged in disproving the hackneyed significance of the maxim.

It is interesting at this time to recall some of the fumbling endeavours of Englishmen and Orientals to estimate one another. There is a saying still current among the peasantry of Northern India: "A demon took a monkey to wife; the result, by God's grace, was the English." Even Mr. Malabari, the Indian reformer, whose death we are now deploring, wrote in his younger days that "an Englishman's friendship appears to be as fickle as his weather." Sir Richard Burton was supposed to know the Oriental well, and he said: "Of all Orientals, the most antipathetical companion to an Englishman is, I believe, an East Indian; even the experiment of associating with them is almost too hard to bear." Only a few years ago that brilliant journalist G. W. Steevens declared in his sketch, "In India," that "to the West the ordinary native of India is almost inhuman." And, still later, in Sidney Low's "Vision of India," we find such a guarded deliverance as this: "It is even possible that the heart and thinking apparatus which work under a brown skin are not in essentials so different as we used to believe from

those which are cased by a white integument." There we may be content to leave the whole matter. Probably King George was right when he said that the key to happier relations and a fuller understanding between East and West was sympathy, for sympathy is both the child and the begetter of understanding. Mr. Montagu has reaffirmed and emphasized the doctrine in these striking words: "The quality which is increasingly wanted as the key-note of British rule in India is sympathy." To secure this sympathy, he holds that "we should give to India, as we have undoubtedly done in the past, the very best material we can." So far as education is concerned, it may be questioned whether the material we have given to India has been either the best available or even passably sufficient, and it is possible that one of the results of the coming Royal Commission will be a raising of the dignity of the Educational Service of India. A Commission of which Sir Valentine Chirol is a member may be expected to see to that. In fact, the constitution of the Commission is such that the fullest and broadest survey of the educational problem is assured. Almost without exception the members have already shown a keen and personal interest in some aspect of State instruction in its relation to the public services.

It is scarcely necessary to express hearty satisfaction with Mr. Montagu's attitude towards the educational needs of India; the nature of these needs has often been indicated in these columns. The air is now thick with promises, and in our national dealings with India we seem to have got beyond the stage when "we promise according to our hopes and perform according to our fears." The official determination to break down the illiteracy of the masses of India is evidently sincere; there is not now so general an apprehension that the spread of knowledge will undermine the foundations of British supremacy. Provision has been made for a considerable extension of primary instruction, and before long we may hope to find at least one school for every group of villages. But the extent of the leeway to be made up is enormous. At present each institution for males has to serve for four towns and villages, and each institution for females serves forty towns and villages. Only 4.4 per cent. of the total male and 7 per cent. of the total female population are at school. The *average* pay of a primary-school teacher is about half-a-crown a week. The numbers of persons returned as illiterate at the census of 1911 for the various provinces are as follows:—

	Illiterates.	Population.
Bengal	49,362,448 out of	52,668,269
Bombay	18,299,816 ..	19,672,642
Burma	9,368,205 ..	12,039,083
Central Provinces, &c.....	13,420,072 ..	13,916,308
Eastern Bengal and Assam ..	32,056,601 ..	34,018,527
Madras	38,311,844 ..	41,405,404
N.W. Frontier Province	2,123,947 ..	2,196,933
Punjab	19,200,111 ..	19,974,956
United Provinces	45,563,579 ..	47,182,044

The benefits to higher education from the spread of elementary instruction among the people will be incalculable. The country needs more students, especially in her professional and technical institutions. What Lord Amptill wrote in 1902 is even more applicable to-day: "Young men of education are wanted in the interests alike of the efficiency and the purity of the administration of the State, for the extension of primary and secondary instruction and for the development of the trade, the industries, and the resources of the country." The vision of India as a vast sub-continent already teeming with graduates is altogether grotesque; even now there are only about 2,000,000 out of 315,000,000 of natives who read an English book, and the annual out-turn of graduates is at the rate of one for every 126,000 of the population. As Mr. Montagu has pointed out, qualified teachers are not yet available for many additional schools; but the number of normal schools is expanding rapidly, and thousands of masters are now being trained. There are also over 1,500 school-mistresses undergoing some degree of preparation; this will provide an average of one teacher for 100,000 of the illiterate

women of India. Incidentally, it may be remarked that the opportunities now offered by India as a field for women's work will probably force themselves upon the attention of the Royal Commission. A glance at the Civil Lists of the various provinces shows that female agency is sparingly utilized and poorly remunerated by the Government. Not only in teaching, but also in medicine and sanitation, more scope is urgently demanded for women, both Indian and European.

India has five Universities, the average territory assigned to each being over 325,000 square miles, or a tract more than six times the size of England. The area now allotted to the University of Calcutta comprises 484,000 square miles, a territory greater than the combined areas of France and the German Empire. This institution has to meet the requirements of 100,000,000 of people. A few years ago an American writer pointed out that it had in its affiliated colleges more students registered than Harvard, Yale, Princeton, and Toronto combined. The establishment of additional Universities has become a pressing necessity. Burma longs to shake herself free from the grip of distant Calcutta, and Dacca, Benares, and Aligarh are preparing to set up on their own account. It is probable, therefore, that at no distant date India will have at least nine Universities, a number that would still assign to each an average population equal to that of England. It is evident that the conversion of the federal Universities into genuine teaching Universities with large post-graduate departments is an expensive process. But private liberality has of late been freely displayed in connexion with higher education in India, and there are fortunately many important centres which lend themselves readily to the grouping of colleges into teaching Universities. What Manchester, Liverpool, Leeds, and Sheffield have lately done for themselves may one day be done by such great cities as Hyderabad, Karachi, Nagpore, Agra, Ahmedabad, Baroda, and Delhi. The last of these, now the capital of the Indian Empire, may in course of time acquire fresh renown as one of the chief centres of learning in the East. The establishment of a separate university college for the education of domiciled Anglo-Indians is also mooted.

In his Budget speech Mr. Montagu had a good deal to say about the Indian student in England. An elaborate and expensive organization has been devised for his welfare, but it is doubtful whether an expansion of India Office activity in his behalf will be of much practical benefit to him. The surest way to win his confidence and to raise the level of his self-respect and ideals is to show a readiness to entrust him with responsible occupation. To check his expenditure, to choose his associates, to direct his studies—all these are good things in their way; but what the students want and what their parents want is some reasonable prospect of return for their outlay and self-denial; and as things are at present this prospect is somewhat remote. The obvious remedy for this state of affairs may suggest itself to the members of the Royal Commission. Mr. Montagu promises a speedy increase of the facilities for technical and professional education in India; it is sorely needed. We hear much of the bitterness and disappointment generated in the breast of the Indian student who has gone through an expensive course of training in this country; we must not forget that these feelings are due more often to his depressing outlook in India than to his experiences in England.

INDICUS.

THE attention of teachers, other than those in elementary schools, is directed to the Secondary, Technical, and University Teachers' Insurance Society, approved under the National Insurance Act. The bodies represented on the Joint Conference entrusted with the formation of the Society include all the Associations represented on the Federal Council, with the exception of the Head Masters' Conference and the Incorporated Association of Head Masters. The Society has already some thousands of members, and its success is assured. All teachers who are eligible for membership should send in form of application without delay. Full particulars may be obtained from the offices of the Society, at 35 John Street, Bedford Row W.C.

OBITUARY.

HERBERT BARING GARROD.

THE announcement of the death of Herbert Garrod, which occurred at his residence in Compayne Gardens on July 30, will have come as a shock to his many friends at home and abroad, though his fellow-members of the Teachers' Guild had missed his presence at the Annual Meeting in the spring, and knew that he was incapacitated by a serious attack of pneumonia, from which, however, he then seemed in a fair way to recover.

Herbert Garrod was born May 22, 1849, the son of Sir Alfred Garrod, M.D., F.R.S. He was educated at King's College School, London, and was elected a Senior Postmaster of Merton College, Oxford, in 1868. The next year he won the Newdigate for English verse and graduated with Honours in 1872. He was called to the Bar in 1874 and joined the South-eastern Circuit, but his interests lay rather in literature than in law, and he was content to be a briefless barrister. He was a frequent contributor to the *Academy* and the *Spectator* and assisted his uncle, Mr. Townshend, in the editorship of the latter journal.

In 1886 he was appointed General Secretary of the Teachers' Guild, and the last half of his life was almost wholly devoted to work for the Guild. Though he had never been a teacher himself, nor up till then been brought into direct relations with teachers, he was drawn to the work by profound sympathy with the main object of the Guild—to make of teaching a profession with the same status as law or medicine, one and indivisible like the Church, with various grades and orders, but with no social distinctions. He persistently maintained that the one mark of a teacher was that he had been trained and given proof of his ability to teach, and he sometimes pressed this democratic doctrine to conclusions which to conservative members seemed revolutionary.

The Guild from the first has, in spite of its growing numbers, had a hard struggle to make both ends meet. It has no endowments, no substantial income derived from examinations, like the College of Preceptors, and to carry out its democratic aims the subscription is necessarily small. The salary of the Secretary was so low that it might almost be called nominal, and even this was drawn by Mr. Garrod only when convenient and often returned as an anonymous donation. It was a labour of love. He toiled hugely, working over-hours, editing the *Teachers' Guild Quarterly*, for which he always wrote the leaders, and visiting local centres, where he was always in demand as an effective speaker with a natural gift of oratory. But it was in the office itself that his qualities showed to most advantage. His even temper and invariable courtesy made him suffer bores gladly; his wide knowledge and experience were at the service of any teacher who consulted him on some professional trouble or what book to take from the library. His tact and cool judgment reconciled differences such as could not fail to arise in a mixed body of men and women, and nipped dissent in the bud. The Guild has lost many members by reason of the superior attractions of the special Associations that have since come into being, but hardly any have seceded from differences of opinion. The latest scheme of Mr. Garrod was a common Conference week, in which all Associations of teachers should take part, on the lines of the British Association Meeting, with the double purpose of bringing all sorts and conditions of teachers together for counsel and converse, and of preventing the dissipation of energy resulting from sectional meetings that extend over a whole month. Next January will see this scheme in part accomplished.

His one defect as a Secretary was over modesty and diffidence. So far from putting himself forward, he tried to efface himself and keep in the background. At public meetings of the Guild he could hardly be persuaded to appear on the platform. Bold advertisement he detested, and he declined to use his connexion with journalism to set forth the merits and claims of the Guild.

In 1910, Mr. Garrod resigned the General Secretaryship, but as Honorary Organizing Secretary and a Member of Council he continued the work to the very end. His loss to the Guild is irreparable. Mr. Garrod married Lucy Florence, daughter of William Colchester, of Ipswich, and leaves four sons, all of whom have inherited their father's talents. The three elder were scholars of Oxford and Cambridge Colleges, and the youngest is a scholar of Uppingham School.

WILLIAM WHITE.

ON July 10 there passed away, at the age of sixty-four, after a long illness patiently borne, one whose devoted and unostentatious work has left a deep mark on the town and district where almost his whole teaching life of some thirty-five years was spent. At the City of London School William White was one of a band, including the present Prime Minister, who won distinction in many fields, owing their inspiration and success largely to their great Head Master, Edwin Abbott. White's degree, First Senior Optime at Cambridge, was not a just index of his powers. After a short period at Manchester Grammar School, and at Marlborough, 1877-8, as a master in the Modern School, he was appointed Second Master at Boston School, which under Dr. Pattenden had a considerable reputation. To name only two, it had sent out the Rev. E. S. Roberts, late Master of Caius College, Cambridge, and T. W. Dunn, of Bath College, a notable figure at Head Masters' Conferences. In every department of school life he took a keen and active interest, but especially in teaching, where his mathematical powers soon made the provincial school which had already won classical distinction equally well known for its mathematicians. So good were his work and influence that, on Dr. Pattenden's retirement, he was invited, and even urged, to take the vacant post, which, not without a reluctance characteristic of the quiet unassuming man, he at last accepted. Ardent devotion to his work, and deep interest in the welfare of his boys at school and afterwards, marked his Head Mastership. A most careful and stimulating teacher, he never spared himself. After a hard day's work in school, he would ungrudgingly spend his evenings with boys whose career depended on gaining a scholarship or success in some public examination. He made the most of his not always promising material, and for many years Boston boys steadily won scholarships, especially in mathematics, and were conspicuous in the Oxford Local Lists. Though chiefly a mathematician, he was a very capable teacher of other subjects, and to the end, amid the changes that have widened the curriculum of grammar schools, though sometimes at the cost of thoroughness, and have brought not a few embarrassments, he saw that a good all-round standard was maintained, while full justice was done to the more able boys. He played an active part on the Holland Education Committee of Lincolnshire, doing much to forward the interests of the secondary schools. For some time he was on the Committee of the Head Masters' Association, and up to his death was a member of the Head Masters' Conference, where he had many friends. A strenuous and faithful worker, of a quiet and retiring disposition—perhaps excessively so—by example and authority he permeated his school and town with an ideal of sound, honest education. Self-advertisement was utterly alien to his nature. His heart was set on quietly doing his best for the sake of others and of his own sense of duty and self-respect. He was a skilled climber in the Alps, and especially in his beloved lake mountains, where for many years he spent his holiday. Such a life, inconspicuous perhaps outside his own district, has helped to keep up the tradition of sound learning and still more of selfless devotion in English grammar schools, showing amid changing educational schemes and clashing ideals the supreme value of conscientious thoroughness, unstinted labour, cool judgment, sympathy, and a lofty standard of duty. To the many who are working in the same spirit, White's life may well be a help and an inspiration.

"Multis ille bonis flebilis occidit,
Nulli flebilior quam mihi."

G. W. R.

WE congratulate the Victoria University on the fine bequest which has been made to it by Mr. John Hall, and this time the gift, we are glad to see, is designed to be spent not in buildings, but in brains. The University will not receive the money immediately, but on the death of the survivor of his two nieces. The amount is between £40,000 and £50,000; £20,000 is to be devoted to endowing a Professorship of Chemistry, and £15,000 to a Chair of Philosophy (the difference in the sums is typical of a practical twentieth century). The remainder is to be used for founding scholarships, chiefly in scientific subjects. The University has also just come into the £20,000 left some years ago by Mr. T. E. Taylor, and Manchester Grammar School has received £1,000 from the same source.

REVIEWS AND MINOR NOTICES.

- (1) *A New Latin Grammar*; (2) *A New French Grammar*.
By E. A. SONNENSCHNEIN. (Each 2s. 6d. Clarendon Press.)

We have waited expectantly for the Report of the Joint Committee on Classical Terminology to bear fruit, and it is right and fitting that the editor of the series of "Parallel Grammars," who was also the inspirer and Chairman of the Committee, should lead the way. Prof. Sonnenschein has taken the first step towards bringing into line the grammar of the two foreign languages with which alone the majority of secondary schools are concerned. Complete harmony even in languages of the same family is obviously unattainable, and it must always be a nice point to decide how far nomenclature shall be stretched so as to cover forms and usages identical in origin which have in course of time widely diverged. Further, as Prof. Sonnenschein well observes, the desired reform cannot be effected by a mere mechanical substitution of one term for another. Grammatical terms are not conventional labels, "they are abstracts and brief chronicles of theories and doctrines," and unless they are truly significant a logical study of grammar is impossible. The other difficulty of the grammarian is not so clearly seen or, at any rate, so clearly stated. Is he to take the phenomena of language as he finds them to-day, and analyse, tabulate, and expound present forms and usages; or shall he explore their origins in the past, investigate the latent force of word or phrase or sentence, and base on this his classification? To this question, too, there is no categorical answer, and the grammarian must steer a middle course, but in our judgment Prof. Sonnenschein leans too much to the historical method.

"Case" is a crucial instance. Latin has six cases, or—counting, as here, the locative—seven. On this there is no dispute. But how many has French? By the strict definition of case as "a modification of form," &c., nouns have no case, and it is only on the analogy of ten pronominal forms that case is attributed to nouns. Prof. Sonnenschein follows the recommendation of the Joint Committee. *Me* is an accusative or a dative, *de moi, à moi* are genitive or dative case-phrases, and *moi* in both these is an accusative. Is not this to sacrifice French on the altar of Latin? Is the beginner in French to be taught that, in *je vais à Paris, à Paris* is a dative phrase composed of a preposition and a noun in the accusative, in order that he may be assisted in his subsequent study of Greek?

In Latin this difficulty rarely arises, and we have no hesitation in pronouncing the "New Latin Grammar" in nearly every respect as great an improvement on Kennedy as was Kennedy on the old "Eton Latin Grammar." The accident is shortened and simplified; *deabus, suppellectilis, et tous ces garçons là* are scrapped; the conjugation of verbs is at once more strictly philological and easier to remember; and, lastly, the accident is not wholly divorced from the syntax. The substitution of the perfect participle passive for the supine is an unmixed gain.

The special feature of the syntax is the treatment of the subjunctive—an application of the theory propounded in the author's monograph on "The Unity of the Latin Subjunctive." All uses of the mood are classed under the two primitive and cognate meanings of obligation and futurity. This is a real and original contribution to philology, and will, we doubt not, be used by succeeding grammar writers as a *filum labyrinthi*. But, while we rejoice at the attempt to substitute reason for rule of thumb, we are afraid that the syntax in which it is applied will prove too revolutionary to commend itself to schoolmasters of the present generation. Explanation and rule are intermingled, and for daily use the pupil needs tabular statements. For instance, a boy wants to know what mood he should use in concessive sentences with *quamvis, quanquam, etsi*. He will find nothing in the index or (if we have not overlooked it) in the text. The same of *cum* frequentative. We are not convinced that the gerundive is a passive verb adjective. In the example given we should

translate "Now for a drinking, now for an earth-beating." The subjunctive of wishes (page 149) is present, not future. *O si sim!* "would I were now!" not at some future time. One other criticism: the examples are nearly all drawn from Caesar's "Gallic War." We should greatly prefer examples from the poets as more easily learnt and better worth remembering.

To write a French Grammar on the lines of the Report was a far harder task, and we cannot say that as complete a success has been achieved. To take a minor point of comparison: the Latin examples, as we have just remarked, are taken from standard authors and the reference is in each case given; the French examples are composed *ad hoc* and rarely above a line in length. This criticism does not apply to the accident, which has been reduced to a minimum and simplified, to the relief and profit of the beginner. In particular, we commend the treatment of the verb and the adoption of the "dead conjugation." There is no attempt at absolute uniformity of tenses with English or Latin. "He gave" is past, *il donna* past historic; "he has given" is present perfect, *il a donné* is perfect. It is not a matter of much importance, but we should have preferred to give the same names to corresponding forms and afterwards point out the different uses in the syntax. On the other hand, for the old conditional we have "future in the past," and here we confess that we find it hard to conquer our conservative instincts. The use from which the name is taken, reported future, is not the commonest, and in the second use, "conditioned futurity," not only the sense of past but of future time has been lost, as in the example given, *hésiter serait une faiblesse*, "the woman who hesitates is [not will be] lost." "Je ne saurais vous le dire" is not, as here translated, "I should not be able to tell you," but "I cannot tell you." The uses of the tenses are clearly but all too briefly explained. It is not only in conversational French, "especially in the north of France," but also in written French, that the past historic is the regular usage in such sentences as "Nous sommes arrivés à cinq heures," and the constant use of the past imperfect in vivid narrative deserves more than a paragraph and a single example in small type. The disuse of the past subjunctive except in literary style is exaggerated. It is mainly for the sake of euphony that it is avoided in verbs of the first conjugation. Why should we be told to avoid in conversation such a sentence as "Il exigea que tout le monde fût là"? The perplexing and subtle question of the position of French adjectives is very perfunctorily treated. The rule that when the adjective is longer than the noun it almost always comes after it needs much qualification. We must write "Cet admirable prince" if we are summing up his qualities. Nor is it true that, when noun and adjective are of the same length, we may take our choice. There is a shade of difference between *un enfant charmant* and *un charmant enfant*, and *un enfant petit* is not French. "Je crains qu'il [ne] vienne" and the rules on page 127 are, to say the least, misleading. The pupil will infer that *ne* is usually omitted, whereas the option applies only to negative or quasi-negative sentences. Under *ignorer*, negative with indicative, it should be mentioned that *ne pas douter* requires the subjunctive. In "Il n'eut pas plus tôt fini qu'il sortit," *plutôt* should not be given as an alternative. The Académie and Littré agree in condemning *plutôt* as a solecism. "Special forms" is not a happy substitute for the old and indefensible "disjunctive" pronouns. What is there "special" in the form of *nous, vous, elle*? "Strong," "emphatic," or "accentuated"—each seems to us preferable. What is the use of a bare list of prepositions (page 161) including "*d'avcc*, from"?

These are flaws that may easily be removed in a second edition. But, if the two Grammars are to be generally adopted in schools, it seems to us that they will need a more serious revision. Either the Latin will have to be lowered a key, somewhat in the way we have indicated, or the French will have to be strung up so as to bring the two into tune. As they stand, we should recommend the Latin for a Sixth and the French for a Fifth Form.

Rationalist English Educators. By GERALDINE E. HODGSON, D.Litt. (3s. 6d. S.P.C.K.)

Herbert Spencer, whose essay on Education is the most notable contribution to the literature of that subject ever written by a rationalist, tells us that "to prepare us for complete living is the function which education has to discharge; and the only rational mode of judging of an educational course is to judge in what degree it discharges such function." Throughout the essay Spencer worked upon that basis; his aim was to discover the true method of preparing the mind and the body for "the complete life." Unlike most writers on education, he never left out of sight the realities of everyday existence; the vital importance of diet and exercise and clothing; the need of teaching the child to discover things for itself; the dangers of treating children as mere units and not as individuals.

Curiously enough, the author of this sketch does not so much as mention Spencer, or his contribution to educational literature; but Milton, whose "fine phrase, often quoted as it is, can never be staled quite into commonplace," expresses the same idea in more elaborate language: "I call, therefore, a complete and generous education that which fits a man to perform justly, skillfully, and magnanimously all the offices, both private and public, of peace and war."

In this sketch, criticizing the educational theories of Locke, the Edgeworths, and Mill, sufficient prominence is not given to this central topic—the function of education. If, as the author concedes, these men and women, rationalists though they were, were moved by the love of what they believed to be truth, she was in fairness bound to judge them according to their own standard. In these days of warring creeds no candid seeker after truth can fail to realize that, be our ultimate goal what it may, and whether our little life be the prelude of some greater existence or not, it is our plain duty, from whatever point of view the subject be approached, to prepare our children for "the complete life" upon earth. The author has, in our opinion, failed to give sufficient weight to such considerations, and has marred criticism in other respects admirable by a false conception of the nature of toleration. To the philosopher—and it is as a philosopher, and not as an educationist, that the author passes judgment upon Locke and Mill—even as no truth is obvious, so can nothing be obviously false. The attitude in which the author rails at what is termed "gelatinous indifference" is the attitude of the would-be silencers of Galileo. "Of two opposing propositions let us always remember that, though it is possible that they may both be false, it is not possible that they can both be true." But if that proposition be interpreted to mean that "if I am right—and it is inconceivable that I should be wrong—then you are in error," we put ourselves back to the days of the Holy Inquisition. What is Truth? Although, like jesting Pilate, we wait not for an answer, it should be our aim as educators to ensure that our children should in no wise be handicapped in the task of finding the answer to that eternal question. Doing and being are, therefore, the paths in which we should chiefly seek to strengthen the feet of the young. That was the key-note of Spencer's teaching, and that is precisely what Locke insists upon when he says, "Nobody is made anything by hearing of rules, or laying them up in his memory: practice must settle the habit of doing without reflecting on the rule." That, too, is what the Edgeworths were thinking of when they alleged, as one of the disadvantages of public-school education, that there too little attention is paid to the general improvement of the understanding and to the formation of moral character. Indeed, with regard to this essential problem of education, the rationalists are at one. Again we cannot but regret the spirit in which the author writes of rationalists as being incapable, as such, of being "kindly human beings." The lives of such men as Locke, Mill, and Spencer are a standing refutation of such a suggestion; and to suppose that such men were what they were in spite of their rationalism is vanity. Once more it is misleading to write of the Edgeworths, "Their whole attitude is baldly, crudely hedonistic." That judgment is based apparently upon the statement made

in Volume I of the "Essays on Education" that "To secure for his pupil the greatest possible quantity of happiness taking the whole of life must be the wish of the preceptor; this includes everything." The comments which follow have no meaning unless we are to assume that the author draws no distinction between "happiness" and "pleasure," and though Locke, Mill, and Spencer may conceivably be termed hedonists, the most cavilling critic would not venture to suggest that any one of them aimed at no higher ideal than pleasure. Pleasure, as Spencer shows in his essay, is a test of the efficacy of an educational method, and it is largely because rationalists realize the usefulness of pleasure as an adjunct to our activities, not as their aim, that they are able to formulate schemes of education that still have their use. In two respects we are in complete accord with the author: first, in dwelling upon the intense love of Truth which impelled Locke and Mill, and, we may add, Spencer; and secondly, in the rightful insistence upon the necessity for training the young to appreciate Beauty. In which respects, as heretofore, be Plato our guide.

An Intermediate Logic. By J. WELTON, M.A., and A. J. MONAHAN, M.A. (7s. 6d. University Tutorial Press.)

This is an abridgment of Prof. Welton's earlier "Manual of Logic," intended for the use of students working for the Intermediate University Examination. The authors, by means of the admirable selection of questions and examples given at the end of the volume, have made it easy to compare intention with achievement, and shown that they have kept throughout in close touch with the needs of those for whom they have been writing. That the book entirely avoids the characteristic fault of most abridgments cannot be asserted, for we note an occasional tendency to sacrifice clearness to comprehensiveness, and, especially in the part dealing with formal logic, later results are sometimes taken for granted, and terms such as "conception" and "judgment" are used with a very cursory definition of their meaning. On the other hand, this volume has, particularly in the arrangement of the subject matter, certain points of superiority over its larger predecessor. The treatment of Method, which precedes the syllogism, is interesting and illuminating, and should help students to see the artificiality of the distinction between deduction and induction as entirely separate and independent processes of thought. Instead of discussing fallacies in a section devoted to themselves, the authors take them in connexion with the various principles which they violate. This is an arrangement which, from the point of view of the practical teacher at least, recommends itself as the most useful and natural.

Such changes of arrangement are evidence of the conscientious desire of the writers of the book to breathe life into what are, for most students at the outset, the dry bones of formal logic; for they aim at making clear the vital connexion among the different parts of the subject, dependent on the essential nature of knowledge. The same desire shows itself in other places, as, for instance, in the interesting section on classification. Immediate inference and the syllogism are very fully discussed, but an examination of the type of questions which the student is required to answer shows that the space devoted to these subjects is justified.

The discussion of the general nature and postulates of induction is pleasantly free from the controversial matter and criticism of other logicians which are apt to prove so distracting to the young student. The principle of uniformity and the subject of causation are suggestively treated, and a good account is given of the value and the relation to each other of the various subordinate processes making up the inductive process as a whole. As is necessary, induction is abundantly illustrated, and one is glad to find that the thinking processes of the hunter and the farmer receive some fleeting recognition alongside those of the scientist. The authors have, however, for obvious reasons had recourse to the natural sciences for their most numerous and detailed examples. Students of logic sometimes complain that the difficulties of the subject are considerably increased for them by the necessity of

grasping illustrations from spheres entirely foreign to their ordinary interests, and it seems unfortunate that the devotees of social, educational, historical, and psychological research should have so little account taken of the actual reasonings in their favourite sciences. It is natural, as our authors explain, that the logician should choose examples that come as near perfection and completeness as possible; yet it might be possible to adopt illustrations from spheres which, for some, are more sympathetic, and to make their very incompleteness help to impress upon the student that lesson of caution in drawing conclusions which it is one of the chief aims of logic to drive home. Perhaps this is more the business of the living teacher than of the textbook—a consideration which leads on to the remark that the volume before us, though primarily intended for students, will prove suggestive and useful for teachers also. Indeed, the ordinary student will probably require the fairly frequent interference of the teacher, for the book is by no means too simple.

Attention must be drawn to the valuable illustrations of inference, both deductive and inductive, among the examples at the end. These will be found interesting to analyse, and their analysis will afford a good test of the extent to which the student has grasped the living significance of the science he has been studying.

"Dent's Modern Language Series."—*L'Homme Vert*.

By JETTA S. WOLFF. (1s. 4d.)

The stories in this volume are partly written by Miss Wolff, partly remodelled by her from old legends. They are intended for rapid reading in form or at home, and the edition has therefore no exercises attached to it, while the fairly numerous notes, which are entirely in French, are only intended to help to the understanding of difficult words or phrases of the text. In this Miss Wolff has, in our opinion, been wonderfully successful, as it is only here and there that the explanation given is beyond the range of the reader she has in mind. For example, *réclamait* is explained by *demandait avec instance*, *se ravisa* by *changea d'avis*, both of which are apt to be misleading to the English child. But, even with such help as the notes undoubtedly give, and though the stories themselves are delightful and well suited for young children—say of eleven to thirteen—as regards their subject-matter, we doubt whether their style and construction are not too advanced in proportion and likely to discourage rather than promote independent reading of French at that age.

Le Livre Rouge. By Miss E. MAGEE. (1s. 6d. Blackie.)

This should be a delightful book for small beginners. Besides abundant material for building up a vocabulary of common words and phrases, "*Le Livre Rouge*" supplies many easy games, one or two set to music, and leads the learner, by well graduated stages, from the very elements of grammar—*le*, *la*, and *les*—to the construction of every kind of simple sentence. It is profusely illustrated with pictures of bold design, which show clearly all the objects mentioned and add no unnecessary details. One would only like to see some of them reproduced as wall pictures to facilitate conversation. Where the subject is taken outside the form-room it is difficult for the teacher of a large division to be sure that all the children are looking at the same thing, and connecting it with the right word. The exercises on each section are well varied and can be used for practice in either oral or written work. There is little doubt that, with this book in their hands, children will find the learning of French both attractive and easy.

Je sais un Conte. By Mrs. J. G. FRAZER. (1s. 6d. Clarendon Press.)

In this collection of tales Mrs. Frazer has conclusively proved her title well chosen. She has drawn them, she tells us, from all kinds of popular sources, and they certainly savour of their origin in their wealth of quaint legend and folk-lore. Beyond a phonetic transcription of the first two "Contes," no attempt has been made at editing them, and they would thus supply an excellent text for rapid reading with a young form, who could not fail to enjoy them.

Contes de Voltaire. Edited by H. W. PRESTON, M.A. (2s. Clarendon Press.)

We are glad to welcome another volume of the "Oxford Modern French Series," which has already done much to familiarize English readers with some of the best French classics. Mr. Preston has prefixed a delightful and scholarly account of Voltaire to this selection of his "Tales," and we advise anyone to read it who feels himself out of sympathy with this many-sided man: "the veritable Jekyll and Hyde of literature," as his editor says of him. The

"Contes" themselves, though ostensibly belonging to the age of legend and magic, are full of modern allusions and sparkling with humour, making one want to read more where the few offer so much. The notes, of which all but a very few are in English, are in most cases full and adequate, though we notice that no explanation is offered of *le mois de la souris* and *le mois du mouton* on page 21. Misprints will be found on page 29, line 3, and on page 82, line 10.

Easy German Poetry. Edited by C. W. COLLMANN, B.A. (2s. Ginn.)

As an introduction to the delights of German lyrical and ballad poetry we can heartily recommend this little book. It supplies, as its editor claims for it, a long-felt want, and, though primarily intended for beginners, could be also placed with confidence in the hands of more advanced pupils. It seems to contain all the poems to which we would like to give children an early introduction, and these have been carefully graded so that the learner shall not be discouraged by his first efforts at German verse. Mr. Collmann has prefixed some suggestions for the teaching of poetry, in which he urges the thorough mastery of each poem, even if not learnt by heart, till it shall become a familiar friend; and lays much stress on the importance of correct pronunciation and intelligent reading. In order to bring the book still more within the range of the beginners for whom it is meant, he has added a full vocabulary and English notes, and recommends that the teacher should translate any passage that proves at all beyond the pupil's grasp. In our opinion it is a mistake to interpose so much English between the learner and his appreciation of a foreign literature, but, except from those who hold this theory, the book is one that ought to receive a warm welcome.

"Harrap's Modern Language Series."—*Easy Prose for Translation into French*. By ALEC CRAN, M.A., D.Litt., Ph.D. (1s. 6d.)

We should like to make two criticisms on this book before speaking of its very considerable merits—the first, that the forty pieces it contains are hardly sufficiently graded from the very elementary ones with which it opens to some really hard extracts from standard English authors; the second that, even taking the early passages into consideration, the book strikes us as too advanced for pupils after only two years' work, though it is for them that it is, in the first instance, intended. On the other hand, we find here much that is excellent packed into a small compass. Besides the passages of continuous prose, there are simple sentences of everyday use to be put into French, a subject for free composition, with hints in French for its treatment, and a set of idioms connected by a similarity of words or ideas, which again are of constant application. The vocabulary, which is more of the nature of notes, is not too full and is very suggestive from the way in which it gives synonyms with their slight variations of meaning, and warns the young learner against confusing different parts of speech. Altogether the book is one over which much trouble and thought have been spent and which will repay careful study.

Contes Français. Edited by MARC CEPPI. (1s. 6d. G. Bell.)

In the "Contes Français" M. Ceppi has made a most delightful collection of thoroughly readable short stories, very easy to memorize, and introducing the child to a wide range of useful vocabulary. The stories have been in part adapted, in part written for English-speaking pupils, and so present none of the language difficulties that so often put the ordinary French tale beyond the grasp of young pupils. In fact, the only adverse criticism we can make is that the text is hardly sufficiently graded for its length. In a book of 163 pages of reading matter the last stories might well be considerably harder. In every other respect, however, we can warmly recommend the "Contes" as an elementary reader, both for its language and its subject-matter. It contains every kind of fairy tale, legend and fable, some familiar, but many new or little known, and much skill has been used in varying the tense in which they are told without detriment to the naturalness of the style. The book is published either with or without vocabulary, and a separate pamphlet may be obtained (price 6d.) with exercises and *questionnaire* for use with the text.

Senior French Reader. Edited by R. F. JAMES. (2s. 6d. W. B. Clive.)

Extracts from nineteenth-century authors, beginning with Corinne and ending with Marie-Claire. An introduction of ten pages sums up, as well as can be done in that space, the development of literature during the century. The passages, most of them old friends, are well adapted for their purpose to prepare pupils for Senior Locals, though, perhaps, they err on the side of easiness. They might profitably be used for unseen. The notes are confined to the matter, biographical and historical allusions. The vocabulary we consider a superfluity. It will not help the pupil to translate *une grosse mer*, *un brun vigoureux*, *ne m'en demande*

pas si long, composition (picture), *garantie* (mortgage), *enlèvement*. It would have been better to give the help required in notes.

Daudet: Le Petit Chose. Edited by W. ROBERTSON, M.A. (1s. 6d. Harrap.)

This is a convenient and attractive edition in the old style of Daudet's little masterpiece. The print is clear, the vocabulary complete, and the notes offer good renderings of idiomatic sentences, with explanations of historical, geographical, and literary allusions. The book is evidently intended to be used entirely for translation, though it is a question whether that is the best way of making boys or girls appreciate the charm of Daudet's style, the lightness of his touch. And, in our opinion, even setting this question aside, too much help is given to the pupil in editions of this kind where reference to the notes and vocabulary leave no scope for either memory or ingenuity.

A Practical Italian Grammar. By L. M. SHORT. Second Edition. (5s. George Allen.)

The grammar is framed on the lines of Ollendorff, each lesson consisting of a rule or paradigm, followed by conversation, exercise, and vocabulary. The student who works through it conscientiously will undoubtedly have gained a fair knowledge of elementary Italian; but it will need fortitude on his part to learn by heart, as is recommended, "La signorina ha un giardino? No, essa non ha un giardino, ma il signore ha due case." The adult, too, will prefer to take his verbs at a gulp, and not by sips—a tense at a time. There is a key to the exercises and to the longer pieces of composition at the end. The latter are interesting and well chosen. *Eglio* and *elleno* are obsolete or obsolescent.

The Theory of Determinants in the Historical Order of Development. Vol. II. By THOMAS MUIR, C.M.G., LL.D., F.R.S. (17s. Macmillan.)

This second volume of Dr. Muir's work on determinants is a worthy successor to the first. It is characterized by the same power in presentation and gives abundant evidence of the same assiduous research. The history is carried on from 1841 to 1860, each chapter being arranged in chronological order, the first chapter dealing with determinants in general, while each of the succeeding chapters is devoted to some special development. The volume opens with Cayley's memoir of 1841, "On a Theorem in the Geometry of Position," in which Cayley gave determinants the notation that has made consequent progress so much less difficult. This period of twenty years is, therefore, the most interesting in the history of the subject. It marks the reign of Cayley and Sylvester, Cauchy, Hermite, Hesse and Brioschi. It is a period of which English mathematicians may justly be proud, and it is singularly fortunate that we should possess a master of the subject so efficient as Dr. Muir and so generous in giving his labour to help students to follow the lines along which this important subject has developed.

Exercises from the "Calculus for Beginners." By J. W. MERCER, M.A. (3s. Cambridge University Press.)

The exercises from the "Calculus for Beginners," which is one of the best elementary textbooks on the calculus, are well worth reprinting for use in classes. When the volume is reprinted, occasional references to the original text should be deleted, especially when, as on page 46, the reference is to a diagram in the complete book which is not among those in the reprinted exercises.

Introduction to Analytical Mechanics. By A. ZIWET and P. FIELD, Ph.D. (7s. Macmillan.)

This volume is intended to form a year's course for University and college students in kinematics, statics, and the dynamics of a particle and of rigid bodies. As compared with an English textbook, more space is devoted to the text, less to exercises, and still less to worked or typical examples, while the exercises themselves are of a simpler character. They are, however, well adapted to illustrate the subject. The methods of the calculus and the elements of solid geometry are supposed to be known, but the solutions of such differential equations as may occur are explained in the course of the work. The authors have written a good introduction to higher mechanics, which a student accustomed to English textbooks might read with advantage.

When I was a Boy. By LUCAS BEYNON. (3s. 6d. Routledge.)

In the early days of competition for Naval Cadets a candidate was being *viva voce'd* by the Admiralty Committee presided over by Lord Selborne. Cross-examination extracted from him that his father was an admiral on active service, that he lived with his grandmother in the country, and spent his time in ratting, ferreting, bird's-nesting, hunting, according to the season, with lessons with a tutor to fill the off-times. Questioned whether he could draw, he answered modestly that he thought he could, though he had not been taught. He was handed a sheet of paper and asked to draw a cow. The drawing was handed round and produced Homeric laughter, but the boy was equal to the occasion and, turning on his

tormentors, said indignantly, "I told you I'd never tried, and I'd like to see one of you Johnnies draw me a pig with your eyes shut." Which things are an allegory. Mr. Beynon's boy is of the same breed, and he tells, as a boy could, his various adventures with catapult, gun, and rod. Some we must take *cum grano*—the wounded owl brought home clinging to the gun barrel and the battle with the cave bats. Nor can we commend the recipe for preserving eggs, to boil them hard, nor advise the young angler to take the idealized father, who might have been a contemporary of Walton, as his exemplar. The book as a plain narrative, without a moral or any attempt at teaching, will delight the natural boy.

Character Training. By ELLA LYMAN CABOT and EDWARD EYLES. (3s. 6d. net. Harrap.)

We have here a book by an American author, "revised, supplemented, and edited for English teachers" by the head master of a London school. The editor has considerably curtailed the original version, particularly where it was "too American." On the other hand, he has made additions and introduced a certain amount of rearrangement. The nature of the book is indicated by the subtitle, which runs: "A Suggestive Series of Lessons in Ethics." On examination, however, we find that it is made up not so much of lessons as of materials out of which lessons may be made. It is, in fact, a compendium of stories, poems, and other illustrative matter that may be used in moral instruction. The book is so arranged as to provide material for lessons for ten months out of the twelve for each of eight years, thus covering the whole of the primary-school course in the American schools, an arrangement which obviously lends itself to our English system as well. Each year has a different topic, the eight topics being Helpfulness, Home Life, Work, Golden Deeds, Loyalty, Friendship, Patriotism, Choosing a Calling. There is necessarily a certain arbitrariness in this selection, but wherever possible there is a clear application to the needs of children of the age contemplated. The subdivision of matter under the different topics is well done and enables the teacher to cover all the essentials in the eight years. The matter is in itself extremely interesting and is selected from excellent sources, not excluding the Bible. There is a complete absence of mawkishness, and the book does everything that can be expected of a compendium of this kind. Whether such a book should be used at all raises a different question. No doubt the best series of moral illustrations are those that come naturally from the teacher's own reading and experience; but all teachers have not the *flair* for such things that Mrs. Cabot undoubtedly has. Nor have busy teachers the time to hunt for appropriate illustrations and to modify the matter to suit the different ages of pupils. So it may be admitted that there is room for this book, especially since it gives references and suggests means by which the abler teachers may extend its usefulness. Still another set of objections have to be met, for there are those who have no faith whatever in deliberate moral lessons. We can fancy a man like Mr. Paton of Manchester looking askance at such a manual. But the author is not one of those who overestimate the value of the deliberate moral lesson in character training. She tells us plainly, "Character grows mainly in two ways: through work well done, and through the contagious example of people whom we love and admire." But she maintains that such a book as this forms an excellent supplement to the forces of achievement and imitation, and most teachers will agree with her.

Education in Scotland: a Sketch of the Past and the Present.

By W. J. GIBSON, M.A., Rector of the Nicolson Institute, Stornoway. (2s. 6d. net. Longmans.)

Mr. Gibson writes primarily for the younger members of the teaching profession in Scotland, hoping to inspire them "with a keener sense of the honourableness and distinction of their calling." He traces the chief ups and downs of education from the time when Ninian built Candida Casa (Whithorn, 397 A.D.) down to the latest departmental memorandum. "In no other country has there been in the past the same free path for ability, in whatever rank produced, not only through the schools, but into all the learned professions." The explanation of this signal advantage is found in the value placed on education by the people, and their profound conviction that education is a matter of public concern as being a matter of interest to the whole people. The story is curiously varied and interesting: "Celtic monks and bards, medieval chancellors and rectors, sixteenth-century preachers and bishops, University regents and professors, parish and burgh schoolmasters, all have borne their part in the great work of Scottish education," and they have had more sense than to spoil the main business by quarrelling over details, and especially irrelevant questions. The matter is carefully distributed, and, if disproportionate space is given to education in the Highlands and Islands, this is for the useful purpose of clearing up a question that has hitherto been misunderstood. The final chapter deals pointedly with recent movements and questions. The work is written with deliberate care and with full knowledge, and in excellent tone.

Introductions to the Poets. By F. W. RAWNSLEY.
(2s. 6d. Routledge.)

Mr. Rawnsley is hon. secretary of a literary society founded for reading English poetry, and at each meeting an introductory sketch of the poet and his works was read: presumably by the secretary, but of this we are not informed. These introductions are mainly a digest of standard criticisms, and make no claim to originality. For instance, that on Milton consists of newspaper cuttings on the occasion of the Milton tercentenary. Well adapted for a society to whose members Chaucer was a new discovery and Swinburne's "Atalanta" a revelation, they scarcely merit a wider publicity. The paper on "Tennyson," delivered as a lecture by the Editor, stands apart, and contains interesting personal reminiscences.

(1) *Paton's List of Schools and Tutors.* (2s.; post free, 2s. 6d.)

(2) *Paton's Guide to Continental Schools.* (1s.; post free, 1s. 4d.) (J. & J. Paton, 143 Cannon Street, E.C.)

(1) This well known and widely circulated "Aid to Parents and Guardians in the Selection of Schools" has reached its fifteenth annual issue. The present edition contains no less than 1,284 pages and more than a thousand illustrations. Full particulars are given of the principal boys' and girls' schools (both public and private), preparatory schools, physical training colleges, schools of domestic science, Army, University, and Civil Service tutors, scholarships and exhibitions. In addition there are articles on the Royal Navy, the Army, the Mercantile Marine, the Civil Service, Insurance and Educational Endowments, &c.

(2) The "Guide to Continental Schools" (240 pages), seventh edition, gives full particulars of Educational Establishments and Tutors in France, Germany, Belgium, and Switzerland. The publishers are to be congratulated on the get-up of both these useful annuals.

Wild Flowers as they Grow. Photographed in Colour direct from Nature by H. ESSENHUGH CORKE, with Descriptive Text by G. CLARKE NUTTALL. Third series. (5s. net. Cassell.)

The third series merits all the praise that we gave to its predecessors, for the coloured photographs are even more beautiful. The daffodils of the frontispiece, could they be multiplied, would have satisfied Wordsworth. All except the monkey-flower (for "lutens" read "luteus") are of the commonest: but these are more suited than rarer ones for the young botanist, who will be led

on to study and dissect them for himself by Mr. Nuttall's descriptions, helped by woodcuts.

Maps: how they are Made: how to Read them. By H. N. DICKSON, D.Sc. (6d. G. W. Bacon & Co.)

The work contains valuable information which is not usually found in the ordinary textbooks. It should be in the hands of every teacher of geography.

We have received a specimen of the "Third Hand" Thumb Magnifier. This consists of a magnifying glass mounted on a special clip which can be clasped on the left thumb. This enables an article to be held, examined, and worked on under the lens, leaving both hands free for use. The magnifier does not necessitate the removal of spectacles or eyeglasses, and both eyes can be used at a reasonable distance from the lens. It is a simple contrivance which will be found of great convenience for many scientific purposes. By means of a round bar and ball joint the position of the lens may be varied. Full particulars can be obtained from "Third Hand Patents, Ltd.," 361 City Road, E.C.

MORAL EDUCATION AT THE HAGUE.

THE differences of opinion which become so obvious in England whenever the Government of the day introduces a Bill into Parliament on what is wrongly called "the Education Question," are apparently generously reflected in other countries. And what better scope for the airing of his views could the enthusiastic denominationalist or secularist find than the International Moral Education Congress, which met at The Hague from August 23 to 27? At The Hague we called the antagonists "Confessionnels" and "Non-Confessionnels," and their respective cases are emphatically and strikingly put in the papers in the First Division, which was devoted to "Moral Education and Character Building considered from any Point of View." As Mrs. W. A. L. Ros-Vrijman, F.T.S., one of the Dutch delegates, clearly states in the paper in which she asks, Is there a common base for moral education? "the great thing which fascinates at this moment those interested in moral education is the difference between those who want moral

(Continued on page 610.)

MACMILLAN & CO., Ltd., St. Martin's Street, London, W.C.

education to be based on religion and those who want moral education to be built on modern science and philosophy." In and around and about this great question were papers from almost every shade of religious opinion—Catholic, Protestant, Greek, Moslem, Theistic, &c.—and then came a large group of Theosophists, Positivists, and other "ists," followed by the Secularists, who, in turn, were followed by an interesting group of philosophical and psychological writers. Needless to say, the authors of the papers hailed from many different parts of the globe. As many as eighteen different nationalities, we believe, were represented at the Congress.

Writing, unfortunately, on the discussion on the papers is only beginning: it is difficult to say which line of thought more closely resembles the general view of the Conference. It is easy, however, to find the most contradictory and mutually destructive views set forth in the papers, although many of the writers successfully harmonize conflicting elements and reduce to a minimum the necessary differences.

Mr. Sadler opens the ball with a vague "few words" on "Spiritual Influences in Moral Education," in which he discourses, rather finely, on the living tradition which is "more potent in its influence upon conduct and character than is the direct instruction given from the pulpit or classroom." "Its power proceeds from those secret places of the soul which lie deeper than words. . . . The tradition is a living message which individuals receive through participation in the organic life of a Christian Society. It rears its fruit in a habit of mind and is evidenced by a right course of action under the stress of inner or outward trial."

Dr. H. Bavinck, of the Free University, Amsterdam, believes that, entrusted to good hands, moral education can bring forth in the children all sorts of virtues, self-reliance, self-control, attention, industry, the feeling of responsibility, the sense of duty, the love of order, friendship, collaboration, &c. Prof. J. S. Mackenzie, of the University College, Cardiff, in some notes on a philosophical basis for moral education, is less sure of the results. There is a great deal, he says, that education cannot do. "It is doubtful whether it can very materially alter the dispositions and aptitudes with which an individual is born." It cannot, he continues, make a dunce into a genius, or a genius into a dunce. If anything, it may have a slightly better chance of doing the latter than the former, since a disposition can be more easily destroyed than

created. In like manner, education cannot be expected to produce a special aptitude for mathematics or music or philosophy in individuals who are not fitted by nature for such pursuits. Nor is it altogether reasonable to expect that it should create a generous disposition or a generous heart. "But it can certainly help," Prof. Mackenzie adds, "to develop such dispositions as are inborn in the young; and, above all, it can direct them into those channels in which they may best serve the common interests of humanity."

A practical paper on "Direct Moral Teaching" was contributed by Mr. G. Spiller, who organized the First Moral Congress held in 1909 in London. The following passage from the paper shows Mr. Spiller's method:—"The teacher, assisted by syllabuses, textbooks, and his own observations, will obtain his material from history, biography, literature, current events, the life around his own and the children's feelings and experiences, and from the various subjects of the curriculum. The method of teaching will be that common to all well taught subjects. . . . The teaching ought to (a) extend to at least the age of fourteen; (b) aim primarily at moving the will; (c) be comprehensive in scope and positive in character; (d) be drawn from reality rather than fiction; (e) be concerned with motive, thought, word, and deed; (f) deal with both habit and reflection as well as with indirect virtues and vices; (g) treat of the progress of the race; (h) inculcate a love of inanimate nature, of plant and animal life, of science and the beautiful; (i) refer to child life as well as to the stage beyond childhood; (j) be not merely or largely historical, analytical, reasoned, hortative, warning, critical, or dogmatic; (k) appeal to the imagination; (l) be conscious of man's social nature and of the active influence of habit on conduct; (m) embrace the various relationships of life rather than a miscellaneous collection of abstractions or virtues; and (n) allow for the need of a unifying idea or ideal such as manliness (consecrating oneself in gladness, sympathy, thoughtfulness, and strength of character to the service of family, profession, country, and world)."

The other divisions of the papers were: "Moral Education considered from a Social and National Point of View," "Formation of the Will," "Moral Education considered from a Practical Point of View" (a paper by Mr. Cloudesley Brereton, M.A., is notable in this section), and "Physical Training and Character Building," "Care of the Body," "National Defence," "Games," "Eugenics."

(Continued on page 612.)

A NEW PRACTICAL INFORMATION READER FOR TOP CLASSES AND EVENING SCHOOLS.

ELEMENTARY BUSINESS TRAINING.

By VICTOR H. ALLEMANDY. Crown 8vo, 1s. 6d.

Business men complain that children leave school useless or unsatisfactory to them. It is because some knowledge of the machinery of business, its routine, customs, &c., is indispensable to a boy or girl, no matter what else they have been taught, and what walk of life they may enter. This book has therefore been written in simple language by a practical teacher to give young persons an intelligent idea of the knowledge, details, and duties expected of them in after-school life. It forms a Business and General Information Reader for day and evening classes, as well as an elementary textbook for commercial schools.

THE ONLY SCHOOL-BOOK OF ITS KIND. EXPERIMENTAL DOMESTIC SCIENCE.

By R. H. JONES, M.Sc., F.C.S. Crown 8vo, 2s. 6d.

This book shows that science can be adequately taught in the kitchen without a previous training in elementary science, by drawing upon everyday experience and by the aid of kitchen utensils and commodities.

"The book marks the beginning of a new era."—*Education*.

"The author shows how fascinatingly interesting the subject is."—*T.P.'s Weekly*.

THE MONTESSORI METHOD OF CHILD EDUCATION.

By MARIA MONTESSORI.

2nd Imp. Illustrated. Crown 8vo, 7s. 6d. net.

"A treasure-trove of wisdom, and a manual of education. Never before has such a combination of genius, inheritance, training, and experience been united as in this woman."—*The Journal of Education*.

"This book will come upon thousands of readers in Britain like a new spiritual dawn."—*Daily News*.

"The book is of pregnant significance. It brings out the most vital of callings in a new and truer vision."—*Athenaeum*.

WM. HEINEMANN, 21 Bedford Street, London, W.C.

NEW GEOGRAPHIES

Issued by J. M. DENT & SONS, Ltd., Bedford St., London, W.C.

AN INTRODUCTION TO PHYSICAL GEOGRAPHY. By MARION T. NEWBIGIN, D.Sc. (Lond.), Editor of the "Scottish Geographical Magazine," Author of "Modern Geography." Price 3s. 6d.

Adapted for the Upper Forms of Schools, and meets the requirements of candidates for the Cambridge Senior Local Examination in Physical Geography, and for the Physical part of the same examination at Oxford, and for similar examinations.

DENT'S HISTORICAL AND ECONOMIC GEOGRAPHIES. In Six Volumes. By HORACE PIGGOTT, M.A., Ph.D., and ROBERT J. FINCH, Senior Geography Master, The County School, Hornsey, N.

Volume I, **WORLD STUDIES**, now Ready. Price 3s. 6d.

Each volume profusely illustrated with Maps, Diagrams, Drawings, and Photographs.

The first volume will be a discussion of purely general matters and geographical types, a knowledge of which is essential to the study of particular regions. It may thus be read as preparatory to, or along with, each of the succeeding volumes; or it may be used independently as a general Physical, Historical, and Economic Geography complete in itself.

Vols. II-VI will deal with the Continents in their natural climatic regions, and will bring out the causal connexions of position, structure, climate, plant and animal life, human life and occupations, the growth of towns, and the development of wealth and national life generally.

Notes, price 8d. each. Abstract of Notes, price 2d. each.

GEOGRAPHY NOTES. By J. C. CHUTE, M.A., Assistant Master at Eton.

AMERICA (Non-British). **THE BRITISH ISLES.**

ASIA and AFRICA (Non-British). **EUROPE.**

CANADA and SOUTH AFRICA. **INDIA and AUSTRALIA.**

DENT'S NEW EDUCATIONAL WORKS

MODERN LANGUAGES.

THE BEST FRENCH PLAYS. Each Volume limp cloth. Fcap. 8vo. Price 3d. net.

This new series is designed to meet the need of teachers for a cheap, unannotated series of French Dramatic Texts for rapid reading in class, and it is hoped that these books will meet their requirements. The first six titles are now ready.

SEDAINE: LE PHILOSOPHE SANS LE SAVOIR.

MUSSET: ON NE SAURAIT PENSER A TOUT.

MME DE GIRARDIN: LA JOIE FAIT PEUR.

LABICHE: LA GRAMMAIRE.

LABICHE ET MARTIN: LE VOYAGE DE M. PERRICHON.

MARIYEAUX: LE JEU DE L'AMOUR ET DU HASARD.

FRENCH WORD GROUPS. Based on Dent's Pictures of the Seasons. By R. GUERRA, Modern Language Master, Bristol Grammar School. Crown 8vo. Price 1s.

FRENCH TEXTS.

La Bruyère: Caractères. With Notes by H. O'GRADY. Fcap. 8vo, cloth. Price 1s. 6d.

Sainte-Beuve: Profils Anglais. With Notes by H. O'GRADY. Fcap. 8vo. Price 1s. 6d.

Dumas: La Tulipe Noire. With Notes by H. O'GRADY. Fcap. 8vo, cloth. Price 1s. 6d.

Mérimée: Colomba. With Notes by H. L. HUTTON, M.A., Chief Modern Language Master, Merchant Taylors School, London. Price 1s. 6d. *[In preparation.]*

DER SILBERNE SCHILLING and other Tales. Edited by WALTER RIPPMAUN, M.A. Price 1s. 4d.

A new Second Year German Reader, uniform with "Der Golden Vogel" and "Eisenhans," previously published in the Series.

MATHEMATICS.

ARITHMETICAL EXAMPLES. For Secondary Schools and the Upper Forms of Primary Schools. Arranged by W. S. BEARD, sometime a Master in Christ's Hospital. Price 2s. 6d. With Answers, 3s.

This book contains a carefully graduated course of examples in Arithmetic adapted to the requirements of pupils in Secondary Schools. Prominence is given to the various branches of Commercial Arithmetic, and there are numerous practical exercises in connexion with Statistics, &c. At the end of the book Miscellaneous Problems and progressively arranged Test Papers for general revision are inserted; many of the later papers have been set in recent University Local and Matriculation examinations.

A KEY TO THE PUBLIC SCHOOL MODERN BOOK-KEEPING. By RANKIN WENLOCK, F.R.G.S., Commercial Master at the County High School, Barry, Glam. Cloth. Price 1s.

The Key is intended to be used as a supplementary volume for class work, and an Appendix is included containing the Elementary and Intermediate examination papers for 1912 of the Royal Society of Arts.

SCIENCE.

A LABORATORY NOTE-BOOK OF PHYSICS. By the Rev. S. A. McDOWALL, M.A., Assistant Master at Winchester College. In Two Volumes. Part I, Elementary. Part II, More Advanced. Crown 4to. 2s. 6d. net each.

Part I is also issued in Sections, in limp cloth, as follows:—

I. **Measurement and Hydrostatics.** 9d. net.

II. **Heat.** 1s. net.

III. **Light.** 1s. net.

IV. **Magnetism, Electrostatics, Current Electricity.** 1s. net.

The Publishers will be happy to entertain applications for Specimen Copies from Responsible Teachers.

LONDON: J. M. DENT & SONS, LTD., ALDINE HOUSE, BEDFORD ST., W.C.

There is a close resemblance between one International Congress and another. Delegates from the different countries fraternize so far as their linguistic powers permit, and there is sometimes a valuable exchange of ideas between the sessions. At the Hague the Authorities were charmingly attentive, and during the early stages of the Congress strangers were usefully aided.

DR. M. E. SADLER ON "STATES OF MIND" IN ENGLISH EDUCATION.

SPEAKING at the Leeds Modern School on July 23, the Vice-Chancellor of Leeds University said that a witty traveller had described the United States as being "not a nation but a state of mind." Similarly, English Education (sharply distinguished in this from German) was not so much an organized system as a variety of states of mind, some reflecting ancient traditions and others new aspirations which had been stirred by the stress and stimulus of modern life. Thus four strong currents of feeling were forcing their way into English Education. One current came from those working men, relatively few in number but influential through their courage and character, who were embracing a new view of education which discarded a good deal of the old "educational ladder" theory, with its attraction of personal advancement into the better paid ranks of industry or into professional life, and was more concerned with the problem how to secure for the adult worker opportunities of study and mental training alongside of his wage-earning employment and in continued comradeship with members of his own class. A second current came from the dissatisfaction of many women with what they felt to be the habitual underestimate of their claims to be regarded as intellectually and administratively competent to bear an unpatronized part in government and public administration.

A third came from the yearning, which grew stronger in many minds as the conflict of spiritual ideals became more confused, that children should grow up into the peace of assured belief, under the wing of the Christian faith. The fourth current was a new and venturesome optimism, self-confident, insatiable in its appetite for new experiences and sensations, buoyant, swift-minded, gay but often ruthless towards the incompetent, quick but fickle in its intimacies, humorously tolerant in its judgments, stoical in danger, unfrightened of the future, though uncertain of the issues which the future might bring. This temper of mind, the spirit of the pioneer, was far commoner in the United States and in Canada than in Europe; but its strong infection had caught hold of the younger England and would have an influence in English education.

The common factor in these four states of mind was a sense of comradeship, whether in sex, or class, or in loyalty to some religious society, or in adventurous outlook upon the opportunities of life. Hence it was that those parts of our education which encouraged comradeship were at this time the most awake. In England, partly through the persistence of the medieval tradition, we were rich in resources for meeting this demand for free and varied comradeship in education. Appreciation of the value of college life in the old (and increasingly in the new) Universities; the *esprit de corps* of the Public Schools; the keenness of teachers and pupils to develop the sense of corporate life in the new secondary and in many elementary schools; the trend towards group-effort in scientific research, with some weakening of the barriers between specialisms; and the growing respect felt for the claims of religious conviction to a firm place in the organization of national education, were symptoms of a strong sense of the need for comradeship in life, and therefore in the education which prepared us for life.

JOTTINGS.

PROF. RIPPMAUN will deliver, in the autumn, a course of lectures for modern language teachers at Queen's College, Harley Street, beginning on October 12. There will be five lectures on phonetics and five on methods. For particulars apply to Prof. Rippmann, 45 Ladbroke Grove, W.

C. ROBINSON, writing on "Schoolmasters in Ancient Greece" in the *Contemporary*—i.e. about 300 B.C.—"culls one piquant quotation from the satirical poet Lucian." We look for some new discovery—an unedited Oxyrhynchus MS.—but we find only the familiar tag from Lucian's "Dialogues of the Dead" (about 180 A.D.), in which those who teach the alphabet to children are coupled with hawkers of salt fish.

A COMMITTEE has been formed, with Prof. Harrower as Chair—
(Continued on page 614.)

THE LONDON Central Institute for Swedish Gymnastics,

16, 17, & 18 Paddington Street, Marylebone, W.

Telephone: 872 Mayfair.

The School World says: "This college for men students . . . will provide a first year's course fitting students for posts in elementary schools, and a second year's course enabling the graduate to take charge of any school of whatever standing. Anatomy, physiology, theory of movements, hygiene, and kindred subjects necessary for a complete grasp of physical training will be taught by experienced teachers. This will be a noteworthy addition to the facilities for training in this subject. . . . this new college has been most cordially welcomed by the Parliamentary Secretary representing the Board. . . . As a sign of progress, and in the hope of a better future for the physique of the youth of the nation, the new 'Central Institute' will be cordially welcomed."

PUPILS ARE NOW RECEIVED.

The Institute also undertakes the instruction in Physical Exercises on the Swedish System for Schools in the neighbourhood.

Recreative Classes—Gymnastics and Fencing—are held in the afternoons and evenings.

For particulars apply to the Principal—

ALLAN BROMAN,

From the Royal Central Institute of Gymnastics, Stockholm.

READY THIS MONTH.**A Business Geography.**

By J. HAMILTON BIRRELL, M.A., F.R.S.G.S. (Boroughmuir Junior Student Centre and Higher Grade School, Edinburgh).

A short volume on new lines for the Upper Classes of Commercial, Technical and Evening Schools.

The main conditions of trade, and the production and transport of the chief commodities entering and leaving British markets, are dealt with from a geographical standpoint.

The book is fully illustrated with specially prepared diagrams indicative of British trade, climatic phenomena, &c., and by a number of newly drawn maps.

The human element is insisted on throughout, and practical exercises have not been forgotten.

JUST PUBLISHED.**The Atlantic Seaboard of North America.**

Being Book VI of

The Junior Scientific Geography.

By ELLIS W. HEATON, B.Sc., F.G.S., Head Master of the Tynemouth Municipal High School. Author of "A Senior Scientific Geography." Crown 8vo, limp cloth, 77 pp., with 35 Maps and Diagrams, and 7 Photographic Illustrations. Price 10d. net.

The following is a complete list of the Junior Series:—

Book I.—PHYSICAL GEOGRAPHY.	1/3 net.
" II.—THE BRITISH ISLES.	1/- net.
" III.—THE BRITISH EMPIRE.	1/- net.
" IV.—THE MEDITERRANEAN.	1/- net.
" V.—THE MONSOON REGION OF ASIA.	10d. net.

Nothing on the market so thoroughly covers the elementary scientific groundwork of geography as this series, published at a price which brings the books within reach of every scholar in the Middle Forms of Secondary Schools and the Upper Classes in Higher Elementary Schools

READY SHORTLY.**South America.**

Being Book VIII of

"A SCIENTIFIC GEOGRAPHY."

By ELLIS W. HEATON, B.Sc., F.G.S.

Completing the series and prepared at the request of numerous Secondary School Teachers throughout the country.

London: RALPH, HOLLAND & CO., 68 & 69 Temple Chambers, E.C.

man, to investigate the complaint of rural districts against the centralizing of secondary education by the Scotch Department. It is urged that children refuse or are refused bursaries because of their inability to attend the prescribed higher-grade centres. Moreover, in consequence of the requirements of the Department, rural-school masters who used to prepare for leaving certificates, and even for the University, have ceased to do higher work. The answers to a circular sent to rural-school masters in Aberdeenshire make out a case for further inquiry.

MR. FROWDE sends us a new penny Prayer Book, which contains, continuously arranged, all that is required for the ordinary services of the Church—Morning and Evening Prayer, with Litany, Collects, Holy Communion, and Psalms. The print is small, but clear. It is a wonderful pennyworth.

LONDON teachers should lose no time in applying for the "Hand-book of Classes for Teachers" (Session 1912-13) issued by the London County Council. They will find a feast of many courses, and, for the professional classes only, a registration fee of 1s. is charged. We can mention only a few of the most attractive dishes—eight lectures, by Prof. Gilbert Murray, on "The Greek Drama"; "The Art of Writing or Style," ten lectures by Miss C. F. E. Spurgeon; "Practical Teaching of Modern Geography," twenty lectures by W. Lower Carter; eight lectures on "How to Study," by Prof. Adams; "English and French Phonetics," by D. Jones; thirty lectures on "Voice Production," by Miss Elsie Fogerty and H. H. Hurlbert.

THE first appointments to chairs in the University of Western Australia will shortly be made. The following eight professorships are to be filled:—Agriculture, Biology, Chemistry, English, Geology, History and Economics, Mathematics and Physics, Mining and Engineering. The salary of the professor will be £800 a year, with residence or an allowance of £100 a year in lieu. Travelling expenses will be paid. The first term will begin in March 1913; but it is desired that the professor should, if possible, be on duty by January 1. Applications in duplicate must reach the Agent-General for Western Australia, London, not later than October 15.

DISCOUNT TO SCHOOLS AND TEACHERS.

the authority of the University of London offers an attractive program for three weeks from August 28. Mr. Daniel Jones, Lecturer in Phonetics at University College, London, will deliver a course of fifteen lectures on "The Phonetics of English and French," and in five lectures Mr. Walter Rippmann will deal with "Methods of Modern Language Teaching." Other lecturers are Prof. H. Vandaele of the University of Besançon, and Mr. H. C. Norman, whose subjects are literary: "Selected French Writers" and "Lamb and Stevenson." In the Reading classes instruction will be given in clear and correct reading of prose and verse; the Conversation classes will consist of English and French students in equal numbers, and the language employed will be French and English on alternate days. There will not be more than ten students in any class. A program of entertainments and excursions has also been arranged.

THE Elementary School Teachers (Superannuation) Bill safely passed its second reading in the House of Commons at the end of July. Mr. Rawlinson, in the discussion, pressed the President of the Board for an assurance that secondary teachers would in due course receive equal consideration, and in reply Mr. Pease said that he was looking into the question. As at present advised, he thought that only teachers in grant-earning schools could benefit. Under the Bill, the State is putting down substantially £1 for every £1 put down by the teacher, in the case of men teachers. Mr. Pease stated that he hoped to be able to contribute a somewhat similar sum in the case of secondary teachers. The question is at present under consideration by Committee at the offices of the Board of Education.

THE sixth Annual Report of the Carnegie Foundation for the Advancement of University Teaching, recently published, contains a well informed article on "The Rise of the Graduate School," "perhaps the most striking feature of University growth in the United States in the past two decades." An increase from 5,831 graduate students in 1899-1900 to 8,776 in 1909-10 is recorded. It has become a question of *amour propre* for colleges and Universities to develop this "post-graduate" work as it is known in Great Britain. Some of the consequences are open to criticism. There has been unnecessary outlay; the effect on the under-

MILLS & BOON'S NEW BOOKS.

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. Applications should state the number of copies that will be required if the book asked for is introduced.

GRAPHS IN ARITHMETIC, ALGEBRA, AND TRIGONOMETRY.

By W. J. STAINER, B.A. Head Master of the Municipal Secondary School, Brighton. With 120 Diagrams. 2s. 6d.
This book treats of many types of graphs and includes sections on indices, logarithms, the exponential function, the trigonometrical functions, simple periodic motion, physical quantities, &c. Such mathematical tables as are required are appended.

EXPERIMENTAL MECHANICS AND PHYSICS.

By A. H. E. NORRIS, B.Sc., Physics Master King Edward VI's School, Stourbridge. With 133 Diagrams. 1s. 6d.
The course in this book meets all the requirements of students preparing for the examinations of the Lancashire and Cheshire Institutes and the Midland Counties Union.

PREPARATORY ARITHMETIC.

By F. C. BOON, B.A., Principal Mathematical Master at Dulwich College. 1s. Answers with Hints on the Problems, 6d. net.

ARITHMETIC FOR SCHOOLS AND COLLEGES.

By F. C. BOON, B.A. Without Answers, 3s. 6d.; with Answers, 4s.; Answers, 6d. net.

"An exceptionally well-planned book for school use. Every difficulty likely to arise is taken in hand and thoroughly well explained. The importance of rough checks is rightly insisted on throughout. Approximation methods in decimals are accorded particularly full treatment."—*Mathematical Gazette*.

"Embraces practically everything which can be brought under the heading of arithmetic. A mine of excellent material."—*School World*.

A NEW SCHOOL GEOMETRY. Part I.

By RUPERT DEAKIN, M.A., Balliol College, Oxford, and London University. With 200 Diagrams. 1s.

The First Part contains both Practical and Theoretical work for pupils being taught in accordance with the new method. It includes all that is prescribed for Geometry in the Preliminary Local Examinations and the Third Class College of Preceptors' Examinations. The book contains more than 1,000 exercises and riders which have been presented with gradually increasing difficulty, and also as leading up to the discovery of new propositions and new ideas.

"The excellent plan of leading up to a theorem by means of well-planned exercises is adopted in this textbook."—*Mathematical Gazette*.

HOUSEHOLD ACCOUNTS.

By RUPERT DEAKIN, M.A., and P. J. HUMPHREYS, B.Sc. 72 pages. With Answers, 6d. net.

A short textbook of household book-keeping. Great pains have been taken to make the book quite up to date, and the numerous exercises convey much information of a thoroughly reliable character.

PROBLEMS IN PRACTICAL CHEMISTRY FOR ADVANCED STUDENTS.

By G. F. HOOD, M.A., B.Sc., Chemistry Master Nottingham High School. With 21 Diagrams. 5s.

The object of this book is to provide a course of practical exercises suitable for candidates for the Higher Certificate Examination, for University Scholarships, and for the Inter-Science Examination. It aims at developing both the reasoning powers and the technical skill of the student. Throughout the book, simplicity combined with the necessary accuracy is insisted on.

"The author's directions are fully and lucidly given."—*Athenaeum*.

"A particularly valuable book to all advanced students of chemistry."—*A.M.A.*

A FIRST SCHOOL CHEMISTRY.

By F. M. OLDHAM, B.A., Senior Science Master at Dulwich College; late Scholar of Trinity Hall, Cambridge. With 71 Illustrations. Second Edition. 2s. 6d.

ELEMENTARY QUANTITATIVE ANALYSIS.

By F. M. OLDHAM, B.A. With 11 Diagrams. 1s. 6d.

"The directions are sound, concise, and practical, and altogether the book provides a satisfactory introduction to the more common volumetric and gravimetric processes."—*School World*.

EXERCISES IN FRENCH FREE COMPOSITION FOR UPPER CLASSES.

By R. R. N. BARON, M.A., French Master Cheltenham Grammar School, Author of "French Prose Composition" and "Junior French Prose." 1s. 6d.

Il n'y a que le premier pas qui coûte applies largely to the writing of free composition, in which a pupil is confronted with four considerations: subject-matter, logical order, vocabulary, and style. The method adopted in this book provides something in each of these directions, and will be found to give stimulus to the imagination and confidence in dealing with the subject. A large portion of the material has been already submitted to the test of the classroom.

Adopted at Eton, Harrow, Charterhouse, Tonbridge, Uppingham, Cheltenham Ladies' College, George Watson's College, Edinburgh; Training Colleges, Cambridge, Chichester, Cheltenham, Rutherford College, Newcastle-on-Tyne; Secondary Schools, Dover, Widnes, York, &c.

"An unusually comprehensive and well-arranged book."—*Athenaeum*.

DIRECT METHOD FRENCH TEXTS

Edited by R. R. N. BARON, M.A.

The Stories in this series of Direct Method French Texts have been chosen as being both good literature and stories likely to appeal to those by whom they are intended to be read.

The Questionnaires and Exercises provide ample material for homework, and contain, besides questions suggested by and based on the text, a wide range of Grammar practice given in such a form as to involve the use of common sense, in addition to knowledge of inflexions and syntax. The first volumes are:—

TAMANGO. By PROSPER MÉRIMÉE. 1s. [For Lower Forms.]

PIERRILLE. By JULES CLARETIE. 1s. 6d. [For Middle Forms.]

SHAKSPERE'S AS YOU LIKE IT. [Set for Oxford and Cambridge Locals, 1913. With a Revised Text, Questions, Notes, and Appendices, by the Rev. C. R. GILBERT, M.A., Rector of Seagrave, formerly Head Master of King Henry VIII School, Coventry. 1s.]

This edition is based on the recommendations contained in Circular 753 of the Board of Education on the Teaching of English.

SHAKSPERE'S KING HENRY V. [Camb. Locals, 1912. Edited by the Rev. C. R. GILBERT, M.A. 1s. Uniform with "As You Like It" above.]

THE NEW PRELIMINARY GEOGRAPHY.

By H. B. WETHERILL, M.A., Second Master Royal Masonic School, Bushey. With 8 Illustrations and 19 Diagrams. 1s. 6d.

A course of 60 lessons which can be gone through and revised in a year. The British Isles are treated in considerable detail. The book is intended to satisfy the requirements of the Universities Preliminary Examinations for Schools, and to serve as a first year textbook in secondary schools.

PETER PAN. READERS

By G. D. DRENNAN. With an Introduction by A. R. PICKLES, M.A., Director of Education for Burnley. Illustrated by JOHN HASSALL, R.I. 6d.

THE ZOO CONVERSATION BOOK.

By EDMUND SELOUS. Author of "Tommy Smith's Animals." 1s.
"An animal book written in a light and interesting style. The illustrations by J. A. Shepherd are delightful; they will make excellent drawing copies."—*A.M.A.*

THE STORY OF WESTMINSTER ABBEY.

By G. E. TROUTBECK. With an Introduction by SIR LAURENCE GOMME, F.S.A. Illustrated. 1s.

An Historical Reader for seniors recommended by the National Home Reading Union for their "Young People's Course, History Section, 1911-1912."

New Educational Catalogue post free from

MILLS & BOON, LTD., 49 RUPERT STREET, LONDON, W.

graduate work has sometimes been unfavourable; degree-hunting has taken the place of the true spirit of research; and there is too marked a tendency to offer generous subsidies in order to attract students. The conclusion of the writer appears to be that the organization of these schools should be undertaken only by the largest and best equipped Universities.

At the annual dinner of the Old Chigwellians' Club, Canon Swallow, who has been Master of the school for thirty-five years, was presented by old pupils with a table centrepiece and a cheque by Colonel Lockwood on behalf of the Governors. His sister, Miss Swallow, was presented by ladies connected with the school with a silver rose bowl.

In the last Oxford Greats list Rugby is credited with four, and St. Paul's School with three, Firsts. Eton, Bradfield, Fettes, Edinburgh Academy, Highgate, Denstone, Manchester, and Merchant Taylors have each one First. The remaining two fell to Colonists—one from Melbourne University and one from Victoria College, Stellenbosch.

UNIVERSITIES AND SCHOOLS.

LONDON.

A number of questions have been asked in Parliament on the site question. Mr. Asquith still thinks the Bedford site a good one, but admits that the question of the most suitable site is one for the Senate, and not for the Royal Commission, to decide. Some letters have appeared in the daily Press in favour of the London County Council site on the south side of the river; but, with this exception, the decision of the Senate in favour of the Foundling Hospital has been received with the silence which may be taken to imply approval.

The Royal Commission have published their fifth volume of evidence. It deals exclusively with medical education and gives the evidence presented on behalf of the Colleges of Physicians and Surgeons and other examining bodies and the London medical schools. One or two of the London schools appear to be almost moribund, partly no doubt in consequence of the alarming decrease in the number of medical students. The number of students registering in England has gone down in thirty years from 1,000 to 600. The decrease is not confined to London. Various explanations are offered, such as the competition of the engineering and other new professions, the increased length, difficulty, and cost of the medical course, and the inadequate salaries. The reorganization of medical education is beset with difficulties, financial, educational, and personal, and no gleam of light traverses the numerous pages of evidence. Owing to national insurance, new considerations will soon arise. It seems evident, however, that the Commission has done a great service to education in collecting so much useful information on a complicated question.

The following University scholarships have been awarded:—Classics—Ethelwyn M. Robinson, Royal Holloway College; R. C. Lamburn, Royal Holloway College. French—Evelyn E. Hurt, Royal Holloway College; J. Ascher, King's College. German—G. D. Millar, University College; Edna Purdie, King's College for Women. English—B. Groom, University College. Mathematics—G. H. Ince, University College; L. C. Horwill, Royal College of Science; R. G. Metcalf, King's College. Physics—L. T. Jarvis, East London College. Chemistry—S. Smith, Pharmaceutical Society's School; G. M. Bennett, East London College. Geology—K. W. Earle, University College. Botany—Ethel M. Filmer, East London College. Psychology and Logic—A. R. Nichols, University College, Reading. Economics and Political Science—Vera Powell, London School of Economics; W. Piercy, London School of Economics; T. E. Gugenheim, London School of Economics. English History—Gladys Hinde, Royal Holloway College. Arts—Evelyn E. Hurt (French), Royal Holloway College; Mabel A. Molyneux (French), Birkbeck College. Science—A. Piercy (Botany), East London College. St. Dunstan's Exhibitions:—Arts—Edith D. B. Cowlin, Forest Hill County Secondary School; Florence R. M. Flew, Mary Datchelor Girls' School; Margaret G. Phillips, North London Collegiate School. City Parochial Foundation Scholarship:—A. R. H. Cox, Birkbeck College.

ROYAL HOLLOWAY COLLEGE.—A meeting of the governing body was held at the Whitehall Rooms on Thursday, July 4. The following awards were made:—Founder's Scholarships of £60 for three years, to E. M. Clemmow (Mathematics), Mary Datchelor Girls' School; B. M. Hood Barrs (Classics), Clapham High School. Scholarships of £50 for three years, to J. M. Batson (Mathematics), St. Mary's Hall, Brighton; D. L. I. Cattermole (French, with credit for English), High School, Stroud Green; M. D. Goodwin (French), George Watson's Ladies' College, Edinburgh; E. M. Hillsdon

OUT-DOOR MATHEMATICS.

The Holborn Angle Measurer. (Regd.)

THE HOLBORN ANGLE MEASURER has been designed for use in Practical Mathematics and Practical Geography. With it, work of great educational value can be done in practical mensuration and mapping; combined with scale drawing, all the usual trigonometrical problems of heights and distances can be applied to the neighbourhood of the school and solved by actual observation and measurement.

The Instrument is based on the Theodolite, and consists of a wooden base, with an accurately printed scale of degrees, carrying a "Sighter" of polished white metal. A suggestive leaflet is supplied with each instrument.

Size, 5 in. diameter. Price 1/3 each net.

E.S.A. Syphon Inkwell Filler.

A Clean, Rapid, and Safe
Ink Distributor.

By an ingenious adaptation of the "Syphon" principle, this inkwell filler meets all the desiderata of a clean and rapid distribution of ink.

The operator has perfect control of the ink; and, by simply pressing or releasing pressure on the rubber, the flow can be regulated or stopped immediately.

The vessel is strong Blue Glass, with celluloid tubes and rubber connections; consequently the ink cannot corrode and the parts are easily cleaned.

Price 2/6 each.

TEXTBOOKS, MAPS, and DIAGRAMS.

We hold immense stocks of Textbooks at Holborn Viaduct; and, as these premises are situated in the centre of the large Publishing Houses, any Book not in stock can be readily obtained, and orders can be dispatched by return when necessary.

CAMBRIDGE.

NEWNHAM COLLEGE.—The following scholarships of £50 a year for three years have been awarded on the results of the Cambridge Higher Local Examination held in June:—The Gilchrist Scholarship, tenable at either Girton or Newnham, to M. Back (Perse School for Girls, Cambridge) for Natural Sciences (Miss Back has elected to hold it at Newnham); the Clothworkers' Scholarship to C. M. Shipley (King Edward's School, Birmingham) for Classics and History; the Winkworth Scholarship to M. C. Fraser (Edinburgh University) for Mathematics; a College Scholarship to M. Barker (Nottingham High School) for Natural Sciences. Scholarships of £35 a year for three years have been awarded as follows:—a College scholarship, deferred from 1911, to A. B. Taylor (King Edward's School, Birmingham) for Natural Sciences; the Birmingham Scholarship to M. C. Anson (Portsmouth High School) for Classics and History; a College scholarship to A. M. Bourne (Orme Girls' School, Newcastle, Staffs) for History. The scholarships of £50 a year for three years, offered for Classics and Modern Languages, were awarded to K. M. Westaway (Bedford High School) for Classics and to M. Clutton (Mortimer House, Clifton) for Modern Languages; Miss Clutton is Mathilde Blind Scholar. Arthur Hugh Clough Scholarships for fourth-year students (one deferred from 1911) have been awarded to Miss A. Yoxall (Classical Tripos, Part I, Class I, Division III) and to Miss M. Deanesley (Historical Tripos, Part I, Class I; Part II, Class I); and the Marion Kennedy Studentship for Research to Miss C. A. Simmins (Medieval and Modern Language Tripos, Class I, 1911). Bathurst Studentships have been awarded to Miss D. Jordan Lloyd (Natural Sciences Tripos, Part I, Class I; Part II, Class I) and to Miss D. Dale (Natural Sciences Tripos, Part I, Class I; Part II, Class I). The Harkness Scholarship for Geology has been awarded to Miss P. K. Jewson (Natural Sciences Tripos, Part I, Class II). The Mary Ewart Travelling Scholarship of £150 has been continued to Miss Alice Werner, who is engaged in linguistic researches among the Bantu tribes in East Africa. The Mary Ewart Scholarship of £50 a year for three years for students who have completed one year of residence has been awarded to M. W. Jepps for Natural Sciences on the result of the Intercollegiate Examination.

LEEDS.

Leeds University is endeavouring to meet the need of the growing number of students who desire systematic instruction in the study of social problems and of social administration. It has just established courses of lectures, tutorial classes, and practical work in social organization and public service. The course will extend over one year and begin at the end of September. A University diploma will be awarded to candidates who complete the course, portions of which will also be open to students who are not qualifying themselves for the diploma. The diploma, which will be open to men and women, is designed to be of service to those who desire to become effective social workers, whether in a paid or voluntary capacity. The course will offer training for those who are preparing themselves for administrative work in connexion with the Public Health and Education Authorities, the Labour Exchanges, the National Insurance Commission, Charity Organization Societies, Guilds of Help, University Settlements, &c. The course of instruction is somewhat on the lines which have been successfully tried at the Universities of Glasgow, Birmingham, and Liverpool. It includes lectures and tutorial classes in Social Economics (Prof. Macgregor and Mr. Henry Clay), the Economics of Distribution (Mr. R. S. Dower), Public Health (Prof. J. Spottiswoode Cameron), the Ethics of Citizenship (Prof. Gillespie), and the History and Principles of Social Work in England, 1700–1912 (Dr. M. E. Sadler). A special feature of the course will be an attempt to give the students a working knowledge of the present public and voluntary agencies for social amelioration. To this end the co-operation of practical administrators and experienced social workers has been secured. Each student studying for the diploma will be required to devote three days in the week to practical work under experienced guidance.

In the arrangement of the course the University has received the promise of assistance from several Committees of the Corporation of the City of Leeds, from the City of Bradford Education Committee, the West Riding Education Committee, the Yorkshire Ladies' Council of Education, the Babies' Welcome Committee of the Yorkshire Ladies' Council of Education, the Bradford Guild of Help, the Leeds Charity Organization Society, the Leeds University Working Men's

THEOLOGY.

JUST PUBLISHED.

BIBLICAL HISTORY FOR JUNIOR FORMS:

OLD TESTAMENT. By Canon FOAKES-JACKSON, D.D. Crown 8vo, 200 pp., Map, Tables, and Summaries, 2s. 6d. (Postage 4d.)

"This is a workmanlike volume, compact and admirably proportioned."—*Athenæum*.

"It will make an excellent textbook for schools."—*Cape Times*.
"The teacher of divinity will be helped by the sympathetic introduction. . . . The boy will be attracted by the ease and simple charm of the author's style."—*A.M.A.*

"This small book . . . contains just what has been needed."—*English-woman*.

BY THE SAME AUTHOR.

BIBLICAL HISTORY OF THE HEBREWS.

Crown 8vo, Third Edition, 6s. net. (Postage 4d.)

This book is an expanded form of the preceding volume and deals with the subject in a much more exhaustive manner.

HELPS BY THE WAY SERIES.

By S. STEWART STITT, M.A., Rector of Strettham with Thetford, Ely. Arranged in the form of Question and Answer. Crown 8vo, sewed, postage 3d. each.

1. **Old Testament History Analysed.** Fourth Edition.

2s. net.

2. **Early Church History Analysed.** Third Edition.

2s. net.

3. **English Church History Analysed.** Second Edition.

2s. net.

∴ Invaluable for revision purposes.

BOTANY.

BRITISH VIOLETS.

A Monograph by Mrs. E. S. GREGORY, with an Introduction by G. CLARIDGE DRUCE, M.A., F.L.S. Royal 8vo, numerous Illustrations, 6s. net. (Postage 4d.)

Though written primarily for the critical Botanist, the book should prove of great use and interest to the less scientific student.

GERMAN.

GERMAN FOR BEGINNERS.

By HELENE LOTKA.

Crown 8vo, cloth, 1s. 6d. (Postage 2d.)

This book is mainly intended for beginners who have already learnt at least one foreign language and who are not young children. The essentials of Grammar are given by a purely inductive method, but not in an exhaustive manner. The direct method has been used throughout.

HISTORY FOR REVISION PURPOSES.

THE LINDSEY HISTORICAL SERIES.

PATON'S LIST of SCHOOLS and TUTORS

FIFTEENTH EDITION, 1912-1913.

1,288 pages. Red cloth. Price **2s.**; post free, **2s. 6d.**

1,000 Illustrations.

Contains particulars of **Preparatory Schools,
Boys' Schools (Private and Public),
Army, University, and Civil Service Tutors,
Girls' Schools,
Schools of Domestic Science,
Physical Training Colleges,
Scholarships and Exhibitions (Boys' and Girls'),
Medical Scholarships.**

Up-to-date Articles on **The Royal Navy, The Army,
The Mercantile Marine, Engineering,
The Medical Profession, The Civil Service,
Agriculture as a Profession for Women,
Profitable Educational Endowments,
Attractive Annuity Combinations.**

The following appeared in "The Journal of Education" for October, 1911:—

PATON'S LIST OF SCHOOLS AND TUTORS, 1911-12. (2s. J. & J. Paton.)

The fourteenth annual edition runs to over eleven hundred pages. There have been so many bogus agencies, some of whose doings we have helped to expose, that we welcome all the more the growing prosperity of a firm against whom we have heard no complaints and frequent commendation.

PATON'S GUIDE to CONTINENTAL SCHOOLS

SEVENTH EDITION, 1912-1913.

240 pages. Blue cloth. Price **1s.**; post free, **1s. 4d.**

Contains particulars of Schools and Tutors in FRANCE, GERMANY, BELGIUM, and SWITZERLAND.

ALL PERSONALLY INSPECTED.

J. & J. PATON, Educational Agents, 143 Cannon Street, London, E.C.

Club, the Leeds and District Association of Girls' Clubs, and the Weekly Board of the Leeds Infirmary, which has permitted the experience of its Lady Almoners to be made accessible to students attending the course. A prospectus of the course can be obtained on application to the Secretary, The University, Leeds.

UNIVERSITY COLLEGE, READING.

The following appointments have been made:—Mr. Robert Dewar, M.A., Professor of English Literature; Mr. Frank Merry Stenton, M.A., F.R.Hist.S., Professor of Modern History; Dr. S. J. M. Auld, Professor of Agricultural Chemistry; Mr. James Mackintosh, N.D.D., N.D.A., Lecturer in Dairy Farming; Mr. John Golding, F.I.C., Research Chemist in Dairying; Miss Winifred M. Macrae, M.A., Assistant Lecturer in Education. The following scholarships have been awarded:—£65 per annum to Dorothy Dobson (Lady Manners School, Bakewell), for Arts; £69 per annum to Randolph A. Chell (Woolwich Polytechnic), for Science; and to John B. Passmore (Royal Albert Memorial College, Exeter), for Agriculture; a Wantage Scholarship of £60 per annum to Harold G. Heath (University College, Reading), for Arts; a Wantage Scholarship of £64 per annum to Frank Soathan (Aylesbury Grammar School), for Science; a County Borough of Reading Minor Scholarship to Minnie M. Swadling (St. Joseph's Convent, Reading), for Arts; Scholarships in Music to Florence L. Beechey, for Singing, and Violet E. M. French, for Pianoforte.

WALES.

Summer schools, as the holiday courses held during the month of August are called in Wales, appear to be maintaining their popularity, as the number of teachers and others attending them is showing no sign of decrease during the present year. A good proportion of the students take their work seriously, and it is probably true that the majority do not allow the social side of these gatherings to usurp the main part of their energy and attention. The success of these schools has been due to a certain extent to the encouragement they have received from the Welsh Department and to the active support of some of the more progressive County Authorities, which in some cases award scholarships tenable at them. The oldest of these holiday schools is that held annually by the Welsh Language Association. It meets this year at

the University College of Wales, Aberystwyth, and some of the best known Welsh scholars are included in the list of lecturers, such as Sir Edward Anwyl, M.A., Prof. J. E. Lloyd, M.A., the Rev. H. Elvet Lewis, M.A. The main object of the school is to promote the study of Welsh grammar, history, and literature. It is to be noted that a fair proportion of the students have no previous knowledge of Welsh.

The Summer School at Barry is devoted to training in such subjects as brushwork, woodwork, physical exercises, &c., and there are nearly three hundred students in attendance. Mr. Alfred T. Davies, who delivered the inaugural address, suggested, as an appropriate motto for it, "An inspiration, not a demonstration." He warned the students that their main purpose in coming there should not be self-improvement or to increase their earning capacity, but that the Summer school should stand for something definite, and that it should endeavour to create itself a fame such as centres of activities in religion and in art had created, and that from this school should go forth an inspiration for something to enrich their national life. During the last thirty-five years they had been so busy setting up their educational machinery that there was some danger that our educational institutions were turning out "machine-made graduates instead of hand-made scholars." Though the adjectives used by Mr. Davies seem to have been chosen more for the sake of effect than for their appropriateness, his meaning seems to be fairly clear, and there is a great deal of truth in his criticism. For, in spite of its opportunities for cultivating art and technical work, Wales has been too negligent of them. There has recently, however, been a great revival of interest in these subjects, so that Wales may again produce great artists and sculptors who will enrich the life of the nation.

The eighth Summer School for Mining is being held at the University College of South Wales, Cardiff. Mr. Henry Davies, the Director of Mining Instruction in Glamorgan, in his introductory address, stated that they had at present over two thousand students in the summer evening classes. During the last few years over three hundred of their students had been promoted to important positions, such as inspectors of mines and managers, and he utterly repudiated the criticism of a North Country colliery owner that the South Wales coal-field was the most backward in the country in the work of technical education. Students who had been trained in the Glamorgan technical schools now held some of the most important posts in the mining world, in the Uni-

versities and colleges of England, and in the Colonies. The school has been organized after the best systems to be found in European and American technical schools, and is mainly intended to meet the requirements of employers for more highly trained subordinate officials.

Colwyn Bay School.

The Denbighshire County Council is fully resolved that no secondary school will be established at Colwyn Bay, and by a decisive majority they have refused to sanction a proposal of the Education Committee that the Higher Elementary School at Colwyn Bay should have a pupil-teacher centre attached to it. It was contended that, if the school was empowered to admit pupil teachers, it would, to all intents and purposes, be converted into a secondary school, and that there was no reason why such pupils should not be educated at the Abergele Intermediate School, which is situated only a few miles away. The controversy between Abergele and Colwyn Bay is a long-standing one, but apparently we have now heard the last of it.

Teaching of English.

At the last meeting of the Carnarvonshire Education Authority there was an instructive discussion on the teaching of English in the elementary school, and, as the outcome, it was resolved to appoint a Committee to confer with the Principal of the Bangor College, with the view to the joint appointment of a teacher of English on the "direct method." Seven years ago the Education Committee determined that Welsh should be the medium of instruction in the early stages for all children in the elementary schools whose home language was Welsh, and inquiries have first been made as to the probable effect of this plan on the general efficiency and intelligence of the pupils. Perfidious nationalists will, no doubt, be surprised to know that not one of the head masters is prepared to suggest that any improvement is due to this great prominence given to Welsh, while a small percentage is of opinion that there has been a definite deterioration in the work of the upper standards as the result of the change. It is also to be noted that 35 out of 104 head teachers report that the children's power of expressing themselves in English has not improved, while 18 maintain that there has been a distinct falling off.

All this is very disquieting, and the Committee were acting wisely in trying to find out the remedy. Mr. D. Thomas, the Assistant Secretary for Education, ascribes the weakness in English to the inexperience and inefficiency of the teachers of the "direct method" in the schools, and to the prevalence of erroneous ideas among them on the subject. Whether this is the reason or not, the question of English

in the elementary schools is becoming increasingly vital not only in Carnarvonshire, but throughout the whole of Wales. The head masters of the intermediate schools complain bitterly and loudly that the pupils from the elementary schools, even the best of them, are sadly deficient in the power of expressing themselves on paper or orally, and that their knowledge of the most elementary facts of grammar is practically non-existent. The result is that a great deal of time has to be spent in the lower forms of the intermediate schools in the attempt to give these boys and girls an elementary acquaintance with English. The Welsh Department, which is too often carried away utterly by its patriotic feelings, might take this matter up in earnest, and bring pressure on school authorities to improve the status of English in the schools. The wholesale and indiscriminate using of Welsh as a means of teaching it has been an undoubted failure, though the Department will not be inclined to acknowledge it. The prevalent opinion among educationists of experience is not favourable to this policy, which has been adopted so persistently at Whitehall, and some change in it is now demanded.

Mr. Richard Ellis, M.A., of the National Library of Wales, has been elected to a Research Fellowship at Jesus College, Oxford. It has been awarded to Mr. Ellis in recognition of his study of the works of Edward Lhuyd and to enable him to publish the life and letters of that eminent scholar.

We regret to have to record the death of Mr. J. M. Archer Thomson, M.A., the first Head Master of the Llandudno Intermediate School. Besides being a very successful head master, Mr. Thomson was recognized as an authority on Climbing. He had performed some very difficult feats in Snowdonia. Mr. Appleby, M.A., the Mathematical Master at the Carnarvon School, has also just passed away.

SCOTLAND,

On the recommendation of the Secretary for Scotland, Mr. Ashley W. Mackintosh, M.A., M.D., has been appointed by the Crown to be Regius Professor of Medicine in the University of Aberdeen, in place of Prof. D. W. Finlay, who has resigned. Prof. Mackintosh is a very distinguished graduate of Aberdeen, both in Arts and Medicine. He also studied at Cambridge, Leipzig, and Vienna, and he has had considerable experience of hospital work as well as private practice.

(Continued on page 624.)

JUST PUBLISHED.

BACON'S NEW "CONTOUR" WALL MAP OF THE MEDITERRANEAN LANDS.

Natural Scale: 1 : 4,067,712, or 64·2 miles to 1 inch.

Size about 40 × 80 inches. Price, on cloth and rollers, or on cloth cut to fold, **16s.**

It includes, on the North, GREAT BRITAIN, SOUTHERN SCANDINAVIA, and SOUTHERN BAL TIC; on the East and South, THE PERSIAN GULF; and, on the West, THE CANARY ISLANDS.

SPECIAL FEATURES.—It is constructed on a Secant Conical Projection, with two error-less parallels.

The Fertile and Unfertile Lowlands are distinguished.

Areas with less than 10" of Rainfall are indicated.

Both Ancient and Modern Names are given.

It includes all the Countries which at any time formed part of the Roman Empire or affected it externally.

Keep your School Healthy by using Royal Dusmo

The Cure for the Dust Evil.

A Schoolmistress at New-castle-on-Tyne, writes:—

"I bought a tin for private use, and was so pleased with it that I felt convinced that it would be of great service in allaying dust and rendering cleaning easier and more efficient in schools." (It is now in use in this school.)

Westminster School Bursary, S.W.—

"I am pleased to say we find your composition does what you claim for it."—J. TYSON (Bursar).

"Sanitary Record"—

"Absolutely prevents dust rising."

By
Special
Appointment to

His
Majesty
the
King.

'DUSMO'
The Dustless Sweeping Powder

Just a thin line of
Dusmo, swept
over the floor,
cleans the boards
and absorbs every
particle of dust.

Dusmo Co., Ltd.,
STRATFORD, E.

A Schoolmaster, at Ching-ford, writes:—

"We have tried DUSMO on our old worn floors, and proved that it provides everything that is claimed for it. It would be a good remedy for the unspeakable condition of our walls and wall furniture."

"British Medical Journal"—

"Answered its purpose in a very satisfactory manner."

The "Lancet"—

"A quite simple expedient, and answers well."

ALL ABOUT DUSMO

WHAT IT IS

Dusmo is the cleanest, quickest, and most economical sweeping powder for effectively freeing your school from dust. *Dust simply can't exist where Dusmo is used.* It is manufactured in two forms—**Dusmo** for use on carpets, and **Dusmo "B"** especially prepared for use on wood, linoleum, stone or marble floors. **Dusmo** contains no oil or grease, and is disinfectant.

WHAT IT DOES

Dusmo absorbs all the dust, which cannot therefore rise to resettle. **Dusmo** not only absorbs the dust, but dry scours the floor and *saves constant scrubbing and washing.* **Dusmo** used on carpets brings the colour of the carpet to its original brightness.

ITS ADVANTAGES

The **Dusmo** method *absolutely* prevents the dust from rising and *removes it.* When the accumulated dust has been absorbed the quantity of **Dusmo** used daily is very small, and the cost would be even *cheaper than sawdust.* The old method of using water or damp sawdust coagulates the dust, leaving it sticking to the floor to return to dust again when dry.

Why not try the Dusmo cure right away?

An OFFICIAL trial, in any School throughout the Empire, for one month, FREE of cost or obligation to purchase, will be granted.

DUSMO COMPANY, LIMITED, STRATFORD, E.

In connexion with the meeting of the British Association at Dundee in September, the Senate of St. Andrews University has resolved to confer the honorary degree of LL.D. on sixteen distinguished men of science, who are to be among the visitors from foreign countries. The list includes representatives of France, Germany, Austria, Italy, Denmark, Belgium, and the United States.

Mr. Robert Dewar, M.A., Lecturer in English Literature at Glasgow University, has been appointed Professor of English Literature at University College, Reading. The Maharaja Scindia of Gwalior has made a donation of £4,000 to Edinburgh University in aid of the Lectureship in Military subjects.

Prof. Harrower, of Aberdeen University, has sent a letter to the Secretary for Scotland indicating the results of an inquiry into the condition (as regards higher education) "to which rural schools have been reduced by the policy of the Scotch Education Department." The inquiry, which was conducted by a "Committee of men prominently associated with education," undoubtedly shows that in many schools which formerly did successful work in preparing pupils for the Leaving Certificate Examination, this work has ceased. It also shows that, owing to distance from central secondary schools and the difficulties of transit, many pupils who would otherwise have taken a higher education have been prevented from doing so; that the bursaries offered by way of assistance are in many cases inadequate for the maintenance of the poorer children at the secondary centre, and that this, along with the disinclination of parents to allow their children at a critical age to live in lodgings, has also had a deterrent effect. The reply of the Secretary for Scotland, which embodies the views of the Department, practically lays the blame on the Local Authorities. The Department declares that it is quite willing to recognize higher teaching in rural schools if the Local Authorities think it necessary to provide it. There the matter rests for the present; and it is difficult to see how, under present conditions, any solution of the difficulty can be found.

The real cause of the present state of things, which is undoubtedly prejudicial to higher education in rural districts, is neither the action of the Department nor the inaction of the Local Authorities, but the defective educational system imposed by the law and the timidity of the Governments, both Conservative and Liberal, in reforming it. It may be quite true that the Local Authorities can supply higher education in rural schools if they like. But there are two more or less independent sets of Local Authorities, the Secondary Education Committees and the parish School Boards. The Secondary Education Committees administer the bursaries, which they give only to pupils who will attend a central school. This means that a considerable number of the promising pupils in rural schools are drafted to the central school. The School Boards, on the other hand, in rural districts are small bodies, having limited resources, and they have to meet large increases in rates, which are due to the increased burdens imposed on them, for purposes of primary education, by the last Education Act. In these circumstances it is not surprising that they find themselves unable to face the expense of providing higher education in their own schools for the remnant of promising pupils who, for one or another reason, are unable to go to central schools. They have a real grievance against the Government in the matter of the rising proportion of rates to Government grants, and they must economize in some way.

The problem would be solved with comparative ease if the anomalies of rating were removed by extending the areas of School Boards, if the larger School Boards were made really representative by the abolition of the cumulative vote (with, perhaps, a system of proportional representation), and if the Department were brought into closer touch with educational opinion in Scotland by the institution of advisory Councils. These were the leading features of the Education Bill introduced by the last Conservative Government. They were enthusiastically approved by the Scottish teachers of all grades, from primary to University. But the Bill was weakly dropped, for reasons having nothing to do with education, and the Liberal Government, for unknown reasons, declined to revive it, preferring to conceal the inherent weakness of the old system by patching it up. The results of this are now becoming more and more apparent, and many of the best teachers are in despair of a remedy.

IRELAND.

The chief topic of discussion in the educational world during the holiday month of August has been the scheme of **Primary Scholarships**, for primary-school children promised by Mr. Birrell in the debate on Irish Education in the House of Commons on July 31. According to present information, £10,000 has been set apart for these scholarships, which will be open to all boys and girls under thirteen years of age attending national schools, and will be allotted on the scale probably of two to each county. They will be awarded on the result of yearly competitive examination, but it is intended that the examinations shall not be by

(Continued on page 626.)

Works by JOHN CARROLL,

ART MASTER AND EXAMINER IN DRAWING.

Approved by the Science and Art Department of the Board of Education.

Practical Geometry for Art Students.

A New Edition, in which the examples dealing with Practical SOLID Geometry have been entirely remodelled. The projections of points, lines, and traces, &c., have given place to those of SIMPLE OBJECTS, the latter being of more practical use to the Art Student. Strongly bound in cloth, **1s. 6d.**

"No private student needs a better book, and no teacher could place a more trustworthy textbook in the hands of his pupils."—*Practical Teacher*.

A Key to Carroll's Geometry.

Consisting of Solutions to all the Exercises in Solid Geometry of Objects of Simple Form, for the use of Students of Geometrical Drawing (Art). New Edition. Cloth, **1s. 6d.**

Drawing from Models and Objects.

A Handbook for Teachers and Students in Training.

Crown 8vo, cloth, **2s. 6d.**

"It may be confidently recommended either as a drawing master's note-book or as 'A Handbook for Students in Training.' It is well arranged, the directions are clear, and the illustrations are numerous and good."—*School Guardian*.

Pattern Drawing and Design.

An application of Practical Geometry to the Construction of Ornament. Strongly bound in cloth, **1s. 6d.**

"The teacher of design has in this book an excellent guide, which can be used in all stages of a pupil's progress. The examples are ingenious and well printed. They are, in a good many cases, quite new to us in books of this character."—*Schoolmaster*.

Freehand Drawing of Ornament.

Consisting of Twenty-four Photographic Reproductions of Examples of Ornament, and Sixty-eight Analytical Diagrams of Construction, Designed and Arranged in Graduated Order, with Directions to the Student. 11 in. by 8 in., in stiff wrapper, price **1s. 6d.**

"Excellent examples, beautifully and clearly printed, are the distinguishing features of this book. In addition to the finished examples, three progressive stages are given showing the gradual development of the ornament. No student can need a better book."—*Practical Teachers' Art Monthly*.

Drawing of Foliage, Flowers, and Fruit, and Foliated Design.

Consisting of Twenty-four Reproductions of Photographs from Nature by WM. J. CARROLL. With Directions to the Student, and Forty Examples of FOLIATED DESIGN by JOHN CARROLL. New and Enlarged Edition, 11 in. by 8 in., in stiff wrapper, **2s. 6d.**

"Can be recommended to designers as well as to students of drawing and painting."—*Architect*.

written papers, but conducted by the National Board's inspectors, and that their aim shall be, to use Mr. Birrell's own words, "to ascertain the intellectual capacity of a boy, not to find out how much the poor creature happens to know at the moment." There will be two compulsory subjects—English or Irish and arithmetic—and, in addition, a third subject, chosen from those studied by pupils in the sixth standard, may be offered. The scholarships will be tenable for three years at secondary schools and of two kinds—at boarding schools and at day schools; the former, the value of which will be about £50, being intended for country children, the latter of the value of about £20, for children who live in towns which have secondary schools.

It is proposed that, when these scholarships expire, the holders shall be elected without further examination to county scholarships. Up to the present the County Councils have offered these on the condition that they shall be held at the National University; but Mr. Birrell considers that they should be tenable at any of the three Irish Universities and will not sanction the scholarship grant unless the Councils agree to this.

This is the only feature of the scheme which has met with opposition in Ireland. As might be expected, it is distasteful to the general body of Gaelic Leaguers, whose leaders, Dr. Hyde and others, have already raised their voices in protest. They point out that, as Irish is not compulsory for election to the scholarships, and is likely to be presented only by children from the Irish-speaking districts, those children who present English instead will probably later on shirk the "compulsory Irish" in the entrance of the National University and proceed to Belfast or Dublin Universities, acquiring an education from which all national elements are wholly absent. They regard the £10,000 offered as an insidious bribe in the interests of Anglicization, and call upon the County Councils to reject it and stick to their original intentions, the sum of £50,000 (the approximate total of the County Council Scholarships) expended on an education which shall be characteristically Irish being of more value to the country than the sum of £60,000 expended on education on purely English lines.

The debate in the House on July 31 elicited from Mr. Birrell the further statement that the Chancellor of the Exchequer has agreed to allow £40,000 for Irish

Secondary Education.

secondary education, the method of distribution to be settled by Mr. Birrell after consultation with the proper authorities in Ireland. Mr. Birrell hopes, by means of this grant, to do something to improve the condition of secondary-school teachers by the introduc-

tion of a system of registration, and further by securing that, in boys' schools, there should be not less than one registered lay assistant teacher at a minimum salary of £120 for every forty pupils on the roll, and in girls' schools one lay assistant teacher at a minimum salary of £80 for the same number of pupils, and that lay assistant teachers should be entitled to six months' notice or six months' salary in case of dismissal.

The pass lists of the Intermediate Examinations held this summer have just been published, and show that 8,276 boys were examined (744 Senior, 1,417 Middle, 3,552 Junior, and 2,563 Preparatory) and 4,305 girls (400 Senior, 772 Middle, 1,999 Junior, and 1,134 Preparatory), making a total of 12,581, or an increase of 476 over the previous year. Of these, 4,767 boys passed (57.6 per cent.), the proportion being 67.7 per cent. in the Senior grade, 58.6 in the Middle, 61.6 in Junior, and 48.5 in Preparatory; 1,083 of these passed with honours (in the three upper grades, there being no honours in the Preparatory). Among girls, 2,248, or 52.2 per cent., passed (68 in Senior, 65.7 in Middle, 48.9 in Junior, and 43.3 in Preparatory grades), of whom 539 passed with honours.

The abolition of the preparatory grade, a change which commends itself to most educationists, has, however, serious consequences for most of the smaller schools, which sent in a good many pupils for this grade and received £3. 6s. 4d. for each child who passed the examination. The Intermediate Board was of opinion that the money saved by getting rid of the examination could be appropriated to the schools as a bonus grant on inspection and thus secured to them in another way; but the Lord Chief Baron and the law officers of the Crown have stated that such action was *ultra vires*. Mr. Birrell has, however, promised to introduce, in the course of the autumn, a short one-clause Bill which will enable the Board to get rid of the preparatory examination and apply the money as they desire.

SCHOOLS.

BIRMINGHAM, GEORGE DIXON SCHOOL.—The President of the Board of Education visited the George Dixon School on Speech Day. The school, he confessed, made strong claims upon him. There was the name of its founder, George Dixon, a man of vision in education, whom he knew in the House of Commons. And the present Head Master, Mr. A. H. Angus, was an old friend whose career he had watched with interest. "I remember," said Mr. Angus in a re-

PHILIPS' COMPARATIVE WALL ATLASES

EUROPE, BRITISH ISLES, ASIA (others in preparation). Under the joint editorship of J. F. UNSTEAD, M.A., D.Sc., and E. G. R. TAYLOR, B.Sc. Arranged for **Comparison**, to show by means of Eight Maps of Geographical Phenomena the chief facts which can be expressed in Map form—Relief of Land, Pressure and Winds, Rainfall, Temperature, Vegetation, Products, Population, &c. The newest, most adaptable, and most educational Maps obtainable; very clear and distinct; essentials only shown. Maps, singly, **2s. 6d.** each, also mounted on cloth and eyeletted, **3s. 6d.** each; complete from **21s.**, according to style of mounting. An explanatory Handbook (**6d.** net) is supplied gratis with a complete set of the Maps.

Detailed Prospectus and coloured facsimiles on application.

GENERAL AND REGIONAL GEOGRAPHY

A new Textbook of Modern Scientific Geography for Teachers and Students. By J. F. UNSTEAD, M.A., D.Sc., and E. G. R. TAYLOR, B.Sc. With 140 Maps and Diagrams specially drawn. Second Edition. 520 pages, large 8vo. **6s.** Also obtainable in two parts if desired. **3s. 6d.** each (not sold separately).

A CONTOUR EXERCISE BOOK

By ERNEST YOUNG, B.Sc., and JAMES FAIRGRIEVE, M.A. For use as a drawing book, in which the pupil can actually work out geographical problems. Contains numerous diagrams of contours, &c. With lines ruled for drawing sections. Size, 11 by 7 inches. **4d.**

THE ESSENTIALS OF WORLD GEOGRAPHY

By J. F. UNSTEAD, M.A., D.Sc., Lecturer in Geography, Goldsmiths' College, University of London, and E. G. R. TAYLOR, B.Sc., Lecturer in Geography, Clapham (L.C.C.) Training College.

Presenting a broad view of the chief features of the earth and its inhabitants. The most important matters, both of physical and human geography are dealt with in a simple manner, and explained in such a way as to be easily understood by pupils in the lower and middle forms.

Abundantly illustrated by diagrams and maps, to all of which careful and detailed reference is made in the text, so that the chief facts shown on the maps may be clearly grasped. Description is given a prominent place, interest is constantly appealed to, and causes and effects are examined throughout.

Crown 8vo, 256 pages, with numerous Maps and Diagrams, **2s.**

Ready at end of September

SLOUGH, BUCKS, ENGLAND.

miniscent speech afterwards, "scoring for Mr. Pease when he made 123 not out at cricket. And I received my first prize from the hand of his father, the late Sir Joseph Pease." Among the prizes were two in remembrance of Dr. Jowett's work in Birmingham. One, a beautifully bound volume, was given on the result of an election held by the boys themselves without interference on the part of the masters. It was for him who, "in the opinion of his school-fellows," had best fulfilled throughout the year these four maxims, the theme of Dr. Jowett's address two summers ago: "Play the game," "Stand up for the weak," "Show your pluck," "Work like a Trojan." Garton Major, a Fourth Form boy, was the recipient. Two votings were held. In the first the boys wrote down the names of their nominees and a second ballot was applied to the two top names. The other Jowett Prize fell to C. A. Butler, of the Sixth Form. It is in the gift of the Head Master and his staff, and goes to the boy who shows the pluckiest devotion to the interests of the school. "I wish I had been there to help with the navvying," said Mr. Pease, glancing at the Head Master's account of the "glorious audacity" of the boys in setting themselves the Herculean task of levelling the playing field. It is a splendid story; cricket has been sacrificed and half-holidays—not to speak of the Easter vacation—in removing upwards of two thousand tons of stubborn clay. Boys have worked with pick, shovel, and barrow. The work will not be complete until next year, but already it is one of the most wonderful exploits in the history of any school. Mr. Pease is a great believer in the open air for school boys. He gave certain figures which Mr. John Burns had quoted in conversation. "At a barracks in London the death-rate used to be 57 per 1,000. Open windows and athletics have reduced it to 2.5 per 1,000." The President of the Board of Education foreshadowed his policy of visiting the great cities so as to study administration on the spot. Sir George Kenrick, Birmingham's leading educationist, paid a tribute to Mr. Pease's readiness to learn and know for himself, independently of what officials might say.

CAMBERWELL, MARY DATCHELOR GIRLS' SCHOOL.—Five Entrance Scholarships have been awarded to be taken up with the new school year: two to girls under fourteen and three to girls under thirteen years of age. The Coventry Scholarship (£15 for one year) has been won by Cecilia Fox, and the Senior Clothworkers' Scholarship, of the same value, has been awarded to Agnes Thorne. Gladys Percy, Dorothy Pascoe, and Doris Meakins have been granted exhibitions of the value of £60 to the Datchelor Training College. Datchelor Scholarships—

value £10 a year and free tuition in the school for two to three years—have been won by Esther Woolley, Muriel Harris, Ruth Wigner, and Ida Wills. Edith Clemmow has won a Foundation Scholarship of the value of £60 a year for three years at the Royal Holloway College, in mathematics; she has also been awarded by the Clothworkers' Company, Governors of the school, a Hitchins Scholarship, worth £50 a year for three years, tenable at Holloway. Rosalie Flew has won a St. Dunstan's Exhibition for Arts, value £60 a year for three years. Marie Mackie has gained First Class Honours, with four Distinctions in the Cambridge Higher Local Examination in Languages, and the Governors have granted her also a Hitchins Scholarship of £50 for three years, tenable at Girton College. Miss Hilda Lett, the well known violinist, pupil of Leopold Auer, has accepted the post of teacher of the violin in the Datchelor School. Miss Fitch, who has been head of the pianoforte work of the school since 1881, has resigned, to the great regret of the Head Mistress and staff and of present and former pupils. She is being succeeded by Miss Hailstone, L.R.A.M., who has for many years been her able second mistress. Miss Eleanor Trice, assistant kindergarten teacher, has left to be married, and Miss Jessie Doherty (National Froebel Union Higher Certificate) has been appointed her successor. Four of the senior girls have passed the Inter. B.A. Examination, London. Three have gained Higher School Certificates, one in Honours. Twelve girls have gained the Senior School Certificate, all but one with Distinctions, and nine of these have matriculated. Forty girls (out of forty-two entered) have gained Junior School Certificates, seven in Honours and sixteen with Distinctions. Daisy Connolly won the fifth place in the last examination for women clerks in the Civil Service, and fifteen of the Secretarial Class formed a year ago have done satisfactorily in the examinations of the Society of Arts (Stage II, Intermediate). Twenty-two girls have passed the Oxford Senior, twelve in Honours. The prize distribution took place on June 12, the prizes being given by Mrs. J. G. Fitch, wife of the Master of the Clothworkers' Company. The Master presided, and, in the course of the afternoon's proceedings, presented the school with a beautiful mezzotint engraving of one of the best of Sir Joshua Reynolds's portraits. A novel incident of the day's proceedings was the awarding of special prizes for musical compositions. These also were the gift of the Master, who had offered £5 to the girl who should do the best piece of work. Dr. Ralph Dunstan, Mus.Doc. Cantab., adjudged the compositions sent in, and advised the dividing of the prize between

AN EXPERIMENT IN HISTORY TEACHING.

By EDWARD ROCKLIFF, S.J.

"The vigorous and graphic methods here depicted will interest all masters, because they have been subjected to actual experiment for many years with a high measure of success. They essentially consist in visualizing, by means of picture-writing, the march of events, so that knowledge may enter by the eye as well as by the ear, and may be recalled in the same way. Several specimen charts are given as illustrations, and indicate how the history lecture, instead of being a dull and sleepy hour, may be made to palpitate with excitement."—*The Month*

"The coloured charts illustrative of the method are quite captivating and deserve the critical attention of every teacher of history."—*A.M.A.*

INORGANIC CHEMISTRY

The subject-matter of Part I is essentially the same as that of the Chemistry Syllabus of the London University for the External Matriculation Examination and that of the Board of Education for Stage I.

Part II contains the subject-matter which, in the opinion of the authors, is suitable for those who, having mastered Part I, intend to devote at least two years more to the study of Inorganic Chemistry, while at the same time working at Organic Chemistry and other subjects, with the view of obtaining a University Pass Degree.

PRIZE COMPETITIONS.

HOLIDAY PRIZE COMPETITIONS.

Prizes to the amount of Ten Guineas are offered for the following subjects:—

LITERARY.

1. An Essay (limit 1,000 words) in the style of Bacon, or Addison, or R. L. Stevenson, on (a) Window-breakers, or (b) Stamp-licking, or C. The first day of the holidays.
2. A suitable passage, French, German, or Latin, for the Translation Prize, with a fair copy.

PHOTOGRAPHS.

1. A set of six kodaks, illustrating a seaside or country holiday.
2. A group illustrating some scene in history or fiction.
3. A study of animal life.

ARITHMETICAL PUZZLES.

1. I sent a messenger to obtain change for a sovereign. He brought back eleven silver coins, and I found that I was unable to make a payment of ten shillings with them. What were the coins?

2. I was paying my tailor and said that I should expect him to allow discount. He was about to deduct 12s. 10½d. when I remarked: "You are cheating yourself of 4½d. It was discount, not interest, I asked for." What was the amount of the bill?

3. The birthdays of my two sons, both under twenty, are on the first day of the month. One of them is 2,279 days older than the other. When were they born respectively?

4. Three bullocks in 2 weeks eat off the grass in two acres of meadow and the grass which grows there during those 2 weeks. Two bullocks in 4 weeks eat off the grass in two acres and the grass which grows there during those 4 weeks. How many bullocks are wanted to eat off in 6 weeks the grass in six acres of meadow and the grass which grows there during those 6 weeks?

5. A cyclopædia is published in twenty-eight volumes, each of which contains between 600 and 700 pages. Each volume is paged separately. The number of figures employed would have been greater by 54½ per cent. if the work had been paged continuously to the end of Vol. 28. How many pages are there?

6. Jones and I live the same number of doors from the North-East corner of our square. The number of my house is a multiple of the number opposite me. His number is a multiple of the number facing him. How many houses are there in the square? (N.B.—There are more than four.)

[Unsuccessful competitions, if accompanied by a stamped and addressed envelope, will be returned.]

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by September 16th, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

"One of the most stimulating writers of the day, especially in the sketch-portraits of the people who have influenced him. His essay on Mark Pattison is not likely to be forgotten by any Oxford man, or, indeed, by any student of modern letters, who has chanced to read it, and it is safe to foretell that the same will be the case with the 'Personal Memoir' in which he has enshrined his recollections of the late Master of Balliol."—*The Times*.

SCHOOLS FOR SALE AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY, Ltd., Educational Agents, 158-162 OXFORD STREET, LONDON, W.

MESSRS. TRUMAN & KNIGHTLEY always have on their books a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, and therefore can offer unusual facilities for satisfactorily negotiating the TRANSFER OF SCHOOLS and arranging PARTNERSHIPS. All communications and inquiries are treated in the strictest confidence. The following are a few selected from their list:—

GIRLS' SCHOOLS.

WORCESTERSHIRE.—Good-class **BOARDING SCHOOL FOR GIRLS.** Established 25 years. 33 boarders, fees 45 to 51 guineas, and a few day boarders, fees 18 to 27 guineas. Large detached house. Dry and bracing climate; gravel soil. Receipts £1,724. Profit £360. Capitation fee accepted on pupils transferred. Successor should be a lady with Low Church views. Inspected and warmly recommended.—T 2015.

WEST COAST.—Two ladies, who are retiring, are prepared to hand over their high-class **BOARDING AND DAY SCHOOL** to their present Head Mistress and for whom a Partner is required. School thoroughly sound and quite full with 30 boarders. Receipts over £2,000; profit about £350, but could be considerably increased with reasonable economy. Half share of goodwill £500. School enjoys a high reputation and can be warmly recommended.—T 2006.

SOUTH COAST.—Very flourishing and high-class **BOARDING AND DAY SCHOOL FOR GIRLS** at a favourite health resort. 32 boarders, fees £63 to £78. 15s., and 9 day pupils, fees 9 to 12 guineas per annum, exclusive of extras. Receipts over £2,000. Profit over £900. Specially built premises with grounds of about an acre. Capitation fee accepted on pupils transferred.—T 2035.

PARIS.—The Principal of a first-class Educational Home in Paris desires to dispose of her connexion: 7 boarders paying fees from £150 to £200 per annum. Profit about £300. Accommodation for 10 pupils. A thorough introduction and excellent references given.—T 2006.

LONDON.—House of **RESIDENCE FOR STUDENTS** near Kensington, with 13 students now in residence, whose average receipts amount to £26 per week. Students are all over 20 years of age, and are girls of good families.—T 1,188.

SOUTH-EAST COAST.—High-class and very successful **BOARDING SCHOOL FOR GIRLS** at a favourite health resort. Principals dissolving partnership and retiring: 56 boarders, fees from £60 to £100 per annum. Receipts £4,400, net profit £1,250. School has more than doubled its numbers during last four years. Goodwill £1,500, payable by instalments if desired.—T 1,139.

SURREY.—Very flourishing **GIRLS' HIGH SCHOOL**, with Kindergarten: old-established. 85 pupils, 16 of whom are boarders. Receipts £1,200, net profit £300. Splendid schoolroom accommodation for 120 pupils. Good residential neighbourhood, with plenty of scope for increasing present number of pupils.—T 1,189.

HOME COUNTIES.—Large, old-established, and very successful **BOARDING AND DAY SCHOOL.** Principal retiring. 50 boarders, 100 day pupils. Gross receipts over £3,000. Profit £500. Fine premises with field for games. Capitation fee accepted on all pupils transferred. Personally inspected and strongly recommended.—T 1,158.

LONDON, N.—Old-established **BOARDING AND DAY SCHOOL**, with Kindergarten. Principal retiring from the teaching profession. 5 boarders, 60 day pupils. Gross receipts over £1,000. Entire goodwill only £400.—T 1,157.

LANCASHIRE COAST.—Good-class **BOARDING AND DAY SCHOOL**, old-established. 25 boarders, fees £50 per annum; 30 day pupils, fees £15 per annum, exclusive of

extras. Specially built premises. Receipts £2,300, net profit over £600. Genuine opening.—T 1,140.

LONDON, N.—Large and flourishing **PRIVATE DAY SCHOOL**, with Kindergarten. 165 pupils. Fees 4½ to 12 guineas per annum, exclusive of extras. Specially built school premises, including large assembly hall and gymnasium. Receipts £1,166, profit £330. Entire goodwill and school furniture, £550.—T 1,168.

SUSSEX.—Partnership is offered in a nice-class Girls' School at a seaside watering place. There are 16 boarders and 5 day pupils. The school has a good French and German connexion. Receipts £952; profit £250. Half share of goodwill £250.—T 1,180.

CHESHIRE.—Principals removing their boarders to the seaside desire to dispose of the **DAY-PUPIL CONNEXION**, numbering nearly 100 pupils, and any boarders who may not go with them. Receipts from day pupils alone £1,310. One term's fees asked for pupils transferred. Exceptionally fine premises at moderate rent.—T 2,019.

SURREY.—Nice-class **HOME SCHOOL** and **HOLIDAY HOME FOR CHILDREN** of parents who live abroad. 6 boarders, 2 weekly boarders, and 7 day boarders. School delightfully situated amongst the Surrey Hills. Receipts £800, profit about £120. Any reasonable offer accepted. Only part of the purchase money need be paid down.—T 2,025.

GLAMORGANSHIRE.—**BOARDING AND DAY SCHOOL** with kindergarten. 19 boarders, 16 day pupils. Receipts £995, profit £140. Only £300 asked for goodwill, to include school furniture, gymnasium appliances, &c. Only part need be paid down.—T 2,031.

Full particulars of the above and others may be obtained on application. Intending purchasers are invited to write stating their requirements. Address—158 to 162 OXFORD STREET, LONDON, W.

GLAMORGAN COUNTY COUNCIL EDUCATION COMMITTEE.

CAERPHILLY NEW HIGHER ELEMENTARY SCHOOL.

Applications are invited for the following posts:—

- (1) Trained Certificated SENIOR FORM MISTRESS. Salary £110 per annum, by £5 annual increments, to a maximum of £130 per annum.
- (2) INSTRUCTOR OF WOODWORK AND METALWORK. Salary £110 per annum, by £5 annual increments, to a maximum of £140 per annum. Where the person appointed is recognized as Certificated by the Board of Education and has some experience in Secondary Schools as a teacher or scholar in addition to the above mentioned qualifications, the maximum salary will be £150 per annum.
- (3) INSTRUCTRESS IN HOME MAKING. Salary £85 per annum, by £5 annual increments, to a maximum of £110 per annum. Applicants must hold a first-class Triple Diploma in Cookery, Laundrywork, and Housewifery, and in addition one Certificate in Domestic Handicraft. The person appointed must undertake to obtain within two years the double Certificate in Domestic Handicraft, and on this being obtained the salary will be advanced by £5. Past service under any other Authority as such teacher up to two years will be allowed in ascertaining the initial salary to be paid.

Canvassing of members of the Committee either personally or by letter will be deemed a disqualification, and letters written in recommendation of candidates will be considered to have been written with their knowledge and sanction unless they can satisfy the Committee to the contrary. This condition will be strictly enforced.

Applications on forms, which will be supplied on receipt of a stamped addressed foolscap envelope, must reach the CHIEF EDUCATION OFFICIAL, County Hall, Cardiff, not later than Monday, September 23rd, 1912.

August 19th, 1912.

EIGHTH EDITION. With Supplementary Easier Exercises. Fcap. 8vo, cloth, interleaved.

Price One Shilling.

HINTS ON FRENCH SYNTAX.

[May be used with advantage with **any** French Grammar.]

The following appears in

LE COURRIER: Bulletin de l'Institut Pédagogique International,

dated March 30, 1912:—

L'auteur disait dans la Préface de la 1^{re} édition: « Mon but a été non de développer, mais d'alléger l'étude de la syntaxe. » Le succès de l'ouvrage, dont on donne la 8^e édition, prouve évidemment que ce but a été atteint.

Les « notes sur la syntaxe » de M. Storr, remarquablement claires et précises, peuvent rendre de grands services non seulement aux Anglais qui apprennent la langue française, mais aussi aux Français qui étudient l'anglais. Nous n'hésitons pas à les recommander aux uns et aux autres.

London: **WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.**

Vol. II.—624 pp. Price 7s.

Or an Abridged Edition, in One Volume, 607 pp. Price 7s.

First Year Latin.

By WILLIAM C. COLLAR and M. GRANT DANIELL.

This book provides an average class of beginners with all material necessary for the first year's work. Review questions and conversations are interspersed, and "Essentials of Grammar" prefixed to every lesson. There are also copious selections for reading at the end of the book. The numerous illustrations add to the attractiveness of the volume. 345 pp. Price 4s. 6d.

First Year German.

By WILLIAM C. COLLAR.

The aim of this book is to lay out in orderly progression, for beginners having not less than four lessons a week, one year's work in speaking, reading, and writing German. The facts and usage of the language are exhibited first in each lesson; then follow observations, rules, and practice. Selections in prose and poetry are freely interspersed, and at the end of the book are massed to the amount of forty pages. 336 pp. Price 4s. 6d.

BOOKS SENT ON APPROVAL TO TEACHERS.

GINN & COMPANY, ST. MARTIN'S STREET, LONDON, W.C.

Selected List of

PITMAN'S NEW BOOKS.

FRENCH PROSE WRITERS OF THE
NINETEENTH CENTURY AND AFTER.

AN ADVANCED READER.

With Biographical and Critical Notices in French, and Literary and
Bibliographical Notes in English.

By VICTOR LEULIETTE, B. & L., A.K.C.

Crown 8vo, cloth gilt, 330 pages, 3s. net.

The Athenæum says:—"There has long been need for a work of this kind in modern language teaching. It is in the interests of French as an instrument of culture and literary training that M. Leuliette has formed this anthology for the use of advanced students. The extracts have been carefully selected, and are illustrative of French ideals, aspirations, and modes of thought."

A FRENCH RECITER FOR SCHOOLS.
LE ROI LION ET SES GRANDS YASSAUX.

By F. W. M. DRAPER, B.A. (Cantab.).

Licencié ès Lettres (University of Paris); Author of "Pitman's Commercial French Grammar."

In crown 8vo, limp cloth, 8d. net.

PITMAN'S NEW SERIES OF
COMMERCIAL LANGUAGE
GRAMMARS.In Four Volumes, each in crown 8vo, cloth gilt, from 160-250 pages,
2s. 6d. net.**FRENCH.** By F. W. M. DRAPER, B.A. (Cantab.).**GERMAN.** By J. BITHELL, M.A., Lecturer in German at the Birkbeck College, London.**ITALIAN.** By LUIGI RICCI, Professor at the University of London, &c.**SPANISH.** By C. A. TOLEDANO, Spanish Master at the Manchester Municipal School of Commerce, Manchester Athenæum, &c.

ATHLETIC TRAINING FOR GIRLS.

Compiled and Edited by C. E. THOMAS. In crown 8vo, cloth gilt, with
Illustrations, 3s. 6d. net.

The Times says:—"This book gives a great deal of valuable instruction as to the playing of games and the performance of athletic exercises, but its primary object is to emphasize the necessity for and discuss the present methods of scientific athletic training."

The Englishwoman says:—"This is a very useful handbook for parents and schoolmistresses, and game-playing girls will obtain from it many useful hints as to training for and practising games."

THE STUDENT'S FROEBEL.

In crown 8vo, cloth, 2s. 8d. net each Part. By W. H. HERFORD, B.A.
Part I.—**Theory of Education.** 152 pages. Part II.—**Practice.** 144 pages.

The two parts together give a full exposition of Froebelian principles and methods, adapted from Froebel's "Education of Man," and following the language of the original as far as possible. Part I has just been revised and improved with two valuable additions, an Educational Note by Professor MICHAEL SADLER, M.A., LL.D., and a short Life of W. H. Herford by Professor C. H. HERFORD, Litt.D.

PITMAN'S COMPLETE MERCANTILE
ARITHMETIC.

With Elementary Mensuration. By H. P. GREEN, F.C.Sp.T., Head Arithmetic Master, Pitman's Metropolitan School. Crown 8vo, cloth gilt, with Key, 616 pages, 4s. 6d. net. Complete book without Key, 600 pages, 4s. net. Key separately, 1s. net. Also in Three Parts:—Part I, 300 pages, 2s. 6d. net. Part II, 208 pages, 1s. 6d. net. Part III, 100 pages, 1s. net. This work is completely adapted in a practical and popular way to the occasions of common business life.

THE STUDENT'S GUIDE TO
POLITICAL ECONOMY.

Crown 8vo, cloth gilt, 232 pages, 2s. 6d. net. By F. H. SPENCER, D.Sc., LL.B., Fellow of the Royal Statistical Society, and of the Royal Economic Society; Lecturer in Economics and Director of the Day Commercial School, City of London College. Comprehensive in character and modern in doctrine, this textbook deals with the whole subject in outline, and is written in simple and intelligible language.

JOHN PYM.

By C. E. WADE, M.A. (Oxon.), Barrister-at-Law. Demy 8vo, cloth gilt,
7s. 6d. net.

Times.—"Mr. Wade gives a fresh and effective picture of this statesman's career, keeping throughout in touch with his authorities; and his graphic narrative will fill the gap in the bookshelf made by the disappearance of Forster's Life written nearly eighty years ago, and long obsolete."

MAKERS OF NATIONAL HISTORY
SERIES.

Edited by the Ven. W. H. HUTTON, B.D.

Each Volume in crown 8vo, cloth, with Frontispiece, 3s. 6d. net.

CARDINAL BEAUFORT. By L. B. RADFORD, D.D.**VISCOUNT CASTLEREAGH.** By ARTHUR HASSALL, M.A.**ARCHBISHOP PARKER.** By WM. KENNEDY, B.A.**FRANCIS ATTERBURY.** By the Very Rev. H. C. BEECHING, M.A.,
D.Litt.**GENERAL WOLFE.** By E. SALMON.**EDWARD IV.** By LAURENCE STRATFORD.**THOMAS BECKET.** By Ven. W. H. HUTTON, B.D.A SHORT HISTORY OF GREEK
LITERATURE.From Homer to Julian. By WILMER CAVE WRIGHT, Ph.D., late
of Girton College, Cambridge. Crown 8vo, cloth, 544 pages, 6s. net.

MODERN FRENCH LITERATURE.

By B. W. WELLS, Ph.D. Crown 8vo, cloth, 6s. net.

MODERN ITALIAN LITERATURE.

By LACY COLLISON-MORLEY. Crown 8vo, cloth gilt, 6s. net.

GREEK INFLUENCE ON ENGLISH
POETRY.By the late Professor JOHN CHURTON COLLINS, D.Litt. Edited, with
Introduction, by Professor M. MACMILLAN. Crown 8vo, cloth gilt, with
Frontispiece Portrait, 3s. 6d. net.PUNCTUATION AS A MEANS OF
EXPRESSION.

Its Theory and Practice. In crown 8vo, 80 pages, 1s. 6d. A
Complete Manual. By A. E. LOVELL, M.A., Director of Education for
the City and County Borough of Chester.

PITMAN'S STUDIES IN ELOCUTION.

In crown 8vo, cloth gilt, gilt top, silk register, 2s. 6d. net. By E. M.
CORNBOLD (Mrs. Mark Robinson).

A guide to the Theory and Practice of the Art of Public Speaking, Reciting,
and Reading. With over 100 Selections for Reciters and Readers.

EUROPA'S CHILDHOOD and GROWTH

An Historical Geography of Europe. By A. J. BERRY, M.A. (Oxon.),
Director of Education, Preston. With over 100 Illustrations. 281 pages,
2s.

Written on an entirely original plan, and attempts to show how the main
lines of European history and development have been dependent on geo-
graphical features and considerations.

PITMAN'S INDUSTRIAL AND SOCIAL
HISTORY.By GEORGE COLLAR, B.A., B.Sc. (Lond.). In crown 8vo, cloth, with
over 100 Illustrations, 2s.

SIMPLE LESSONS IN COLOUR.

By HERBERT A. RANKIN, Art Master, Silver and Bronze Medallist.
Demy 8vo, cloth, 112 pages, with 36 full-page Coloured Plates, 4s. net.

A practical manual, suitable for all who would master the elementary
principles of colour as applied to both animate and inanimate objects, and
especially useful to teachers.

PASTEL WORK, or Colour with Crayon

By H. A. RANKIN. In demy 8vo, cloth, about 160 pages, with 32 full-page
Colour Plates, 4s. net.

Commencing with the very simplest problems of colour and progressing by
easy and interesting stages.

PITMAN'S

"TOWER" HISTORY READERS [PERIODIC].

Each profusely illustrated with Coloured Plates and other Illustrations.
Seven Volumes, in periods, at prices ranging from 1s. to 1s. 10d.

Complete Illustrated Prospectus, with Specimen Pages and Coloured
Plates, post free on application.

TEXTBOOKS SUITABLE FOR JUNIOR AND MIDDLE FORMS.

MATHEMATICS AND SCIENCE.

- Algebra, Textbook of. Part I: Junior.** By ROBERT DEAKIN, M.A. 3s.
- Arithmetic, The Junior.** Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPPE, B.A. With or without Answers. *Second Edition.* 2s. 6d.
- Book-keeping, Junior.** By T. C. JACKSON, B.A., LL.B. 1s. 6d. KEY. 2s. 6d. net.
- Book-keeping, Practical Lessons in. Part I.** By T. C. JACKSON, B.A., LL.B. 2s.
- Chemistry, Junior.** By R. H. ADIE, M.A., B.Sc., Lecturer in Chemistry, St. John's College, Cambridge. *Second Edition.* 2s. 6d.
- Chemistry, Junior Practical.** By H. W. BAUSOR, M.A. 1s.
- Geometry, Junior.** By A. G. CRACKNELL, M.A., B.Sc., *In preparation.*
- Heat, Junior.** By J. SATTERLY, D.Sc., M.A. 2s.
- Magnetism and Electricity, Junior.** By R. H. JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 2s. 6d.
- Mechanics, Junior.** By F. ROSENBERG, M.A., B.Sc. 2s. 6d.
- Plant Biology.** By F. CAVERS, D.Sc., F.L.S. 3s. 6d.
- Science, Junior Experimental.** By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. 2s. 6d.
- Sound and Light, Junior.** By R. W. STEWART, D.Sc., and J. SATTERLY, D.Sc., M.A. 2s. 6d. *In the press.*
- Trigonometry, Junior.** By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S. 2s. 6d.

LANGUAGES, HISTORY, AND GEOGRAPHY.

- English Composition, Junior Course of.** By E. W. EDMUNDS, M.A., B.Sc. 1s. 6d.
- English Grammar with Parsing and Analysis, Junior.** By A. M. WALMSLEY, M.A. 1s. 6d.
- English Grammar and Composition, Junior.** In One Volume. 2s. 6d. *Ready September 1912.*
- French Course, Junior.** By ERNEST WEEKLEY, M.A. *Second Edition.* 2s. 6d. KEY. 2s. 6d. net.
- French Course, New Junior.** By G. A. ROBERTS, M.A. 2s. 6d. *Ready September 1912.*
- French Reader, New Junior.** By J. P. R. MARICHAL, L. és L., and L. J. GARDINER, M.A. 2s.
- Geography, Junior.** By G. C. FRY, M.Sc. 2s. 6d. *In preparation.*
- Geography of Asia.** From *The Junior Geography* by G. C. FRY, M.Sc. 8d.
- Geography of South America.** From *The Junior Geography* by G. C. FRY, M.Sc. 8d.
- The British Isles, with Outlines of Physical Geography.** From *The Junior Geography* by G. C. FRY, M.Sc. 1s. 6d.
- History of England, School.** By M. E. CARTER. 3s. 6d. Also in Three Parts:—(1) To 1603, (2) 1485-1714, (3) 1660-1910. 1s. 6d. each Part.
- Latin Course, Junior.** By B. J. HAYES, M.A. *Second Edition.* 2s. 6d. KEY. 2s. 6d. net.
- Latin Course, New Junior.** By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. 2s. 6d. *Ready September 1912.*
- Latin Reader, New Junior.** By A. J. TATE, M.A. 2s. *Ready September 1912.*
- Copies of Keys supplied only to Teachers, or to Private Students certified as such by a Clergyman or Schoolmaster.

REWARDS AND PUNISHMENTS IN EDUCATION.

THERE is nothing perhaps so difficult in the education of children as to determine the principles on which rewards and punishments depend. Moreover, when the principles are determined, they have to be applied to particular cases, and very often difficult questions arise that might well test the capacity of a judge. Indeed, the teacher is often enough tempted to ask whether the whole idea of rewards and punishments is not wrong; whether pupils ought to be stimulated or deterred by a system which offers insuperable difficulties and generally involves substantial injustice. He might further inquire, in the event of a schoolmaster arising who has discovered the sound principles on which rewards and punishments should depend, and who also possesses the highly trained mind that can apply those principles, whether it is good for the child to be precipitated into goodness and haled back from the precipices of evil by artificial means; whether it is wise to teach a child that it pays to be good and does not pay to be naughty. The teacher might reasonably argue: "All this is a confession of failure. If the child had been properly trained, it would not need inducements to keep it in the right path. I have to reward and punish my classes because it is necessary to counteract other influences, both past and present, over which I had and have no control." He might even go further, and say: "Many false views about this life and about the life to come, about economics and religion, are due to the false notions that school ideas about rewards and punishments have put into the head of the child at his or her most receptive age."

That there is a great deal of truth in this position it would be difficult to deny. Yet it does not state the whole case. It evades certain facts of human nature. Man is, very largely, a creature of discipline and an imitative creature, on the one hand, while, on the other hand, each individual man is highly differentiated from all other men. These facts really supply an explanation of the further fact that, both in religion (in all religions almost without exception) and in daily affairs, all ages and times in some considerable measure have applied the stimuli of rewards and punishments to human life.

The high differentiation of one individual human being from another—in other words, the specific personality of each individual—results necessarily in powers of the most diverse kinds which the will to produce or the desire to act brings into operation. The imitative faculty is operating at the same time, with the result that one individual imitates by means of different powers the results produced by another individual. Thus competition inevitably arises. This competition between man and man is something that does not occur among non-ratiocinating animals. There is, of course, competition among these animals, but this is due almost exclusively to sex questions or questions of sustenance. With man there is also this other form of competition indicated above, which is due exclusively to the high differentiation of individuals coupled with the sense and power of imitation.

The susceptibility of man to discipline—which probably arose in the course of long ages from the need that men had to combine with one another and to suppress themselves as individuals in the struggle for race-preservation against innumerable foes—made and makes education possible. The desire or the power to compete, if subjected to discipline, obviously opens whole vistas of progress. But discipline has to take into account marked personalities of very varying powers—some volatile, some sluggish, some rebellious to authority, some with little hold on universal traditions of conduct, some with unstable powers, some with little, some with intense continuity of purpose. Yet these various personalities are all susceptible to discipline, and, if once the moulding force of discipline is at work, it will enable the imitative sense to operate and to win from the other children and from the teacher the maximum (for that individual) of those communicative blessings which we connote by the word "edu-

cation." Consequently the teacher has to analyse the meaning of discipline and the nature of the sanctions that will appeal to and awaken the sense of discipline in each child.

Before attempting such an analysis it will be convenient to consider some historical aspects of the question. The first and most obvious fact of history in this connexion is the use of the rod or birch in school. In the Roman schools discipline was enforced by means of the rod with terrible severity. In that period of civilization physical punishment played a great part in social life. The rod lay in pickle to enforce the performance of duties by all persons of imperfect status, whether they were wives or children, clients or slaves. This tradition survived into modern times, and it is not so many years since our law books contained the proposition that it was legal to control a wife with moderate and reasonable correction. The physical punishment of dependants, slaves, apprentices, and children remained the law throughout Europe into modern times. I imagine that it is still legal to correct apprentices with the rod in England, while parents, guardians, tutors, and schoolmasters have still the right and the will to whip the children committed to their care. The physical punishment of adults is now very rare in England since the abolition of flogging in the Army and Navy, but it still survives for certain offences; while in some parts of the Continent, and especially in Russia, the flogging of servile persons is part of the system of society. The history of the birch in English schools is very familiar. Our earliest reference to education—a sixth century Welsh canon—deals with the use of the rod upon boys under fifteen years of age. Throughout the Middle Ages the schoolmaster enforced his discipline with the rod, and the practice ever grew in severity. In the Elizabethan age the educational theorist protested against the practice without the least effect, and our educational system died down in the eighteenth century to the sound of the swish and the wail. Even to-day those schools that maintain the historic continuity of English education also maintain the use of the rod. Whether Westminster, Winchester, and Eton find the rod or swish a real necessity of discipline I do not know; but they maintain the ancient tradition of Rome, and half a century ago they maintained it with a sanguinary ferocity worthy of the late seventeenth century.

In the sixteenth century, our modern theory with respect to physical punishment came to birth. Montaigne, in his protest against the abuse of the rod, wrote: "How much more decent it would be to see their classes strewn with green leaves and fine flowers than with the bloody stumps of birch and willow! Were it left to my ordering, I would paint the school with the pictures of Joy and Gladness, Flora and the Graces, that where the profit of the pupil is, there might their pleasure be also." Three centuries later we find (when physical punishment was doing its best or its worst in the schools for the upper classes) a school in England for the very poorest of the population which deliberately and successfully dispensed with physical punishment. In the Borough Road School in 1827 we are told that punishment by ridicule took the place of the rod:

The idler and the sluggard would be rocked in a cradle by a little girl. Shackles or logs would be applied to legs. The laggard would be tied to a desk. Bad boys were yoked together and made to walk backwards. The very doubtful were put into a basket and hoisted up by a rope to the lofty ceiling. During my time [writes old Mr. Bonwick, a schoolfellow, at this school, of Mr. Cornwell, the geographer] a dirty arrival would be washed by a girl sent from the other School, to our amusement.

Before dealing with the questions of principle contained in the remarks of two such very different persons as the Seigneur de Montaigne and Mr. James Bonwick, of the Borough Road School, it will be useful to consider certain other historical matters. Punishment was not the only means of discipline provided by the early teachers. A more notable method was the method of stimulus by competition. It took the form, both in the schools and the Universities, of Disputations. Our earliest knowledge of curriculum in the schools of London is an account by Fitzstephen, in the twelfth century, of the competition among London schools by means of Disputations.

School was set against school, in oral struggle, in subjects of the Trivium and Quadrivium. These Disputations are worthy of reflection on the part of the educational theorist. They made each school responsible for a certain standard of scholarship; they made each scholar feel that the honour of the school depended on his individual effort; they created that *esprit de corps* which is the most notable feature even to-day of English public-school life. Disputations, whether in the school or the University, were an ideal method of securing discipline, and when the method died out in the mid-seventeenth century English education was indeed the poorer. Something of the method lingered on in the form of *viva voce* examinations into our time, but now this is practically no more. We see historic remnants of the ancient educational method in the words Tripos and Wrangler, but the stools have become straightbacked chairs and all the wrangling is done on paper so far as the University authorities are concerned.

Another method of stimulus by competition was the introduction of the scholarship system in the twelfth century or thereabouts. The poor scholar often enough begged his way to the University and begged his way home again, and lived largely on charity or by his wits in the Universities unless he was a member of an adequately endowed house. But the introduction of scholarships tenable at schools or at the Universities by pious donors, and later by the gilds, created a stimulus to learning and fostered the sense of competition both between individual scholars in schools and between separate schools. This is not the place in which to trace the history of scholarships, but in days when the scholarship is once again taking an all-important part in the education of the poor, it is well to remember that, as an educational method, it is a gift of the great medieval period when the schoolmen were the famous pioneers of civilization. Prizes in our modern sense are, I believe, quite a modern invention. It is, of course, true enough that in early times we find teachers advocating pleasant little stimuli for good little people. Thus in Corderius we find that when a very small person has of his own good will before breakfast done an excellent Latin lesson, the master says: "Come, follow me; I will give you something that is good because you have done your business well. What is this?" "White bread and dried figs." "Count them." "Oh, pretty little boy! now get your breakfast at your own leisure." Sarah Lloyd, the schoolmame of the early eighteenth century, the schoolmistress of the poet Shenstone, after well thrashing her little charges—

Till fear has taught them a performance meet—
turns to "the well known Chest"

Whence oft with sugar'd cates she doth them greet,
And ginger-bread y-rare, now certes doubly sweet.

But I am not aware that there was any system of school prizes as a regular part of an educational system much before the eighteenth century. The earliest University prize now in existence is the Seatonian Prize, founded at Cambridge in 1741, and from that date onward the foundation of prizes became usual. I fancy that the system of giving prizes as a regular school institution began in the late seventeenth or early eighteenth century. Whether the system has justified itself is a more general question, which requires consideration, but for the moment one is tempted to doubt the efficacy of a method of stimulus that does not seem to have had any form of sanction from ancient practice.

We are now in a position to consider somewhat in detail the question of discipline. Rightly or wrongly, all teachers and theorists of whom we have any tradition or from whom we have considered opinions have felt that the *magister* in relation to his disciples must be able to wield stimuli that are independent of the knowledge that it is part of his business to communicate. To some, to perhaps a majority of schoolmasters, discipline has meant something of a military character, and has been enforced by militant methods. But the schoolmaster has also gone abroad out of the schoolroom and taken the lesson of life and introduced it into the schoolroom. He has felt that the schoolroom should be a microcosm

and should reflect the struggle for existence that goes on in the outer world. He has striven to get the most (not necessarily the best) out of his disciples by creating a sham struggle for existence and, imitating fate or destiny, he has flogged those who fall in the fight. It is impossible not to get some such idea of the schoolroom as one peers into it age after age. But again we obtain peeps of something better than this: we hear teachers like Richard Cornwall, in the fourteenth century, saying: "I shall get better work out of my boys and better ideas into my boys if I use better methods of teaching." We hear practical men like Richard Mulcaster—tenderest of schoolmasters—saying: "These three things, perception, memory, and judgment, ye will find peering out of the little young souls at a time when ye can see what is in them, but they cannot see it themselves. Now, those natural capacities being once discerned, must as they arise be followed with diligence, increased by good method, and encouraged by sympathy, till they come to their fruition."

We see again the school made not a place of struggle for struggle's sake, but a place in which the sense of unity, fellowship, and *self-sacrifice* in the interest of the body corporate is one of the main features. The child then acquires that sense of responsibility which is, I believe, the chief end of education, and the question of punishment or reward becomes a very minor matter in so far as punishment or reward is external to the continuity of school life. This seems to me to be the real point involved in the whole question of reward and punishment. If the punishment or the reward is to have any meaning at all, if it is not to be mere surplusage, that at the best degrades and, at the worst, brutalizes human nature, it must be something that organically springs out of the school life and out of the school work. The prize or the punishment must be something inevitable and of the very nature of the work. Take, for instance, the case of Disputations. If the boy was successful in his work and did well in the struggle against another school, his reward was not connoted by a money or book prize, or a better supper, but by the fact that he had brought honour and glory to his own community; that his fellows looked on him with love and pride; that he was for the moment *essential to the life of his school*.

If, on the other hand, he failed, the punishment was not the rod that fell with ruthless insistence on his back: the real punishment was that he was *not essential* to the life of the school, that he had brought disgrace and failure upon it, that his companions turned from him as one who had failed them. It is in this fact that modern school athletics are so valuable. They do in a measure for the school what the old Disputations did. It is no vain reward to be the hero (in the best sense) of the school; it is worth all the books that ever were printed, all the scholarships that ever were endowed, all the prizes that ever were given. And why? Because the reward is a thing which is part of the school life, which is the legitimate crown of the school life; because it means that the child has already learnt the value of living for something nobler than himself, has already learnt the disgrace of living idly, selfishly, foolishly, of losing, in the pathetic words of Thomas à Kempis, "what all the brethren have."

In a word, then, we come to the conclusion that punishments and rewards in education are, like education itself—to use a medieval phrase on the subject—"spiritual," and not material, things, though they may have, and often must have, material counterparts or symbols. Indeed, if schoolmasters in the past, when they introduced into the school the struggle of life, had also introduced the idea of rewards and punishments as they, in fact, occur in life, practical education would have set up a different ideal to that which has been followed for so many centuries. On the whole, in life the rewards and punishments are the outcome, direct and inevitable, of conduct: but success is not always a reward and failure is not always a punishment. Apparent failure may be the condition of spiritual (and therefore eternal) success, while apparent material success may be the most ghastly of punishments. Moreover, in life, the reactions of conduct on other individuals and on the community are of such immense importance, that reward and punishment have to be calculated with reference

to an ever widening circle of which the person rewarded or punished is the centre. If the schoolmaster, when he introduced the struggle of life into the school, had also introduced these mysterious sanctions that really govern human life, and had given them some material form, it would have been all the better for education.

When we turn to the application of these principles to actual school life, we see at once the sanctions that lie behind the whole idea of discipline. First as to punishments. The punishment must not only fit the crime: it must, as it were, spring out of the crime; it must as certainly follow the crime as day follows night.

I do not think that corporal punishment can be altogether excluded from school, for (says Mulcaster, and very rightly) "the rod can no more be spared in schools than the sword in the hand of the Prince, . . . but I do think [he adds] gentleness and courtesy towards children more needful than beating. I have myself had thousands of pupils passing through my hands whom I never beat, because they needed it not; but if the rod had not been in sight to assure them of punishment if they acted amiss, they might have deserved it." In other words, there should be a physical sanction to deal with certain offences, though the knowledge of its existence should be sufficient. No doubt the cases where the birch is needed are very rare, but in this imperfect world they cannot be eliminated and, such is the danger as well as the value of human imitativeness, these offences must be dealt with publicly, ruthlessly, and swiftly. Mr. Lancaster dispensed with the rod altogether, but I am not satisfied that the influence of ridicule, enormous though it is, adequately meets cases of depravity or rebellion. Physical punishment is Nature's own punishment for such offences: the corollary or crowning fact of Vice is Pain; by Vice I mean disloyalty to the human body or to the body corporate. As to other punishments, it should not be hard to devise methods by which the crime works out its own extinction. As has been said, the sense of shame is the real punishment, and the outward punishment should be of such a nature as to enable the culprit, by his own willing efforts, given in time that would otherwise be devoted to pleasurable things, to reinstate himself, not only in the opinion of his master and of his fellows, but of himself.

When we turn to rewards, we have to deal with other considerations. Rewards for fulfilling duties are hateful things, and much of our modern prize-giving is a hateful business. Perhaps the worst example of it is to be seen in Sunday schools, where, in certain cases, children attend to get prizes, and prizes are offered to attract children. The worst sorts of prizes, indeed, are offered in the shape of school treats, and the hero of the alley is the child who attends most schools and most treats. The *morale* of more children in certain districts is sapped by Sunday schools than by any other form of educational effort. That view was expounded at length recently by an East End clergyman who knows the facts of his district very thoroughly.

Yet we cannot exclude rewards from our scheme of things on the ground that the world possesses a number of foolish people who practise bribery and call it a reward. Rewards, like punishments, are "spiritual" things, and a reward of an inevitable nature—that is to say, a reward that is a natural and inevitable product of an act or course of conduct—is a perfectly legitimate stimulus. We have seen how, in the case of medieval Disputations, or in the case of modern school athletics, that the reward of success was and is one that makes for unselfishness, that fosters *esprit de corps*, that builds the character while giving joy to the heart. Pure competition for places in class lists, whether in school or at the University, hardly does the same thing, unless the candidate is fighting for the honour of a class of boys or girls or for the honour of his or her old school, as well as for his or her personal advancement. This depends on the previous training in school, and, if the training is right, competition may be a moral as well as an economic force. Scholarship winning is a different matter, for there the candidate is fighting to secure the means of further discipline; and, if the discipline on which the power to struggle is based has been good and noble, the gaining of the scholarship is all

to the good, for it not only provides means for further education, but it adds to the glory and traditional power of the school from which the winner comes.

When we turn to prizes, we have to face a much more difficult position. The real ground on which prizes can be defended is that the stimulus given is not so much a stimulus to individual scholars as to the entire community of which the scholars are units. But, in fact, no such stimulus ought to be necessary. In so far as the school is competing against other schools, the *esprit de corps* of each school ought to be sufficient to produce the maximum of effort, while the example of the more sturdy scholars for the common end ought to be sufficient stimulus to the less capable children. But the prize offered, in order to urge an individual child to exertion, is hardly defensible on moral grounds, and is really defended on the ground of pure expediency (which ultimately is a ground of excuse for previous shortcomings in the training of the child), or on the ground that the prize does, in fact, stimulate those who would crawl through their work unless the prize were offered. This ground is weak enough, but not more soul-sapping than the suggestion that the prize system is a picture of adult life; that if children are taught to fight for prizes in school, they will do the same in the school of life.

If, however, we must have prizes, let them spring, so to speak, from the work done; let them be of such a nature as to stimulate further work along the same lines of thought and effort, and let them also provide a perpetual reminder of the school and of its life. If the prizes are books, let them bear some mark that will always at a glance associate the book with the school; let them, if possible, be works written by some past members, or by past or present masters, of the school; and let them be works of permanent value. In innumerable schools the prizes are ill-chosen, and have little or no influence in keeping the child in touch with the old school, or in touch with the work for which the prize was given.

The above statement as to rewards and punishments in education was written from what appeared to the writer to be certain fundamental educational principles. The same problem was attacked by John Locke from a different and from a non-historical point of view; but it is of interest to notice that the conclusions are much the same. In his "Thoughts on Education" he begins with the proposition "that Good and Evil, *Reward* and *Punishment*, are the only Motives to a rational Creature; these are the Spurs and Reins, whereby all Mankind are set on work, and guided, and therefore they are to be made use of to Children too. . . . *Rewards*, I grant, and *Punishments* must be proposed to Children, if we intend to work upon them." But Locke adds that those generally used are ill chosen; "the Pains and Pleasures of the Body are, I think, of ill consequence," and the necessary Rewards and Punishments "are quite of another order." We should use, he says, not bodily Pleasure and Pain, but Esteem and Disgrace, which are, "of all others, the most powerful incentives to the Mind." Locke adds: "To make the Sense of *Esteem* or *Disgrace* sink the deeper, and be of the more weight, other *agreeable* or *disagreeable* Things should constantly accompany these different States; not as particular Rewards and Punishments of this or that particular Action, but as necessarily belonging to, and constantly attending one, who by his Carriage has brought himself into a State of Disgrace or Commendation."

This question of rewards and punishments in education is, as Locke says, "the great Secret of Education." If it be solved, we have solved the meaning of the word "discipline," and all that discipline means in the lives of men and women, both in their relation to one another and in their relation to God.

J. E. G. DE MONTMORENCY.

SOLID READING.

AT first a great many things had to be forgotten: endless subtle distinctions between the comparative immunity from howlers attained by the various members of the Upper Third, disturbing confidences of Prefects, mark-lists, committees, interviews with the Head, even Common Room amenities: all had to be forgotten. Forgetting, like remembering, would seem to be as much a passive as an active process; therefore I ate and slept and lazed. Then the mental crampiness relaxed, and I walked and swam, stretching my limbs out to their proper length and feeling more kindly to the world around me. It is the middle of hay-harvest in Warwickshire, and crops are heavy in the fertile meadow lands near the Avon. When the grass is mown, we turn it, working with light wooden rakes in gangs of four or five, the leader setting the pace. It is for the most part silent, monotonous work, up the hill field and down again, the breeze now with us, now against us. The sweet lush grass falls in green swathes orderly beneath the rakes. As we work, the fresh wind cools our brow, the scent of the hay fills our nostrils: Earth is weaving her spell around us. A few periodically recurring images float through the brain, some half-remembered verses, some scenes of natural beauty lately visited: river reaches, cottages with gay gardens, rabbits startled beside the hedgerow, friendly and mysterious trees, a patch of purple vetch and mallows—gentle visitants, dream-like phantoms, visionary forms, rhythmically they come and go, haunting but nowise disturbing the drowsy, somnolent brain. We raise our eyes, striving to break the spell. A distant consciousness of Wilmcote, Henley, Hampton-Lucy, Charlecote flows in, recedes and narrows the horizon down to the neighbouring elms, then to upright wheat and the quickset hedge of our own immediate field. In the very land of Shakespeare, we think not of him; his presence has become an indistinguishable part of all that is. The spell is wrought. Seeds lie thick on the ground at our feet, and the swathes of grass fall orderly beneath the rake. Earth draws us closer to her; earth to earth—union mysterious and divine. Mother and Queen, she has wrought upon us her ancient charm. Her warm life quickens the blood about our heart, and, as the lush grass falls in green swathes orderly beneath the rake, there stirs within us a dim sense of ancient battles and the sea.

In the middle of the second week I opened the trunk where the books for solid reading lay. I picked up Jowett's "Thucydides" and went out to read him. It was very difficult to find the right spot. Habit sometimes saves us in these contingencies, so I went once more to a little copse where I had smoked before and shared the shade with several inquisitive calves. My usual seat in the laburnum wasn't comfortable. I tried a yew tree; it was higher and there was a better view, but the branches were very unyielding, and I greened my clothes badly. Thucydides fell. Then the man in me awoke and said: "N., take yourself seriously. Thucydides is a loan copy. Get down and lie on the ground. Remember what a lot of reading you got through that way before the Tripos. That's how you got your Second; no doubt about it." Three minutes later and for a few pages of Book VI Thucydides had it all his own way. But when he came to tell how "about the middle of Summer the expedition started for Sicily," and how "the Athenians and such of the allies as had already joined them went down to the Piraeus and began to man the ships," then some latent power of association awoke within me and I saw myself a boy in my old school again, translating this very passage in the Sixth Form with Phipps. We had a crib, but Phipps would never use it, I remember, except in the easy parts; then he read it aloud sonorously while I tore through the text at lightning speed, noticing the stiff bits so as to be able to construe them to him afterwards. Phipps was always uncommonly good on the Modern Side—a sort of unconscious advocate of what they call now the Direct Method, I suppose. Anyhow, he had a theory that all the really fine and exciting passages ought to be read aloud in good English; and, as nobody could be expected to

put Thucydides into decent English by the light of Nature, hence the crib. I can hear him reading now :—

When the ships were manned and everything required for the voyage had been placed on board, silence was proclaimed by the sound of the trumpet, and all with one voice before setting sail offered up the customary prayers; these were recited, not in each ship, but by a single herald, the whole fleet accompanying him. On every deck both officers and men, mingling wine in bowls, made libations from vessels of gold and silver. The multitude of citizens and other well-wishers who were looking on from the land joined in the prayer. The crews raised the Paean, and, when the libations were completed, put to sea.

And so on, and so on, until "the Athenians sailed away to Naxos and Catana, intending to winter." I wonder which winter of the war that was. Thucydides had rather a quaint way of managing his dates, if I remember rightly, by winters and summers. Yes, here it is: "Such were the events of the winter; and so ended the sixth year in the Peloponnesian War of which Thucydides wrote the history." And then the next book begins: "In the following summer, about the time when the corn comes into ear, ten Syracusan and ten Locrian ships —" Well, to go back to the Sicilians. Speech of Hermocrates . . . speech of Euphemus. . . No, I really can't read the speeches. We always thought them awfully stodgy and long-winded, unless it was Pericles or Alcibiades. Why! here is Alcibiades. I'll light a cigarette and see what he says.

And I read on, my wandering attention arrested for a while by the fervid eloquence and specious reasoning of Alcibiades' harangue. Gradually the pleasing sense of remoteness began to disappear. Charged with fresh significance, undemonstrable, oracular, and repeating themselves with dreamy persistence, the phrases leapt unwarantably from their context, the periods became pertinent. "And, therefore, remember, every one of you, that the safety not of Sicily alone, but of Peloponnesus, is at stake. No time should be lost —" No, of course not. "*No time should be lost.* Every man is likely to know best himself *the dangers which he has most to fear* —"

Now it's an odd thing, but I've never yet had time to think it out properly about Phipps's sister. I may as well have another cigarette and do it now. Lunch isn't till one. I call her (to myself, of course) "England's daughter." I suppose it's all right, but it's deuced unconventional, that kind of glorified bathing-dress that she wears—so short, too—and Phipps says she stands five ten in her stockings; but, then, when a girl has such ankles! Anyhow, it would be horrid in anybody else. Then her hair's always down about her shoulders, getting dry after swimming. Phipps says she can swim two miles up river against the current, and farther if she takes her own time. She milks the cows and grooms her own hunter—in fact, she and Phipps manage the farming between them. I wonder if it pays. . . . Her conversation wouldn't bear reporting, I admit; it's jerky. Some people would say she just makes a series of incontrovertible assertions and doesn't converse at all. But then, again, her impressions are so clear-cut and stimulating, and such a blessed relief when a fellow is mazed with thinking. And the way she paralleled the "pinnacle of political opportunism" with "a terminological inexactitude" and "the exuberance of his own verbosity" the other day before any of us had time to think! There's no doubt she has what Bacon calls "a present wit." On the whole, though, I'm inclined to consider her best effort was, at dinner night before last, her description of a dog show. What she said about the classes of dogs and the different types of people they attracted was, I thought, a very sound bit of psychological observation. It must have been, for it led us right on to Bergson. Phipps's wife reads him . . .

When I'd thought things out up to this point, the sunlight was playing on the leaves above my head and the wind turned over the pages of Thucydides, delighting even me, careless, with hints and glimpses of that old Greek life, "with its great ideas, its great actions, its creations in politics and in art," beautiful (wrote Jowett) "like the distant remembrance of youth to the delighted eyes of mankind." Sooner or later I

think I fell to wondering how late it was, but Phipps's wife says time is of no account (opinion inestimable in a hostess!), being but the common measure of duration—that our minutes and meal times are fixed by the total sum of all human misery and bliss, a thought deep enough to make any fool in a forest muse an hour longer by his dial. As I walked back to the farm, to England's daughter and Phipps, I distinctly remember recalling, oddly enough, with pleasure, some of the things I had come away on purpose to forget. But, before I go back to them, I shall take the Boy Scouts into camp, somewhere in Warwickshire, if it's possible, and after that there'll be three weeks more of Thicksides and solid reading.

M. HOLMES.

A SWISS SCHOOLMASTER OF THE SIXTEENTH CENTURY.

NO one can visit Switzerland without being struck with the natural simplicity of the people; and we can easily imagine the conditions of life were still more primitive four centuries ago. It was in the year 1499 that a certain Thomas Platter came into the world near the little village of Grenchen in the Canton of St. Gaul. His father died when he was young, and on his mother's second marriage he was turned over to an aunt. He must have had a hard time of it, but the yoke he bore in his youth was the means of forming a strenuous character. He tells his own story in such a plain, unvarnished manner that we see his life as in a "votive picture": we feel we are reading the inner recesses of his thoughts.

He had a lively imagination and, anticipating the invention of aeroplanes, used, with a fellow goatherd, to devise flying-machines to carry them into Switzerland, the young scholar's Promised Land. He had, on the whole, a happy time among the goats, in spite of many bad falls, though in summer he was shoeless and in winter had nothing but sabots. "My food," he says, "was in the morning, before day, a rye-broth—that is, a soup made of rye-meal. Cheese and rye-bread are given in a little basket to be carried at one's back; at night cheese-milk; of all, however, there was a fair measure. In summer lying on hay; in winter on a straw mattress."

From minding goats and cows he was taken into Germany to school, but this meant that, as he was poor, he must travel from one teacher to another and earn his living by the way. He was, in fact, "a travelling scholar." He was joined by other "scholars," but, being the youngest, he was obliged to act as "fag." He was often treated very badly; yet on the whole he seems to have enjoyed life; and after journeying from Dresden to Nuremberg, and from Nuremberg to Munich, he was enabled to visit the home of his early boyhood, where his old companions declared he "spoke so profoundly that they could not understand him." He had done, in fact, what the Swiss to-day does: he had learned something of the language of every place he had visited.

Passing over many minor events in the career of this strenuous seeker after fortune, we find him at Zurich, where he entered one of the schools and determined to devote himself to study. It was his aim to become a priest. He had an uphill fight, for when his bodily wants were supplied, his suffering from extreme poverty had weakened his constitution, so that when he wished to study he slept very little. He says: "I often took raw turnips or sand into my mouth, so that the grating of my teeth might awaken me again."

Circumstances led him to abandon the idea of becoming a priest, and he resolved to adopt the profession of schoolmaster when an opportunity presented itself. He had not long to wait. Always of a practical turn of mind, he combined trade with pedagogy. "Taking an empty house at Visp," he writes in his journal, "I began to prepare my ropemaking trade and to keep a school. In winter I had about thirty scholars; in summer scarcely six. Each had to pay a penny every quarterly fast; and besides many presents I had many relations—one brought me eggs, another cheese or a

ball of butter. Also others, whose children came to me to school, brought the like—some a quarter of a sheep; those who were at home in the village gave milk and vegetables, and jugs of wine, so that seldom a day passed in which something was not given to us."

It will be observed that Platter uses the plural "us," for by this time he had married. It is not surprising, therefore, that he sought a position where he would have better opportunities. Hence we find him at Basle, once again a professor. But he was always of a practical turn of mind, and when it was suggested to him that there were more professors than the town could support, he turned printer. He tells us, however, he had a bad time of it. But Basle had something better for him, and when he was invited to become the head of a school attached to the University, he readily accepted the position. "I got," he says, "a salary of two hundred florins, of which I had to pay one hundred to the assistants." He had, however, "a great deal of disputing with the University." All difficulties were at last surmounted and he retained the office for a period of thirty-one years. The Diary ends with the following note: "Written by Thomas Platter, the 14th of February, 1573, the seventy-third year of my age. God grant me a happy end through Jesus Christ. Amen."

But he was to live some years longer, for his son, Dr. Felix Platter, adds: "In the year 1582, the 26th January, my dear father died."

J. C. WRIGHT.

CORRESPONDENCE.

ACADEMIC IMMOBILITY.

To the Editor of The Journal of Education.

SIR,—In your August issue you indicate some of the best means of securing the free movement and interchange of academic thought. You are right in thinking that exchange of professors is scarcely practicable, though it is occasionally tried on a limited scale by religious societies maintaining colleges in different countries. The difficulties are many. Professors are usually incommensurable and often unknown quantities. Transfers are in many cases hampered by official regulations regarding leave, pension, and other considerations. The overseas Universities would often welcome men of intellectual note as temporary lecturers; they do not merely want men who are in need of a change of air and can be readily spared at home.

The desire for interchange is more widespread than many suppose. At the present moment several of the overseas Universities have representatives in this country on the lookout for lecturers willing to give their services for a term or a couple of terms. The remuneration offered is very handsome. This fact is sufficient to indicate the need for a Central Bureau of University Information. Men are wanted who can not only impart information on special subjects, but also infuse fresh vitality into University organization and methods. In illustration of this demand we may refer to Bombay, where the Governor has just addressed a letter to the Vice-Chancellor pointing out the need that the University should prepare for corporate action amongst colleges and for new and higher activities. He proposes to obtain the services of an expert from home to report to the Senate measures necessary to bring the University into line with present requirements. He recommends this course partly because "the cost of obtaining professors of exceptional mark for permanent posts in India would necessarily be heavy and selection would offer difficulties, and it would never be possible to predict success with certainty in such cases."

It is quite true that an educational appointment overseas is in the majority of cases a sentence of long exile. After three, or at most five years' service, escape and return are practically impossible, except to certain specialists. This immobility involves a real loss to the Empire as a whole. Brilliant

young scholars are deterred from seeking appointments overseas, and the old country sees and hears too little of many men who have acquired breadth and insight in handling subjects of great social and educational importance. No University should be regarded as fully equipped for its work if it does not bring its students into close touch with men who have "seen and done" notable things beyond its own walls.—I am, &c.

SYNDIC.

TRAINING AND PRUNING.

To the Editor of The Journal of Education.

DEAR SIR,—From the Head Mistresses' Conference one learns that the present system of training for ordinary secondary teachers is not wholly satisfactory. Evidently, after being trained, some people can teach and some cannot. Some head mistresses lay the blame at the door of the training college curriculum in being too theoretical and aloof from the intimate working of school life, and plead that the training of each individual should take place in a separate school recognized for this purpose. Others, again, see the fault in the material offering to be trained and in the apparent inability of the colleges to eliminate the unfit after fair trial. Now, while it cannot by any means be said that the physical training colleges have never certificated an unfit person, it must be admitted that the power and common practice of turning away unsuitable students has done much to keep up the standard of fitness in this particular branch of education. Long may the colleges retain their independence and this power to use the pruning knife, for the receiving of educational money grants might easily destroy the power, as internal economic pressure has, on occasion, prevented its adequate exercise. We recommend the secondary training colleges to take a leaf from the experience book of the physical training colleges—i.e. to admit all properly qualified applicants for training on a term's approbation, and be prepared to eliminate at least ten per cent. at the end of the first term, returning the class fees for the same period. As ability to teach is the crux of "fitness," plenty of teaching practice must come during the first term. The whole staff should report progress on each student at half-term, and the "lazy ones and the aisy ones" and the otherwise doubtful are then put on their mettle, and, if advisable, can be given some special help. Miracles in self-development are sometimes wrought in the last six weeks of term, and the final painful task of elimination is thereby made easier to those in responsibility.

Where such a system is in force the status of training is raised, *the public is better served*, and the individual is spared the misery of finding herself launched on an unsuitable career, with no more money or time at her disposal to choose another.

(Mrs.) E. ADAIR IMPEY

(Editor *Journal of Scientific Physical Training*).

July 30, 1912.

VACATION TERM FOR BIBLICAL STUDY.

THE Vacation Term for Biblical Study held its Annual Meeting at Oxford from July 27 to August 17. The lectures were given in the Hall of Keble College, and students were boarded at Lady Margaret Hall, St. Hugh's College, and Somerville College. Altogether, about 260 students, many of whom came from abroad, attended for one or more weeks, a large number staying throughout the whole course.

The object of the Vacation Term is probably now well known, but, for the benefit of those who have not yet heard of it, it may be mentioned that the aim of the Committee which arranges the lectures is to make known the results of modern Biblical scholarship by means of lectures on academic lines. The scheme is on a broad Christian basis, both lecturers and audience belonging to various denominations. In each week two complete courses of four lectures are given, as well as single lectures; but all the courses are arranged to illustrate one central idea. This year that central idea was: "Christ in Israel, in the Gospel, in the Church."

The term began on July 29 with an inaugural lecture by the Bishop of Oxford, who took for his subject "A Permanent Religion." Dr. Gore pointed out that the Jew alone, half-way between West and East, had a true conception of God the Creator, who reveals Himself to man. Christianity, the religion for East and West alike, the essence of which is faith in Jesus Christ, sprang from a Jewish origin. "Salvation is of the Jews."

Course I, by the Rev. R. Brook (Merton), was on "The Gospel

according to St. Matthew." The lecturer began with a statement of the present condition of the Synoptic Problem, and later the character and purpose of the First Gospel were discussed. "The writer gives us a portrait rather than a mere photograph." The Rev. Dr. Joyce (St. Deiniol's Library, Hawarden) took for the subject of Course II "The Development of Messianic Expectations to the Christian Era." He distinguished between Messianic prediction and Messianic expectation, "prediction being the efficient cause of the expectation." In the first two lectures he traced the rise of the Messianic idea, showing the contributions made to it by individual prophets. In the last two lectures he dealt with the currents of thought stirring in post-exilic and Maccabæan times, and showed how behind the Maccabæan revolt was the influence of the literature known as apocalyptic. He pointed out how Messianic expectation was further shaped by the Apocalyptic writers, so that this literature, so strange to modern minds, formed a very real preparation for the revelation of Christ. Prof. Kirsopp Lake (Leiden) gave a single lecture on "St. Paul's Eschatology." He began by pointing out how deeply St. Paul's ideas were coloured by Jewish thought. The eschatology of the early Church may have been mistaken, but this does not affect the essentials of Christianity. "Christianity is not bound up with its temporal expression: it is rather continuity of life."

In the second week, Course III, on "The History, Social Conditions, and Religion of Israel in the Ninth and Eighth Centuries B.C.," was given by Canon Foakes-Jackson, who drew a vivid picture of the times, and ended by an appeal for the retention of the Old Testament in teaching as a basis of belief and practice—"it was a sound ideal of righteousness after which ancient Israel strove so well." Course IV, by the Rev. Prof. Nairne (King's College, London), was generally agreed to be the most impressive of the series. The subject, "The Transformation of the Messianic Hope by Our Lord and His Apostles"—bound up as it is with Eschatology or Apocalyptic—is one of the burning theological questions of the day. Prof. Nairne began where Dr. Joyce, in the first week, left off, by showing that our Lord was the type of Messiah whom the Jews had been prepared to expect. The lecturer considered that the key to the problem of our Lord's nature is the Apocalyptic view of the Gospel—that which regards Him as acting the passive rôle of the Messiah, relying in all things on the Father's will. He traced the gradual transformation of the Apocalyptic idea in the Epistles of St. Paul and St. Peter, the Revelation, and the Epistle to the Hebrews, till, in the Fourth Gospel, "the primitive idea of sudden fulfilment gives place to the modern idea of evolution." He showed how the author of the Fourth Gospel, and to some extent also the writer to the Hebrews, used the sacramental principle in teaching: to them "the manhood of the Lord in the days of His flesh was the sacrament of His Divinity." During the week a lecture was given by the Rev. Dr. Selbie (Mansfield) on "The Theology of the Early Prophets," and a lantern lecture by Prof. Macalister on "The Geography of Palestine." This second week was notable for the visit of Mrs. Benson, the revered President of the Vacation Term Committee, and the inspiring address which she gave to the students one evening will remain long in the memories of those who heard it.

The third week began with Course V, on "Personality," by Prof. Jevons (Durham). This was a most interesting course. Dr. Jevons, after disposing of the "pre-animistic theory," dealt with the psychology of Hume, James, and Bergson, each of whom, in different ways, deny the existence of personality. In his last lecture Dr. Jevons attacked Solipsism, and showed that there is no such thing as an individual "who is impervious to other selves." Personality implies subject and object: the person has relations and fellowship with other members of society, and "the unity and the coherence after which a person strives is to be gained only by that love which is the impulse towards unity with one's neighbour and one's God." Prof. Peake (Manchester University) lectured on "Isaiah and Micah" (Course VI). Single lectures were also delivered by Prof. D. S. Margoliouth, on "The Aramaic of our Lord's Day," and by Canon Scott Holland, who gave a most interesting account of Justin Martyr.

More and more this Vacation Term is coming to be appreciated by women who have to teach the Bible to others. A large number of the students were mistresses in secondary schools. The systematic instruction given is valuable, but even more valuable is the personal contact with others who have, it may be, very different work to do in the world—with women who have high ideals of study and teaching, of service and fellowship.

EVELYN W. HIPPLEY, S.Th.

CANON MARTIN has resigned the Principalship of Winchester Training College, and is succeeded by the Rev. E. G. Wainwright, M.A.

SAFE NOVELS.

The Touchstone of Fortune: being the Memoir of Baron Clyde, who lived, thrived, and fell in the Doleful Reign of the so-called Merry Monarch, Charles II. By CHARLES MAJOR. (6s. Macmillan.)

The Merry Monarch, if one is to judge by Baron Clyde's picture of him, was characterized by the absence of all the virtues and the presence of most of the vices. The tale is largely concerned with the dangers encountered at his hands by the beautiful and virtuous Frances Jennings, and with her love for George Hamilton, one time a profligate, later moulded by his passion for her into the semblance of an honest gentleman. The mutual love of Baron Clyde himself and pretty Betty Pickering, the daughter of an innkeeper, forms a pleasing background for the principal motive. By poetic licence the sale of Dunkirk to Louis XIV is made to take place when Nell Gwynn and other historic personages were at Court; but in other respects the tone of verisimilitude is well sustained.

Out of the Wreck I Rise. By BEATRICE HARRADEN. (2s. net. Nelson.)

A clever dramatic agent fraudulently withholds a portion of the receipts from certain plays. He repents, and the problem of how he shall be saved from exposure and disgrace is attacked by two of his old flames. The portrait of the more notable of the two women, Tamar Scott, is skilfully executed. But the story as a whole lacks life and unity and is disfigured throughout by the unnaturalness of the diction. A typical example of this glaring fault occurs in the first few pages. "Yes," he said aloud: "this means my eventual humiliation unless I am able to handle this man adroitly, and thus stem the tide of further investigations." Apart from the fact that the utterance is in itself ridiculous, no person outside a lunatic asylum ever expressed such thoughts aloud. Again, people no longer say "Woe is me! woe is me!" or beat their breasts, and a reader of average intelligence does not need to be told that £120 less 15 per cent. is "exactly £102." The introduction of a supernatural appearance is uncalled for and inartistic. At the moment when the tide of adverse circumstances sets in too strongly to be pleasant, Adrian Steele, the dramatic agent, is conveniently overwhelmed by an avalanche in the Alps.

The Oakum Pickers. By L. S. GIBSON. (6s. Methuen.)

Upon the title-page we read "If one side of love is an enchanted palace, the other is a workhouse and a prison. In its cells sit all the men and women who have lost or wasted their love, and pick the oakum of heart-break and disappointment, of broken faith and vanished hopes." In the pages which follow a considerable quantity of oakum is disposed of, for the story is a chronicle of marriages between persons of mutually incompatible temperaments and of hearts broken by the shattering of hopes. Minute psychological analysis and desultory moralization form the bulk of the letterpress. One leaves the book with a feeling of intense weariness; and that, we suppose, is just as it should be, for oakum-picking is an exhausting process, even to read about.

The Outcry. By HENRY JAMES. (6s. Methuen.)

Dean Swift boasted that he could write an essay on a broomstick, and Mr. Henry James vies with him in composing a drama (the word is the publisher's) on the sale of a picture by an English nobleman to an American collector. The subject might lend itself to true tragedy, as when in Boccaccio the poor squire wrings his pet falcon's neck to provide a meal for his lady-love: but Mr. James moves on a lower plane and attempts no higher flight than genteel comedy. The only attractive character in the play is Mr. Bender, the Yankee millionaire, whose frank vulgarity is a relief to the thin veneer of breeding which barely hides the meanness of the other noble characters. Lord Theign, the owner of the picture, is intended as a type of the *grand seigneur*, but he is introduced to us as bargaining with Lord John, an impecunious youth who lives on Mr. Bender's commissions, one of the conditions being that Lord John's mother, the Duchess, shall cancel a bridge debt owed to her by Lord Theign's married daughter, and afterwards, when Lady Grace declines to ratify the contract, he damns her like any plebeian. Lady Grace promises to be a true heroine—an Iphigenia sacrificed at the altar of art; but it turns out that her heart is given, not to art, but to the Bohemian aesthete, Mr. Crimble. National treasures of art are pawns in the game, and survive, not for any worth attached to them by the owners, but from the internecine struggle of the big prices. The novel is a brilliant but a depressing and sordid comedy.

EDWARD STANFORD'S LIST

NEW OROGRAPHICAL MAPS

FLINTSHIRE. Stanford's New Orographical Map of Flintshire, prepared for use in schools. This map shows the Parliamentary Boroughs, Urban and Rural Districts, and Civil Parishes, and their boundaries. Antiquities and Historic sites are also marked and named. Contours are drawn at 200, 400, 600, 800, 1000, 1250, and 1500 feet above sea-level. The map is printed in black, blue, and several shades of brown.

Size: 44×35 inches; scale, 1½ inches to 1 mile (1:42,240).

Price:—Mounted on rollers and varnished, 15s.

LANCASHIRE AND CHESHIRE. Stanford's New Orographical Map of Lancashire and Cheshire, reduced from the Ordnance Survey. By E. G. W. HEWLETT, M.A., and C. E. KELSEY, M.A. A graphic representation of the physical features of the counties, showing also county boundaries, railways, canals, rivers, &c. The principal towns and cities are shown in such a way as to indicate approximately their populations.

* Size: 42×60 inches; scale, 2 miles to an inch (1:126,720).

Price:—Mounted on rollers and varnished, 15s. net.

SOUTHAMPTON (HAMPSHIRE). Stanford's New School Map of the County of Southampton (Hampshire), prepared for use in schools under the administration of the County Education Committee. This map, drawn in a bold and readable style, contains the names of all towns and villages where there are public schools, distinguishing secondary schools, council schools, and non-provided schools. It also shows the areas embraced in County Boroughs, Municipal Boroughs, and Urban Districts. First-class and second-class roads, railways, and railway stations are shown; the Roman roads are also shown in a distinctive character. The map supplies accurate information about Archaeological remains, distinguishing defensive earthworks of pre-Roman time, earthworks and towns of Roman date, and earthworks and castles of the Norman period; also dykes of pre-Roman, Roman, and of unknown date; all these particulars have been supplied by Dr. WILLIAMS-FREEMAN, President of the Hampshire Archaeological Society.

Contour lines are drawn at intervals of 100 feet, and are coloured in tints of green and brown; the five-fathom line is marked on the sea; and the principal coastal lights are shown.

A geological section on the same horizontal scale as the map, drawn on the meridian of 1° 18' west of Greenwich, shows the various formations that are to be met with on this north and south line through the county. This section has been edited by HORACE B. WOODWARD, Esq., F.R.S., F.G.S.

* Four sheets; 60×60 inches; 1 inch to 1 mile (1:63,360).

Prices:—Coloured sheets, 16s.

Mounted on rollers and varnished, 20s.

OROGRAPHICAL MAPS

Compiled under the direction of

H. J. MACKINDER, M.A., M.P.,

Reader in Geography in the University of London.

"This excellent series."—*Geographical Journal*.

These Maps are primarily intended to depict the physical features of the Continents, but by the employment of the device of grey, almost transparent lettering, many names have been inserted without spoiling the graphic effect of the colouring. The contour lines have been drawn at the same intervals above and below the sea-level, with the result of rendering visible the true contrast between land elevations and ocean depths. The frontiers of countries have been marked by distinct, though subordinate, broken lines, and every town of a given minimum population has been indicated by a symbol.

1. MAP OF EUROPE.

Four Sheets, 60×54 inches; 63½ miles to an inch (1:4,000,000).

2. MAP OF AFRICA.

Four Sheets, 50×58 inches; 115 miles to an inch (1:7,286,400).

3. MAP OF PALESTINE.

Four Sheets, 52×62 inches; 4 miles to an inch (1:253,440).

4. MAP OF ASIA.

Four Sheets, 58×50 inches; 140 miles to an inch (1:8,870,400).

5. MAP OF NORTH AMERICA.

Four Sheets, 52×60 inches; 94½ miles to an inch (1:6,013,500).

6. MAP OF SOUTH AMERICA.

Four Sheets, 52×60 inches; 94 miles to an inch (1:6,000,000).

7. MAP OF AUSTRALASIA.

Four Sheets, 58×50 inches; 85 miles to an inch (1:5,385,600).

8. MAP OF THE BRITISH ISLES.

Four Sheets, 50×58 inches; 11½ miles to an inch (1:728,640).

"Thoroughly trustworthy and up to date. . . . Altogether we can thoroughly recommend these maps—all of them—for the classroom."—*School World*.

Teaching Geography on Scientific Lines.

THE NEW GEOGRAPHY ATLASES. Price 4½d. net.

The teaching of Geography during the last ten years has undergone a complete revolution. Geography is no longer regarded as a conglomeration of unrelated names and places, or of facts and statistics, but as a Science which shows us how physical laws affect climate and how climate and soil account for vegetable and animal life, and how they in their turn determine the position of our cities and towns, or briefly—as these affect human life—how environment shapes and determines the destiny of the races of mankind. The object of these books is to enable this idea to be carried out in schools.

I.—THE BRITISH COLONIES, PROTECTORATES AND INDIA. (Ready.) Price 4½d. net.

Containing — 4 Photo Relief Maps, 27 Skeleton Maps, interleaved with 12 pages of squared paper.

II.—AMERICA. (Ready.) Price 4½d. net.

230 MEDALS AND PRIZES!!!**STUDENT'S ELEMENTARY
BOOK-KEEPING**By **ARTHUR FIELDHOUSE**, Accountant,*Commercial Lecturer, Technical College, Huddersfield,*who will forward copy **Index** and **Specimen Pages** on receipt of
Post Card addressed to **Box D 50, Huddersfield.****290 Pages. 16th Edition. Post free 2/-.****100 Exercises. 350 Questions.****Teacher's Specimen Copy, from Author only, 1/-.****The ONLY TEXTBOOK to which there is a FULL KEY.**

While this textbook more than covers all **Elementary Examinations** in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Society of Arts, West Riding County Council, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.**

The **exercises** and the principles introduced therein are so carefully **graded** in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The **Questions** will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers** of the **Society of Arts, the W.R.C.C., College of Preceptors, the Oxford and Cambridge Locals, and the L.C.C.,** are included.

London: **SIMPKINS.** Leeds: **BEANS, 17 Boar Lane.****THE STUDENT'S
BUSINESS METHODS**
and
Commercial Correspondence.By **ARTHUR FIELDHOUSE**, Technical College,
Huddersfield,who will forward **Specimen Pages** and **Index** on receipt of Post Card
addressed to **P.O. Box D 50, Huddersfield.****Fifth Edition. 350 Pages.
2/6 Post free.****80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.**

This is the only **practical, up-to-date** book on **Commercial Correspondence and Office Work**, and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well **graduated**, and the **teacher** is **saved the drudgery** of preparing **Test Papers**, one of which follows every chapter, in addition to numerous **Examination Papers.** **PRACTICAL work** is provided in the **Series of Business Transactions** included in some of the **Test Papers.** It is the only **Complete Guide**, covering all the **Elementary Examinations.** Small-priced books may be had on the subject, but as they do not cover the **Syllabuses** they are dear at a gift. **Efficiency** should be the first consideration. It is an excellent **Hand-book** for the **Junior** in the **Office.** **Teacher's Specimen, from Author only, 1/3 post free.**

A PRIMER OF LOGIC.

By E. E. CONSTANCE JONES, Mistress of Girton College, Cambridge. With Examination Papers, Tables, Index, &c.

Fcap. 8vo, 1s. 6d.

(Second Edition in preparation.)

PRESS OPINIONS.

"Very aptly written."—*School World*.

"Well suited for its purpose. The examples and illustrations are particularly excellent."—*Spectator*.

GIRTON COLLEGE STUDIES, No. 4.

A NEW LAW OF THOUGHT AND ITS LOGICAL BEARINGS.

By E. E. CONSTANCE JONES, Author of "A Primer of Logic."

Cambridge: At the University Press, 1911.

Price Two Shillings.

"Miss Jones has made a great discovery. She has discovered the Law of Significant Assertion, and also that it does not find a place among those which Logic enumerates as the self-evident Laws of Thought."—*Mind*.

"Miss Jones seems to have made out a good case for regarding the Law of Significant Assertion as a fundamental Law of Thought."—Prof. STOUT.

"I may here refer very briefly to Miss Jones's interesting treatise on 'A New Law of Thought.' . . . The substitution of S is P, as the general formula of thinking, for A is A, which taken as such a formula is meaningless, will I hope be adopted by logical theory and practice. By dealing with a difficulty which so great a logician as Lotze could not overcome, the suggestion shows itself to possess a considerable value."—Dr PERNARD BOSANQUET.

HORACE MARSHALL & SON

Complete Illustrated Educational Catalogue, 1912-13, will be sent post free on application.

A New Part of A FIRST BOOK IN ENGLISH LITERATURE.

By C. L. THOMSON, late of Somerville College, Oxford, and the Cambridge Training College.

Part VII. (1820-1901) ...	2s. 6d.

This book may also be obtained in the following form:—Parts I, II, III, and IV, in one volume, price 6s. 6d.; and Parts V, VI, and VII, in one volume, price 6s. 6d.

ENGLISH HISTORY IN ENGLISH POETRY.

From the French Revolution to the Death of Queen Victoria.

By C. H. FIRTH, M.A., LL.D., Regius Professor of Modern History in the University of Oxford. Annotated. Price 2s. 6d.

This book contains a long and valuable introduction dealing with the manner in which the poetry of the period may be used to illustrate its history, together with selections from the poems, classified according to the topics to which they refer. It is intended to be studied, in connexion with the history of the period, in the upper forms of secondary schools.

THE BRITISH ISLES.

By E. M. HUGHES, M.A. (Dublin), Oxford Honours School of Natural Science; Head Mistress of the County School, Tunbridge Wells, and formerly Lecturer in Natural Science at the Cambridge Training College for Women. Price 1s. 6d.

Extract from Preface.—In writing this textbook an attempt has been made to provide an intelligent introduction to the study of Geography. It is hoped that the material selected may be suggestive to the teacher as well as interesting to the children. As far as possible the text has been arranged so as to lead the pupils to draw conclusions from their own observation or from presented facts.

THE POETRY READERS.

Edited by ALFRED PERCEVAL GRAVES, M.A., formerly one of His Majesty's Inspectors of Schools.

This Series is meant to provide a means for carrying out the suggestion of the Board of Education that a larger amount of attention should be given to recitation and reading aloud. The contents of the various parts are selected especially with a view to this end.

Each part, cloth bound, 96 pages, price 8d.

Book VI. World Stories ...	1s. 6d.

THE CARMELITE CLASSICS.

This Series aims at providing Standard English Texts at a low price, of attractive appearance, and containing a minimum of editorial matter. Such notes as occur refer only to such matters as pupils of school age could not be expected to know or to think out for themselves, and, when quotations from Greek or Latin authors occur, they are given in standard English translations. This Series is now published in limp cloth at 4d., and in cloth boards at 8d., 1s., and 1s. 4d.

Full List post free.

TEACHERS' DIPLOMAS.

The COLLEGE OF PRECEPTORS holds Exam-
inations of Teachers for the Diplomas of Associate,
Licentiate, and Fellow of the College in London,
Birmingham, Bristol, Dublin, Leeds, Liverpool,
Manchester, Newcastle-on-Tyne, and Plymouth. The
Associateship and Licentiate Examinations are
held twice a year, viz., in January and in August-
September. The Fellowship Examination is held
only in January. The Theory and Practice of Edu-
cation is an obligatory subject for each grade. For
Regulations apply to the SECRETARY, College of Pre-
ceptors, Bloomsbury Square, London, W.C.

PRELIMINARY EXAMINATIONS FOR MEDICAL, DENTAL, AND PHARMACEUTICAL STUDENTS.

The COLLEGE OF PRECEPTORS holds Pre-
liminary Examinations in March, June, September,
and December. All the Examinations are held in
London, Birmingham, Bristol, Cardiff, Edinburgh,
Leeds, Liverpool, Manchester, Newcastle-on-Tyne,
and Nottingham. For the June and December
Examinations there are other Centres, including
Blackpool, Brighton, Cheltenham, Croydon, Ealing,
Exeter, Glasgow, Inverurie, Margate, Plymouth,
Portsmouth, Sheffield, Southampton, Southport,
Sunderland, and York. In March there is a Centre
at Inverness, and in September at Aberdeen. For
Regulations, apply to the SECRETARY, College of
Preceptors, Bloomsbury Square, London, W.C.

LONDON UNIVERSITY DEGREES.

*Graduates of other Universities, and those who
have passed certain specified examinations—e.g.
The Cambridge Senior Locals, &c.—may register
as members in lieu of taking the Matriculation
Examination of London University.*

They will be awarded to the best candidates holding a Degree or its equivalent in Arts or Science.

Applications should be sent to the HEAD OF THE DEPARTMENT.

MADAME

BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnastic Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighborhood offers over one thousand children for the students' practice as teachers.

Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIAC TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

SCHOOLS FOR SALE AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY, Ltd., Educational Agents, 158-162 OXFORD STREET, LONDON, W.

MESSRS. TRUMAN & KNIGHTLEY always have on their books a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, and therefore can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS and arranging PARTNERSHIPS. All communications and inquiries are treated in the strictest confidence. The following are a few selected from their list:—

GIRLS' SCHOOLS.

WORCESTERSHIRE.—Good-class **BOARDING SCHOOL FOR GIRLS.** Established 25 years. 33 boarders, fees 45 to 51 guineas, and a few day boarders, fees 18 to 27 guineas. Large detached house. Dry and bracing climate; gravel soil. Receipts £1,724. Profit £360. Capitation fee accepted on pupils transferred. Successor should be a lady with Low Church views. Inspected and warmly recommended.—T 2,015.

WEST COAST.—Two ladies, who are retiring, are prepared to hand over their high-class **BOARDING AND DAY SCHOOL** to their present Head Mistress and for whom a Partner is required. School thoroughly sound and quite full with 30 boarders. Receipts over £2,000; profit about £350, but could be considerably increased with reasonable economy. Half share of goodwill £500. School enjoys a high reputation and can be warmly recommended.—T 2,036.

SOUTH COAST.—Very flourishing and high-class **BOARDING AND DAY SCHOOL** for GIRLS at a favourite health resort. 32 boarders, fees £63 to £78, 15s., and 9 day pupils, fees 9 to 12 guineas per annum, exclusive of extras. Receipts over £2,000. Profit over £900. Specially built premises with grounds of about an acre. Capitation fee accepted on pupils transferred.—T 2,035.

PARIS.—The Principal of a first-class Educational Home in Paris desires to dispose of her connexion; 7 boarders paying fees from £150 to £200 per annum. Profit about £300. Accommodation for 10 pupils. A thorough introduction and excellent references given.—T 2,006.

SOUTH-EAST COAST.—High-class and very successful **BOARDING SCHOOL FOR GIRLS** at a favourite health resort. Principals dissolving partnership and retiring; 56 boarders, fees from £60 to £100 per annum. Receipts £4,400, net profit £1,250. School has more than doubled its numbers during last four years. Goodwill £1,500, payable by instalments if desired.—T 1,139.

SURREY.—Very flourishing **GIRLS' HIGH SCHOOL**, with Kindergarten; old-established. 85 pupils, 16 of whom are boarders. Receipts £1,200, net profit £300. Splendid schoolroom accommodation for 120 pupils. Good residential neighbourhood, with plenty of scope for increasing present number of pupils.—T 1,189.

HOME COUNTIES.—Large, old-established, and very successful **BOARDING AND DAY SCHOOL.** Principal retiring. 50 boarders, 100 day pupils. Gross receipts over £3,000. Profit £500. Fine premises with field for games. Capitation fee accepted on all pupils transferred. Personally inspected and strongly recommended.—T 1,158.

CHESHIRE.—Principals removing their boarders to the seaside desire to dispose of the **DAY-PUPIL CONNEXION**, numbering nearly 100 pupils, and any boarders who may not go with them. Receipts from day pupils alone £1,310. One term's fees asked for pupils transferred. Exceptionally fine premises at moderate rent.—T 2,019.

GLAMORGANSHIRE.—**BOARDING AND DAY SCHOOL** with kindergarten. 19 boarders, 16 day pupils. Receipts £995, profit £140. Only £300 asked for goodwill, to include school furniture, gymnasium appliances, &c. Only part need be paid down.—T 2,031.

NO CHARGE TO PURCHASERS.

Full particulars of the above and others may be obtained on application. *Intending purchasers are invited to write stating their requirements.* Address—158 to 162 OXFORD STREET, LONDON, W.

LONDON, W.—A high-class **BOARDING AND DAY SCHOOL** for the daughters of gentlemen in one of the nicest residential districts. 11 boarders, fees 100 to 150 guineas per annum, 21 day pupils, fees 24 to 30 guineas per annum, exclusive of extras. Receipts over £2,000; profit £400. Capitation fee accepted on pupils transferred. Strongly recommended.—T 2,044.

CHESHIRE.—**DAY AND BOARDING HIGH SCHOOL**, with Kindergarten. 3 boarders and 32 day pupils. Premises consist of a double house of about 22 rooms in large grounds. Receipts £550, profit £220. For an immediate offer the small sum of £200 would be accepted for goodwill, or the vendor would be willing to transfer on a capitation basis.—T 2,045.

SOUTH COAST.—Under 80 miles from London. The principal of a high-class **BOARDING SCHOOL** for the daughters of gentlemen, with a connexion of 15 boarders paying good fees, desires to amalgamate with a lady able to introduce a similar number of pupils with a view to removing to larger and better premises in the immediate neighbourhood which will be available in March next.—T 2,046.

HAMPSHIRE.—Middle-class **BOARDING AND DAY SCHOOL.** 7 boarders, 15 day pupils. House delightfully situated in its own grounds, with sea in front and New Forest at the back. Receipts £470. Goodwill, to include lease, house and school furniture, £250.—T 2,042.

GERMANY.—First-class and very flourishing **FINISHING SCHOOL** of about 18 pupils. Receipts last twelve months, £2,600, considerable profit. Splendid opening for an English and German lady to take over School in partnership. Personally inspected and warmly recommended.—T 2,047.

KINGSLEY'S HEROES. Edited by R. G. GILL, B.A. With Notes required by Preliminary Candidates and Questions from past Examinations ... 1s.

A SIMPLE MANUAL OF GRAMMAR ON ORGANIC LINES.

By CHARLES and ARTHUR LOCKE. Price 1s. 6d.

This manual deals with the subject on bold and practical lines. Its plan is entirely original, its style fascinating and yet simple, and, though it contains no heresies, it inaugurates a new era in the teaching of Grammar.

CLEAR. BRIEF. ORIGINAL. INTERESTING.

SOME SALIENT FEATURES.

- GENERAL IDEA** *The sentence as the unit in the teaching of Grammar.*
- MANNER OF EXPOSITION**
 1. A continuous and lucid explanation, instead of a series of disconnected paragraphs.
 2. Progress from the known to the unknown.
 3. Avoidance of definitions and technical terms, except at points where their aid will be welcomed.
 4. Insistence on principles rather than on exceptions (these being in the main relegated to Appendices).
 5. Variation of method, to prevent interest flagging.
- METHOD OF ANALYSIS** *A new and simple method, involving the use of only 1 column.*
- EXAMPLES AND EXERCISES.** These range over all literature, and are varied in substance and style. Men of action are quoted as well as great writers, and care has been taken to make even the shortest passages forward the general aim of the book, which is to carry on, at the same time with the teaching of Grammar, the inculcation of a love of good English, of noble behaviour, and of such simple virtues as patriotism and citizenship.

Complete list of Books, included in the Oxford and Cambridge Edition, required for the 1913 Universities' Local and other Examinations, post free. With a view to adoption for Class use, the publishers will be glad to forward Sample Copies post free.

"Oxon-Cantab" Guide and Syllabus Extracts for the 1913 Oxford and Cambridge Local Examinations and Complete Educational Catalogue post free.

SCHOOL TRANSFER AGENCY.

(Established
1833.)

Proprietors—Messrs. GRIFFITHS, SMITH, POWELL & SMITH.

Offices—34 BEDFORD STREET, STRAND, AND 22 HENRIETTA STREET, COVENT GARDEN, LONDON, W.C.

Schools Transferred and Valued. No charge whatever will be made to Vendors of Schools or School Partnerships, by Messrs. Griffiths, Smith, Powell & Smith, unless a sale is effected or agreed upon.

SPECIAL NOTICE TO VENDORS.

As Messrs. GRIFFITHS, SMITH, POWELL & SMITH have at all times the names of a large number of intending Purchasers of Schools and School Partnerships on their books, they have every confidence in stating that they can readily effect a sale of any desirable Property they may be instructed to dispose of. All instructions receive the personal attention of one of the Partners of the firm.

No commission charge whatever will be made by Messrs. Griffiths, Smith, Powell & Smith, to Purchasers of Schools, or School Partnerships.

Applications from intending purchasers are solicited for the following properties:—

GIRLS' SCHOOLS.

KENT (Seaside).—Superior BOARDING AND DAY SCHOOL. Number of Boarders 14, and 9 Day Pupils. Receipts about £1188. Rent £150. Price for goodwill, £400.—No. 1,863.

NORFOLK.—BOARDING AND DAY SCHOOL. Income past year £800. No. of Boarders 10, and 40 Day Pupils. Very attractive premises standing in nice grounds of about one acre. Rent £103. Price for Goodwill only £100. Furniture by arrangement. Part of the purchase money can be paid by instalments. Very exceptional opportunity.—No. 1,860.

NORTH WEST OF ENGLAND.—Very successful and high-class DAY SCHOOL. Income over £1,400. 90 to 100 Pupils. Some Boarders might be secured. Very fine premises and grounds. Goodwill, only one term's fees for Pupils transferred. Exceptional opportunity.—No. 1,807.

LONDON, N.—Successful BOARDING AND DAY SCHOOL FOR GIRLS, with Kindergarten Department. Gross receipts about £1,000. Number of Boarders 5 and 65 Day Pupils. Price for goodwill only £400.—No. 1,792.

LANCASHIRE (Seaside).—BOARDING AND DAY SCHOOL FOR GIRLS.

A Complete List of Girls' and Boys' Schools for Sale, as also of Partnerships, will be sent to intending purchasers on application.

Gross receipts about £1,000. Number of Boarders 18, and 30 Day Pupils. Rent of very fine house only £120; this could be nearly covered by letting the house in the holidays. Price for goodwill, £400.—No. 1,790.

MIDDLESEX.—DAY SCHOOL in prosperous locality near London. 83 Pupils. Terms up to 15 guineas per annum. Extensive premises with splendid Gymnasium. Goodwill £450, or £750 would be accepted for the place as it stands (goodwill and all furniture).—No. 1,789.

CHESHIRE—GIRLS' HIGH CLASS BOARDING AND DAY SCHOOL.—Gross receipts past year £1,405. 5s. 5d. Number of Boarders 6 and 34 Day pupils—17 of whom are Day Boarders. Goodwill £300, or Vendor would accept 1 Term's fees on all pupils transferred.—No. 1,783.

SURREY.—TRANSFER OR PARTNERSHIP.—BOARDING AND DAY SCHOOL. Gross income £1,200, net £300. Could be largely increased. 80 to 90 pupils. Terms of sale or partnership to be arranged.—No. 1,781.

HANTS (Seaside).—BOARDING AND DAY SCHOOL. Income nearly £800. Number of Boarders 13, and 30 Day Pupils. The numbers could be greatly increased. Price for goodwill and the whole of the household and school furniture (including two good Pianos), £300.—No. 1,780.

KENT (Seaside).—BOARDING AND DAY SCHOOL. Number of Boarders 9, also 9 weekly Boarders and 6 Day Pupils. Gross receipts £806. Rent £90. Price for goodwill about £350. Furniture by arrangement.—No. 1,866.

SOUTH COAST.—PARTNERSHIP IN FIRST-CLASS SCHOOL. Gross receipts about £2,500, net income fairly considerable. About £1,000 is asked for a half share of goodwill and valuable furniture. The whole purchase money need not be paid down. Very fine premises.—No. 1,777.

NORTH WEST COAST.—BOARDING AND DAY SCHOOL FOR GIRLS. Gross income over £2,000. Net £600. Number of Boarders 30, and 30 Day Pupils. Exceptional opportunity of securing a School in flourishing condition at a nominal price, viz., £600 for Goodwill. School plant at valuation. Splendid premises and grounds.—No. 1,774.

KENT (near LONDON).—BOARDING AND DAY SCHOOL. Income over £1,000. Number of Boarders 11, and 72 Day Pupils. Rent only £100. Price for goodwill, school furniture, and nearly all house furniture, £600 or close offer.—No. 1,773.

KENT (Seaside).—Highly successful BOARDING SCHOOL. 60 Pupils. Gross income at rate of over £6,000 per annum, and net at rate of £2,100. Goodwill £2,000.—No. 1,772.

BLACKIE & SON'S NEW LIST

Messrs. BLACKIE & SON will be pleased to send full Lists of Books suitable for Oxford and Cambridge Local Examinations, 1913, post free on application.

A Historical Work of First Importance.

THE GROUNDWORK OF BRITISH HISTORY.

BY

GEORGE TOWNSEND WARNER, M.A.,

Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c.

AND

G. H. K. MARTEN, M.A.,

Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and full Index.

764 pp., super-crown 8vo, 6s. Also In Two Parts, 3s. 6d. each.

Mr. G. M. Trevelyan in the *Morning Post* says: "It is to be hoped that this book will be widely used in the upper and middle classes of our schools. The want of a good school history on a level with modern standards of historical knowledge and educational method is a very real want indeed. The present volume is neither dull nor vulgar. It is written by scholars and gentlemen, who are yet thoroughly modern in their conception of how history should be taught—a conception based on experience."

BLACKIE'S ENGLISH TEXTS.

6d. each. Blue limp cloth covers. Over 100 Volumes. To be used in correlation with the study of **English Literature and History.**

THE WARWICK SHAKESPEARE.

Edited by **Prof. HERFORD, Litt.D.** The best and most widely used edition of Shakespeare for School purposes. Price **1s. and 1s. 6d.**

A NEW ENGLISH COURSE ON MODERN LINES.

A FIRST ENGLISH COURSE.

By **FRANK JONES, B.A.**, Assistant Master, King Edward's School, Aston, Birmingham; Lecturer in English at the Birmingham and Midland Institute; Joint Author of Scott and Jones's "Latin Course." Crown 8vo, cloth, **2s. 6d.**

FIRST ENGLISH EXERCISES.

By **FRANK JONES, B.A.**, Assistant Master, King Edward's School, Aston, Birmingham; Lecturer in English at the Birmingham and Midland Institute; Joint Author of Scott and Jones's "Latin Course." **1s. 6d.**
Reprinted from "A First English Course." For class use where the master prefers to give the grammatical exposition orally.

SCIENTIFIC METHOD.

ITS PHILOSOPHY AND ITS PRACTICE. By **F. W. WESTAWAY, B.A.** Super-crown 8vo, **6s.** *Just published.*
This résumé of philosophic principles and review of the development of Scientific Method should be found invaluable by all who are interested in the methodical procedure of scientific investigation.

A NEW SPANISH READER ON MODERN LINES.

Edited by **R. D. MONTEVERDE, B.A. (Madrid)**, Examiner to the London County Council; Lecturer at the Birkbeck College, West Ham Municipal Technical Institute, St. George's College, &c. **2s. 6d.** *Just published.*

A book of some 200 pages prepared by an experienced teacher, giving specimens of Spanish as it is spoken and written to-day by masters of the language. The selection covers a wide range of subjects and style, and includes poetry as well as prose. For students preparing for examinations and for commercial life, a list of Spanish idioms is provided, and also certain legal documents which will be found useful.

A COURSE OF PHYSICS.

PRACTICAL AND THEORETICAL.
By **CHARLES H. DRAPER, B.A., D.Sc.**, Author of "Heat and the Principles of Thermodynamics," "Light, Heat, and Sound," &c.
Super-crown 8vo. 424 pages. Illustrated. Price **4s. 6d.** *Just published.*

TILLAGE, TRADE, AND INVENTION.

AN OUTLINE OF INDUSTRIAL HISTORY.
By **GEORGE TOWNSEND WARNER.** Crown 8vo, cloth, **2s.** *Just published.*
The aim of this book is to give a simple account of the land and of those who worked it; of the towns and their trade; of our industries and their expansion; and of the different opinions which men of the past have held upon the constantly recurring problems of land, labour, and industrial enterprise.

Prospectuses giving full particulars of above books will be sent post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.
GLASGOW AND BOMBAY.

OCCASIONAL NOTES.

IN his Presidential Address, which is dealt with elsewhere, Prof. Adams did not ignore the difficulties inherent in any attempt to reduce education to a science and to set up an objective standard of attainment. Human nature, he admitted, was so complex and so volatile that it was almost impossible to reduce its workings to fixed laws. We would contend that the qualifying adverb might well be omitted. It is quite certain that we shall never be able to embody the phenomena of thought and feeling in laws which will work with the same rigidity as those of chemistry and physics. Chalk and iron are much the same everywhere, but no two human minds are alike. Moreover, the higher the plane of teaching, the more difficult does any scientific systematization become. Take the three subjects—gymnastics, arithmetic, and literature. The student of physical training can calculate with fair average correctness the muscular results which his schemes will produce. The teacher of arithmetic can discover with some distant approach to exactness at what age certain mathematical conceptions become intelligible to children. But what human being can gauge the effect upon a child's heart and mind of the reading of poetry? Here we work by faith, and not by sight.

WHEN educationists discuss the evaluation of results and the establishment of an objective standard, they are met by the same difficulty as the Eugenists: the results and the standards desired are not similar in all cases, but infinitely various. There is no single type that we desire to produce, and, if we had any such aim, it would

be not merely inhuman, but thoroughly unscientific. The mark of rank in Nature is heterogeneity, not homogeneity. The real standard in the teacher's mind for each pupil must be his conception—it can be at best only a vague and shadowy conception—of the kind of being which the pupil's capacities admit of his becoming.

THE discussion at the same meeting on Vocational Training suffered from the fact that the speakers had such very different social areas in their minds. The Head Mistress of Cheltenham Ladies' College was hardly discussing the same question as the Clerk to the Edinburgh School Board, and it was quite possible to agree both with the one when she contended that general education must never be dominated by the vocational ideal, and with the other when he argued for a scheme of education for boys and girls of the working classes between fourteen and eighteen in which training for occupation should have a large place. Of what vocational education would really mean in the ordinary secondary or elementary school little was heard. Dr. Morgan's contention that work in the higher standards should be "of a semi-vocational nature" is too vague for discussion. Miss Burstall had discovered the difficulty that mothers want girls to be trained for two professions—domestic life and some other. No one discussed the case of the secondary school, the majority of whose pupils are destined for business or teaching. In what would the special training of the future clerk consist beyond shorthand and book-keeping, both of which teachers brand as uneducative, whilst one is condemned by many business men as unpractical?

THERE is one kind of vocational training which is generally accepted as sound education and as specially necessary in this kingdom, and which urgently needs increased support—namely, training for the sea. It is curious indeed that preparation for the industry by which, almost more than by any other, the nation lives should be so neglected. There are certainly some training ships doing good work in which general and technical education are combined, as is advocated by the supporters of vocational training, but there are only three or four of them, and they receive scanty support from the State. The question is of national importance, for the inadequate supply of skilled seamen in passenger ships constitutes a grave danger, as some recent disasters have shown, and a field of employment which might absorb a large number of Englishmen is left largely to foreigners. We are glad to see that some of the great shipping companies and some chambers of commerce have taken the matter up, and that a national conference on the subject is to be held on October 21.

A USEFUL report was presented to the Section by the Committee on the influence of school books upon eyesight. Though education is not so bookish as it used to be, children have to exercise their eyes over print a great deal, and it is of the first importance that the print should be of the best and clearest. Among the noticeable recommendations of the Committee are the suggestions that a hard-pressed paper without gloss should be used, that elaborate and complex pictures and coloured inks should be avoided (there are good psychological as

well as physiological reasons for this), that printing in columns is reprehensible, and broad margins are desirable, and that the spacing of the type is quite as important a consideration as the size. There are useful hints to teachers. Children should be taught to hold the book at a proper distance from their eyes. It might have been added that they should hold their books *up*, instead of stooping over them. We hope the report will be carefully studied by school authorities. They have the matter in their own hands. If they rigidly refuse to buy books the print of which does not reach a proper standard, the publishers will soon cease to produce them. Books which try children's eyes are dear even at a penny.

THE *Schoolmaster* of September 7 espouses Mr. Bentliff's scheme of co-ordination, and detects in our criticism the cloven hoof of "exclusiveness." The

Correlation
of Primary and
Secondary
Schools.

word is ambiguous, and, if we are charged with advocating class distinctions, we answer that our readers will acquit us of such snobbery. If it means

that only the more capable children in the elementary schools should be sent on to secondary schools, we must plead guilty, and, in fact, our contemporary says the same, *nur mit ein bischen andern Worten*. Secondary schools are to educate "the leaders of the democracy of the future, the picked brains of the generation, so far as they can be picked." Precisely so—they should receive the cream of the elementary schools, not the mass. No doubt there are places where scholarships are too few; as surely there are others where they are too numerous. What is needed is not so much increase as redistribution.

MR. BENTLIFF'S original arguments were based largely upon the fact—real or supposed—that a large number of children from elementary schools do not

What the
Primary Schools
might do.

get on well in secondary schools, or do so only after a lengthy process of adapting themselves to their environment. Has it

never occurred to him that the remedy for this may lie to some extent in the hands of the primary schools themselves? What the secondary teacher complains of is that the scholarship boys lack independence, that they cannot work alone, and do not know how to prepare a given task. Is not this largely the fault of the methods of teaching which are in vogue in the higher standards of the popular schools? Homework, no doubt, must always be a difficulty where the children come from working-class homes, though it is a difficulty which is surmounted in some cases; but might not the teaching of such subjects as history and geography take more the form of showing children how to learn for themselves from books and maps? A considerable amount of oral teaching is no doubt needful in these as in other subjects, but the regime of continual talking on the one side and listening on the other side is not only unnecessary but is very poor training for the pupils who are submitted to it, and produces just that intellectual helplessness which impedes their progress in higher schools.

ONCE again we find ourselves differing from our contemporary, this time on the subject of University degrees. The *South Wales Daily News* reported

B.A.
Haymakers.

that B.A.'s and B.Sc.'s may be seen in any Welsh village working in the hay-field, or, worse than that, employed in

Council schools as uncertificated teachers at starvation wages. The *Schoolmaster* comments: "In the case of teachers who obtain their degrees as hall-marks in their profession . . . it ought not to be possible that cases of the kind should occur. It is waste and folly that such things should be possible." Surely the mistake is that a University degree should still be considered by any one a hall-mark for the teacher. It is strange to find those who have entered a righteous protest against the appointment of untrained Oxford graduates as Inspectors complaining that every Welsh B.A. is not at once provided with a billet as a teacher.

THE French Teachers' Unions have come into serious collision with the Government by allying themselves with the *Confédération Générale du Travail*—the

Teachers and
Politics.

body whose policy is Syndicalism and whose method is the general strike; and a number of the "unions" or "sec-

tions" have been dissolved by the Minister of Public Instruction. This action may seem at first sight to savour of tyranny, but it must be remembered that the *Confédération Générale* is avowedly a revolutionary society, which advocates cessation from work as an alternative to armed insurrection only because its leaders believe that the latter would be futile, and that it carries on a propaganda of anti-militarism. It is difficult to see how any Government can let its teachers publicly espouse doctrines which are subversive of the foundations on which the State rests, however much we may sympathize with the very scantily paid French teachers. The question, indeed, of what methods of bringing pressure to bear upon a Government, State employés who think they have a right to better remuneration may adopt, is a difficult one. If they use their voting power for this purpose, they are accused of selfishness and lack of public spirit; if they strike, they are declared guilty of mutiny. They are presumably expected to rely on their own powers of argument and the Government's sense of right; but State Departments have not always a finer feeling for justice than private employers, and hard pressed Treasuries are seldom ready to yield to moral suasion only.

AS we anticipated last month, the Trade Union Congress resolved, by a small majority, that the question of secular education should be excluded from future conferences. Regarded as a Truce of God this is welcome news, but, unfortunately, the debate shows that the vote

Trade Union
Manifesto.

cannot be interpreted as a conversion of the Labour Party to religious education, and it will be possible for any secularist, by moving that the resolution be rescinded, to reopen the whole question at the next Congress. The argument that carried the vote was not the need for religious education, but the danger of splitting up the ranks of the Trade Unions by introducing a question of secondary importance on which opinions differed. The omnibus resolution reaffirming the general policy of the Union on education was carried unanimously without debate. It demanded *inter alia* free education from the primary school to the University, the adequate maintenance of school children, and a Royal Commission with a majority of Trade Union representatives to inquire into the finances of the Universities and the great public schools. A large order, which would double at a stroke the Education Estimates.

WE had fondly thought that the battle for the reformed pronunciation of Latin was finally fought and won, but a recent correspondence in the *Times* shows that we were too sanguine. The Treasurer of the Classical Association reports that certain of the leading public schools have either made no serious attempt to adopt it or are discontinuing its use on the ground that preparatory schools are recalcitrant and object to the additional burden imposed on the teachers of Latin. He further suggests that the head masters might easily put pressure on the preparatory schools by imposing an oral test in their entrance examinations. The Head Master of Shrewsbury fits the cap and pronounces *ex cathedra* that the new pronunciation does interpose a very appreciable obstacle to the learning of Latin by the average boy, and regrets that the Classical Association should be so unfamiliar with the conditions of public schools as to imagine that an oral examination at entrance is possible. As to the first point, if any argument is needed, we would suggest that a correct pronunciation of French is now universally demanded and that not a tenth of the time is needed to secure a correct pronunciation of Latin. As to the second, all we need say is that the die-hards and reactionaries must be hard driven to urge such a plea.

DR. SADLER, distributing the prizes at the Rochdale Technical School and School of Art, contrasted well the two counter currents of education to-day—the demand for stricter discipline, drill in grammar, technique in art, and, on the other hand, the desire for self-expression, for *Lernfreiheit* as well as *Lehrfreiheit*, the revolt against enforced tasks and routine of all sorts—and he urged teachers to steer a middle course. It seems to us that the Scylla of routine is of the two the more fatal rock. Does not Shakespeare give us the key to this parallelogram of forces: "The labour we delight in physics pain"? Show the pupil his Miranda, and then set him to chop wood.

"CUSTOS," in the *English Review*, discusses "Our Gentlemen's Schools," a misnomer according to him, as they neither train nor teach, "turn out neither men nor gentlemen." The article is so prejudiced and overdrawn that it is hardly worth discussing. The one sentence with which we agree is: "It is easy to denigrate and find fault." A sequel by Mr. A. C. Benson is promised for this month. We shall be curious to see, not what Mr. Benson has to say on Public School reforms (he has preached from every pulpit in the kingdom), but how he treats his understudy. Will Gracchus rebuke Catiline?

A RUMOUR has gained the cold publicity of print to the effect that proposals are to be put forward for the abolition of the Osborne Naval College. The College represents a bold experiment in educational specialization which has been watched by teachers with interest, if not with full sympathy. Apart from the educational arguments against specialization, there are difficulties both in selecting boys of twelve or thirteen and in branding them for a profession at such an early age. We have drawn attention in these columns to the exclusion

from the Navy, in consequence of the new system, of many suitable boys for financial reasons. Any desire on the part of public schools not to lose a large number of their most intelligent potential scholars would give way if the change had been shown necessary in the public interest. But, as a fact, the arguments adduced in the famous Memorandum of 1902 did not meet with unanimous support, even in the Navy. The question at issue is one of broad policy, for the College has been admirably conducted, both in its educational and technical aspects.

IN his evidence before the Royal Commission on the Civil Service, the Secretary of the Board of Education outlined important modifications in the present system of selecting inspectors for elementary schools. The idea is to establish a new class of "assistant inspectors," recruited as a rule, but not exclusively, from certificated teachers of elementary schools with considerable experience of teaching. The classes of "junior inspectors" and "sub-inspectors" will become moribund, but the new assistant inspectors will be treated more generously in the matter of salaries than the present sub-inspectors, and their status generally will be higher, as their title implies. The maximum age limit will be raised from thirty-five to forty-five, or even higher in exceptional cases. Mr. Selby-Bigge asserted that the old system of selecting young University men as junior inspectors, due to Sir John Gorst, proved an impossible system as regards promotion. The recognition of teaching experience as an essential qualification in a school inspector is a principle for which we have pleaded for many years. Its whole-hearted acceptance by the Board will go far to remove the lack of sympathy which is now so common between the schools and the central authority.

LOCAL AUTHORITIES.

Award of Scholarships. In the "Occasional Notes" of this journal for September reference was made to the award of scholarships to children in elementary schools, on the results of competitive examinations. The question is one of immediate interest to Local Authorities who, in offering facilities for education other than elementary, have the one object in view—that of selecting promising material for further training and development. The problem to be solved is how best to select. Mr. A. R. Pickles and other experts clamour for the abolition of competitive examinations, and would not, perhaps, "select" at all. They desire presumably that the means of education, other than elementary, shall present no barriers or restrictions. There may be Utopian administrative areas where this is possible. For the majority of Authorities, however, existing conditions, educational and financial, preclude consideration of the policy of the open educational door.

Examinations. If, therefore, it is impracticable to adopt the policy of the open educational door, Local Authorities are obliged to adopt some method of selection. Where the number of candidates is much larger than the number of places available, any process of "nomination" must break down. Moreover, it would entirely fail to satisfy the public. Consequently, in the absence of any practicable alternative, Authorities favour some system of selection by examination. Some time ago the Chief Examiner for Junior Scholarships awarded by the London County Council discussed this question, and, while admitting the limitations of the "examination net," said: "Intelligence is necessary to almost any kind of eminence, and I feel pretty confident that the degree of intelligence necessary to subsequent eminence in any occupation, or in any social plane, is far more likely to be possessed by those who win scholarships than by those who do not."

Durham. THE Durham Local Education Authority has issued an interesting report by Mr. J. A. L. Robson, the County Secretary for Higher Education, on the award of 318 Junior Scholarships. The scheme provides for 75 per cent. of the scholarships to be offered to children under thirteen years of age from elementary schools, while the remainder are available for children over thirteen and under fifteen, and are apportioned equally between (a) children from elementary schools and (b) children in secondary schools. In future years the age limit in both classes is to be reduced by one year. The examination is in two parts, written and oral. The large number of 3,485 candidates entered for the written test in Arithmetic and English Composition, and of this total 615 qualified for admission to the oral examination, which is intended "not to ascertain facts stored in the memory, but to discover the intelligence and potentialities of each child." The fact that under 11 per cent. of the pupils put forward as candidates failed to pass satisfactorily in Arithmetic and English is not encouraging.

Cornwall. OF 442 candidates for Junior Scholarships in Cornwall, 84 per cent. failed to secure half marks in the subject of Arithmetic. A large number, it is stated, must have worked their sums very slowly, and circuitous methods were frequent, whilst, as in previous years, inaccurate work was much in evidence. As to English, very few candidates wrote really good letters.

Northumberland. IN the county of Durham the number of candidates presented for scholarships was over 20 per 1,000 of the children in attendance at elementary schools. The neighbouring county of Northumberland, with a total of 1,003 candidates—about 17 per 1,000 of the elementary-school children—found that 28.5 per cent. reached scholarship standard. The examiner states that, while the Education Committee has grounds for satisfaction in many schools which show evidence of careful and thorough instruction, there is, unfortunately, another aspect. In certain schools, he states, there are evidences of careless and inaccurate work, and inability to attack questions involving simple thought.

Surrey. THE Report of the Secretary on the examination for Junior Scholarships in the county of Surrey shows that a total of 686 boys and girls entered for the tests, and of this number 210, or 30 per cent., qualified. The proportion of candidates to the number of pupils in attendance at elementary schools was much lower than in the case of the two northern counties, but, on the other hand, the test was of a more comprehensive character.

Kent. THE number of candidates taking Junior Scholarships this year was 1,263, who were examined by local bodies of oral examiners as well as by written papers, and as a result 557 pupils were invited to attend a final oral examination by the Central Board. Of this number 341 were selected as worthy of further consideration.

Worcestershire. At a recent meeting of the Worcestershire Education Committee there was an interesting discussion on the results of the Scholarships Examination. The Director reported that, of 771 candidates, 295 (38 per cent.) were entitled to Merit Certificates; 148 schools sent in no candidates at all, and the Director asked whether all schools should not be expected to present eligible pupils. A member of the Committee described the results as "disastrous," and Canon Coventry said there was the least possible attention being paid to the subjects badly required. "There would be no change in the teaching in elementary schools unless they reverted to the old examinations."

Progressive Proposal. THE condition of elementary education as revealed by the Scholarships Examination in Worcestershire is much the same in other counties. And the fact that Authorities are realizing this condition is an encouraging indication. Mr. Wheeler, one of the members of the Worcestershire Committee, made the best contribution to the debate when he said that the fault was largely their own. "He had never heard one discussion as to what the children were being taught, and he did not think that 10 per cent. of the members of the Committee knew what was being taught." In moving the appointment of a Special Sub-Committee to consider the advisability of extending the Scholarships Examination to all schools and to make recommendations to improve the average standard of teaching in elementary schools, Mr. Willis Bund remarked that, if the children did not know more than was shown in the report, they were not worth sending to the higher schools.

The Selected Product. WHILE examinations for the award of scholarships cannot be regarded as a satisfactory test of the work in elementary schools, Local Education Authorities must inevitably attach importance to the results. If, they say, only 30 or 40 per cent. of the "selected" pupils from a school succeed in reaching a creditable standard in a reasonable test, what is the condition of affairs among the "unselected"? In the six counties to which reference has been made in the preceding paragraphs, the proportion of children in elementary schools between the ages of twelve and thirteen who were presented for examination was approximately as follows:—Cornwall, 8 per cent.; Durham, 20 per cent.; Kent and Surrey, 8 per cent.; Worcester, 10 per cent.; Northumberland, 15 per cent. The proportion of "selected" material is not, therefore, very large. Again, taking the basis of the children on the school registers between thirteen and fourteen years of age, the approximate proportion satisfying the examiners was about 2 per cent. in Cornwall, 3 per cent. in Kent and Surrey, and 4 per cent. in Durham, Northumberland, and Worcester.

Halifax. FACTS of this description raise the question once more whether we are not attempting too much or doing too little in our elementary schools. It has been asserted by critics of the system that the curriculum of the elementary schools is suitable only for the preparatory training of clerks. But efficiency in this direction appears to be declining. A Halifax firm, it is reported, have informed the managers of the Labour Exchange that the present system of education in that area would "appear to be designed to unfit boys for any commercial capacity whatever." They wanted an office boy, and the Exchange sent them a number, all of the seventh or ex-seventh standard. Only one could spell the word "prejudicial" and only one could spell "responsibility," while their ignorance of simple geographical facts was deplorable.

The Aims of the Union. At a meeting of the Devon County Association of Teachers held in July, a representative of the National Union claimed that when dealing with the trinity of educational interests—the child, the school, and the teacher—the Union had always placed those interests in that order. "The child is in the forefront, the school next, and themselves (the teachers in their purely professional interests) last of all." In these days of self-seeking associations these words are refreshing. In support of this contention, perhaps, the representative of the Union also said: "The cost of living in every direction has greatly increased during the past twenty years, and the Board of Trade returns with all their eliminations make it 12½ per cent. Had their salaries gone up 12½ per cent.? The teaching profession was the only organized profession in the country whose scale of salaries had not gone up in accordance with the general trend of increase in the cost of materials and food."

The Labourer and his Hire. WE have the greatest sympathy for teachers and believe their remuneration should be increased. But even sympathy must not be permitted to prejudice a frank admission of the facts. If official statistics are reliable, the average salary paid to the certificated teachers has "gone up" during the past twenty years, not 12½, but in the case of head masters nearly 30 per cent.; assistant masters, 40 per cent.; head mistresses, 44 per cent.; and assistant mistresses, 37 per cent. The following figures are published by the Board of Education:—

AVERAGE SALARIES OF CERTIFICATED TEACHERS.

	Masters.		Mistresses.	
	Principal.	Assistant.	Principal.	Assistant.
1890 ...	£134	£90	£83	£66
1902 ...	£148	£108	£98	£78
1909 ...	£174	£126	£121	£91

It may be suggested that in future the representative of the National Union of Teachers may appropriately inform the public at provincial gatherings that his profession is among the few where the cost of training is provided by the State whose scale of remuneration has gone up at a rate not out of proportion to its merits, but entirely out of all proportion to the rise in price of commodities.

Law v. Medicine. IN the opinion of many School Medical Officers a child who has had measles must attend school although other members of the same family may be suffering from the disease. Mr. Hedderwick, the North London magistrate, does not share this view. To a parent summoned recently for a failure to comply with the School Attendance By-laws under these circumstances, he said: "You did quite right in not sending

your children to school while the measles were in the house. Now, don't send any of them until all the children are quite well. You have endeavoured to do the right thing." Public sentiment is probably entirely on the side of the magistrate, and the medical experts will find a difficulty in persuading the parents of children who have not had measles that there is no risk of infection if they associate with others from infected houses. But it would be a convenience for medical men and magistrates to agree.

THE prospectus issued by Mr. A. C. Coffin for the Bradford Education Committee shows that complete provision has been made, by means of the ordinary evening schools, branch technical and commercial schools, and the Technical College, School of Art, and Commercial College, for the needs of students. There are well defined avenues of systematic study for all classes.

THE Kent Education Committee supplies instruction in a variety of subjects likely to be interesting and useful to the rural population. The syllabus includes lectures in agricultural science, cottage gardening, poultry keeping, bee keeping, lace making, and domestic arts and crafts. Sir A. Quiller-Couch, a few weeks ago, expressed the conviction that the money spent in rural districts in evening continuation schools might just as well be thrown into Domesday Pool. Sir Arthur would probably exclude from this condemnation the instruction supplied by the Committee of Kent which must be of material interest and value to the rural population.

SCIENCE NOTES.

THE claim to have been the first "science teacher in schools" could hardly be denied to the veteran Mr. J. D. Cogan, who died recently at the advanced age of ninety-five. His first lessons were given in 1837 at Bath, the subject being electricity. In consequence of the success of these pioneer lecturers, Mr. Cogan was asked to give science lessons in several private schools, and his record of active service as a science teacher and public lecturer extended over more than fifty years. The strong interest which was aroused in scientific study in the middle of last century owed much to the novelty of the subject; much also to the expository skill of Huxley and Tyndall. All recognize the work of these leaders, but to men like J. D. Cogan, who worked with enthusiasm in a humbler sphere, no small share of credit is due for the wide spread of interest in matters scientific.

THE British Association meeting at Dundee was an unqualified success. The cordial hospitality of the Dundonians, the generous gift of £10,000, and the admirable work of Professor D'Arcy Thompson and his colleagues, assured the success of the gathering from a social point of view. It should be noted here that all the twelve sections had full and interesting programs preluded by presidential addresses of more than average ability and of wide interest. The subjects which attracted most attention appear to have been wireless telegraphy, the local geology, the origin of life, labour problems, the "suction" between passing ships, and animal nutrition. The evening discourse on "The Antiquity of Man" and the sectional papers on exploration proved interesting to large audiences.

THE current number of *Science Progress* contains much matter of interest to teachers. Prof. Love opens with a clear and non-mathematical account of Tides, in which he reviews recent advances in our knowledge of the rigidity of the earth. The account of Sir J. J. Thomson's new method of chemical analysis gives a good introduction to perhaps the most brilliant piece of research in the present century. It must suffice here to say that the method opens out a new era in chemistry, seeing that individual molecules and atoms are investigated and weighed, and that compounds which endure but for a ten-millionth of a second can be weighed with accuracy.

IN the same volume there is a concise account of the genesis of logarithms. The author, Mr. Allan Ferguson, does justice to Napier and Briggs, both men of notably high character, who were united in strong friendship. Incidentally the argument that schoolboys must approach

logarithms through indices is crushed by the reminder that logarithms were used a hundred years before Euler taught that they were the indices of powers. Here we have one of many instances exhibiting the importance to teachers of the history of discovery.

It seldom happens in the case of physics or chemistry that the lesson-unit and the method-unit coincide, and any attempt to force such coincidence leads to serious faults of method. For example, acids, bases, and salts form a clearly distinguished method-unit, which cannot be separated into neat sequential divisions, each occupying one lesson. The subject will require from three to six (or possibly more) lessons, according to the previous knowledge of the pupils; the later lessons contributing to the acquisition of a clear idea of chemical equivalence. At the end of the method-unit it is well to require written answers to a question-paper, and the value of the work will be increased if an essay can be written on one of the main principles brought out by study of this particular method-unit. The organization of the syllabus into a well schemed series of method-units is an important aid to science teaching. If the syllabus has to be submitted to an inspector or examiner, the plan of paragraphing by method-units will make the recognition of the teacher's aims and methods more discoverable than is the case when a mere list of topics is submitted.

It appears to be decided that the majority of teachers of domestic science will be required to insure under the 1911 Act. We may therefore draw the attention of such teachers to the fact that they are eligible for membership of the Secondary, Technical, and University Teachers' Society. Inquiries should be directed to the Secretary, 35 John Street, Bedford Row, London, W.C.

THE day classes of the Northampton Polytechnic Institute, Clerkenwell, begin this week, the evening classes having started on September 23. We see from the program that both day and evening courses are provided in engineering and in artistic crafts. Special features are the classes in technical optics, horology, aeronautics, and radio-telegraphy. A strong staff is provided for the evening classes in domestic economy and women's trades.

EDUCATION AT THE BRITISH ASSOCIATION.

PROF. JOHN ADAMS devoted his Presidential Address at the Dundee meeting to a careful exposition of the need for an objective standard in education, and to a review of the steps which have been taken hitherto, or are likely to be taken in the near future, towards its attainment. "Of those who deny to education a place among the sciences the name is legion, for they are many." Before that desirable place can be attained the facts of education must be organized, and the educator must be able to predict. Neither requirement as yet is satisfied; but the general principles of education are established and accepted: the standard books are there, even if a too deliberate profession is unaware of them. The next stage of progress has already been entered upon, and education is seeking to free herself from mere empiricism: "We are passing from an appeal to experience to an appeal to experiment"—a method, that is, of trial and error of tentative prediction and subsequent correction. But for the evaluation of experimental results we need a recognized standard: not the subjective standard which is still doing duty to a large extent, but one independent of private opinion. For this purpose, education is inclined to use psychology, but education is more than applied psychology, and, besides, psychology, itself depending in its turn upon physiology, has a very insecure foothold among the sciences. Quantitative manipulation of the elements of a study tends to evolve an objective standard. Such a standard was, in fact, evolved by the working of the English and Scotch Education Codes—a standard which has had its day, and, in the opinion of those who had most experience of it, has done a great deal of damage. Of late,

the quantitative method of dealing with educational problems has been greatly developed. The formulæ of Karl Pearson and of Prof. Spearman have made possible an exact statement of the amount of correlation existing between series of quantitative data. The danger that the application of mathematical method will dehumanize the subject is not great. All human problems must begin with the individual and end with the individual. The hope of the future lies in the proper employment of the experimental method. "Students of education have always been in the habit of asking questions, but they have not always waited for an answer." The questions have now to be made precise and limited in their scope. All the relevant conditions must be laid down and control tests applied. Even then results are not to be accepted until they have been established by different experimenters working independently. There are hundreds of definite practical questions that are being asked by teachers every day which can be answered accurately by experimental methods, and to which, at present, the only answer is that of individual experience. To discover and classify these questions and to correlate them with the various investigations now going on in many countries would be to render a very practical service to the study of education. When the work is done the educator's office will lose none of its dignity. He will be the master of organized knowledge, and will be entitled to require an objective standard from those who make education their special study, but for the intelligent application of that standard to the affairs of his school he must accept the full responsibility.

In a bald summary such as this, it is impossible to follow the President's acute digressions in search of illustrative material into the field of acoustics, optics, and other sciences, or to convey the quiet humour which added charm to his treatment of a grave and serious subject. If the Section moves, as it gives promise of doing, along the lines indicated in the address, its work will be of unique value in the development of educational theory.

The noteworthy thing in the second day's discussion on Vocational Education was the way in which speaker after speaker proclaimed himself or herself a thorough believer in it. Miss Faithfull alone preferred to remain in the ancient ways, and ably restated the many difficulties which beset the path of the vocationalist; the danger, for instance, of choosing an occupation too early and of stereotyping the outlook upon life just at the time when it needs broadening and elevating; the danger of over-emphasizing the material in this day of the chattel when, as Emerson said:

Things are in the saddle
And ride mankind.

Prof. Moore, of Yale, who is well known for the successful fight he made against corruption in educational administration as City Superintendent of one of the western towns of America, handled the subject with a freshness and that mastery which experience alone can give. Americans, said he, are great missionaries, and like all missionaries they go to extremes: they needs must, for there are always so many fellows at the other extreme. "Our forefathers settled up a continent with extraordinary rapidity. It is equally marvelous how much they destroyed," and not material resources only. To-day we have to conserve the forests and the mineral wealth, and the human labour which has been so ruthlessly exploited. "North America has shown a profound faith in general education, so profound that it has had no faith left for vocational training." The result is that more than half the children drop out of the elementary-school course before it is finished, and half the students who enter upon the high-school course come out after a year. The explanation is that they find their studies tedious and meaningless; out of touch with life; with no power to kindle the imagination. Evening continuation schools are but a partial remedy: "they are a good thing for people who have learnt to save themselves during the day." What is wanted is the day-trades school, which the young employés of both

sexes can have time to attend. It is no use, however, being too many fields ahead of public opinion in this matter. Compulsion has been put upon the employer in some States and has failed to bring about anything better than the dismissal of the youths from their occupations. There are occupations which are energizing, which make a constant appeal to the intelligence of the employé; there are also enervating occupations which have a deadening influence on the mind. Unfortunately, it seems that the former are decreasing and the latter increasing. The question of questions, which is not yet answered and cannot be without many experiments, is how to take in hand these stupefying employments so that the workers may learn to keep their souls alive; what are we to teach them, and how are we to teach it? One thing is clear, the subjects of the curriculum must be broken into units, and proximate ends which the student can understand must be set up. "Let us learn something definite, it may be how to use a slide rule." The truth which Kant enunciated, "Concepts without percepts are empty, percepts without concepts are blind," must be kept before us.

There are some interesting accounts given of vocational experiments already in existence. Mr. J. W. Peck, now Chief Inspector for Scotland under the Insurance Commission, described the arrangements made in Edinburgh for vocational training, and incidentally showed the great value of the census of occupations and the sociological inquiries which have been conducted in that town. Many English Local Authorities are now beginning to administer the Education (Choice of Employment) Act, and the lesson to be learned from Mr. Peck's paper undoubtedly is that the first work of the new employment officers should be carefully to survey the industrial and commercial conditions of their areas.

The Director of Education at Bournville gave an outline of the vocational training for both boys and girls which Messrs. Cadbury have established there. Miss Burstall, who described herself as a convinced believer in vocationalism, spoke of the need of training for the increasing number of girls who require to find a living in their fingers. Dr. Morgan, of the Institute of Scotland, dealt largely with the social aspect of the question. 50 per cent. of the present destitution was due to inability to get and keep employment, he said. Dr. Kimmins and Mr. Holland stated the argument for vocationalism from the psychological point of view. The faculty hypothesis and its child, the doctrine of formal training, are on their last legs, though most of the current discussion of educational problems implicitly takes them for granted. The doctrine of specific disciplines, the training of the mind to react to groups of stimuli, or, in other words, to work in certain environments, is gathering strength and leads direct to vocationalism.

Nothing is gained by pretending that the problems of vocational training have been solved. Throughout the discussion there ran a demand for experiment and yet more experiment: indeed, it may be said to have been the note from start to finish of the Dundee meeting, but from this discussion it was clear that the Day Trades School—taking in the young worker at about the age of fourteen and giving him a training which aims at rendering him self-supporting; able to adapt himself to the constant changes in occupation; to understand his relation to his employer and to the State; to value mental and physical health and to know how to keep it—has a great future before it in the modern civilized community, and a sphere, so far as England is concerned, quite distinct from the sphere of the secondary school and of the technical institute, whose aim is to train for the professions and for leadership in commerce and industry.

The session which it is customary to put at the disposal of the Committee for the Investigation of the Mental and Physical Factors involved in Education was this year occupied with the discussion of three problems. First, the Examination of Mentally Defective Children, and then the Psychology of Reading and Writing. The report on the Examination of Defective Children was presented by Dr. Shrubbsall. The conclusions of his expert Sub-Committee

are that the current procedure is adequate for the detection of obvious mental defect, but that in doubtful cases existing resources are quite insufficient. The teacher, the doctor, and the psychologist should all have their part in the examination. No one can judge so well as the teacher whether the child whom he has been striving to instruct can profit by ordinary instruction; the doctor is best able to determine whether the deficiency is due to physical abnormalities or to diseases which admit of remedy; while the psychologist is required to investigate the obscure causes of mental disturbance.

The discussion upon Reading was opened by Prof. Green, who defined the problem as two-fold—the nature of the dexterity involved and the child's attitude towards the dexterity. Mr. Dumville and Miss Foxley contributed accounts of experiments and observations which they had themselves made, the results of which led them to favour the look-and-say method of teaching reading as against the phonic method. The analytic nature of the latter method, it was suggested, is contrary to the teachings of genetic psychology. In the natural order the word-whole, or even the phrase-whole, is grasped, though indefinitely, from the very beginning; the analysis and the spelling of the word does not come naturally until the child realizes that it is important. Children, even those trained on phonetic methods, when left to themselves, do not apply the method. Prof. Green emphasized the importance of making reading meaningful and messageful from the beginning; the literary interest of what is read should appeal to the child throughout. Principal Donaldson gave an account of the Melville Bell system, by which to each sound a definite symbol is attached—a system which has proved valuable in the training of deaf mutes. Incidentally, Sir James announced himself a heretic as to the importance of correct spelling: he would let everyone follow his own fancy in spelling, as folk did before the compositors made our present conventional spelling to suit themselves. Prof. C. S. Myers summed up the discussion with the suggestion that, although the phonic method set up associations between elements, sounds, and symbols, which had then to be respectively combined into word-wholes, spoken and written, before the meaning could be made out—a wasteful because a roundabout process—yet it will not do to depend entirely upon the look-and-say method. Language began with the word, which then became a symbol or letter, and to-day word-wholes are combined to form larger wholes and longer words. A method, therefore, which sought to teach each word-whole separately would prove extremely laborious.

Of the two papers by Drs. Brown and Rusk on the Psychology of Writing and on Movements in Handwriting, the teacher will find the latter full of suggestions which can be turned to immediate account. Three forms of movement are involved in writing—finger movements, the movement of the wrist which tends to keep the palm of the hand flat upon the paper, and the movement of the shoulder joint and elbow by virtue of which the hand passes across the page. The hand tends in writing to move across and upwards, a movement which has to be inhibited with a consequent waste of energy if the page is parallel to the desk. To render this movement as easy as possible, and at the same time to keep the lines regular, the page should be tilted so that its edge is almost at right angles to the forearm. With regard to the wrist movement, so far as this is utilized to keep the palm flat, it is needless: there is no reason why the hand in writing should not rest on its edge. A problem which has not yet been solved is whether finger movements or movements of the hand and arm should be used in forming the letters. It is found that adults as a rule make no use of finger movements, yet in teaching writing finger movements are generally insisted upon. From the latest experiments it seems probable that hand and arm movements should be used for up and down strokes, but that finger movements give a better result in the rounded letters. A very simple piece of apparatus has been devised by Judd for isolating the

movements of the hand from those of the finger—simple enough for use by any teacher who cares to experiment for himself.

It is to be hoped that Prof. Findlay's Committee will apply the experimental research method to other practical and well defined issues, for teachers at present are, in the main, inclined to be sceptical of the value of the method.

The session closed with a trenchant attack by Principal Donaldson upon the Scotch Education Department, the Committee of My Lords of the Privy Council which seldom or never meets, and whose members individually have almost no knowledge of the documents and directions issued in their name. Those who lived through the troubled years in English education between 1902 and 1907 or 1908 will sympathize with the Principal in his complaint of the continual change of plan in Scotch education and the never ceasing uncertainty as to what the next move will be. The restlessness of the Department has unsettled both teachers and pupils. More serious still is it that the Department has allowed the standard of attainment among the teachers to fall steadily. Thanks to the low salaries, the poor prospects, and the continual interference with their work, the high Honours men of the Universities have ceased to enter upon teaching, or, if they have, have left Scotland. The old democratic educational system of which Scotland was so proud is being Germanized in the interests of a class. The public are not properly informed of the alterations as they are made, and those who they most concern—the teachers—are not consulted. In the Principal's opinion it is necessary that the Board of Education Act of 1899 be applied, *mutatis mutandis*, to Scotland, and more important still, that the new Minister for Education be assisted by a Council of Education on which teachers are adequately represented. Of such a Council, it may be remarked, the new Registration Council in England gives promise.

To the discussion of the Present Teaching of Mathematics in England there is but little space left to refer. Dr. Nunn, Dr. Pinkerton, Dr. Milne, Mr. Eggar, Prof. Silvanus Thompson, and Principal Griffiths were the chief participants. The two last agreed in deploring the loss of the rigid Euclidean sequence in Geometry. The student of University rank is not, in their opinion, so capable as his predecessor was of following a long chain of reasoning and of appreciating the meaning of a mathematical proof. Mr. G. F. Daniell, from his experience as an examiner, controverted their argument; and Dr. Nunn, by anticipation, also answered it in part when he pointed out that reasoning is after all a function, an element entering into intellectual activity, and must, therefore, be differently exercised at different stages of mental development.

Mr. Strong and Mr. MacGillivray read papers upon the Scottish Leaving Certificate, to which extended reference is impossible. Your reporter came away more impressed than ever with the formidable and arbitrary character of the control which results from the system. As Mr. Strong said, any subject can be squeezed out of the curriculum or forced into it by a simple change of regulation. It is a power too great to be entrusted to any person or body short of a Council widely representative of current educational thought and practice.

Of the reports presented by Sub-Committees, that on the Influence of School Books upon Eyesight deserves to have a far reaching influence. The Sub-Committee have set out concisely and in non-technical language the hygienic requirements to which all school books should conform, and the report is illustrated by specimens of type classified according to the different age periods for which they are suitable. Such a paper would be of the greatest assistance to any one who has to select books for children's reading, and it is to be hoped that arrangements will be made for its wide circulation among administrators, teachers, and others.

The Council of the Association has this year arranged to issue the President's address, the reports, and the abstracts of papers read, in a small volume for each Section, instead of

waiting for the annual publication of the proceedings of all Sections in one bulky and expensive volume. To this pamphlet we must refer those who desire to follow out the discussions of which we have given only the outline.

It remains to add that the arrangements of the Local Committee for the housing of the Section and for visits to schools, experimental gardens, and other educational institutions were admirable. The attendance at the Dundee meeting was almost a record, and English visitors will long remember the generous and warm-hearted reception given to them, both publicly and privately, by their Dundonian hosts.

MR. STANLEY LEATHES ON MODERN LANGUAGES IN EDUCATION.

THE First Civil Service Commissioner has given in the *Times Educational Supplement* his estimate of the comparative value of ancient and modern languages, and indicated how he would have our secondary schools remodelled if this estimate is accepted. Any pronouncement coming from such an authority must command attention. "The Arch-Examiner," as he styles himself, is or should be a polymath, able to hold the balance not only between the Old and the New Learning, but also between science and letters, the Humanities and *Realien*. Mr. Stanley Leathes, with singular frankness, produces his own credentials, and in so doing shows that, in spite of his endeavour to be fair and impartial, his antecedents disqualify him as a judge in the matter. The first quarter of the article is a glowing retrospect of his own school education, which was on strictly classical lines:

Mathematics took a back seat; you could learn some if you liked, but no one bothered you much if you did not like. We used to draw a great many maps, and we took great pride in making them look neat and pretty, and decorating them with water colours; we learnt no systematic history; there was a little science going, which used to turn up in the most capricious way. . . . I have never done a laboratory experiment in my life.

For himself, he would not have had it otherwise. He regrets not an hour that he spent in "settling the business of enclitic *de*" or grinding out longs and shorts, and he is convinced that nothing but Latin and Greek could have given him such a sound and logical training. But he allows that he is one of the chosen few who have "on manna fed and drunk the dews of Paradise"; he has pity on the hungry multitude who have no stomach for such diet of the gods, and he would not send them empty away. Latin and Greek he would reserve for the elect. He would have all boys begin with French, and then promote those who showed linguistic ability in the easier language to a special class or classes of "Grecians." Under such conditions he prophesies that "boys would learn more Greek and Latin in four years than we did in ten." No graver condemnation of the *ancien régime*, we may note in passing, has been pronounced by the extremest of modernists. The remainder, the less gifted, will form the Modern Side, and, while continuing their French, with the possibility of adding German, will devote the bulk of their time to science, mathematics, and English, including modern history and geography.

Widely as we differ from Mr. Leathes's premises, we welcome his conclusions and hope that, as Examiner-in-Chief, he will act upon them. Henceforward no boy is to learn Latin and Greek unless his parents express a wish that he should do so. If we could imagine the two Head Masters' Conferences persuaded by Mr. Leathes to adopt a resolution to this effect and to act upon it, we might without exaggeration say that the whole course of secondary education in England would be revolutionized. But certain riders follow which Mr. Leathes fails to see or to which he deliberately shuts his eyes. Thus he assumes that the bulk of Oxford and Cambridge scholarships will continue to go to the chosen few, the classical

scholars, and apparently, if his estimate of the relative value of ancient and modern languages is accepted, the same rule will hold with all the higher appointments in the Civil Service. Again, we ask what will be the relation between the new Classical and Modern Sides? It is absurdly assumed that all boys on the reformed Classical Side will be "industrious and gifted." It follows that the Modern Siders, if not idle and stupid, will be at any rate less industrious and gifted, and that their school status will be one of inferiority. But what right has Mr. Leathes to assume that linguistic ability is the supreme test of moral and intellectual excellence? Is a young Darwin who cannot, to save his life, write a decent elegiac couplet to be dubbed, as in the past, a *pocourante* and be condemned to take a lower place as a "commercial"? Are his "Grecians," as at Christ's Hospital, to be synonymous with the Head Form? Some of the *obiter dicta*, as coming from the "Arch-Examiner," fairly take our breath away. "If a parent wants his boy to learn French and German he had better see that he learns them before he is ten; if possible, before he is eight." This ideal is to some extent realized in the families of the Russian aristocracy, and of the results we may judge from the novels of Tourguénief and Tolstoy. It is quite possible to be ignorant in three languages, and we have never observed in Anglo-Indian children any of those advantages that Mr. Leathes attaches to infantine bilingualism.

No less amazing is his depreciation of, we might almost say his contempt for, the German language and literature. German accident is "very arbitrary and can only be mastered by an effort of memory." German pronunciation "is not comparable in elegance and accuracy to French." "German literature, for our purpose, begins with Lessing and almost comes to an end with Heine. In that period we cannot say that there was any German history." "I cannot imagine any one practising translation into German except for sheer necessity. But it is not undesirable that schoolboys should have some disagreeable task." The one good word he has to say for the study of German is that "the German lyrics of the great period show what poetic genius can do, even with the most intractable material."

No German literature worth reading earlier than Lessing or later than Heine! No history in the period that laid the foundations of Prussian hegemony and the German Empire! No German prose to be imitated except for the same reason that a missionary practises Cherokee or a China merchant pidgin-English! German an intractable language for poetry! The remark would be much truer of the French language, which does not admit of blank verse, the stateliest and most flexible of all metres. Matthew Arnold—no mean judge—expresses the relief he felt in passing from French alexandrines to German rimes. To German science, theology, and philosophy, the theatre and romance, there is not even a passing allusion. And as to German style, have Englishmen nothing to learn from Monmsen and Nietzsche, to name at random two authors at the opposite poles of thought?

With French literature and language Mr. Leathes is better acquainted (has he not himself examined in them?), but here too there are singular gaps in his knowledge. "French literature is, and always has been, divorced from politics." Chateaubriand, Guizot, Thiers, Victor Hugo, for instance, in recent times; and had Mr. Leathes read Taine's famous monograph he would not have made the absence of political and social allusions the differentia between La Fontaine and Horace. We might continue, but we have given enough instances to prove that Mr. Leathes has not the same knowledge of modern literature that he has of classical.

We began by endorsing the main conclusion of the article; let us end by approving one at least of the riders. "A point must be reached in every boy's career at which the literary study of the language should become of more importance than the oral." Mr. Leathes would have French literature studied with the same minute accuracy as the classics. He allows that hitherto French and German have not had a fair trial in schools, and that he cannot tell what results they will produce if they are properly taught and a proper amount of time is allotted to them. Even now we could introduce Mr.

Leathes to schools where boys "obtain the kind of familiarity with foreign nations that we used to get from reading Latin and Greek," and they not the élite, like himself, but whole classes.

THE TEACHERS' REGISTER.

AN INTERVIEW WITH DR. MCCLURE.

MILL HILL was in a summer glory when I climbed to the brow a few weeks ago. It was my first visit. The beauty of the place held me in thrall. Dr. McClure's school mansion is a cradle for poets. If a youth is to dream dreams and entertain visions, there is no fairer spot to which they may throng as guests. Full in front, but beyond a wooded interim, stands Harrow Hill and the spire in whose shadow the boy Byron lingered day-dreaming. In the vale between the red hand of the suburban builder obtrudes. It can never utterly spoil the fair domain in which the schools, twin inheritors of this landscape, have their setting.

As to the teachers themselves, Dr. McClure has neither dream nor desire of exalted isolation. He is the champion of solidarity; in open places and in secret he has worked for that visible covenant of union which is, we hope, made sure and firm by the Registration Council. His wit and optimism have oiled the slow wheels of officialism, and now that the machinery is made and many begin to whisper their doubts as to its efficacy, the same strong optimism rings out. "What special difficulties do you anticipate?" I asked. "I anticipate none," came Dr. McClure's reply. "We beget difficulties by anticipating them." This is the right spirit with which to face the future.

Dr. McClure sketched for me the familiar history of the Register: its burial in the gulf fixed between Column A and Column B—"a funeral with few tears"—and the proceedings which led to the resurrection of a braver measure not destined to die of a cloven heart. It was interesting to hear the story from the lips of one who was in all the goings and comings at Whitehall. I inquired as to the attitude of the official mind. "I must acknowledge," said Dr. McClure, "the sympathy that was always meted out to us. Officialism has been regarded as a stone of stumbling in our path. That is a wrong conception. One of the best known officials at the Board of Education said that he was by no means opposed to a Register, but he did consider it to be an insoluble problem. I think I ought to add that our views on the question of the Register were considerably modified by contact with the Board. Sir Robert Morant deserves a special meed of praise. As for Mr. Pease, his eager sympathy has not surprised us, but we have marvelled at his thorough grasp of detail. Teachers may well remember that officials are not the bugbears they are sometimes painted." On the whole, Dr. McClure has found the Head Mistresses' Association far keener than the Head Masters'. The significant fact that the Register will give an impetus to the training of teachers has specially impressed the former body.

Most educational problems of our time are, in essence, financial so far as administration is concerned. "Money is the root of all—education," Dr. McClure would say. He sees the perils of poverty that loom ahead of the Register, and has tried to steer it clear of the "shallows and miseries." He played a chief part in drafting the proposals on which the Government based financial help towards the successful issue of the measure. "The cost of initiation is always high, and necessarily so," he said in answer to my solicitude for after years; "but I believe it is perfectly possible to produce in three years a Register that shall be self-supporting. Suppose there are twelve thousand members and you have a small annual subscription of 5s.; that yields £3,000 a year, which should cover everything and cover it handsomely. I do not see there need be many meetings of the Council."

I pointed out that teachers had many demands upon their purses—which are lean enough, in all goodness—and a tax of 5s. a head was not a pleasant prospect. Various organiza-

tions and societies appeal to teachers for their life-blood, which is revenue. "And what of teachers in elementary schools?" Dr. McClure said he did not think these had so much to gain as the secondary teachers, but, when the Register is really "a going concern," there will, he thinks, be a generous response. "The outlook is not all gloom," he again assured me.

We passed to speak of the work that awaits the Council, and Dr. McClure gave himself rein. It is a theme that fires him. "The ministry of unification—of reconciliation, I might almost say—among the various branches of the profession is what the Council must seek to fulfil. We are all disunited at present. I think it is true to say that secondary teachers do not understand in anything more than a superficial sense the problems our elementary teachers have to face day by day; nor do these look with anything of favour and sympathy upon their brethren in the higher reaches of education. I am speaking generally, of course; but this division is a tragedy. And there is a chasm between the schools and the Universities, so far as the teaching staffs are concerned—a chasm with scarce a bridge across. You will agree with me that it is time this insular policy were modified. The Council can help to make us more continental."

I interpolated the phrase "the educational ladder," venturing to suggest that the common meaning of ascent from the humblest classroom in the land to Trinity was only half the truth. Surely the idea of descent from that same Trinity back again to lowliest schoolhouse was not to be excluded? When we can get the flower of the Universities into the elementary schools of the kingdom we shall have gone far to solve a problem upon which a famous circular threw a searchlight. As to this ladder of descent, Dr. McClure said "an educational sieve" was quite as much needed. "It ought not to be possible for a University 'anybody' to get into the profession. There must be a method of selection. The Council has legal power, I think, to do more than make and keep a Register. That is its duty, but not its sole duty, and I hope it will move tactfully in the direction of ordaining a refining process. The Register, I take it, will not be a mere alphabet: it will contain some record of training and experience." As to the analogy of the Medical Association, about which I asked, Dr. McClure said it was anything but close. "It does not include nurses, for example."

I wanted from one who has worked without stinting and without misgiving for the establishment of the Council a statement of hopes and fears in regard to it now that it has come to pass. Characteristic was the reply: it spoke of hopes only. "I feel that, in the first place, it will bind together different sections of the profession. That is a glorious work. In the second place, this body of expert opinion will be, or ought to be, a valuable guide to Governments in any legislation that touches schools and teachers. It may also become a kind of Court of Appeal to which matters requiring fine discernment and adjustment may be referred. I look to it also to act as a centre of crystallization and give a solidity and dignity to the profession, which term, by the way, promises to become a reality now and no merely courteous convention. It is only a dream of mine as yet, but I hope the Council will give an impetus to the training of teachers. The conditions of registration must ultimately, I think, include training as a *sine qua non*. Personally, I feel that eventually the teaching profession will become part and parcel of the Civil Service."

These last words surprised me greatly. I was thinking of the dumbness that would be the price to pay—the loss of freedom of experiment and of speech. Dr. McClure divined the cause of astonishment. "There is no need for fear," he said. "In Germany teachers have as much elasticity of experiment as we in England, probably more; and the genius of the British people is against tyranny. If teachers were Civil Servants it would exalt them in the social scale and be a public acknowledgment of their just claims. It is their only real safety. They would have security of tenure and be kept from the disgrace of that 'order of the boot' which is the only 'honour' conferred upon them at present."

A NOTE ON THE TEACHING OF GEOMETRY.

By CHARLES DAVISON, Sc.D., F.G.S.

THE present methods of teaching geometry came into general use in 1903, though Euclid lingered on as a textbook for some examinations for two or three years longer. We have, therefore, had about nine years for testing the value of the new methods, for determining what we have gained and what we have lost by the abolition of our time-honoured manual, for deciding whether to press on in the same direction as hitherto or whether it would be wiser to retrace our steps. For, unfortunately, the general gain has not been unaccompanied by manifest loss, though the proportions of gain and loss have varied in different schools. In those which can afford to act more or less on their own account the gain has probably predominated. In others it is possible that the loss has often outweighed the profit. It would not be difficult for many a teacher to point to schools in which the results of the changes, so far as the teaching of geometry is concerned, are deplorable.

We have, in fact, arrived at a situation not unlike that which prevailed in Italy more than forty years ago. In common with other Continental nations, the Italians had abandoned Euclid as unsuitable for modern educational needs. The result was found to be so unsatisfactory that, in 1867, the Government appointed a special commission, consisting of Profs. Cremona and Battaglini, to inquire into the state of geometrical teaching in the Ginnasi or classical schools of Italy. They reported that this state was so defective, and the number of faulty textbooks so considerable, that they were compelled to recommend the re-institution of Euclid in all the Ginnasi, and their recommendation was adopted.

A few years later, in 1871, an order was issued by the Italian Government, from which two quotations may be made with advantage. "Mathematics," it is urged, "should not be looked upon as a mere collection of intrinsically useful propositions or theorems of which boys ought to acquire a knowledge in order to be able to apply them subsequently to the practical purposes of life. The study should be regarded principally as a means of intellectual culture, directed towards the development of the faculty of reasoning, and to the strengthening of that just and healthy judgment which serves as the light whereby we distinguish truth from that which has but the semblance thereof." And, further, coming to details, "the teacher is recommended to adhere to the method of Euclid as the one best fitted to establish in the youthful mind the habit of thoroughly rigorous reasoning."

At a first glance, the present state of geometrical study in England may be held to resemble that with which Profs.

* Quoted from Dr. Hirst's presidential addresses to the Association for the Improvement of Geometrical Teaching, First Annual Report, 1871, pages 10-11; Second Annual Report, 1872, pages 10-13.

DENT'S NEW EDUCATIONAL WORKS

TWO IMPORTANT GEOGRAPHICAL TEXTBOOKS.

DENT'S HISTORICAL AND ECONOMIC GEOGRAPHIES.

By HORACE PIGGOTT, M.A., Ph.D., and ROBERT J. FINCH, F.R.G.S.,
Senior Geography Master, Hornsey County School.

Volume One: WORLD STUDIES. Now Ready. Price 3s. 6d.
With 263 Half-tone and Line Illustrations.

Please write for a detailed Prospectus of this comprehensive work.

AN INTRODUCTION TO PHYSICAL GEOGRAPHY.

By MARION I. NEWBIGIN, D.Sc. (Lond.), editor of the "Scottish Geographical Magazine,"
author of "Modern Geography." Price 3s. 6d.

Adapted for the Upper Forms of Schools, and meets the requirements of candidates for the Cambridge Senior Local Examinations in Physical Geography, and for the Physical Part of the same examination at Oxford, and for similar examinations.

MODERN LANGUAGES.

THE BEST FRENCH PLAYS. Each Volume limp cloth. Fcap. 8vo. Price 3d. net.

This new series is designed to meet the need of teachers for a cheap, unannotated series of French Dramatic Texts for rapid reading in class, and it is hoped that these books will meet their requirements. The first six titles are now ready.

SEDAINE: LE PHILOSOPHE SANS LE SAVOIR.
MUSSET: ON NE SAURAIT PENSER A TOUT.
MME DE GIRARDIN: LA JOIE FAIT PEUR.

LABICHE: LA GRAMMAIRE.
LABICHE ET MARTIN: LE VOYAGE DE M. PERRICHON
MARIVAUX: LE JEU DE L'AMOUR ET DU HASARD

FRENCH WORD GROUPS. Based on Dent's Pictures of the Seasons. By R. GUERRA, Modern
Language Master, Bristol Grammar School. Crown 8vo. Price 1s.

FRENCH TEXTS.

La Bruyère: Caractères. With Notes
by H. O'GRADY. Fcap. 8vo, cloth. Price 1s. 6d.

Sainte-Beuve: Profils Anglais. With
Notes by H. O'GRADY. Fcap. 8vo. Price 1s. 6d.

Dumas: La Tulipe Noire. With Notes by
H. O'GRADY. Fcap. 8vo, cloth. Price 1s. 6d.

Mérimée: Colomba. With Notes by H. L.
HUTTON, M.A., Chief Modern Language Master, Merchant
Taylors School, London. Price 1s. 6d. *[In preparation]*

DER SILBERNE SCHILLING and other Tales. Edited by WALTER RIPPMMANN, M.A.
Price 1s. 4d.

A new Second Year German Reader, uniform with "Der Golden Vogel" and "Eisenhans," previously published in the Series.

MATHEMATICS.

ARITHMETICAL EXAMPLES. For Secondary Schools and the Upper Forms of Primary Schools.

Arranged by W. S. BEARD, sometime a Master in Christ's Hospital. Price 2s. 6d. With Answers, 3s.

This book contains a carefully graduated course of examples in Arithmetic adapted to the requirements of pupils in Secondary Schools. Prominence is given to the various branches of Commercial Arithmetic, and there are numerous practical exercises in connection with Statistics, &c. At the end of the book Miscellaneous Problems and progressively arranged Test Papers for general revision are inserted; many of the later papers have been set in recent University Local and Matriculation examinations.

A KEY TO THE PUBLIC SCHOOL MODERN BOOK-KEEPING. By RANKIN WENLOCK,
F.R.G.S., Commercial Master at the County High School, Barry, Glam. Cloth. Price 1s.

The Key is intended to be used as a supplementary volume for class work, and an Appendix is included containing the Elementary and Intermediate examination papers for 1912 of the Royal Society of Arts.

SCIENCE.

A LABORATORY NOTE-BOOK OF PHYSICS. By the Rev. S. A. MCDOWALL, M.A., Assistant
Master at Winchester College. In Two Volumes. Part I, Elementary. Part II, More Advanced. Crown 4to. 2s. 6d. net each.

Part I is also issued in Sections, in limp cloth, as follows:—

I. **Measurement and Hydrostatics.** 9d. net.

II. **Heat.** 1s. net.

III. **Light.** 1s. net.

IV. **Magnetism, Electrostatics, Current Electricity.** 1s. net.

The Publishers will be happy to entertain applications for Specimen Copies from Responsible Teachers.

LONDON: J. M. DENT & SONS, LTD., ALDINE HOUSE, BEDFORD ST., W.C.

Cremona and Battaglini were confronted in 1867. Euclid has, with some rare exceptions, been entirely abandoned in this country. During the few years which have elapsed since this step was taken we have seen the publication of more than fifty new textbooks. A marked feature of many of these modern works is that they have become conversational; we miss the old Euclidean form; it is difficult to detect the reasoning amid the maze of words. They explain too much, and give too many illustrations; the reasoning is sometimes loose, and occasionally faulty; the exercises are easy, and the least difficulty is smoothed away by a hint that as often as not ought never to be required. These new textbooks are written by teachers in every class of school in the country, and for every kind of pupil, and it is possible that much of the slipshod reasoning and the tendency to over-explanation are designed to meet the wants of pupils who are perhaps below the average level of intelligence.

On the other hand—and it is this which permits us to take a hopeful view of the situation—some of the best textbooks are of a high order of merit. They retain what was good in Euclid—all the more important theorems and his rigorous mode of reasoning; they supply many of his defects and improve some of his methods; they insert the new material in its proper place in the course, and the whole geometrical course is shortened. In two respects—in the use of hypothetical constructions and the close grouping of connected theorems—the recent textbooks mark an advance upon Euclid. These, in my opinion, are advantages which should outweigh in time whatever else we may miss in the abolition of Euclid's Elements.

We have, however, a serious loss to face, in that we have no longer a single textbook, or at any rate a single sequence of propositions, in use throughout the country. No other textbook, good as many of them are, has yet clearly outdistanced its competitors, nor has any syllabus been suggested which appears likely to command general assent. It was no

slight advantage for examination purposes to have a recognized sequence of propositions and similar methods of proof; but even this advantage dwindles into insignificance when compared with that which our pupils possessed in their transference from one school to another.

It has been suggested that we should return to the sequence of Euclid, or that a sequence should be devised that should prevail throughout the country. The former alternative is one that I trust may remain for ever outside the range of practical politics. The other is a consummation devoutly to be wished. But it is important that any scheme suggested should be subjected to the most careful scrutiny, not by a committee on which experienced teachers are unrepresented, nor by one in which opinions tend mainly in a single direction, but practically by the whole body of teachers engaged in mathematical work. At the present time the teaching of geometry suffers, I believe, not so much from the recency of the change as from the rapidity with which the change was made, the hurry with which the new schedules were drawn up, and the competition of textbook writers to be early in the field.

Take, for instance, the schedule adopted in 1903 for the Previous Examination at Cambridge. It begins in the usual way with two or three propositions on angles at a point, followed by the same number on parallel straight lines. Then comes the theorem that the sum of the angles of a triangle is equal to two right angles. How the Cambridge Syndics intended this important theorem to be proved we may perhaps infer from the textbooks of which two of their number are joint authors. In these the Euclidean proof is given. Euclid's proof in the Elements is, however, valid, for he shows first that the exterior angle is greater than either of the interior angles, and therefore that the line CE drawn parallel to BA falls *within* the exterior angle. But the schedule and the textbooks founded on it include no such provision, and the reasoning contained in them is therefore incomplete.

METHUEN'S NEW SCHOOL BOOKS

A SECOND YEAR COURSE OF ORGANIC CHEMISTRY FOR TECHNICAL INSTITUTES.

By F. B. T. THOLE, B.Sc., Lecturer in Organic Chemistry, East Ham Technical College. With Plates and Diagrams. Crown 8vo, 2s. 6d. [*Textbooks of Science.*]

This book forms Vol. II of a series designed to meet the requirements of students in technical institutes. It deals with that portion of the subject necessary for the second year student, and covers the syllabus for Stage II of the examination held by the Board of Education. It is hoped, however, that it will be found useful for those students taking the first year of their B.Sc. Course.

The book contains an account of the properties of the carbocyclic compounds, their general synthesis, and their utilization for industrial and scientific purposes. Questions of constitution and the chief reactions associated with this class of compound are fully discussed and carefully explained.

MODERN RESEARCH IN ORGANIC CHEMISTRY.

By F. G. POPE, B.Sc. (Lond.), F.C.S., Lecturer in Organic Chemistry. With 261 Diagrams. Crown 8vo, 7s. 6d. [*Textbooks of Science.*]

This volume is an attempt to bring, in a concise form, the development of some of the more important branches of organic chemistry before the chemical student. The results of the most recent research work are embodied in the text, and a bibliography is given at the end of each chapter, so that the student may be able to make use of current literature.

*Volume I of a series of three.
Volume III is also ready.*

A SHORT HISTORY OF EARLY ENGLAND.

To 1485. By H. J. CAPE, M.A., B.A., F.R.Hist.S., Head Master of the Mathematical School, Rochester. Crown 8vo, 2s. 6d.

The author has endeavoured to carry out the suggestions contained in two recent and most valuable Memoranda of the Board of Education. By limiting the space devoted to the less instructive reigns, it has been possible to treat at greater length the events of outstanding importance, while the great movements of history are discussed in their European bearing and not merely from the influence which they exercised upon our own country.

It is, however, hoped that the book will satisfy the requirements of those who need a practical textbook for examination purposes.

STORIES FROM AMERICAN HISTORY.

By ALICE BIRKHEAD. With a Map. Crown 8vo, 1s. 6d. [*Stories from the Histories.*]

This is the third volume in "Stories from the Histories" and is uniform with the other volumes. American History is a romance of many-sided interest, and such a book as this will serve to prepare a way for a fuller study of its different phases.

METHUEN & CO., LTD., 36 Essex Street, London, W.C.

BELL'S NEW BOOKS

New Edition.

Thoroughly Revised and Enlarged.

ELEMENTARY ALGEBRA.

By **W. M. BAKER, M.A.,** and **A. A. BOURNE, M.A.**

Complete. Ninth Edition, revised. Crown 8vo, with or without Answers, 4s. 6d. Or in Two Parts.

Answers separately, 1s. net.

Part I. To Quadratic Equations. Fifteenth Edition, revised, with Answers, 3s. ; or without Answers, 2s. 6d.

Part II. Fourth Edition, revised. With or without Answers, 2s. 6d.

Messrs. BELL are now publishing a New and Revised Edition of **BAKER and BOURNE'S ELEMENTARY ALGEBRA.** In this edition the book has been revised so as to keep it in agreement with the most modern methods of teaching, and at the same time to introduce such simplifications as experience has suggested. The alterations in Part I are not numerous, but in Part II several chapters have been rewritten, fuller explanations have been given in the bookwork, and all sets of examples have been revised.

BELL'S LATIN PICTURE CARDS.

Edited, with Vocabularies and Exercises, by **FRANK S. GRANGER, M.A.,** Professor of Classics, University College, Nottingham. A Set of 16 Cards, printed in Colours, with Vocabularies and Exercises on the back of each card. Price 1s. 3d. net per set.

These Cards are a direct outcome of the discussion on methods of Latin teaching at the Bangor Summer School of Latin, and are intended for use in the Third and Fourth years of Latin, when the more advanced authors begin to be read. The Vocabularies furnish materials for conversation and composition, and cover fully the subject illustrated.

BELL'S SIMPLIFIED LATIN CLASSICS.

Edited, with Notes, Exercises, and Vocabulary, by **S. E. WINBOLT, M.A.** With numerous Illustrations. 1s. 6d. each.

Now Ready.

CAESAR'S INVASIONS OF BRITAIN. — LIVY'S KINGS OF ROME. — SIMPLE SELECTIONS FROM CICERO'S LETTERS. — CAESAR'S FIFTH CAMPAIGN. — VIRGIL'S ATHLETIC SPORTS. — VIRGIL'S TAKING OF TROY.

GEOMETRY FOR SCHOOLS.

By **W. G. BORCHARDT, M.A., B.Sc.,** and The Rev. **A. D. PERROTT, M.A.**

Now Ready.

Vol. I.—Covering Stages I and II of the Board of Education Circular, No. 711, 1909. 1s. **Vol. II.**—Properties of Triangles and Parallelograms. 1s. 6d. **Vol. III.**—Areas. 1s. **Vol. IV.**—Circles. 1s. **Vol. V.**—Proportion. 1s. Also Vols. I-III in One Volume 2s. 6d. Vols. I-IV in One Volume. 3s. 6d. Vols. IV and V in One Volume. 2s.

READY SHORTLY.—**Vol. VI (Solids).**

Vols. II to VI cover Stage III of the Board of Education Circular.

CONTES FRANÇAIS.

Edited, with Introduction and Notes, by **MARC CEPPI.**

With or without Vocabulary. 1s. 6d.

With Questionnaires and Exercises. 2s.

Handbook of Exercises and Questionnaires separately. 6d.

CONTES D'HIER ET D'AUJOURD'HUI.

(Illustrated.)

Edited, with Notes and Vocabulary, by **J. S. NORMAN, M.A.,** and **M. CHARLES ROBERT-DUMAS.** Vol. I, 1s. 6d. Vol. II (just published), 2s.

These volumes are intended for second-year pupils, and contain Questionnaires and very full notes.

BELL'S ILLUSTRATED FRENCH READERS.

With brief Notes, Questionnaire, Exercises, and Vocabularies.

NEW VOLUME.

EPISODES FROM VICTOR HUGO'S "LES TRAVAILLEURS DE LA MER." Edited by **H. N. ADAIR, M.A.**

TALES FROM MOLIÈRE.

Edited by **MARC CEPPI.** 1s. 6d. With Vocabulary and Notes, 2s.

This volume contains selections from the most popular of Molière's plays, and being intended for pupils who have mastered the first difficulties of the language, as much of the original dialogue has been left in as possible.

New Arithmetic by Mr. Pendlebury.

A PREPARATORY ARITHMETIC.

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.
Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.; *prepaid rate.*
Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; *prepaid rate.*

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE HAGUE MORAL EDUCATION CONGRESS.

AUGUST 22 TO 27, 1912.

AN extremist of the *école laïque* proclaimed to the world some little time back that the International Moral Educational Congress had "fallen among thieves." "Thieves" was a pretty euphemism of this writer for theologians.

Well, the second International Moral Education Congress met in a country where the political party in power is clerical and reactionary. That party did not touch the Congress with the hem of its garments, although it was under the high patronage of the Queen Mother, who graciously forwarded a message of cordial sympathy to one of its sessions. On the other hand, there sat on the Dutch National Executive, Catholics, Calvinists, and Freethinkers, who co-operated throughout with good sense and impartiality. A similar and powerful Committee was also established in France, upon which sat Catholics (of the Modernist type), Protestants, Jews, and Freethinkers. Such combinations for educational purposes were novel in the histories of both countries. Apart from the holding of the second Congress the constitution of these national committees on so representative a basis has been a factor of considerable moment for the countries concerned, especially in France, where a powerful Moral Education League, equally representative, has resulted.

Many things happened at the Congress, but if one thing is certain it is this—it was not captured by the theologians. One expected the Dutch theologian, of the rigid Calvinist type, to have been much to the fore. *Il n'en était rien.* I asked for some explanation from my Dutch friends. I was informed that, in the first place, the Dutchman is by nature reticent on religious matters in public debate, and, secondly, that he was somewhat taken off his feet by witnessing the novel spectacle of Freethinkers no less obviously serious and convinced than he is himself. The puzzling psychology of this novel situation contributed largely to keep him tongue-tied. The Belgian cleric, however, was neither reserved nor

puzzled. On the whole it would, I think, be correct to state that the definitely clerical (what our good friends in Holland style the "confessional") point of view was put forward with restraint and moderation. A similarly chastening operation appears to have been at work also on the representatives of the *lay* idea, some of whose most redoubtable protagonists appeared on the platform—to mention only Ferdinand Buisson and Séailles from France. Clericals and Freethinkers—employing these terms roughly for broad distinction—are both learning, by rubbing shoulders together at these Congresses, to give a less crude and less polemical formulation of their thought than has hitherto often been their wont. They are also discovering that there is far more common ground to co-operate upon than they had deemed, and they are manifesting a far more eager desire to co-operate where this proves at all possible. If this judgment be correct, there is already great gain.

The Congress was, none the less, passing through a crisis. Would the orthodox and the heterodox hold together? There were apprehensions on both sides. And the capture of the Congress by either section would have spelt disaster, for the ultimate aim of these Congresses is surely to discover the unity of the spirit amid the widest diversity of its operations. Thanks to the organizers, it may now be stated that the two sections have held together and are now likely to continue to hold together. This result is due to the fact that the utmost impartiality of treatment of the most diverse expressions of conviction has been throughout observed, that every school of thought could have utterance in the Congress Papers, and every species of orator find his way to the rostrum. For this result, however, a heavy toll had to be paid. The Papers of the Congress cover over 1,200 pages. Four-minute orators trooped in interminable queue to the platform, their orations often ruthlessly cut short when the divine afflatus was only just making itself manifest. It was very tantalizing; and, when there was an orator worth hearing on the stage, the audience at times could ill restrain itself from challenging the chairman. We were paying the penalty of the exercise of a strict impartiality. There could be, under the circumstances, neither a careful selection of papers nor a careful selection of speakers. Far more in this direction will be possible when the next Congress takes place. We shall be able to concentrate more resolutely than in the past on common ground, with the result that the educational value of future Congresses should be considerably enhanced. The field is now fairly surveyed; the period of constructive work begins.

It is impossible in a brief article to do more than glance at the volumes and the discussions. All I can hope to do is to convey to the reader some indication of trends. But if one turn merely to Prof. Sadler's perfect little paper which has the place of honour in the Congress Volumes, or if one heard merely the very first speech of the Congress, he would catch something of its spirit and significance. Prof. Sadler emphasizes the unique importance of the Christian tradition of life and thought as a factor in Moral Education. The first speaker at the Congress was, however, a Mohammedan, whose "El Salam Alaïkom" fell upon us as our first benediction, and the speaker who made the deepest impression on the audience was a Hindu, Dr. Sarvadhikary, of the University of Calcutta. This speaker received an ovation, and the Congress paid him the highest compliment in its power by electing him the first Oriental member of the permanent Executive.

I hope these last few sentences convey something of the scope and variety and world-wide significance of these Congresses. A few statistics may, however, confirm the impression. The Congress numbered some nine hundred members. Of these, 400 were Dutch, 150 French, 130 English, 60 Russian. Other members hailed from Algeria, Austria, Belgium, China, Egypt, Hungary, India, Japan, Persia, Peru, the Scandinavian countries, Spain, and the United States of America. Of countries outside Holland, France was the most adequately represented, not only in numbers, but in the standing of its representatives. No other country sent so fine a team as Boutroux, Buisson, Séailles,

Bureau, and Delvolvé. For England, Germany, and the United States, Sadler, Foerster, and Adler were the sounding names.

Among the English contributors to the volumes of papers are Dr. Sadler, Prof. Mackenzie, Prof. Adamson, Dr. Saleeby, Mrs. Bramwell Booth, Dr. Hayward, Mr. F. J. Gould, Mr. Gustav Spiller, and Mr. Harrold Johnson. Mr. F. J. Gould also gave a demonstration moral lesson to a small class of English children before a crowded audience of members of many nationalities, and probably proved thereby—if one is to judge by the splendid reception the lesson obtained—better than all the debates that "one touch of Nature makes the whole world kin."

I should like to conclude this brief article with the closing words of a paper contributed to the Congress: "What we need increasingly to learn, and what, I trust, this International Moral Education Congress will in some measure teach us, is that in preparing the child through education for the social life upon which he is about to enter, we should emphasize far more than we do the things that bind us all into one fellowship, and far less than we do the things that divide us into our various sects of the Pharisees and the Sadducees. The child will, in the long run, prove to be our reconciler."

HARROLD JOHNSON

THOUGHTS ON THE MONTESSORI METHOD.

By SUSAN PLATT.

I SUPPOSE most teachers have by now read Dr. Montessori's book, and have gained much inspiration from its pages. It is a remarkable book by a remarkable woman, and is worthy of our careful and sympathetic study. We are at one with her when she speaks of the stationary desks and chairs to which children are pinned like dead butterflies, and we may well ask with her what we are doing with the *spirit* of the child under a regime which makes it possible for its *body* to become deformed. We are at one with her when she tells us that we pour into the children the intellectual content of school programs, and that we are in danger of suffocating them. No doubt, too, she is right when she tells us that we often approach them with "foolish" stories, and I think that her "Children's Houses" must be wonderfully bright spots in the wretched tenements of Rome. But I do not follow her when she says that the mothers in the tenements "enjoy the privilege" (?) of going to their work with easy minds knowing that their children are cared for, and that "the transformation of the house must compensate for the loss in the family of the presence of the woman who has become a social wage-earner." Surely no system of education, however fine, can compensate for the absence of the mother from the home! It is sad, too, to think that children have to be expelled from the "Children's Houses" because of the sins of their parents.

The section on the abolition of rewards and external forms of punishment is most enlightening. I know from experience that children trained on rational lines do not want rewards for good work and do not need punishment. On discipline through liberty, on the observant attitude of the teacher, and on many other fine things in the book, I need not here dwell. They have been discussed at great length in England and America, and are familiar to most teachers. The sense-training methods are by no means new, and were, I believe, originally suggested by Dr. Fernald, of Waverley, Mass. They are already in use in England, and have been for many years, notably in the Sandlebridge Homes and Schools for the permanent care of the feeble-minded, to which schools a notable Englishwoman, Mary Dendy, devotes her strength and energy.

So much for the book. But now to what I consider a point of great importance. It seems to me that we teachers

in England, not being very original ourselves, but "extraordinarily receptive," are rather given to swallowing methods wholesale. We are so afraid of being behind the times, of being thought old-fashioned or inelastic, afraid in fact of being ourselves. We are also rather apt to forget that remarkably good work is being done by English teachers. And when I am told by one prominent teacher that she is "introducing the Montessori Method" to her classes of happy children who come from cultured homes, and when I hear that another keen educationist has asked his committee for the necessary funds to introduce the method to his children, also of the cultured classes, then I begin to hate the very word "method" and to say, "Poor children and poor teachers! what have you not suffered from methods?"

It is only of late years that we have found out that even the methods of Froebel, that great and inspired teacher, are not really suitable to English children; but we surely reach a height of absurdity when we assume that methods which have been successful with poor little feeble-minded Italian children in tenements should be necessarily the best for English children who come from good homes. This wholesale adoption of new methods is the bane of education in England. Take, for example, the "textbook" method. We, at school, were over-ridden by textbooks; we learned our lessons off by heart, and the teacher heard them—a very faulty method, though we *did* learn self-dependence in the process. But the tide turned: "Away with the domination of the textbook! Let us have the living voice of the teacher!" became the cry. So the teacher "got up" notes of lessons, and buried himself in the tomes of libraries and museums. The children had an easy time, for little was demanded of them. The teacher did everything, and poured out oceans of talk on the passive class, while the minds of the children were, fortunately, far away, revelling in fields of delight of their own, unknown and unheeded. But methods changed again, and "Away with all this!" was again the cry. "The teachers' throats are aching; their voices are worn out; they are suffering from nerves." The children, too, had little to show for all this energy of voice expended upon them. They had all this time been happily unconscious of most of this great outflow of words. And now there was danger lest their minds should become as dormant as their bodies. For it was wonderful how constant practice had taught them to keep their bodies rigid on a hard bench and their eyes awake while their souls were asleep. "Awake, then, little sleepers!" cried the exponents of the new method. "We must base our teaching on things; away with books and the talking teacher. We must be active!" And now the child weaves and cuts out cardboard, and both teacher and child are active, and neither has yet rebelled. The teacher tries to follow the new method, the child is adaptable, and the books lie neglected and dusty on the shelves. We are, no doubt, a progressive race. At any rate, we shall not fall behind through lack of trying to take up each new idea as it comes along.

Have we not for years, in our big elementary schools, taught *Swedish* drill to hundreds of shivering *English* children, with bad boots and weak bodies? Against our better judgment, mind you, for the teachers have always known better than the powers that be. Yet methods have again changed, and now we teach dancing and skipping, and discard *Swedish* drill, yet the little bodies are still tired and aching, and many of them have been at work for hours before coming to school.

One might multiply instances in all schools, elementary, secondary, or what not, but these may suffice to teach us that the methods of others are not always for *us*. And the Montessori Method—the outcome of devoted work with the feeble-minded—seems of all methods least adapted to the education of bright intelligent children, brimming over with life and energy. Surely such keen children, who come from cultured homes, learn quickly and easily without all this paraphernalia of material! Suitable, no doubt, it is to the poor little afflicted children of Rome; suitable, with modifications, for the "Children's Houses" of the tenements,

where the mothers "go to work." But for our happier English children, Never! One has only to see the feeble-minded child at work in order to realize the vast gulf between him and a child of even ordinary intelligence. By all means let us gain inspiration from the work of others, but let us learn our methods from our own children, where Dr. Montessori learnt hers. Give the children the right environment, a surrounding of streams and hills and running brooks; leave them free and happy and untrammelled; let them be guarded and protected, but interfered with as little as possible; and let us be content to learn from them. One cannot "apply" (I detest the word, though it is Dr. Montessori's own) methods to such children.

Truly all roads of argument on the education of children lead to the same goal—the home to which the child returns when school is over. What of the tenement houses described in this book? What of the "blocks" and "dwellings" of our great towns? Surely even better than the palliative of a "Children's House" would be the giving of a home to the little child—a home in which it could grow up in the fresh air and sunlight, a home in which the father and mother should be responsible for its welfare. When the home is a "block" or "dwelling," and the parent is relieved of all responsibility with regard to his children while these are of school age, what hold has he over them when they leave school? Would it not be better to spend our money on raising the wage standard, and giving the workers homes worthy to be the growing-places of the souls of little children? The lazy, drunken, and neglectful parent would soon cease to exist, for parents in the main love their children and would do well for them if they could. The mother with a home to keep would no longer haunt the public-house, and the problem of the feeble-minded and cripple child would be nearly solved.

Compulsory education of children in masses in our large elementary schools is a negation of all true educational ideals. Children should be educated in groups, not in masses. The constant readjustment of teaching methods to the large class serves only to lower continually our educational ideal. Compel the children to come to school, and you must feed them if they are hungry, clothe them and wash them, and give them medical attendance, and pat yourselves on your broad County Council backs, because you have been the first to provide shower-baths or open-air schools for them. Yet surely it is the parent who should do all this for his child, and who would gladly do it if he had a sufficient wage to provide a home for them instead of a "dwelling."

Instead, then, of the vast sums of money that are being spent on education, which at the best falls far short of the ideal, I would spend that money on decent housing. I would also give fewer licences to public houses, for to the thinking person the glittering taverns on one side of the street and the schools for defective or crippled children on the other are a nightmare. Having given to our children the best environment possible, I would devote a good deal of money to research work on the best methods of teaching them. For this work I would study English children direct, remembering that they are English after all, and that they differ temperamentally from Swedes, Germans, and Italians. Froebel and Pestalozzi were right when they learnt from *their* children. Dr. Montessori is right when she learns from her little Italians. Let us learn *our* methods from English children.

SCIENCE ASSOCIATION.—The Science Section of the London Branch of the Association of Assistant Mistresses has been encouraged by its past success to become the nucleus of a larger Science Association, not restricted to London members, but including any past or present teacher of science in a public secondary school or any Science Lecturer in a women's college. The inaugural meeting will be held in November. Meanwhile, subscriptions (5s.) may be sent to the Hon. Sec., Miss I. H. Jackson, Godolphin and Latymer School, Hammer-smith, W.

JOTTINGS.

THE correspondence on the pronunciation of Latin drags on, but there is really nothing more to be said. Prof. Saintsbury backs up Mr. Alington and the defenders of *mumpsimus*, but, like "the young painter of Rome, who preferred to cut meat with a comb," he declines to give his reasons. Dr. Robert Bridges accounts for the fulfilment of Mr. Alington's prophecy that the reform would prove abortive. At Eton one of the masters, "whose classical influence was not the least, would sometimes openly express his disapprobation before the class. Such a muddle between the two systems would be likely enough to disconcert Mr. Alington's 'average boy,' or any one else." Fortunately the Board of Education have given their imprimatur to the New Pronunciation, and, as Dr. Bridges writes, "Our old high-class schools will be left in the lurch by the scientific schools if they hesitate in the common-sense reforms."

MR. H. BOMPAS-SMITH, Head Master of King Edward VII School, Lytham, has been appointed a Professor of Education in the University of Manchester. We understand that Prof. Bompas-Smith will take over the administrative side of Prof. Findlay's duties, who will thus be free to devote himself to the work of research and experiment in the Fielden Schools.

PROF. FOSTER WATSON has been awarded the degree of D.Lit. (Education) by the Senate of the University of London, in recognition of his "English Grammar Schools to 1660." This is the first time that the degree has been awarded for Education, as distinguished from History and Philosophy, and it brings us one step nearer Prof. Adams's desideratum—the recognition of Education as a science.

In the *Journal for English Studies*, Mr. P. B. Ballard has an entertaining article on "Appreciation of Poetry." As a test he set eight extracts, four good and four bad poetry, to be marked in order of preference. The test was set to various classes in elementary schools, training colleges, and to unqualified teachers. College students come out best and teachers worst, worse than the worst school. We hope next month to discuss this interesting experiment.

THE visit to England of M. Jaques-Dalcroze, which was postponed owing to the strike last March, will take place in November. Particulars of his demonstrations will be found in next month's issue.

HAS handwriting deteriorated? A former examiner in several Universities has suffered and suffers many things from examinees and correspondents, and complains in the *Times* that "neat writing is neither taught nor encouraged in our great secondary schools." Mr. Nowell Smith rebuts the charge. Public-school masters do encourage neat and legible writing, and the blame so far as it exists lies at the door not of the public, but the preparatory schools. A boy should have been taught to write before he is thirteen, and no one would wish to re-establish the old writing-master.

BUT is it true, as a former examiner states, that fifty years ago the old Universities turned out men who wrote as a rule excellently? If the present writer had to select from his correspondence specimens of cography, the first three he would choose are from a Senior Inspector, a late head master, and a famous author—all Fellows of Oxford or Cambridge colleges. Dean Stanley's writing is proverbial, and no one succeeded in deciphering a letter of Lord Melbourne set among our Prize Competitions some twenty years ago.

THE PHYSICAL EDUCATION SUMMER SCHOOL.—The Letchworth Garden City has been the scene of many Summer Schools, but none proved more successful than that organized by Miss Theodora Johnson, of Clifton, for the National League for Physical Education and Improvement. The students came from all parts of England and from Egypt, Canada, and France as well, while the Garden City itself contributed over 2,500 entrances for the open lectures. Lectures were given by General Sir Nevil Macready and Mr. A. J. Martin, on "The Fight for Health"; by the Rev. Mabel MacCoy Irwin, on "The Proper Sex Instruction of Children," "The Ethics of Marriage," and "Adolescence"; and by Mr. E. E. Hayward, on "The Housing of the Working Woman";

while Miss Johnson gave a course on "Physiology and Hygiene." Two hours a day were devoted to the practice of Swedish exercises and country dances, under Miss Whiteley's able tuition, at "The Cloisters," which Miss Lawrence had kindly placed at the disposal of the League. All the students looked stronger and healthier at the end of their fortnight, and expressed themselves as delighted with the novel experience in spite of the adverse weather conditions.

IT is a hopeful sign of the times that during the month of August no less than thirteen holiday courses in manual training were held in England, and the total attendance of teacher-students cannot have fallen far short of two thousand. At Scarborough alone there were close upon four hundred. The teacher who can carpenter is gradually superseding the carpenter who cannot teach.

THE *Reading University College Review* (Vol. IV, No. 12) is something more than a domestic chronicle. The current number contains three articles of general interest. Prof. Wyld discusses "The Place of the Mother Tongue in a Modern University." He would have all students begin with phonetics, and proceed to Middle English and Chaucer, not differentiating between Pass and Honour men till the second year. At that stage he would also differentiate between the linguistic and the literary side. "Frederic Seeböhm," by Prof. Stanton, sums up the opinion of leading modern scholars on English social origins. For dessert, Prof. Bassett gives a graphic account of a "potholing" expedition. The *Review* appears three times yearly, price 6d.

In the list of members of the Registration Council, in our August number, the names of Mr. A. A. Somerville (Assistant Masters' Association) and Mr. F. A. Sibly (Private Schools Association) were inadvertently omitted.

THE Registration Council, at its first formal meeting on October 4, will proceed to elect a Chairman and appoint various Committees. It is not likely that they will enter on the actual work of Registration before next year.

THE Church Congress will be held at Middlesbrough, October 1 to 4. The School Emergency League will be represented by Sir W. H. Worsley and the Bishop of Manchester, and Sir C. Alfred Cripps will be among the speakers.

AN official statement just to hand enables us to answer several inquiries as to colonial openings. In the western provinces of Canada—Manitoba, Saskatchewan, and Alberta—there is a large demand for teachers. Salaries vary from £120 to £200 in the junior department and from £200 to £400 for senior departments and principalships. The regulations for recognition of English certificates and diplomas are too complicated to be summarized. A graduate who has taken a two-years' course of training will be granted an interim first-class certificate, and similarly trained teachers without a degree a second-class certificate. These certificates may be made permanent after one year's successful training. Further particulars may be obtained by application to the Superintendent of Emigration for Canada, 17 Victoria Street, S.W.

HERBERT BARING GARROD.

NO brazen trumpet clamoured o'er his grave,
No shattering volley mocked the thunder cloud;
For, though his life to war for truth he gave,
His soul abhorred the pompous and the loud.
And best he loved to dip his polished shaft
In that deep well of wisdom undefiled
Whence old Ulysses drew his wondrous craft
And Dante dreams that half the world beguiled.
Truth set her seal upon his fearless tongue,
But laid no poison on his courteous lips;
And much he honoured age, yet praised the young
What time they launched Endeavour's untried ships.
His soul was radiant with an old-world light:
He was a "veray parfit gentil knight."

WILLIAM K. HILL.

COLONIAL AND FOREIGN NOTES.

GERMANY.

Germany is steadily cultivating the arts of peace and the arts of war. Our business being with the peaceful art and science of education, let us look with our own eyes at what she is doing in that, and let us set down also some gathered facts relevant to the matter. Köln—officially, as we think, still Köln—may serve us as a first centre of inquiry and as an example. The pedagogic eye is at once impressed with the abundant provision made for the child at play; thus, near the northern end of the great "Ring" is a *Spielplatz* (playing ground), embosomed in flowers and containing within confining boards two large heaps of precious sand. Sand-heaps for him you will find also outside the town near the Venloerstrasse, and elsewhere. In the baths on the river banks (*Strandbäder*)—the Town Council has just voted 1,500 M. that some 2,100 schoolboys and schoolgirls may, in the holidays, use the town *Strandbad* free—children may play as well as bathe. Germany, observe, is recognizing the educational value of "free" play (as we know it), beside taught games and formal gymnastic exercises. And, since your German is nothing if not scientific, every childish game is studied scientifically. Thus, a curious investigator lays down that *Blinde Kuh*, our "blind man's buff," goes back to Indo-Germanic times, when "one wearing the mask of a beast-shaped demon sought to catch the bystanders, the mask being without eyeholes, whether it were to make the catching difficult or to avoid even a mimicking of the 'evil eye' of the demon." Yet the child may play his games without being instructed in their origin; and when he is tired, all around in parks and open spaces, there are *Kinderbänke* (benches for children only) or other resting places. To stimulate his patriotism the German Navy League (*Flottenverband*) will sometimes pay for his journey to the coast, where German ships rule the waves. As to his schooling, the town spends on it year by year a growing and ungrudging sum, for in the schools pupils multiply apace. There are now in the *Volksschulen* of Köln, *Asyl-, Hilfs-,* and *Waisenhaussschulen* being excluded, 1,427 classes, taught by 763 men teachers, 723 women teachers, and 47 technical instructresses. We must not hide a weak point. Here, as so often in Germany as well as in England, there are overcrowded classes. The figures may be interesting. In 121 classes were lately forty pupils or fewer; in 592 classes, between forty and fifty pupils; in 605 classes, between fifty and sixty; in 100 classes, between sixty and seventy; whilst in 6 classes the number was from seventy to eighty. Not the most skilful primary teacher can do justice to sixty or seventy children. Does Köln feed her children? In the year 1911 six thousand of them received a free milk breakfast.

Let us no longer confine ourselves to Köln, but discourse of Germany at large. And, first, a word about Continuation Schools. Continuation. Steady progress is to be reported. We hesitate to crowd this page with statistics; yet, to complete our picture, we must print a few illustrative figures. In the district (*Bezirk*) of Kassel alone there are at present 62 industrial continuation schools, with 7,199 pupils, 393 of them unskilled workmen; to these must be added 11 commercial continuation schools, with 1,254 men and 526 women pupils. The most conspicuous development is of the country continuation schools (*ländliche Fortbildungsschulen*); of these Kassel has 454, containing 8,686 pupils. Special courses are being given in many parts of Germany to train teachers for the country schools, and these courses are often followed by the clergy, not so much engrossed by "religious difficulties" as to be indifferent to the children's needs. In the Niederbarnim Circle (*Kreis*), Brandenburg, there are now 14 industrial continuation schools, and nine places are enumerated as having recently established country continuation schools. Noteworthy here is it that the *Kreis* is making grants to enable forward pupils of the continuation schools to attend higher professional schools (*Fachschulen*). In fine, it cannot be disputed that Germany is giving to the adolescent sedulous and ever-increasing care.

Turning to the secondary schools no talk of vocationalizing them!—we find that the schemes of instruction remain practically unchanged. Are there no weaknesses? Never an incompetent teacher? No boys who are moral problems? It must be so. But the German higher school keeps those who follow its full course for nine years under the best educational influences that German pedagogy can supply. It is on this continuous, not necessarily uniform, pressure that Germany relies to mould her youth. She devotes more attention to the training of the mind than to the training of the body. Says a writer: "Wir haben keine englische, sondern eine deutsche Schule, auf der noch glücklicherweise bisher die

geistige Erziehung der körperlichen bei weitem voransteht"—Ours is not the English but the German school, in which, happily, up to now intellectual training has been accounted far above physical. Yet the body is not neglected. German boys make in school-time long excursions on foot, unknown to English public-school boys. They play lawn-tennis. When opportunity is afforded them, they boat; on the Rhine at Köln you will see a handsome boat-house belonging to the *Gymnasium* and the *Realgymnasium* jointly. Be it a merit or a demerit, the German boy plays football in summer: whence bad "reports" in autumn (*Herbstzeugnisse*), and proposals to lighten his work in the summer term.

We have been told lately that England has nothing to fear from a comparison of her educational system with that of any foreign country. Mr. Pease will have made the assertion on the authority of the Board of Education, which must not be allowed to write its own testimonials. Is the education furnished by the English primary school better or worse than that of the German *Volksschule*? We should like some impartial inquirer—let us say the Professor of Comparative Education in Columbia University, New York—to investigate a subject so vitally important. In the field of Continuation we have given our rivals a dangerous start. With regard to the German secondary school, that it does, on an average and owing to its sanctions, keep the pupil under its influence for a longer time than the English, we hold to be certain. That its range of instruction is wider the schemes prove; on the other hand, there is no reason to think that the finished product of the German *Gymnasium* reaches a higher standard in classics and mathematics than our own sixth-form boys. But what chiefly distinguishes German education from English is that Germany, firmly upholding liberal education, has made such separate and distinctive arrangements for vocational instruction as to excite admiration throughout the world. Here, again, if a comparison is to be drawn, we ask for an umpire. Perhaps M. Ferdinand Buisson might tell us whether there is better provision for technical and commercial education in Germany than in England. We believe that he would say "Yes." In any case, and for good or evil, the mode of development is different. Germany promotes technical and commercial *Hochschulen*, which thrive notably. The *Handelshochschule* at Köln, for example, will offer this winter 175 lecture courses, occupying 307 hours a week. In its first half-year the figures were 33 and 80; in the tenth, 133 and 222. England creates Universities in which technical and commercial studies jostle liberal. In Germany even such a subject as chemistry may not be taught vocationally in the secondary schools; in England we let in typewriting, mainly vocational, and it is now proposed to vocationalize the secondary school itself. We ask temperately that caution should be exercised in this matter, remarking that, whilst there is no opposition between the making of a man and the making of a bread-earner, method and matter of instruction are wont to be changed when a new end is proposed—when, for instance, the teacher of gymnastics is required to produce acrobats. In one respect England need dread no comparison with Germany: her women are, for the most part, better educated than the German, whose intellectual vision is not seldom bounded by an horizon of cooking utensils. Nevertheless, here, too, much is being done. In another respect we are as far behind the Germans as the Hottentots are behind us. Our children stand, or lie in perambulators, outside of the public-house, where the mothers visit them, beer glass or spirit rummer in hand. In Germany it is pleasant to see clean children with their clean-mouthed parents sitting or frolicking in clean taverns where a bishop would deem it no shame to sit. We fear the English public-houses more than we fear the German Dreadnoughts.

FRANCE.

They do some things better in France than we in England. Thus they can teach us how to lighten the work of preparing for an examination by giving it aims and meaning. The program for the *Agrégation d'anglais* has lately been issued. In such a case we should specify periods and some—probably dull—texts. The French student is invited to address himself to three subjects: (1) the English spirit of adventure and conquest, (2) the religious spirit and influence of the Bible in England, (3) criticism of contemporary English society. For the study of the first subject he will use not only Sweet's "Reader," Shakespeare's "Henry V." and Hakluyt's "Voyages," but also Kipling's "Seven Seas" and S. E. White's "The Blazed Trail." Enlightenment on the second subject is to be got from the Psalms of David (Authorized Version of 1611), from Henry Vaughan's "Sacred Poems," from Cowper's "Letters," and from Browning's "Christmas Eve and Easter Day"; on the third from Carlyle's "Past and Present," Galsworthy's "Man of Property," and H. G. Wells's "Tono-Bungay."

Syndicates being the order of the day, the French primary teachers, men and women, formed their own syndicates and uttered revolutionary views. M. Guist'hau, the Minister of Public Instruction, interposed with a circular in which he expressed the resolution of the Government to defend the secular school against those who would compromise it as well as against those who attacked it. Teachers must not be allowed to voice sentiments which would estrange from the school all those who are concerned for the morality of the young and for the dignity and security of the country. The syndicates were illegal and must be dissolved by September 10. We remark that the children, in whose interest we write, never profit by the introduction of a strong partisan spirit, religious or political, into the atmosphere of education. The school needs calm.

UNITED STATES.

Let us return to the great meeting, mentioned briefly last month, of the National Education Association at Chicago. **Resolutions of the N.E.A.** It is not in the internal politics of the Association, but in its resolutions—clear guides to professional opinion in the United States—that we are interested. By one of these resolutions a readiness was declared to promote the movement for an international commission upon the cost of living; for teachers must live, although the untaught do not always see the necessity of it. By another it was stated that "in view of the fact that children are often innocent victims of our present unequal and unjust laws, the National Education Association favours a uniform law on all questions of marriage and divorce—based upon an amendment to the Federal Constitution." The American schoolmen regard the maintenance of peace as one of their concerns, and they pronounced the effort to stay war to be "one of the great educational movements of the age." The franchise for women we in England deem to be a political question. The Association brought that, too, into their province and urged the granting of the suffrage to the women of the United States on the ground that women must train youth to realize the duties and privileges of citizenship, and that "the ability to accomplish this work adequately demands not only a knowledge of the functions of citizenship, but also the right to exercise them." Significant was the declaration that "the time has arrived when Normal Schools and Teachers' Colleges should give adequate courses of instruction in sex hygiene with a view ultimately to the introduction of similar instruction into the courses of study in public schools."

England stands at the parting of the ways. Is she in education to march beside the United States or beside Germany? Will she, with Germany, maintain liberal education as distinct from vocational training, or will she yield herself to the seductions of Oregon and Arizona? Our business here is simply to report what educators in the United States are saying, so that our readers may know to what their companionship would lead. At Chicago the great army of schoolmen wrote vocationalism on its banner. We quote the declarations on the subject, so far as is possible, *verbatim*. "In spite of the fact that our schools have met well the social and economic problems which have confronted us to date, there has been an ever-increasing demand on the part of the public for greater practical proficiency on the part of pupils of all ages and grades. Liberal education has, in a measure at least, failed to meet this demand on the part of those who judge by results. Many of our formerly well accepted principles, as well as our educational traditions, are undergoing constant and rapid revision as a result of recent scientific investigation and philosophic readjustments. Accordingly this Association places itself on record as favouring such changes in the course of study in elementary and secondary schools, together with such changes in methods of instruction, as shall make it possible to assist the pupil in the ready application of such knowledge as he may acquire to the conditions of actual life." The United States, "to protect its population by maintaining its vigour and morality, to change its large output of raw material into an output of finished product, to make it possible not to fight with armoured cruisers, but with brain and skilled workmanship, and to maintain its commercial prestige, requires some form of vocational training." The Association desires the Federal Government to pass a law, carrying with it an adequate appropriation of money, "which shall have for its end the ultimate improvement of home, shop, and farm through vocational training." It suggests that the sum so appropriated should "be administered through the United States Bureau of Education or a similar body; thence through the State Board of Control of each State to the several local Boards of Control in the several communities."

CORRESPONDENCE.

SONNENSCHIN'S "NEW LATIN AND FRENCH GRAMMAR."

To the Editor of The Journal of Education.

SIR,—I am much obliged to your reviewer for the careful study which he has made of my new "Latin and French Grammars" and for the many kind things which he has found to say of them. The suggestions which he makes for their improvement raise a number of points of great interest to students of Latin and French; and, as the view which your reviewer takes differs in some important points from that to which I have been led, it seems desirable in the public interest that these matters should be ventilated, and I venture to send you the following remarks. First of all, however, I must say that your reviewer has unintentionally done me an injustice in regard to one or two points. I do not call *à Paris* a dative-phrase; on the contrary, I expressly put it under instances of phrases formed with *à* which do not correspond to datives (see "French Grammar," § 394). Again, I have not omitted the rule of the moods taken by *quamvis*, *quamquam*, and *etsi* (see "Latin Grammar," §§ 343 and 532). As to *cum* frequentative, I have given no rule; but is any rule necessary? Ciceronian usage knows only the Indicative, *i.e.* draws no distinction between *cum* frequentative and *cum* non-frequentative. That *un enfant petit* is not French is recognised in my "French Grammar," § 538 f.

The following criticisms are more important as raising questions of general interest:—"There is no attempt at absolute uniformity of tenses with English or Latin." Your reviewer is referring to the fact that "he gave" is called Past and "il donna" Past Historic; "he has given" is called Present Perfect, "il a donné" Perfect. The object of the Terminology Committee was to find names which should be as far as possible descriptive of the uses of forms, and we came to the conclusion that the similarity and difference between "he gave" (often habitual in meaning) and "il donna" is correctly marked by applying the term "past" to both and differentiating the French tense by the addition of the term "historic." Similarly "il a donné" is used not only like the English "he has given," but also like the Past Historic, and is therefore correctly differentiated from the English Present Perfect by the omission of the term "Present." What is wanted in terminology is a set of terms which indicate both the differences and the similarities of languages. That your reviewer has conservative scruples about the term Future in the Past does not surprise me; yet I am not alone in thinking the term a great gain, and I cannot admit that the idea of futurity has disappeared in the usage of the form which denotes what we call "conditioned futurity." *Hésiter serait une faiblesse* does not mean "To hesitate is a weakness," but "To hesitate *would be* (*i.e.* will, under certain conditions, be) a weakness"; such at any rate is our analysis of this often misunderstood idiom, and we find ourselves in touch with some of the best modern French authorities, *e.g.* Clédat.

Whether the misuse of the French Past Subjunctive, except in literary style, is "exaggerated," as your reviewer thinks, is a point on which I can only say that I have followed the guidance of the best teachers and grammars. The reason why modern French has departed so far from the strict rule of sequence is no doubt based on euphony, as your reviewer says; but the departures are not limited to one conjugation: see my § 328, note 3, page 124.

An important point is the question whether the *ne* in sentences like "Je crains qu'il ne vienne" is optional or not. I have printed the *ne* in square brackets to indicate that its use is optional. Why does your reviewer say that this implies that the *ne* is usually omitted? No; it implies only that the *ne* is not necessary. I am well aware that most grammars give the rule differently, but my statement is supported by excellent authorities, among whom I may mention my colleague, Prof. Châtelain, Sudre ("Grammaire Française," page 149), Haas ("Neuf Französische Syntax,"

page 426), Lücking ("French Grammar," § 329, where the optional use of *ne* in several different constructions is dealt with). As Sudre says, usage has varied at all epochs of the language, and at the present day there is a tendency to restrict the use of *ne*. If this is not true, perhaps some French scholar of authority will step forward to defend the traditional rule.

That *ne pas douter* requires the Subjunctive is implied as a rule of the ordinary usage in my §§ 355, 356, yet there are exceptions. See Lücking, § 169, top of page 158 (third edition).

As to *plutôt* being an alternative for *plus tôt*, I do not feel so sure, and should be glad of guidance; but I find it is so used by good writers, such as Bourget: "Ce projet n'eut pas plutôt saisi cette âme frénétique que l'accomplissement en devint inévitable." ("Cœur de Femme," IX.)

As to Cases in French, the strict definition of the term "case" as a modification of form cannot be maintained in any language, and the advantages of recognizing cases and case-phrases in French impressed themselves strongly on the Terminology Committee, as they have on many other grammarians. Prof. Rippmann recently sent me the following quotation from a review of Marty's book entitled "Zur Sprachphilosophie": "It is to be noticed that Wundt and Marty, like Delbrück and Sütterlin, recognize nouns with prepositions as cases. The opposition to this point of view, which is expressed by Dietz in his "Grammar of the Romance Languages," and which I formerly maintained, has in recent times become weak and unscientific (F. Baumann in "Literaturblatt für Germanische und Romanische Philologie," January 1912, page 1).

Space forbids a discussion of your reviewer's suggestions as to the Latin Gerundive and the temporal signification of the Subjunctive of Wishes. On the latter point his view is applicable to Old Latin (e.g. Plautus "Cist." 555, "Asin." 615), rather than to Latin of the classical period.—Yours faithfully,
September 18, 1912. E. A. SONNENSCHNEIN.

[On most of the points raised in Prof. Sonnenschein's interesting letter we must agree to differ; in the few remaining I may have misunderstood, but can only in one instance plead guilty to misrepresentation. (1) 394 gives "Uses of *à* which do not correspond to datives," but it is not stated that these are not to be called dative phrases. Would not "C'est à moi" be classed by him as a dative phrase? (2) § 532, *quamquam* with subjunctive I overlooked, and apologize. Surely Cicero distinguishes "Verres cum ver appropinquabat" and "cum ver appropinquaret"? (3) "Hésiter serait une faiblesse" expresses a condition. Agreed, but in present, not in future, time. As Brinkmann has it, "One function of the conditional is to express an action, either future or present, from a present point of view." (4) Since the review was written I had the curiosity to count the imperfect subjunctives in some hundred pages of "Jean Christophe," and found they averaged well over one a page.—YOUR REVIEWER.]

WINTER SPORTS IN SWITZERLAND.

To the Editor of The Journal of Education.

SIR,—Will you allow an ex-schoolmaster, who has done his share of Alpine climbing, to urge his brother public-school masters to discountenance the, I fear, growing practice of allowing our public-school boys to go to Switzerland for winter sports? These sports are all very well for men and women generally, and possibly for "jaded" schoolmasters in particular (though I am afraid that the young master is apt to be somewhat luxurious), but for boys I think that they are open to very grave objections. First, on the score of health. The day's outing in the glorious winter air, if the weather be dry, is no doubt admirable; but the good effect is often in great part undone by the long evening in the stuffy hotel, spent in dancing, &c., in a crowded room. I know by experience how utterly foul the air of an hotel lounge can be in the early morning before the windows are opened—and often they

are not properly opened at all—and this even when the evening has been short. Secondly, the sports are decidedly costly, and parents who cannot really afford it have often to give in and let the boy go, against their own conviction.

Still more, the sports take boys away from home duties. One knows how little of home a boy gets when once he has gone off to the preparatory school, and Christmas is surely the time when he should be at home, especially if he lives in the country and is to be a "country gentleman." He ought to be learning the ways and thoughts of country folk, rich and poor, and so avoid the ills of the separation of classes which town life often seems to make inevitable.

There ought to be plenty to do. Hounds to ride to, if a horse or pony is available, harriers to run after, rabbiting, even ratting. I remember hearing so confirmed a don as the late Edwin Palmer speak with much keenness of "the delights of a rat-battue." Albeit, Dr. Bradley is said to have said of the Marlborough boys that their ideal was "killing rats with a thick stick"—they did pretty well in the schools all the same!

And surely, in spite of the attractions of "public-school competitions" in the High Alps, the boys have had games enough and to spare in the autumn term. Also, writing as one who has loved mountaineering and never saw a mountain until after Oxford days, I would protest against too early a familiarity with the grand and mysterious Alps, for winter sports do make many boys *blasé*.

More might be urged; I cannot understand how public-school masters who talk and even preach eloquently about "the simple life" can possibly encourage that form of luxury about which I am writing. This is scarcely the place in which to do more than just refer to the harm done increasingly to family life by the fact that the elders go. I hear to-day of a family advertising for children "while the parents are away in the Alps."—Yours faithfully,
J. H. D. MATTHEWS.

Purley Rectory, Reading, September 20, 1912.

THE BRITISH BOYS' TRAINING CORPS.

To the Editor of The Journal of Education.

SIR,—We shall be obliged by your kindly permitting us to draw attention to a scheme for providing a systematic course of combined military and industrial training for lads from the age of fourteen years upwards.

The object of the British Boys' Training Corps, on behalf of which we write, is the moral, physical, and industrial advancement of the cadets enrolled in it, to train them in the duties of citizenship and to fit them for a life of industry. Military organization and exercises will be used as a means for developing their moral and physique, and promoting among them habits of discipline, application, adaptability, and resourcefulness, which are indispensable to proficiency in the workshop or the factory.

The Corps will not compete with the Boy Scouts, the Church Lads' Brigade, or any similar movement; rather it will strengthen them by stimulating the growth of those principles of modern education on which they depend for success. In fact, the Corps owes its inception to the excellence of their work, and the consequent desirability of adopting their methods on a more extended and comprehensive scale. Their activities are mainly concerned with boys in employment, whose opportunities for training are necessarily intermittent. The British Boys' Training Corps will in effect be a military and industrial boarding school, and is designed to train and instruct a boy for a period of three or four years continuously from the time he leaves the elementary school.

Alike upon social, economic, and industrial grounds we confidently commend the scheme to the public. The annual loss to the nation of promising material presents a grave problem. Far too many boys on leaving school are engaged in "blind-alley" occupations; when they have outgrown these they find themselves adrift without either the skill or the knowledge to qualify them for permanent employment; they swell the ranks of casual labour, and the prison or the workhouse is the ultimate destiny of an increasing number of them. To mitigate these evils, in some measure at least, is our aim. Those boys, moreover, who may afterwards join the Army will on discharge be in a much better position to obtain remunerative employment than they would otherwise be, owing to the technical trade instruction which they have previously received, while their prospects in the Army itself would

be considerably in advance of those of the usual recruit irrespective of their enhanced value as soldiers.

The direction and control of the Corps will be undertaken by Lieut.-Colonel Alsager Pollock, who organized and conducted the *Spectator* Experimental Company with such conspicuous success in 1906. The experience gained upon that occasion conclusively demonstrated the beneficial effects of military training for even a few months. Upon its industrial side the Corps will be modelled on the admirable schools of the Christian Brothers at Artane and elsewhere in Ireland.

It is estimated that the cost of establishing and maintaining the Corps at first will be £15,000. No appeal for funds has yet been made, but two members of the Council have generously promised to guarantee £1,000 and £500 respectively towards the expenses on condition that the total amount guaranteed or subscribed is not less than £15,000: and various unsolicited donations, including an anonymous one of £50, have already been placed to the credit of the Corps at the Bank of England.

In issuing this appeal for financial support we would emphasize the fact that the movement is in no way connected with any political party. The Council includes members of all parties, and distinguished representatives of almost every aspect of national life. The realization of the project will fill a distinct gap in English education, for the existing facilities for efficient practical training during the years of adolescence are deplorably inadequate, and it will, we trust, lead to the establishment of similar Corps in other parts of the country. Subscribers will have the privilege of nominating boys to the Corps according to a fixed scale.

Guarantees, donations, or subscriptions may be sent to the account of the Corps at the Bank of England (Western Branch), Burlington Gardens, W.; to Colonel Pollock, Wingfield, Godalming; or to the Hon. Secretary, Mr. J. C. Medd, 37 Russell Square, W.C., from whom particulars of the scheme can be obtained.—Your obedient servants,

ALEXANDER OF TECK (President).

UNIVERSITIES AND SCHOOLS.

LONDON.

KING'S COLLEGE FOR WOMEN.

The College opens for the session 1912-13 on Thursday, October 3. The inaugural address will be given by Dr. Bernard Bosanquet, LL.D., D.C.L., on Friday, October 11, at 5 p.m., in the Jehangier Hall of the University, the subject being "Optimism."

A few courses useful to those engaged in social work have been arranged. The scheme is at present tentative, but if further developed it is hoped that it will follow to some extent the lines of the courses given in the Universities of Liverpool and Birmingham. In addition to the regular lecturers of the College, the Rev. C. F. Rogers, of King's College, will give a short course this session on "The Work of Charity," and the Rev. John Morris, Vicar of St. John's, Walworth, on "The Social Reformer at Work."

OXFORD.

It is still too early to be able to write much about the prospects of Michaelmas Term. We shall no doubt in the course of the term have presented to Congregation Council's proposals for constitutional reform. These proposals were published last term. As they leave vested interests undisturbed in Congregation and propose no reform of Convocation except that its members should vote at a three days' poll, they are not really of profound importance. The success of the attempt to make Congregation represent the resident teachers will depend on how far non-teaching resident members make the necessary effort to retain their vote. It is possible that a large number of them may allow their rights to lapse. Something was said in the August number of the Summer Classes, held under the auspices of the Tutorial Classes Committee of the Extension Delegacy. They lasted from July 1 to August 27, and were even more successful than in previous years. This year the school was attended by 215 students. Of these, 130 came for only a week, 85 for a fortnight, 6 for three weeks, and 14 for four weeks and over. The longer stay of these few picked students was the new feature of this year's school. It was made possible by the Gilchrist Trust contributing £100 and Magdalen College £50 for scholarships of £10 each.

The students came from the classes of eleven different Universities and University Colleges. They attended one lecture with an hour's discussion each day, but most emphasis was placed on the individual tuition with different tutors, in which men read essays on the subjects they had themselves selected. The lectures were on economics, history, political science, and sociology, with one short but much appreciated course on evolution. The subjects chosen for individual study were more various. Industrial History attracted the largest number, 94; then came Economics with 48, and Political Science with 38. Other subjects were divided as follows: Anthropology 2, Biology 3, Education 5, Greek 1, History (not industrial) 8, Law 4, Literature 2, Philosophy 6, Sociology 4.

The students came from the most varied trades; there were about thirty clerks and eleven elementary teachers. Most of the others were factory operatives. They were, of course, from all parts of the country.

The Oxford Summer School disproves to anyone who comes to it that silly assertion that men of different classes cannot understand one another. Given a common interest, the desire to learn that all members of the summer classes have, and class differences do not exist. The work of the summer classes has this in common with a regular University course, that men learn there not by getting information and not merely by listening to lectures or having their essays criticized by a tutor, but by mixing with fellow students from all over the country, in endless talks and arguments on all subjects under the trees in the quadrangle at night or in the quiet of college rooms. The time is short, too short for systematic courses, but long enough if the hours with a tutor are well used, for a man to get guidance and suggestion to last him through the year. The summer classes, it is clear, are no longer an experiment. They have come to stay. The extension of the benefits of the University to working-class students must proceed along this line at least. The summer classes might develop into a Summer University, where men could attend a University course which would not need that they should leave their trade and would not take them out of it. In the meantime expansion is checked by want of money, and, before the Tutorial Classes Committee can meet the demands made on it, it must have far more money at its disposal.

WALES.

At one of the Cymmrodorion meetings held during the Eisteddfod week at Wrexham, there was an interesting discussion on the vital question of "Careers for the Youths of Wales." Sir Herbert Roberts, M.P., who has taken a prominent part in establishing an Appointments Board for Wales, read a valuable paper in which he gave an outline of the work which the Board proposed to undertake. That there is urgent need for an organized system of finding suitable avenues of employment for the youths of Wales is shown by the fact that, at the present time, there are over 400,000 children in the primary schools and 14,000 in the intermediate schools. Hitherto, the teaching profession has been the main outlet for the best boys and girls, while the Civil Service and the great fields of commerce have not been patronized to the extent that might have been expected. Statistics supplied by the Board of Education tend to prove the correctness of the statement, for we find that, of the pupils who left the county schools during the last year, 17.4 per cent. became teachers of various kinds, 10.8 per cent. entered upon a professional, commercial, or clerical career, 3.1 per cent. went to the University, and only 1 per cent. to agricultural occupations.

Welsh pupils, it is surmised, drift to the teaching profession in such disproportionate numbers in the majority of instances because they are ignorant of other possibilities of making a livelihood, and not because they are specially attracted to school work. It will be the business of this Board to bring all available information as to other careers to the notice of the boys and girls and of the University students, which will enable them to exercise a wider choice of employment. Mr. Llewelyn Williams, M.P., while blessing the appointment of such a Board, seemed to be anxious about its effect on the character of the Welsh nation, for he thought that there was a danger that it might undermine their spirit of self-reliance and independence, and convert them into a nation of "Babus"! Whatever opinion one may hold about the modern tendency to lavish scholarships and bursaries on all and sundry, it is not at all clear to the ordinary intellect that the mere supplying of information by the Appointments Board will have such dreadful results as the worthy M.P. seems to anticipate. There are great possibilities of usefulness in this new departure provided it is organized on sound business lines.

The fifth Annual Meeting of this Association for Wales was held at Cardiff College, on September 21, under the presidency of Prof. Mackenzie. Considerable success has attended its work during the past twelve months. Audiences of over a thousand listened to lectures on economics and industrial history during the recent coal

SCHOOL CLASSROOM WITHOUT ANY OBLIGATION.

strike, which is a striking evidence of the keenness of a section of the working men and women for higher education. There were also four full University tutorial classes in North Wales and two in West Wales, all of which were showing satisfactory progress. In his opening address, Prof. Mackenzie stated that so far the Association confined itself mainly to developing the interest of the working people in social and general questions of citizenship, and he defended this policy on the ground that, as the government of the country was becoming more and more democratic, it was essential that every man should become conversant with his duties as a citizen.

A meeting of Teachers of Modern Languages in the Welsh County Schools was held at Shrewsbury, on September 21, to discuss the position of Modern Languages in the Intermediate Schools and the attitude of the Central Welsh Board towards them. For some years there

has been an increasing dissatisfaction with the character of the papers set in French at the Board's examination, and the papers during the present year are as severely criticized as any of their predecessors. They are not only exceedingly difficult, especially at the highest stages, but the type of question set, as a rule, is also of a very unexpected character. That the standard of the French examination is too high is shown by the fact that not a single distinction was gained in French in the Honours Certificate Examination this year, and comparatively few at the other stages. The Central Welsh Board has always given great prominence to modern languages, and has encouraged their development in every way, but until there is a radical reform in the examination papers schools will not be prepared to give to them the attention they deserve in their curriculum. This Association can do useful work by bringing its influence to bear on the Central Authority.

A case of considerable interest to all secondary teachers was heard in the Merthyr Tydfil County Court on September 12 before Judge Bryn Roberts. In March 1912 the Corporation of Merthyr, acting as the Governors of the Intermediate School, decided to pay the staff four times a year—in December, March, June, September—instead of three times a year, at the end of each term, as before. A mistress chanced to leave at the end of the Summer Term, in July. She was then paid for the days she had worked since June 30, and no more, thus incurring a loss on the amount of her annual salary of about one-twelfth. In the action which followed, the contention of the Corporation was that the relation of master and servant ceased on the last day of the term, and that, notwithstanding the fact that the mistress would not receive the full amount of her annual salary, nothing more was in reality due to her. The Judge gave judgment for the plaintiff, and said: "It was clear that the year's wages were for the work done in the three terms, and that as soon as that work was done the wages were earned. If it were otherwise, there might arise the practice of discharging the staff at the end of the Summer Term, and taking on the new teachers as from the beginning of the Winter Term."

We regret to have to record the death of Prof. Winter of the University College of North Wales. Prof. Winter was Professor of Agriculture at the College, and he was generally regarded as one of the foremost in agricultural science in the kingdom. Under his guidance, many of the North Welsh farmers had been led to revolutionize their agricultural methods.

SCOTLAND,

The late Mr. Robert Marshall, of Glasgow, has bequeathed to the Glasgow University Court, by special deed of trust, the lands and estate of Grangehill, Beith, or the proceeds thereof when sold, for the purpose of endowing a Chair of Modern Languages in the University. The annual value of the estate is between £600 and £800. There are, at present, lectureships in the University in French, German, and Italian, and the Court is already in possession of certain funds which have been given towards the endowment of Chairs in French and German.

Aberdeen University Court has received intimation of a bequest by the late Mr. Alfred Gilchrist for the foundation of bursaries in the Faculties of Arts and Medicine, and of lectureships on the progress of medical science and the progress of educational science, the lectures to be delivered every five years by the Professor of Materia Medica and the Lecturer in Education.

Mr. J. Lorrain Smith, M.D., F.R.S. Professor of Pathology in the University of Manchester, has been appointed Professor of Pathology in the University of Edinburgh, in succession to Dr. Greenfield. He is a distinguished graduate of Edinburgh University in Arts and Medicine, and he has held the positions of Demonstrator in Pathology at Cambridge and Professor of Pathology at Queen's College, Belfast. Mr. J. Eadie Todd, M.A., Lecturer in Economic History at Edinburgh University, has been appointed Professor of History in a Canadian University.

The Education Department has approved the proposal of the Glasgow Provincial Committee to purchase a site at Jordanhill, Glasgow, extend-

ing to about sixty acres, for the purpose of building a new training college, with hostels and a demonstration school.

The regulations of the Education Department regarding the Junior Student course have tended to the segregation of junior students from other pupils in the higher grade and secondary schools. This was one of the evils of the old pupil-teacher system, and it was hoped that the substitution of junior students for pupil-teachers would remove it. After considerable correspondence with the Education Department, the Glasgow School Board has resolved that in future all pupils under its control who intend to be teachers must obtain the leaving certificate as the condition of entrance to the Training College. The result of this resolution will be that the pupils who intend to be teachers will follow much the same course as those who intend to enter other professions, and that they will have an equal opportunity of becoming University students. If the example of the Glasgow School Board is followed by the authorities in charge of junior students in other places, the standard of education in the teaching profession will undoubtedly be raised.

IRELAND.

Mr. Birrell's schemes for improving the position of lay secondary teachers and for the establishment of intermediate scholarships for primary-school children, the outlines of which have been already indicated in this column, were issued on September 9. The draft scheme for the former purpose is as follows: The maximum grant is to be £40,000, to be distributed by way of grants to schools, in proportion to the amount received by them under the Intermediate Education Acts in the preceding year, provided such schools comply with the following conditions: (1) Each boys' school to have at least one registered lay assistant teacher at a minimum salary of £120 a year, and each girls' school a lay assistant teacher at a minimum salary of £80, for every forty pupils on the roll. (2) All such lay assistants to be entitled to six months' notice or six months' salary in case of dismissal, except on account of grave misconduct.

A Register of Secondary Teachers is to be set up, on a scheme to be drawn up by a Committee, consisting of representatives of the Intermediate Board and of the Irish Universities.

The second scheme provides for seventy-five scholarships to be granted annually to children from primary schools, without distinction of sex. The candidates must not be over the age of thirteen on June 1 preceding the examination, and must give satisfactory evidence of health and also of character from the manager or head teacher of their school, satisfactory proof also being required from parents or guardians that they cannot afford the cost of secondary or University education. The scholarships will be awarded on the results of an examination, mainly oral, to be conducted at local centres, in the following subjects: (a) Irish or English (including geography and history), (b) arithmetic, and (c) one optional subject from among the following: Irish, English, Latin, French, German, elementary mathematics, drawing, elementary science. An entrance fee of 2s. 6d. will be charged, but where necessary the travelling expenses of the candidates will be paid by the examining committee. The scholarships will be tenable in suitable intermediate schools and are of two kinds: (1) Twenty-five of £20 per annum (£10 for school fees, £10 to be placed to the credit of the parent for clothes, books, &c.), tenable at day schools—to be awarded mainly in the county boroughs; and (2) fifty of £50 (£35 for school fees, £15 for other expenses), tenable at boarding schools, to be awarded mainly in the counties. Subject to the distinction between county boroughs and counties the scholarships will be "regional"—i.e. a certain number will be assigned to each county on the basis of population, two or more counties being combined if necessary. The scholarships shall be awarded for three years, subject to the annual report of the head master and inspector of the school as to the fitness of the scholar. Each scholar shall be required to pass with honours in the Junior Grade of the Intermediate before reaching the age of sixteen. Holders shall be eligible for prizes, but not for exhibitions, during their term in intermediate schools.

No scholarship shall be awarded in any year in any county or borough unless such county or borough undertakes to provide scholarships, value £60 a year tenable for four years, at any Irish University selected by the holder, for each of the scholars under the scheme, such scholarships to be awarded to scholars who have fulfilled the conditions already mentioned on the expiration of their term at the intermediate school without further competition, provided only that the scholar passes the matriculation of the University he selects within twelve months of his leaving his school.

This is the only feature of the scheme which has hitherto provoked opposition. The Executive Committee of the Irish County Councils General Council, which met in Dublin on August 30, had not the detailed scheme before them, and therefore abstained from definite action, but drew up a statement declaring that the proposal to make

county scholarships tenable at any Irish University was one which they could not recommend the Council to adopt, for the following reasons: (1) The Irish County Councils General Council has the power of nominating eight members of the Governing Body of University College, Dublin, and has no control in the case of any other University. (2) Local Authorities in Great Britain in many cases confine their scholarships to Universities on the governing bodies of which they are represented. (3) The General Council had made representations to the Senate of the National University that the Councils were prepared to found scholarships only on condition that Irish should be an essential subject for matriculation, and it would be a breach of faith on the part of Councils who insisted on this condition (24 out of 31) to open their scholarships to any University which failed to comply with it.

It is estimated that the cost of Mr. Birrell's scholarship scheme when in full working will be £12,000 annually, which might be reduced to about £10,000, if one allows for a wastage during the passing of the scholars through the schools.

The scheme for assisting lay teachers is, however, the one which at present calls forth most discussion, and it has been the subject of lively criticism in the public press and elsewhere since its formulation. At a general meeting held on September 5, the Roman Catholic Head Masters' Association and the Committee representing Convent Schools drew up for publication a lengthy statement, signed by the Heads of all the leading religious schools in the country, boys' and girls', condemning the scheme as outlined by Mr. Birrell in the House of Commons on July 31, on the grounds that it involved a hurtful distinction between lay and religious teachers, being calculated to result in the dismissal of religious teachers to make room for lay ones, and that it involved further an unwarrantable claim to interfere in the internal administration of religious schools—a claim the logical outcome of which was secularization; moreover, that its drawbacks pressed only on Catholic schools, not on Protestant ones, which would be able to take full advantage of it. The statement further says that the stipulation regarding the proportion of lay teachers to be employed is unnecessary, inasmuch as the Catholic intermediate schools already employ 368 lay teachers for a total number of about 12,800 pupils, an excess of forty-eight over the number required. The condition of giving six months' notice is also protested against, as opening the way to very serious evils.

These objections are expanded in the "Editorial Notes" of the current issue of the *Irish Educational Review*, which represents the interests of the religious schools. The writer of the notes regards the scheme as an endowment of Protestant schools without any corresponding endowment of Catholic ones. It would affect the convent schools injuriously even more than boys' schools, because—so it appears—there are many men who adopt teaching as a means of livelihood; but no Catholic girl takes up teaching except "as a means of securing herself independence and freedom in the few years—the fewer the better, in her opinion—between her school life and her marriage. . . . A Catholic girl who desires a celibate life devoted to teaching becomes a nun." The writer of the notes, who is a cleric, does not seem aware of the fact that a considerable number of Catholic girls do at present take up teaching as a serious profession without becoming nuns, and that most of them leave Ireland to seek employment in England or abroad because they cannot find it in their own country. The obvious answer to the objections of the clerical Head Masters is that it takes away nothing from the existing endowments of schools, either Catholic or Protestant; it only sets aside an additional sum to be devoted to the special purpose of improving the status of lay teachers (a matter which the Catholic Head Masters themselves admit calls for improvement), and it would fail in its purpose if it did not provide some safeguard that the condition of lay teachers in the schools which participate in it shall be thereby improved.

Moreover, if, as the head masters state, the number of lay teachers already employed in religious schools is in excess of the number stipulated for, it is hard to see why the new scheme should result in dismissal of the religious teachers to make room for lay ones; unless, indeed, the lay teachers at present employed are only extern ones engaged for additional subjects and not in receipt of such munificent salaries as the minima (of £120 and £80 for men and women respectively) fixed by the scheme.

To judge by the letters which have appeared in the press from Catholic lay teachers, these latter view the question from a somewhat different standpoint from that of the head masters. They point out that the lay teacher, who has to live in the world, to provide for old age, and in most cases for a family, is very differently circumstanced from the religious one who has no cares for livelihood, and who takes vows of poverty, chastity, and obedience; and they regard the minimum salary fixed as scarcely adequate.

One of the ablest criticisms of the scheme is from the pen of Prof. Culverwell, who, in a recent letter in the *Irish Times*, points out the following defects. (1) The scheme makes no provision for annual

(Continued on page 692.)

HARRAP'S LATEST PUBLICATIONS.

AN ENTIRELY NEW SERIES. JUST READY.

To meet the requirements of the Board of Education.

Extract from the Official Circular No. 753 on "The Teaching of English":—"In every class repetition from memory should form an essential part of the instruction in Literature. There is no reason for restricting learning by heart to poetry, as is commonly done; passages of good prose should be learnt by heart also. Nor need all the pupils in a class invariably learn the same piece."

A Treasury of Prose and Poetry

For Learning by Heart. In Six Graded Parts. Compiled by AMY BARTER.

Part I, 64 pages. Stiff paper, 4d.; limp cloth, 5d.

Parts II to V, 96 pages each. Stiff paper, 5d.; limp cloth, 6d.

Part VI, 128 pages. Stiff paper, 6d.; limp cloth, 8d.

A Special Prospectus of this New Series will be sent post free on application.

The Poetry and Life Series

General Editor, Professor WILLIAM H. HUDSON, Staff Lecturer in Literature to the University Extension Board of the University of London.

A new series of Monographs on the Poets, in which the principal work of each poet is shown in its proper relation to the life of its author. Each volume contains a representative selection of the poet's work printed in chronological order in the story of his life.

NEW VOLUMES.

9. *Spenser and His Poetry.* By S. E. WINBOLT, M.A. 160 pages, 10d.

10. *Mrs. Browning and Her Poetry.* By KATHLEEN E. ROYDS. 136 pages, 10d.

11. *Milton and His Poetry.* By WILLIAM HENRY HUDSON. 184 pages, 1s.

12. *Scott and His Poetry.* By A. E. MORGAN, B.A. 160 pages, 10d.

Other Volumes in preparation.

A Descriptive Circular with Professor Hudson's General Preface will be sent to any address.

Ancient Peoples and their Heroes

Modern Nations and their Famous Men

By H. B. NIVER. In Two Volumes. Fully Illustrated. 192 pages. Crown 8vo, 1s. each.

Told Through the Ages. 34 Volumes

Large crown 8vo, 256 pages. 16 Plates. Cloth boards, 1s. 6d.

GIRTON COLLEGE STUDIES, No. 4.

A NEW LAW OF THOUGHT

AND ITS LOGICAL BEARINGS.

By E. E. CONSTANCE JONES, Author of "A Primer of Logic."

Cambridge: At the University Press, 1911.

Price Two Shillings.

"Miss Jones has made a great discovery. She has discovered the Law of Significant Assertion, and also that it does not find a place among those which Logic enumerates as the self-evident Laws of Thought."—*Mind*.

"Miss Jones seems to have made out a good case for regarding the Law of Significant Assertion as a fundamental Law of Thought."—Prof. STOUT.

"I may here refer very briefly to Miss Jones's interesting treatise on 'A New Law of Thought.' . . . The substitution of S is P, as the general formula of thinking, for A is A, which taken as such a formula is meaningless, will I hope be adopted by logical theory and practice. By dealing with a difficulty which so great a logician as Lotze could not overcome, the suggestion shows itself to possess a considerable value."—Dr BERNARD BOSANQUET.

increments over the minimum salary of £120, so that in practice the legal minimum may become the maximum; (2) it makes no provision for pensions; (3) there is no guarantee that the qualifications demanded for registration shall be adequate, nor is it easy to see how they could be so for the remuneration; (4) there is no guarantee that the whole of the £40,000 will be spent in improving education, since, after complying with the minimum requirements, the school authorities may apply the remainder of the grant to any purpose they please. In spite of these defects, Prof. Culverwell regards the measure as a real step forward in the position of assistant teachers, and urges the head masters to accept it; for if it is killed it is not likely that another will take its place in the present Parliament.

The exhibitions and prize lists of the Intermediate Examinations were published on September 11. Exhibitions of the value of £30 (First Class) and £20 (Second Class) are awarded in the various subject-groups in Senior and Middle Grade, and in the Junior Grade of the value of £15 and £10—all tenable for one year only; a large number of book prizes for general good marks and for excellence in certain subjects being also given, as well as medals for first place in grades in special subjects. An analysis of the results gives the first place among boys' schools (estimated by total number of prize awards) to the Christian Brothers' School, Cork, followed by the (Christian Brothers') O'Connell Schools, North Richmond Street, Dublin, while Rockwell College, Cashel, and Clongowes Wood College tie for third place.

The excellence of the teaching given by the Christian Brothers' schools in mathematics and experimental science is attested by the fact that their pupils carry off five out of eight medals awarded in the various grades in mathematical subjects, and seven in science subjects. Among girls, the highest place falls to the Loreto College, St. Stephen's Green; the second to Alexandra College and School; and the third to Loreto Convent, Wexford. It is noticeable that the medals awarded among girls in mathematics fall nearly all to the northern schools. An objectionable feature of the whole system is the prominence given in the press reports to individual winners of first places, medals, &c., while their portraits appear in some of the weekly papers.

The Commissioners of National Education have drawn up, and forwarded to the press, an important statement on the perils in store for national education unless more adequate safeguards are provided in the new

Home Rule Bill. Hitherto the funds required for national education have been voted by Parliament on the basis of estimates annually submitted by the Commissioners to the Treasury, and, though the Commissioners have never had enough to satisfy them, they have, at any rate, always been able to meet the legitimate charges sanctioned under their rules. Under the new Bill national education is a "transferred service," and a fixed annual sum is to be paid over to the Irish Consolidated Fund on account of it, the amount to be determined by its cost in the year in which the Bill passes. The Commissioners point out that an automatic increase has been going on under the head of teachers' salaries in the past four years amounting to an annual average of about £23,000; that, under improved conditions in the county, with an increase such as may be expected in the number of pupils, this automatic increase will continue to rise, necessitating a corresponding increase in the grant for primary education, which they estimate as likely to be about £100,000 in the year 1918-19; that, further, the ultimate cost of reforms and developments which are urgently required (such as medical inspection of schools, &c.) would be approximately £250,000; while non-recurring charges connected with the monthly payment of teachers' salaries and the building and improvement of schools would require a sum of about £930,000.

PRIZE COMPETITIONS.

The Winner of the Translation Prize for July is Miss Grace J. Masson, 36 Coniston Drive, Edinburgh.

HOLIDAY PRIZE COMPETITIONS.

1. *Essays*.—Prizes of £1. 1s. are awarded to "J.W.M." and "Cornelia"; of 10s. 6d. to "X³" and "G.A."

2. *Suitable Passages for Translation*.—Of 5s. to "Mon pays," "Topsy," "Slow and Sure," "Enac," "Sirach."

GIRLS' SCHOOL TRANSFERS.

Messrs. GABBITAS, THRING & Co.,
36 SACKVILLE STREET,
PICCADILLY, W.
(Established 1873.)

TRANSFERS OF AND PARTNERSHIPS IN GIRLS' SCHOOLS.

Messrs. GABBITAS, THRING & Co. have a large number of Girls' Schools on the books of their Transfer Department, but issue no list of such Schools. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her.

The following are a few of the Schools now on their books:—

No. **TRANSFER** of good-class Boarding and 4,987. Day School for Girls and young Boys in residential district close to an important northern city, established over 20 years. Fees for Boarders £45 to £55, for Day Pupils 6 to 15 guineas per annum. Receipts and profits over £600 and over £200 respectively. Increase last year over the average annual of the three years. Goodwill, £300 or capitation fee.

No. **TRANSFER** of Boarding and Day 4,986. School for Gentlemen's daughters in favourite South-East Coast Resort. Vendor about to be married. Containing 7 Boarders and 16 Day Pupils. Strictly for Daughters of Gentlemen. Fees for Boarders from £50 to £60. Gross receipts over £700. Profits £200.

No. **TRANSFER** of old-established Home 4,985. School of high class, in a Continental Capital, usually containing 10 or 12 Girls. Prospectus fees, 100 guineas per annum. Gross receipts, over £1,200, and showing an advance. Goodwill £500.

GIRLS' SCHOOL TRANSFERS.

No. **TRANSFER** of flourishing Home School 4,981. at favourite South Coast Health Resort, containing rather over 30 Boarders at prospectus fees of 60 to 75 guineas, and 9 Day Pupils at prospectus fees of 9 to 12 guineas. School practically full as to Boarders. Gross receipts over £2,000 and net profits over £900, both showing substantial increases over the average of the last three years. Excellent premises, on lease for 99 years. Price for property, Goodwill, and furniture, £4,800. Property good security for a substantial mortgage.

No. **TRANSFER** or **PARTNERSHIP** to 4,977. **succession**, of School in a Northern Seaside place, established over 40 years, purchased by the present vendors about twelve years ago. Strictly for gentlemen's daughters and with a very high educational standard. 30 Boarders at prospectus fees of from 63 to 66 guineas, and 30 Day Pupils and Day Boarders, prospectus fees from 9 to 27 guineas. Gross receipts nearly £4,000, and net profits about £800. Price of whole Goodwill £2,000, but one-third or one-half share would be sold in the first instance.

No. **TRANSFER** of old-established Boarding 4,967. and Day School, at a South West Coast Resort, owing to the Death of the Principal. 15 Boarders, prospectus fees from 75 to 90 guineas, and 4 Day Pupils. Price to include Goodwill, Furniture, and Effects from £500 to £600.

No. **PARTNERSHIP** in an old-established 4,954. Boarding and Day School on the South Coast. 12 or 14 Boarders, prospectus fees from 30 to 60 guineas, and 8 or 10 Day Pupils, prospectus fees from 9 to 18 guineas. Gross receipts and profits for 1911, £950 and £250 respectively. £250 for half share in Goodwill.

No. **TRANSFER** of old-established, large, 4,890. and flourishing Boarding School for gentlemen's daughters at South Coast Health Resort. Principals retiring. Full with 60 Boarders. Prospectus fees 60 to 75 guineas. Gross receipts of last twelve months considerably over £4,000, and profits over £1,200. Goodwill, £2,000.

No. **TRANSFER** or **PARTNERSHIP** 4,880. with a view to **succession**. Flourishing School for Boarders only, at a favourite South Coast Resort. Steadily full, with rather over 30 Girls. Prospectus fees of 90 guineas, besides extras. Gross receipts about £4,400 last year. Average

GIRLS' SCHOOL TRANSFERS.

annual receipts of last four years about £4,000. Net profits for those periods over £750 and over £720 respectively. Goodwill of half share £1,000.

No. **PARTNERSHIP** in Boarding and Day 4,874. School in residential locality close to important Midland town, containing 7 Boarders and about 25 Day Pupils and Day Boarders. Prospectus fees 60 to 75 guineas and 15 to 42 guineas respectively. Gross receipts about £1,000. Profits between £200 and £300. Goodwill of half share £250.

No. **PARTNERSHIP** with a view to **succession** 4,804. in Boarding and Day School for Gentlemen's Daughters in a very healthy locality near the South Coast. Nearly 20 Boarders. Prospectus fees from 75 to 99 guineas, and 12 Day Pupils, 9 to 18 guineas. Excellent premises. Gross receipts about £1,200 and net profits about £200 per annum.

No. **TRANSFER** of Boarding and Day 4,656. School for Gentlemen's daughters in residential seaside district in the Northern Midlands, containing 6 Boarders and between 30 and 40 Day Pupils. Boarders pay from 45 to 80 guineas and Day Pupils from 9 to 50 or more guineas per annum. Gross receipts over £1,400, and profits nearly £200. One term's fees for Goodwill, or a lump sum of £300.

No. **TRANSFER** of small school for Board- 4,614. ers only, on the South East Coast, containing 12 or 14 Boarders. Fees of £30 to £70. Receipts for last year £434, besides £80 for letting during the vacations. Goodwill at capitation fees.

No. **TRANSFER** of Educational Home in a 4,600. Continental Capital, now containing 12 Boarders. Fees 130 guineas per annum. Gross receipts of the last 12 months £3,000. Goodwill, lump sum or capitation fee.

No. **PARTNERSHIP**, possibly to **succession**, 4,476. in Boarding and Day School in healthy Northern Suburb of London. A few Boarders paying on the average about £60 per annum, and about 40 Day Pupils, and Day Boarders, paying fees varying from 9 guineas for the youngest up to 28 guineas per annum, and considerable extras. Gross receipts over £1,000. Goodwill by capitation fee.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require full particulars before arranging introductions to their clients. No charge is made to Purchasers.

THE LONDON Central Institute for Swedish Gymnastics,

16, 17, & 18 Paddington Street, Marylebone, W.

Telephone: 872 Mayfair.

The School World says: "This college for men students . . . will provide a first year's course fitting students for posts in elementary schools, and a second year's course enabling the graduate to take charge of any school of whatever standing. Anatomy, physiology, theory of movements, hygiene, and kindred subjects necessary for a complete grasp of physical training will be taught by experienced teachers. This will be a noteworthy addition to the facilities for training in this subject. . . . this new college has been most cordially welcomed by the Parliamentary Secretary representing the Board. . . . As a sign of progress, and in the hope of a better future for the physique of the youth of the nation, the new 'Central Institute' will be cordially welcomed."

PUPILS ARE NOW RECEIVED.

The Institute also undertakes the instruction in
Physical Exercises on the Swedish System for Schools
in the neighbourhood.

Recreative Classes—Gymnastics and Fencing—are
held in the afternoons and evenings.

For particulars apply to the Principal—

ALLAN BROMAN,

From the Royal Central Institute of Gymnastics, Stockholm.

3. *Photographs*.—(1) Of 10s. 6d. to "Gothicus," "Cymore," "Rufa"; of 7s. 6d. to "Tramp"; of 5s. to "Berisal," "παις," "Tramp." (2) Only one scene in history was sent in, and that was not a group. (3) Of 10s. 6d. to "Cymore"; of 5s. to "Gothicus," "S.C.R.," "Kuri," "Bob."

4. *Arithmetical Puzzles*.—Of 10s. 6d. to "Tantalus"; of 5s. to "Vernice," G. E. Marshall, "Grammaticus," "E.M.N." "Beeks," "Duavon."

1. "Window-breakers" was the favourite subject and Bacon the favourite model. A mock essay must needs be more or less of a parody, and most took the subject too seriously and failed in lightness of touch. I hope next month to find room for two or three more prize essays.

2. There were but few of the numerous passages that seemed to me in every way suitable. Some were from standard authors, of which there were good translations; others were too easy, presenting only difficulties of vocabulary; others omitted to supply a fair copy or to give the reference.

3. In deciding the prizes for Photographs the interest or beauty of the subject was considered no less than the excellence of the technique. In "Cymore's" study of a pony both qualities were combined.

4. My mathematical coadjutor reports that no less than fifty-seven competitors sent in correct answers to all six questions. In awarding the prizes he was guided by the method and style of the accompanying solutions.

THE WINDOW-BREAKERS (after Addison).

By "CORNELIA."

Mr. Spectator,—Having cited many times, and with approbation, your saying that "a good intention joined to a good action gives it its proper force and efficacy; joined to an evil action, extenuates

its malignity and in some cases takes it wholly away," it is my constant grief to find that your speculations have prevailed to an extent and in a manner that I little dreamed of, and I would beg of you to turn one discourse to the due consideration of an abuse which, as your philosophy has helped to bring it about, your censure may help to reform.

I have under my guardianship a couple of nieces who bid fair to make me run mad, since the present distresses have turned both from modest, well conducted young gentlewomen to viragoes who excuse and justify their wildest extravagances of behaviour on the ground of good intention. You will hardly believe to what lengths their phrenzy drives them. The elder of the two, Sacharissa, is even now confined in Her Majesty's prison of Bridewell, her offence (not denied) being the breaking of honest tradesmen's windows with the intent (so the minx informs me) to obtain for herself and her sex the right to vote for members of Parliament. With the same design, or so she avers, the second wench makes a practice of joining with a crowd of similar unbalanced females in mobbing Ministers of the Crown, who, as they say, are all in a conspiracy together to prevent them from attaining the privilege which they desire.

Besides this she emulates the Salamanders that live in the midst of flames, themselves unhurt, since more than once she has been found endeavouring to fire public buildings with intent to create a panic, and thereby convince the said Ministers of the justice and reasonableness of giving women a voice in public affairs.

For such a period as the Justices keep the elder girl in durance (I pray it may be long) I am quit of her; but conceive the horror to a modest female of knowing that one so nearly related to her is fallen into the hands of the law, dragged into the public courts, and consigned to the common jail, there to consort with (I doubt not) the most abandoned of her sex. Think also of my sensations when I see the second girl charged with the fearful crime of arson, released on bail only because, as her evil purpose failed of accomplishment, no one could prove that it was seriously meant. In vain I have read to both these misguided sisters your discourse of May 5 (1711) earnestly representing to politicians of the fair sex the disfiguring effects of party zeal. I have urged them in your very words, "as they value their complexions, to let alone all

(Continued on page 696.)

HORLICK'S MALTED MILK.

THE IDEAL FOOD DRINK FOR ALL AGES.

The wholesome nutrition of pure, rich milk and choice malted grain, supplying strength and vigour, with little tax on digestion. Delicious, nourishing, and refreshing.

PREPARED IN A MOMENT WITH WATER. NO COOKING.

Used instead of tea, coffee, or cocoa at meals, develops healthy bodies and clear brains. Equally useful to the vigorous and the weak, the business or professional man, the youth, the maid, the mother, the child, or the infant.

An efficient corrective of insomnia,
taken hot before retiring.

WM. HARBUTT, A.R.C.A., 225 Bathampton, Bath.

MILLS & BOON'S NEW BOOKS.

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. Applications should state the number of copies that will be required if the book asked for is introduced. Their new Educational Catalogue is now ready.

THE NEW PRELIMINARY GEOGRAPHY.

By H. B. WETHERILL, M.A., Second Master Royal Masonic School, Bushey. With Illustrations and Diagrams. Crown 8vo, 1s. 6d.

A course of 60 lessons which can be gone through and revised in a year. The British Isles are treated in considerable detail. A beginning has been made with a number of lessons on the chief human activities, as the conditions of life in these islands are too complex for them to be placed before young boys as directly resulting from geographical environment. In treating other areas less in detail, the relation of man to his environment is brought out more sharply. The book is intended to satisfy the requirements of the Universities Preliminary Examinations for Schools, and to serve as a first year textbook in secondary schools.

EXERCISES IN FRENCH FREE COMPOSITION FOR UPPER CLASSES.

By R. R. N. BARON, M.A., French Master Cheltenham Grammar School, Author of "French Prose Composition" and "Junior French Prose." Crown 8vo, 1s. 6d.

Il n'y a que le premier pas qui coûte applies largely to the writing of free composition, in which a pupil is confronted with four considerations: subject-matter, logical order, vocabulary, and style. The method adopted in this book provides something in each of these directions, and will be found to give stimulus to the imagination and confidence in dealing with the subject. A large portion of the material has been already submitted to the test of the classroom.

Adopted at Charterhouse, Eton, Harrow, Uppingham, Cheltenham Ladies' College; Training Colleges, Cambridge, Chichester; &c.

SHAKSPERE'S AS YOU LIKE IT.

With a Revised Text, Questions, Notes, and Appendixes, by the Rev. C. R. GILBERT, M.A., formerly Head Master of King Henry VIII School, Coventry. Crown 8vo, With 2 maps. 1s.

This edition is based on the recommendations contained in Circular 753 of the Board of Education on the Teaching of English. The object has been to stimulate the thorough study of the text of the play. At the same time sufficient information is given for candidates for the Local Examinations. Questions are given on the subject-matter and language of each scene, which can be answered from the text itself without reference to the notes. Notes are added explanatory and illustrative of the language of Shakspeare, and these are followed by a series of appendixes on (1) How to study the play; (2) The Study of the characters; (3) Shakspeare's grammar; (4) Rhythm and Prosody. A list is also given of passages for (1) learning by heart, (2) paraphrase, (3) analysis, arranged in each case in order of difficulty. Some Examination Papers recently set are added at the end.

PROBLEMS IN PRACTICAL CHEMISTRY FOR ADVANCED STUDENTS.

By G. F. HOOD, M.A. (Oxon.), B.Sc. (Lond.), Chemistry Master Nottingham High School. With 21 Diagrams. Crown 8vo, 5s.

EXPERIMENTAL MECHANICS AND PHYSICS.

By A. H. E. NORRIS, B.Sc., Physics Master King Edward VI's School, Stourbridge. With 133 diagrams. 1s. 6d.

MILLS & BOON, LTD., 49 RUPERT STREET, LONDON, W.

By FRANCIS STORR,

B.A. Camb., Officier d'Académie,

Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

EIGHTH EDITION. With Supplementary Easier Exercises.
Fcap. 8vo, cloth, interleaved. Price One Shilling.

HINTS ON FRENCH SYNTAX.

"May be used with advantage with **any** French Grammar."

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenaeum*.

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

disputes of this nature," or leave them to partizans too old or unpleasing to hope for converts, with other counsels of no less weight culled from your writings.

It is, I fear, but too true that "a woman is too sincere to mitigate the fury of her principles with temper and discretion"; for all my distress enforced by your wisdom is of no avail, and, even while I write, my niece Belinda is affixing metal tips to her shoes and replaiting the thong of her dog-whip in readiness for a Deputation (as the misguided girl terms it) to my Lord of Oxford at the Houses of Parliament. To all my persuasions she has but one reply—that since a woman, our gracious Queen Anne, now holds the highest office in the realm, there is neither justice nor reason in denying other women the right to hold and express political opinions; and that right Miss vows she will have if she dies for it. This is no idle threat, for the officers of the law are none too gentle in their handling of such as disturb the peace, and Her Majesty's prison (whatever Her Majesty's throne may be) is no place for delicately-nurtured females.

You may see by these amazing instances of folly what strange disorders are bred by the false application of wise and virtuous maxims, and I beg of you, Mr. Spectator, to admonish these young persons and warn them, before acting on any counsel, however good, to bring it first to the test of reason and duty. — Your distracted

CORNELIA.

WINDOW-BREAKING (Style of Bacon).

By "J.W.M."

That is a froward and perverse custom which many of late affect—to break or destroy windows. For they are but like the hunter which hurteth himself by his own snare: as saith the ancient, "Qui frangunt, iidem persolvent," and this holds good of window panes.

It is clear that what is inanimate hath neither intention nor feeling, neither can it enter into the deeds of men. Besides, these breakers are but like to the tossing billow which violently is self-destroyed.

The greater part of mankind hath a quarrel to complain, but it is the mark of a foolish and ingrateful boy to bruise the hand that succoureth him.

Moreover, as there is a law to punish, the breaker is ever the loser, and it is still two for one: for by breaking panes he comes to greater pains, while all excusations and upbraidings are base indignities, "communia maledicta."

Window-breaking commonly proceedeth from mischance, from mischief, from misfortune, or from the *Malleus Fencstrarum*, as the women call their leader of revolt.

For mischance: this often befalls in sports of game, or when a man rideth abroad; and can be passed over if that which hath been 'paired is made good.

For mischief: a man shall see that boys and wantons out of malice or revenge shall oftentimes with *catapultae* or other engines of war cause much breaking of glass. It were good that such be taken and punished by justice.

For misfortune: certain, reduced by want, will accomplish a felony in order to give a quarrel for lodging them in the common prison. Such are worthy of commiseration, and should without iteration be secured and provided with that they lack, esculents and shelter.

For the Amazonian and her like: here it should be proceeded warily, for the wrong is not of body but of spirit, and therefore demandeth the greater caution. These are such of the female as dissemble their ancient allegiance, thinking them that have the conduct and manage of affairs to be "negotiis impares," and as of old—

"mallent imperantium mandata
interpretari quam exsequi."

They act not thus, like to malefactors or those of the commonalty, out of desire for thieving or misuse, but that thereby they may purchase for themselves the greater renown, and for their cause the greater following. But such violence but doubleth all errors, and putteth the law out of office, driving away such as are temperate and cautious, whereas a sober and reasoned address betimes would profit much: for to the godly and prudent "salus populi suprema lex."

Simple men admire window-breakers, wise men condemn them, policemen secure them, and leader writers use them.

There are certain who think it a derogation of sufficiency to follow law and order, and these ever oppose them in authority, turning their own mind to violence and carnage. These are base and crafty cowards, and it were good that such as have wrongs give not heed to their urgings; but that rather when they petition keep in mind the old saw, "That is half granted which is graciously denied."

(Continued on page 698.)

The Degrees of London University are open to all without Conditions of Residence or Distinction of Sex. Graduates, and those who have passed certain specified examinations—e.g., The Cambridge Senior Locals—are exempted from the Matriculation Examination.

J. POOLE & CO.,

(ESTABLISHED 1854)

104 CHARING CROSS ROAD, LONDON, W.C.

SOLUTIONS OF ARITHMETICAL PUZZLES.

- Four double-florins, one half-crown, six threepenny-bits.
The difficulty of proving in a few words that there is no other solution seems to be insurmountable.
- £21. 9s. 2d.
Difference between interest and discount = interest on discount.
 $\therefore 4\frac{1}{2}d. = \text{interest on } 12s. 6d.;$
and at same rate, $12s. 10\frac{1}{2}d. = \text{interest on } £21. 9s. 2d.,$
amount of bill.
- February 1, 1897, and May 1, 1903.
 $2279 = 6 \times 365 + 89.$ We have to find a period of 6 complete years preceded (or followed) by the months of February, March, and April, no February to contain more than 28 days. The fact that 1900 was not a leap year renders a solution possible.
- Five bullocks.
2 bullocks in 4 weeks eat 2 acres and 4 weeks' growth on 2 acres;
 $\therefore 8 \text{ bullocks in 6 weeks eat 12 acres and 6 weeks' growth on 8 acres}$... (1)
Also 3 bullocks in 2 weeks eat 2 acres and 2 weeks' growth on 2 acres;
 $\therefore 3 \text{ bullocks in 6 weeks eat 6 acres and 6 weeks' growth on 2 acres}$... (2)
Deducting (2) from (1), we obtain the result.
17858.
 $5N - 11106$ figures are required for paging the whole work, $3a - 108$ figures for paging a single volume, where N, a are the number of pages in the work and volume respectively.
 $\therefore 5N - 11106$ is $154\frac{2}{3}$ per cent. of $3N - 28 \times 108.$
Hence $N = 17858.$
- Fifty-two.
If there are $4x$ houses in the square and my house is a doors from the North-east corner, the numbers of the four houses in question are $a, 2x - a + 1, 3x - a + 1, 3x + a.$
 $3x + a = 2(2x - a + 1) \text{ or } 3(2x - a + 1)$
 $3x - a + 1 = na.$
Eliminating x , we have $na = 8a - 5 \text{ or } 3a - 2;$
from which we find the only (permissible) value of a is 5.
The numbers of the houses are 44 and 35.

A Prize of Two Guineas is offered for the best translation of the following extract from Anatole France:—

Par malheur, j'avais déjà le pli du bureau, le goût des découpages faites patiemment le soir à la lampe, le sens profond des images, et, quand je sortais de mes amusements d'artiste prédestiné, c'était par des coups de folie, par une rage de désordre, pour jouer éperdument à des jeux sans règle, sans rythme, au voleur, au naufrage, à l'incendie. Tous ces appareils de buis verni et de fer me parurent froids, lourds, sans caprice et sans âme, jusqu'à ce que ma marraine y eût mis, en m'en enseignant l'usage, un peu de son charme. Elle soulevait les haltères avec beaucoup de crânerie, et, portant les coudes en arrière, elle me montrait comment les barres, passées sur le dos et sous les bras, développent la poitrine.

Un jour, elle me prit sur ses genoux et me promit un bateau, un bateau avec tous ses gréements, toutes ses voiles et des canons aux sabords. Ma marraine parlait marine comme un loup de mer. Elle n'oubliait ni hune, ni dunette, ni haubans, ni perroquet, ni cacatois. Elle n'en finissait point avec ces mots étranges et elle mettait comme de l'amitié à les dire. Ils lui rappelaient sans doute bien des choses. Une fée, cela va sur les eaux.

Je ne l'ai pas reçu, ce bateau. Mais je n'ai jamais eu besoin, même en bas âge, de posséder les choses pour en jouir, et le bateau de la fée m'a occupé bien des heures. Je le voyais. Je le vois encore. Ce n'est plus un jouet. C'est un fantôme. Il coule en silence sur une mer brumeuse, et j'aperçois à son bord une femme immobile, les bras inertes, les yeux grands et vides.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by October 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

These School and Teachers' Advertisements are continued from page 660.

THE ENGLISH FOLK DANCE SOCIETY.

Must be able to prepare pupils in Pianoforte for the Associated Board Examinations, and teach Class Singing, Harmony, and Theory. Solo Singing a recommendation. Res. from £35 to £45.—B 33383.

Assistant Teacher of Domestic Science on the staff of a Training College for Children's Nurses in the North. Must be qualified in Cookery, Laundry, and Housewifery. Commencing salary £40 resident, or £45 if very good Needlewoman.—B 33493.

STUDENT-TEACHERS—Messrs. Truman & Knightley always have on their books a large number of Vacancies for **Student-Teachers** on mutual terms or at moderate premiums.

LADY MATRONS AND HOUSE MISTRESSES.—Messrs. Truman & Knightley assist qualified **Lady Matrons, Housekeepers, and House Mistresses** to find appointments in Boys' and Girls' Schools.

Ladies desiring further information of any of the above and of other suitable Vacancies should write fully to Messrs. TRUMAN & KNIGHTLEY, stating their age, qualifications, &c., and enclosing copies of their testimonials.

NO CHARGE OF ANY KIND is made to applicants unless an engagement be secured through this Agency, when the terms are reasonable.

Prospectus, terms, &c., will be forwarded on application.

SCHOOL TRANSFERS & PARTNERSHIPS.

A separate Department, under the personal management of one of the Directors, is devoted entirely to the negotiation of School Transfers and Partnerships.

See List on page 659.

No charge is made to purchasers.

THE EDUCATIONAL SUPPLY ASSOCIATION, LTD.,

**Manufacturing School Stationers and Furnishers,
Publishers, and General School and College Suppliers.**

EXERCISE BOOKS

An immense stock of Exercise Books in all sizes and qualities kept in stock, suitable for every school subject, at prices from **4 6** per gross to **108/-** per gross. Exceptional value, quality, and style.

JUST ISSUED.—A new Post 4to Exercise Book, 40 pages, good paper, bound in strong tinted cover, at **9/-** per gross.

WRITING CASES AND BLOCKS

The E.S.A. Writing Cases and Blocks, invented by the E.S.A. in 1907, have been extensively adopted by many of the foremost schools. The Cases are waterproof and washable, and should be seen by everyone who uses Writing Blocks or loose paper.

FLAT FILES AND BLOCKS

The Practical File is one of the best flat files ever issued. It has a clever locking device, which securely holds the filed papers in position. Supplied in 4 colours and in several sizes, price from **24/-** per 100. Filing Blocks for use with the above are supplied in various rulings and sizes, suitable or every requirement.

GRAPH BOOKS

Graph Books and Science Books and Paper are stocked ruled in—
Centimetre and millimetre squares.
Tenth-inch and half-inch squares.
Centimetre and 2-millimetre squares.
Transparent Graph Paper for mapping.

NATURE NOTE BOOKS

Nature Note Books—the best and most complete series issued—made of excellent writing paper, interleaved with superior cartridge paper, and strongly bound—at **18/-** per gross, and upwards.

DUPLICATING PAPERS

“Absorbo” Duplicating Paper is an absorbent paper with a splendid texture, suitable for all makes of “Stencil” machines. Prices **1/7** and **1/10** per ream
“E.S.A. Duplicator” is a paper not so absorbent as above and is suitable for the Cyclostyle and similar machines. Prices **1/9** and **2/-** per ream. Specimens free.

DRAWING BOOKS

All our Drawing Books are made of superior Drawing Cartridge, which will take the pencil kindly and will bear erasure without the surface rubbing up.
New Books for Water Colour and Sketching have just been put into stock—samples free on request.

MATHEMATICAL INSTRUMENTS

Mathematical Instruments in noiseless Metal Boxes, containing all essential requisites, *i.e.* Safety Patent Bow Compass, Blacklead Pencil, Compass Pencil, Eraser, Six-inch Rule and Protractor, 2 Nickel Set Squares. Price **1/9** per box.

A very large stock of Instruments in Wood and Cloth Boxes.

The Stanton is the most perfect Hygienic Desk made. It was the pattern selected for use by the Royal Princes during their education. It is made of Oak, Pitch Pine, or American Whitewood—stained, and supplied in various heights and patterns. Price in Pitch Pine, **23/-**.

STANTON DESKS

A desk with separate chair is now being adopted in many girls' schools. This arrangement has many advantages. The Chair and Desk are not more expensive than desks of the ordinary pattern. Price of each set, **19 2**.

DESKS WITH CHAIR

The Folding Examination Desk or Table is especially useful in the school-room. For an emergency it can be used for regular school work, either as Desk or Table, as well as for examination purposes. When out of use it can be stored in a very small space. Price **8/-** each.

EXAMINATION DESK

Masters' Pedestal Tables are kept in stock in various sizes and patterns. Made of Pitch Pine or Oak. Accurately fitted and finished in best style and workmanship.

MASTERS' TABLES

These hinged Wall Blackboards have very great advantages for the lecture room. Drawings for Art or Science Lessons that could not be drawn while the lesson was proceeding, can be prepared on the board previously and turned to the wall; at the proper moment it can be turned round to face the class. Prices from **17/6** each.

MURAL BLACKBOARDS

“Hyloplate” is quite a new slate surfacing for Blackboards. The board is light but strong, and the surface will stand hard wear for several years without deterioration. Hyloplate is supplied in various sizes and style. Particulars on request.

HYLOPLATE BLACKBOARDS

Laboratories. The Educational Supply has had very extensive experience in fitting up both Chemical and Physical Laboratories. Much of the work supplied has been designed and planned by their own Staff. Laboratories have been recently fitted at Cherwell Hall, Oxford, Dulwich College, Charterhouse, Epsom College, Blundell's School, Merchant Venturers' (Bristol), London Polytechnic.

LABORATORIES, PHYSICAL, ETC.

Folding Partitions for dividing large rooms into Classrooms. The Partitions are suspended from above with patent movements which run perfectly smoothly and cannot get out of order. No partition could be better made or work easier. Drawings, specifications, and prices free.

Literary Supplement to THE JOURNAL OF EDUCATION.

No. 519.

OCTOBER 1, 1912.

Cambridge University Press

Ecclesiasticus

In the Revised Version. With introduction and notes by W. O. E. Oesterley, D.D., Jesus College, Cambridge. Cambridge Bible for Schools and Colleges.

Fcap 8vo
6s net

The introduction deals with the title, authorship, date, character, original home, integrity, and contents of the book, its teaching, its place and use in the Jewish and the Christian Church, the original language in which it was written, with versions and daughter-versions, and also gives an historical sketch of the times. The introduction is followed by text and commentary, general index, and indexes of Greek and Hebrew words.

A Shorter Geometry

By C. GODFREY, M.V.O., M.A., and A. W. SIDDONS, M.A. Also published in four parts:—Part I, Geometry for Beginners, 1s. Parts II, III, IV, 10d each.

Crown 8vo
2s 6d

A well-arranged and clearly expounded school textbook which covers the three stages distinguished in a recent recommendation of the Board of Education. It is, in short, a valuable development and continuation of the excellent 'Geometry for Beginners' written by the same authors.

—*Scotsman*

A Shorter Geometry can also be had bound together with the same authors' *Solid Geometry*. 4s

Electromagnetic Radiation

And the Mechanical Reactions arising from it. Being an Adams Prize Essay in the University of Cambridge. By G. A. SCHOTT, B.A., D.Sc., Professor of Applied Mathematics in the University College of Wales, Aberystwyth.

Royal 8vo
18s net

In consequence of the discoveries of the last few years in the fields of radioactivity, vacuum-tube phenomena, magnetism and radiation, a great need has arisen for a comprehensive Electron Theory of Matter. . . . It is desirable, before attempting to frame any comprehensive Electron Theory of Matter, to develop the theory of moving electric charges with as few restrictions respecting their structure and motion as possible. . . . The object of this essay is to carry out these preliminary investigations, to provide, as it were, prolegomena to any future Electron Theory of Matter.

—*Extract from the Preface*

Burke: Reflections on the French Revolution

Edited, with introduction and notes, by W. ALISON PHILLIPS, M.A., Merton College, Oxford, Senior Scholar of St. John's College, Oxford, and CATHERINE BEATRICE PHILLIPS.

Extra fcap
8vo
4s

The notes are confined to an explanation of events, ideas, and persons alluded to by Burke, who assumes an encyclopaedic knowledge in his readers which it is to be feared, but few possess. The introduction includes a brief sketch of the development of the French Revolution up to the time when the *Reflections* were first published, and of the condition of France when they were being written, and with the effect of the Revolution on contemporary England.

Statics: including Hydrostatics and the Elements of the Theory of Elasticity

By HORACE LAMB, Sc.D., LL.D., F.R.S., formerly Fellow of Trinity College, Cambridge; Professor of Mathematics in the Victoria University of Manchester.

Demy 8vo
10s 6d net

This book contains, with some modifications, the substance of lectures which have been given at the University of Manchester for some years. It is intended for students who have already some knowledge of elementary Mechanics, and who have arrived at the stage at which they may usefully begin to apply the methods of the Calculus. It deals mainly with two-dimensional problems, but occasionally, where the extension to three dimensions is easy, theorems are stated and proved in their more general form.

Examples in Numerical Trigonometry

By E. A. PRICE, B.A., Assistant Master Royal Naval College, Osborne.

Crown 8vo
2s

This book is primarily a collection of graduated examples in Arithmetical Trigonometry and is intended to supply those pupils who do not devote much time to Mathematics with materials for applying Trigonometrical Ratios and their tabulated values in practical computation.

Cambridge Manuals of Science and Literature

Under the general editorship of P. GILES, Litt.D., Master of Emmanuel College, and A. C. SEWARD, M.A., F.R.S., Professor of Botany in the University of Cambridge

Price 1s 0d net each in cloth, 2s 6d net in lambskin

"We go so far as to say that a complete set of these manuals is as essential to the equipment of a good school as is an encyclopaedia. The editors have cast their net so wide that practically every subject of outstanding importance is drawn into it. In the selection of authors and subjects the editors have shown great wisdom as well as understanding, and the list of volumes already published or in preparation commands respectful attention on account both of authority and comprehensiveness. We can conceive no better series of handy books for ready reference than those represented by the Cambridge Manuals."—*School World*

The latest additions to the series are:—

The Civilisation of Ancient Mexico. By LEWIS SPENCE.

The Work of Rain and Rivers. By T. G. BONNEY, Sc.D.

The Psychology of Insanity. By BERNARD HART, M.D.

House Flies. By C. G. HEWITT.

Brewing. By A. CHASTON CHAPMAN, F.I.C.

The Individual in the Animal Kingdom. By JULIAN S. HUXLEY, B.A.

China and the Manchus. By Prof. H. A. GILES, LL.D.

Brasses. By J. S. M. WARD, B.A., F.R.Hist.S.

The following volumes, among others, have been published earlier:

The Moral Life and Moral Worth. By Prof. SORLEY, Litt.D., F.B.A.

King Arthur in History and Legend. By Prof. W. LEWIS JONES, M.A.

New Zealand. By the Hon. Sir ROBERT STOUT, K.C.M.G., LL.D., and J. LOGAN STOUT, LL.B. (N.Z.)

Greek Tragedy. By J. T. SHEPPARD, M.A.

The Ballad in Literature. By T. F. HENDERSON.

Goethe and the Twentieth Century. By Prof. J. G. ROBERTSON, M.A., Ph.D.

The Troubadours. By the Rev. H. J. CHAYTOR, M.A.

Life in the Medieval University. By R. S. RAIT, M.A.

A prospectus giving full particulars of the series, a list of the volumes ready and in preparation, of which there are a very large number, specimen pages and illustrations, will be sent post free on receipt of a postcard addressed to A.H., Cambridge University Press, Fetter Lane, London.

FROM

PITMAN'S LATEST LIST

FRENCH PROSE WRITERS OF THE NINETEENTH CENTURY AND AFTER.

An Advanced French Reader. With Biographical and Critical Notices in French, and Literary and Bibliographical Notes in English.

By VICTOR LEULIETTE, B. ès L., A.K.C.

Crown 8vo, cloth gilt, 350 pages, 3s. net.

The Nation says:—"The book is on the whole the best advanced French Reader we know. It is certain to give students a heightened appreciation, not only of the flexibility and resources of the French language, but of the wealth and fascination of French thought and of the French outlook upon the world."

A FRENCH RECITER FOR SCHOOLS.

LE ROI LION ET SES GRANDS YASSAUX.

By F. W. M. DRAPER, B.A. (Cantab.), Licencié ès Lettres (University of Paris).

In crown 8vo, limp cloth, 8d. net.

PITMAN'S COMMERCIAL LANGUAGE GRAMMARS.

In 4 Volumes, each in crown 8vo, cloth gilt, from 160-250 pages, 2s. 8d. net.

FRENCH. By F. W. M. DRAPER, B.A. (Cantab.).

GERMAN. By J. BITHELL, M.A., Lecturer in German at the Birkbeck College, London.

ITALIAN. By LUIGI RICCI, Professor at the University of London, &c.

SPANISH. By C. A. TOLEDANO, Spanish Master at the Manchester Municipal School of Commerce, Manchester Athenæum, &c.

ATHLETIC TRAINING FOR GIRLS.

Compiled and Edited by C. E. THOMAS. In crown 8vo, cloth gilt, with Illustrations, 3s. 6d. net.

The World says:—"This is a work for which there was a real need, and, now that it has been so admirably supplied, I would strongly counsel everyone interested in the physical culture of girls to read, mark, learn, and digest it. Indeed I think it is a book that every schoolmistress, every mother, and every girl should be compelled to read, for it is full of the best advice and thoroughly practical hints."

JOHN PYM.

By C. E. WADE, M.A. (Oxon.), Barrister-at-Law. Demy 8vo, cloth gilt, 7s. 6d. net.

The Times says:—"Mr. Wade gives a fresh and effective picture of this statesman's career, keeping throughout in touch with his authorities; and his graphic narrative will fill the gap in the bookshelf made by the disappearance of Forster's Life written nearly eighty years ago, and long obsolete."

MAKERS OF NATIONAL HISTORY SERIES.

Edited by the Ven. W. H. HUTTON, B.D.

Each Volume in crown 8vo, cloth, with Frontispiece, 3s. 8d. net.

CARDINAL BEAUFORT. By L. B. RADFORD, D.D.

VISCOUNT CASTLEREAGH. By ARTHUR HASSALL, M.A.

ARCHBISHOP PARKER. By W. M. KENNEDY, B.A.

FRANCIS ATTERBURY. By the Very Rev. H. C. BEECHING, M.A., D.Litt.

GENERAL WOLFE. By E. SALMON.

EDWARD IV. By LAURENCE STRATFORD.

THOMAS BECKET. By Ven. W. H. HUTTON, B.D.

THE STUDENT'S GUIDE TO POLITICAL ECONOMY.

Crown 8vo, cloth gilt, 232 pages, 2s. 6d. net. By F. H. SPENCER, D.Sc., LL.B., Lecturer in Economics and Director of the Day Commercial School, City of London College. Comprehensive in character and modern in doctrine, this textbook deals with the whole subject in outline, and is written in simple and intelligible language.

PITMAN'S INDUSTRIAL AND SOCIAL HISTORY.

By GEORGE COLLAR, B.A., B.Sc. (Lond.). In crown 8vo, cloth, with over 100 Illustrations, 2s. 8d. net.

PITMAN'S COMPLETE MERCANTILE ARITHMETIC.

With Elementary Mensuration. By H. P. GREEN, F.C.S.P.T., Head Arithmetic Master, Pitman's School. Crown 8vo, cloth gilt, with Key, 646 pages, 4s. 6d. net. Complete book without Key, 600 pages, 4s. net. Key separately, 1s. net. Also in Three Parts:—Part I, 300 pages, 2s. 6d. net. Part II, 208 pages, 1s. 6d. net. Part III, 100 pages, 1s. net.

LONDON: SIR ISAAO PITMAN & SONS, Ltd.,
1 Amen Corner, E.O.

"A MERRY HEART."

THE happiest and youngest hearted person I know is a little old lady of eighty-four, who lives alone on a tiny income that is somehow always large enough to be shared with other people; who keeps herself and her old-fashioned belongings in the most exquisite order; who is loved and laughed at and scolded by scores of friends; is always so deep in engagements that you cannot be sure of her at even a week's notice; who never for an instant finds life dull.

She is a charming mixture of shrewdness and childlikeness, but her face, masklike from the very fullness of the record graven there, is astonishingly impassive. Large and heavily framed, of a curious bleached colour, it is crossed and recrossed by innumerable wrinkles, lined and seamed and furrowed beyond belief. A short, inquiring nose is set between narrow slits of pale eyes that peer blinkingly out at you from under thin, wrinkled, almost lashless lids. The upper lip is abnormally long, deeply indented; the mouth is drawn a little to one side by a patch of dully gleaming scar. The hair, worn parted and smoothed over the ears and twisted behind into a funny tight little plait round a bit of black ribbon that ought to be invisible but never is, in colour is a lustreless lint-white. An odd, bunched little figure, trim for all its bunchiness, with comically short arms and legs, dressed always in plain, well darned and mended black, set off at the throat and wrists by spotless ruffles and "tuckers"; for ornaments, a huge cameo brooch, an old-fashioned flat watch and a slender thread of gold—her mother's wedding ring—my old lady moves briskly from hearth to table, poking up the fire and dashing tea into the pot with characteristic haste and recklessness; or sits sewing by the window, black-rimmed spectacles thrust crookedly on the tip of her nose, her nimble fingers keeping time to a steady stream of talk—humorous, pithy, shrewd—as kindly in intention as it is racy in expression.

Her conversation is studded with homely words and phrases, some survivals, no doubt, of an earlier generation, others surely all her own, that give it a curious pungency. How often has she scolded, "Law, child!"—a Puritan of the strictest sect, she allows herself the free use of this one expletive—"Law, child, do 'eo sit still! you're for all the world like a parched pea on a drum," and has been heard to complain that a certain visitor who "drank tea" with her was "as mum as a drum with a hole in it." She sews with more speed than neatness, but defends the size of her stitches on the ground that "a galloping horse won't see them." She always carries two handkerchiefs—"a shower" and "a blower"—and counts no garments a set that do not comprise "a wash, and a wear, and a go naked." The soul of quickness and cheerfulness herself, she disapproves of those who "grizzle" and "quirk" and "wear themselves to fiddle strings," regarding a Peter Grievous as only one degree better than a Betsy Dangle. Her pet exclamation of disgust is an emphatic "Gadgel!" while "Ah, 'tis goodly!" marks for her the height of appreciation.

She has always been fond of nicknames, and sometimes hits off the idiosyncrasies of her acquaintance with surprising penetration. "My Lady Sniff," "Madame Bustle," "Jack Sprat," "Mrs. Up"—these she has fixed for ever, and with unconscious humour she avenges herself upon a tiresomely enthusiastic missionary friend by never mentioning her apart from the scene of her labours, so that, as children, we quite believed that "Annie Saunders, Bone, Algeria," was the lady's lawful if unusually double-barrelled name. This habit has occasionally landed her in difficulties. She is notoriously hazy about names, geographical and otherwise. She once asked for a ticket to Norfolk, and was seriously annoyed on another occasion with a London policeman who was unable to direct her to "my cousin's Mrs. Richards, a widow lady with two daughters"; and with customary spirit relates how she failed to trace a friend whom she aptly describes as "Glider." An old gentleman,

come to the rescue, suggested that as she had forgotten the number of the house and was uncertain of the square in which her friend lived, he might be able to find the address in a directory. "But, behold me, I could think of nothing but 'Glider, Glider,' so that I had to tell him I had forgotten *her* name, too. I know he thought I was a lunatic," she chuckles delightedly, but to this day she is unable to recall "Glider's" true name. The question having arisen of the present name of a dressmaking widow, lately married, she solved the difficulty by summarily ordering us to address our request to "the late Mrs. Bush."

If her language is quaint, her cooking arrangements are quaint. She does most of her cooking herself, and as her own digestion is of a robustness that defies the most outrageous demands made upon it, her friends have learned to prefer afternoon tea to any other meal at her hospitable but unreliable hands. Her invitations are characteristic. "Come at 6.30," she will write, "Irish stew and no fuss." She adores pepper—and that Cayenne—which she scatters freely, even when mixing her celebrated ginger wine, of which it seems to be the principal ingredient. Her favourite dishes are, perhaps, crab and cockles, despite the fact that she once encountered a crab of whom she remarked in disgusted surprise, "Law, 'tis a bad body and good legs"; but she often sends out invitations to a tripe supper, the sauce being, on one occasion at least, thickened with giant sago to give it "body."

But though the wise avoid dining with her, tea—delicious bread and butter, flanked with specially moist dough-cake and seasoned with the hostess' spicy table-talk—is a pleasure not soon to be forgotten. The meal cleared away, the visitor will be set down to help sew for the sale of work that the old lady holds yearly in her rooms. To this end does she spend her days crocheting wonderful wool-work mats, busily hemming bootboots, edging dolls' bonnets with scraps of lace, out of a heap of odds and ends "concocting"—the word is hers—a thousand trifles, which, tasteless and grotesque as they often are, represent hours of devotion. Now by persuasion, now by bullying, she manages to fill her sale room to such good purpose that she is able year by year to make a substantial contribution to her beloved foreign missions.

She is as generous to her many friends as to the heathen. No one of them is ever forgotten at Christmas, but will receive at least a card, often with a small picture or text pasted over the name of the original sender—the practice of writing names on Christmas cards she strongly deprecates, and perhaps a little present, purchased it may be at the Penny Bazaar—a favourite haunt of hers—a set of dusters or a pair of kettle-holders (flannel for the kitchen, silk or velvet for the parlour), or toilet mat of American cloth, ornamented with a border of pearl or even, if funds are low, of boot buttons. But "all work and no play makes Jack a dull boy," she quotes presently, and the sewing or knitting is laid aside, and we give ourselves up to games. These with her are a veritable passion. Croquet is nearest her heart and no one who has not seen her, impatient as ever, trotting over the lawn or calling anguishedly to her ball to stop as it threatens to roll beyond its hoop, can claim to know her fully. Despite her wild hitting she plays surprisingly well, and demands from others the concentrated attention that she gives herself. "Take away his mallet, he's not attending," she called once apropos of a perfect stranger who was playing rather languidly, and, like Mrs. Battle, she loves the rigour of the game. Cards, however, her principles forbid, so she consoles herself with complicated varieties of dominoes and draughts and a certain form of Halma which she has christened "Kangaroo." These she will play by the hour with far more fervour than most children would show. The opponent she likes best is one who is nearly her equal but who tactfully allows her to win finally in the "conqueror." She is fond, too, of spelling games and buried cities, sometimes with surprising results. "My first is part of the body with the *h* left out, my second is a small cane, my whole is a town in England," she told us once, and found us as dull not to guess Ipswich immediately, as when we failed to recognize

in "My first is what you play with babies, my second is a solitary person, my whole is a place in France, I *think*," Bo-lone, *her* rendering of Boulogne.

She is a great lover of flowers, and in this connexion is utterly conscienceless. "Do you know that you are trespassing?" the owner of an estate, coming upon her digging up fern roots, asked her sternly. "Oh yes," she replied blandly, without even looking up, "but I must have this one"; and having secured it, to the great scandal of her friends hypnotized him into helping her to carry her booty away.

All her pleasures, to be enjoyed, must be shared with a friend or neighbour. A drive is her greatest delight, but a vacant place in the carriage will spoil the expedition for her, and she will lament the absence of this or that acquaintance who might have shared the treat, with a simple trust in your agreement that is very significant. No more generous or grateful soul ever lived. "Now, how *kind*! How good everyone is to me!" is always on her lips, uttered with as sincere thanks for a bunch of primroses or a shilling's worth of stamps as for a handsome addition to her infinitesimal income.

Her attitude towards public affairs is one of complete indifference. Asked about politics, she will reply, "I'm Blue, my father was Blue," but what this means she has no idea. She cannot be persuaded into applying for the old-age pension, having some vague idea that to do so would be to prove herself faithless and unbelieving. "No, no, there are others who need it more than I do. I always have been provided for, thanks be to God, and I know I shall never be allowed to want."

Her reading is confined to her Bible and a few religious magazines and tracts, though she dearly loves a novel when she can be induced to waste her time over one. Indeed, though there are many things that she does not "hold with," she never condemns others for enjoying them, and takes the frankest pleasure in hearing of the plays and festivities in which her more worldly friends have taken part. "And what did they give you for dinner, my dear?" she asks, and settles down comfortably to hear all about it.

This interest in details is her most striking characteristic and, more than anything else, has served to keep her young in body and in mind. Unlike most old people, she has no fondness for reminiscences, is indeed rather impatient of them, and quickly changes the conversation to what Mrs. Smith told her yesterday or what she and Miss Jones are going to do to-morrow. However, we do sometimes get her to talk of the past for our delight, and most of all we take pleasure in seeing this little old child of eighty-four stand up, with her hands unconsciously placed behind her, to relate the story, learned so many years ago, of

Daffy-down-dilly, who lived by the well,

A good-natured boy, could both read, write, and spell.

So she lives her life, the busiest, cheerfulest, most contented of happy old maids, neither regretful of the past nor fearful of the future, occupied utterly with the dear immediate present.

ELIZABETH RENDALL.

THE GOVERNESS AGENCY.

IT is commonly supposed that Governess Agencies do not now get much opportunity to be anything but genuine, and yet a little knowledge of the dealings of some of them makes one pause and wonder whether there is not some hankey-pankey about them still, especially in the matter of appointments for interviews. An agency which wishes to appear flourishing must be greatly tempted to advertise a few more posts than it really has. And who is to know that they are not genuine except the numerous unfortunate

applicants for the vacant post? And even they can only suspect; they cannot prove that the post has not been given to someone else, for in nine cases out of ten they are not even told the name of "the lady" who requires a daily governess, companion, or secretary.

Here is a case in point: On May 24 my friend Sybil Baker applied to an agency, which professes to be patronized by the nobility and gentry, for a secretarial post which the agents advertised in a good morning paper. As she was staying in the country at the time she wrote to the agency for details of the post, and received in reply a typewritten letter stating that if she would send five shillings and fill in a form her name would be entered in the books, and notices of all suitable vacancies sent to her. Enclosed was a small typewritten slip containing the same notice that she had seen in the paper—namely, "Daily Secretary required for several days weekly," with the additional words, "Interview town." Now these two words meant no more than the rest to me, but they seemed to bring a rather guarded look to Miss Baker's face.

"You see, I'm in the *country*," she said. "Are they doing a five-shilling gamble on the chances of my staying in it? I once before rushed up to town to be in time for 'Interview to-day 10.30,' and although I arrived at 10.22, it was only to be told that 'the lady' (nameless, of course!) 'had been called away from town unexpectedly.' No, if they don't give you the name and address of the employer, or a *reasonable* date for the supposed interview, it is not uncharitable to suspect that your coin in the slot will draw a blank."

However, being of an inquiring turn of mind, Miss Baker wrote again, stating that she could come to town at any time, and suggesting politely that in the meantime the agency should send the name and address of the lady who required a secretary.

After a delay of three or four days the address was sent: Mrs. McKinnon, The Lyceum Club, 128 Piccadilly. Reproaching herself for misjudging even an agency, Miss Baker wrote to this lady, setting forth her qualifications, and enclosing copies of testimonials for previous work.

She received no reply the next day. Nor the next. But on the third morning the postman left a large envelope with "Lyceum Club" stamped on the flap. Rejoicing that the longed-for employment had come at last, she eagerly opened it. But alas! inside was her own letter of application, with a note from the Hall Porter of the Lyceum Club, saying that there was "no member of the Club of that name," and he therefore returned the letter and testimonials, as they had been opened by a lady whose name was similar. This was annoying. "It's bad enough," said Miss Baker, "not to get the job I wanted, and it is always a trifle uncomfortable to have one's letters and testimonials read by persons for whom they are not intended."

"Chuck them and apply to another agency, Sybil," I advised, "these are evidently bad hats."

But she was willing to probe deeper still. "I like to know what people really *are*," she said, "even when they keep an agency. And this sort of thing does rather show, you know."

Sybil is a marvel. Nothing damps her ardour in the search for truth, and in the face of all this discouragement she indited another letter to the agency informing them of the Hall Porter's letter, and politely adding: "No doubt there is some perfectly natural explanation."

After a delay of about a week, the explanation came. "It's been rather long in the making," remarked Sybil cynically. The agency "much regretted" their typist's error in writing "McKinnon" instead of "——" the name that should have been given. The testimonials and details then started off on their travels again, addressed "Mrs. M——, the Lyceum Club." This time Sybil was not exactly "burning with high hope."

"Do you notice," she said, "that lower down in this letter of explanation they say, 'Would you care to take a post as enclosed particulars?' and then follow details of an entirely

new post. Now is that merely a decoy to prevent me from following up the 'McKinnon' trail?"

Another week passed without any reply from Mrs. M—. Knowing that letters are often forwarded from the Lyceum Club, Sybil's next step was to write to the Hall Porter asking him if there was a Mrs. M—, a member of the Club, and she received a reply in the affirmative.

She therefore wrote again to Mrs. M—, enclosing a stamped envelope for a reply, and explaining matters briefly. Even this, though she made it quite clear that the reputation of an agency was in question, failed to bring any reply. She happened, however, to be going to London during the following week, and made it her business to see the Hall Porter of the Lyceum Club, and to ask him if the letters had been forwarded.

"The letters," said the Hall Porter, "were all forwarded to Mrs. M—'s London address three days ago. She was abroad until then, and had given orders that none of her letters were to be forwarded."

This was satisfactory as far as the Lyceum Club was concerned, but it raised another point with regard to the agency, for they had said that Mrs. M— "was called away the day she intended interviewing, by the sudden illness of one of her children." Had she then intended to come from abroad merely in order to interview a daily secretary at a pound a week? Or was the child ill abroad? Or did the agency use her name knowing by some means that she was abroad, and was not having letters forwarded? Some governess agencies are kept by women who are more or less in society, and who are thus able to note the movements of its members.

The matter could have been satisfactorily settled at once by the briefest of replies from Mrs. M—, but in spite of a third more urgent appeal there was still no answer. The last inquiry was sent direct to Mrs. M—'s town house, which the Hall Porter happened to mention.

It was difficult to know why any lady should persistently refuse a reply to an obviously reasonable question of that kind, and Sybil resolved to make a final appeal, so wrote a fourth letter, saying that it had been suggested to her that the agency ought to be sued for obtaining money on false pretences if it could not be proved that the posts they advertised were genuine. She made it quite plain that Mrs. M— could clear them from all suspicion merely by stating whether she had applied to this agency *and on what date*. This brought a reply at last. Mrs. M— wrote that she *had* applied to the agency for a secretary, and had appointed one. She did not, however, mention the date of application or of appointment, and her own letter was undated, though the post-office stamp on the envelope was July 17. This combination of circumstances made Sybil resolve to make assurance doubly sure, and she pointed out to Mrs. M— the omission of all dates, asking if she would kindly supply the necessary ones. To this she received another internally undated reply, in which Mrs. M— did not supply either the date of application to the agency or the date of appointment of the secretary, but, instead, desired "to close further correspondence," leaving Sybil to attribute her silence to arrogance, to a perverse desire to mystify, or to some kind of complicity with the agency, and proving how difficult it is to test any one of the cases.

It is now nearly two months since Sybil first applied to the agency, but they have not sent her any other notices of vacancies in return for her five shillings except the two already mentioned. Possibly they kept them for less wide-awake people, thinking that their clients would not care for a secretary who was able to ask searching questions and dig into the roots of a matter.

All this set me wondering how many others besides my friend had applied and sent five shillings on seeing this post that so exactly suited them, and how often governess agencies had to use their wits to hoodwink applicants venturesome enough to turn up in person for the "interview," instead of sending five shillings and waiting for the *next* vacancy.

Perhaps the best course, and one which Sybil is seriously considering, would be to sue the agency for obtaining

money on false pretences, though here matters are made more difficult by Mrs. M—'s silence on the important point; but it would be a fair return for that lady's want of courtesy to compel her to speak, and to give evidence that she is not for any reason intentionally shielding the agency.

It is surely time that some legislation was introduced making it illegal to charge *any* fee, beyond stamps to cover postage of notices of vacancies, until an appointment has been obtained by the applicant. This would effectively extinguish the third- and fourth-rate agencies, the kind which advertise "No previous experience necessary," in order to catch the five-shilling fees of all and sundry of the unqualified throughout England, well knowing that even if the post be genuine it can only be given to *one* of the many who desire it so much, and who stake their poor five-shilling pieces on the chance of being the lucky one.

This may have been thought and said before, but it has not been said either often enough or strongly enough if it has failed to hinder those who live by the misfortunes of others, who batten on the dead hopes of their fellow-creatures.

E. JACKSON.

[No advertisements of agencies charging an entrance fee are accepted by *The Journal*.—ED.]

REVIEWS AND MINOR NOTICES.

John Pym. By C. E. WADE. (7s. 6d. net. Sir Isaac Pitman.)

Mr. Wade has earned the gratitude of all students of English history by this masterly account of the life and labours of John Pym. As he points out, "no popular life of Pym has been written since John Forster published his in 1837," and the researches of S. R. Gardiner long ago rendered Forster obsolete. Many of Forster's mistakes were due to his desire to drag Pym into "dramatic prominence"; there was little need to do that. Mr. Wade is very sparing of his comments upon the speeches and actions of Pym, and often contents himself with leaving them to speak for themselves. The sum total of the impressions thus conveyed forces upon us the conviction that Pym was inevitable. Ever working, never vacillating for one moment until the sword was out of the scabbard and had already tasted blood, leaving nothing to chance, not even details the most minute, Pym makes the ill timed impulsive counterstrokes of Charles seem puny in comparison. Not until the battle of Edgehill had been fought and Brentford taken did Pym hesitate. "His vacillation may well be pardoned, for he was beginning to feel the difficulty Charles had known so well, of finding supplies for an unpopular war."

To return to Pym's early career. Of his young days little is known, but Mr. Wade sums up briefly and well the circumstances under which his sinister figure first appears upon the political stage. It was by his three speeches upon the "great subject" of supply, the first of which was delivered on November 27, 1621, that Pym for the first time forced himself upon public notice as a master of debate. In commenting upon these speeches Mr. Wade shows us precisely where lay his strength as a Parliamentary orator:

It has been well said of Pym that his strength lay chiefly in his faculty of appreciating the ideas and the prejudices of the ordinary man, and of transmuting them into such a logical and attractive presentment that each of his hearers could feel in them kinship, if not paternity. . . . Pym was among the greatest, as he was among the first, of our Parliamentarians to show that not intellect, but enlightened common sense, is the quality which there carries furthest.

In criticizing the part played by Pym in the impeachment of Buckingham—the ninth, tenth, and eleventh articles of which were entrusted to his care—Mr. Wade well points out that, though at this time Pym was "on the full tide of the civil strife," yet "religion" was still his primary interest. Religion to Pym was not what religion was to such a one as

George Herbert or such a one as Bunyan. "He is of the house and lineage of William Laud, whom of all men he most abhorred; he is definitive, positive." Religion to Pym meant something which called for Yes or Nay, something one could and must fight about. "He is most characteristically himself when he is hard on the trail of some Popish school-master or expounding the doctrinal enormities of an Arminian bishop."

But, for all his religious intolerance, Pym was never a fanatic. In that respect he stands out in the clearest contrast with Eliot, for example, during the impeachment of Buckingham; and it was this very power of self-suppression which rendered "Pym and his snarls" so terrible to his enemies. He never allowed himself to be carried away by the tide of enthusiasm. The great speech which he delivered in the Short Parliament upon the subject of grievances—a speech which "at once assured to him that leadership of the House which he never lost until his death"—had been prepared with minute care and forethought. The manner in which he compassed the ruin of Strafford affords a model of devilish ingenuity. Against such men of blood and iron Charles was a child. "The greatest of all the statesmen whom an age fertile in greatness produced" went the way of Buckingham and heralded the approach of his master along that path which men call death. "And round about his scaffold capered Pym's patriots."

In 1641 came the parting of the ways. Now was the time for Pym to decide whether he would become the "leader of a truly national party, binding up the wounds of the country by associating the moderate men of both sides," or whether he would continue to follow that road of battle and murder and death, sudden and implacable, at the goal of which was the crown of "King Pym." "We do not know," says Mr. Wade, "that Pym ever hesitated." In our judgment, it would show little grasp of the moral character of the man to suppose that he ever could hesitate. And so Pym chose, as he was bound to choose, the path of destruction, of vengeance—a sword and not peace. On December 1, 1641, deliberately choosing the moment for driving the King to despair, for rendering civil war inevitable, he presented the Grand Remonstrance, reviving "from the beginning of Charles's reign every grievance that had been raised, even where such grievance had been since redressed." Too late (everything that the hapless monarch ever did was done too late) Charles realized that the dangers which menaced him were concentrated in the person of Pym. Of what use to offer him the Chancellorship of the Exchequer now, or two days later to impeach him of high treason? Both expedients were resorted to when the time for them was long since past. Charles went down to the House of Commons and paraded his futility, but Pym he found not; and from that moment of Charles's discomfiture and retreat Pym "became in fact a King." He did not live to witness the closing scenes of the drama, for on December 8, 1643, a destroyer more potent even than "that good fat man, Master John Pym," laid his hand upon him. What, then, is the final verdict? It is, in Mr. Wade's words, this: "Like Cromwell, Pym never knew where he was going till he got there, though at each stage of his journey he knew precisely at which station he would find himself next. Such men are the most dangerous of revolutionaries."

If John Pym be accounted great, he was great by reason of his very limitations. Any student of history who wishes for an impartial yet vivid picture of the troublous and momentous times in which John Pym lived and worked, should lose no time in perusing Mr. Wade's scholarly work.

The International Law and Custom of Ancient Greece and Rome. By COLEMAN PHILLIPSON, M.A., LL.D., Litt.D., of the Inner Temple, Barrister-at-Law. In Two Volumes. (21s. net. Macmillan.)

Dr. Phillipson claims that "the present work offers to the reader the first comprehensive and systematic account of the subject (namely, the international law, public and private, of ancient Greece and Rome) that has appeared in any language"; and Prof. Sir John Macdonell endorses his former

pupil's claim. Dr. Phillipson himself makes special reference to the second and third volumes of Laurent's encyclopædic series, but rules Laurent out of competition—yet on totally different grounds. Perhaps he had in mind writers more modern than Grotius, though indeed he is more comprehensive, if not more systematic, than Grotius. Sir John thinks these volumes "will help to dispel the fiction, still sometimes repeated, that in the sixteenth and seventeenth centuries a group of writers—notably Albericus, Gentilis, and Grotius—"founded" international law." By "founding" Sir John evidently means making, creating. But surely nobody that counts, nobody that has read a few pages of Grotius, would ever think of expressing such an opinion. What Grotius himself says is that, while the civil law has been treated by many writers, yet "ius illud quod inter populos plures aut populorum rectores intercedit . . . attigerunt pauci, universim ac certo ordine tractavit hactenus nemo." Very likely the fact that a good many points of what we should call international law, and especially "private" international law, are set forth as elements of the private civil law, may account for the lack of later separate treatment of them as international law. Anyhow, Grotius does not imagine for a moment that he is creating international law: he makes just the claim that Dr. Phillipson makes, that he is treating the subject more comprehensively and systematically than anybody has done before him, and, so far as Greece and Rome are concerned, he goes to the same sources, without the assistance of the immense modern literature that Dr. Phillipson is able to appeal to. However, there can be no doubt about the comprehensiveness of Dr. Phillipson's treatment. He has ransacked Greek and Roman literature, legal and general, the epigraphic collections, and a multitude of monographs and other writings dealing with the various topics in the modern languages of Western Europe. He disposes his multifarious materials systematically on the large scale; not so systematically within the particular chapters or sections. In cases where the precise terms used by an author that is not readily accessible are important, it is advantageous to have the full quotation at the foot of the page; it is rather awkward, on the other hand, to encounter a block of French or German or Greek in the middle of a paragraph of the text, particularly when the meaning is already given in the English, and the original is not specially called for. The style, in fact, is too often turgid and discursive. We like the discussions of modern opinions when they are really important, but we have no pleasure when a fly is broken on the wheel; and, while we agree with the insistent contention that "terminology in ancient times—as at any other time—was not subjected to a strict pigeon-hole application purporting to be definitive and exclusive," we get tired when we are told also that "words were often used with a flexibility necessarily demanded by the intrinsic significance of the synthetic and analytic processes of cognition and apperception." It would be unfair to say that Dr. Phillipson has emptied his notebooks (or some of them) into the different chapters, but the suggestion does occasionally thrust itself on the reader. The book is undoubtedly a good book, but it contains the materials for a better—better in selection and in plain and pointed exposition, more compact and less demonstrative—in a word, more mature in form. Substantially there is very little to quarrel with, for it would be ungenerous to remark on small details in a work of such extensive scope and such laudable industry. The indexes and the long list of works of reference are very useful. (By the way, the historical introduction to Hunter's "Roman Law" is wrongly ascribed to Mr. Greenidge.) These volumes are especially welcome as a sign that our younger jurists are beginning to deal with larger questions of principle and of historical development, with a working command of the immense and valuable literature of the continent of Europe.

Is the Mind a Coherer? By L. G. SARJANT. (G. Allen.)

The interrogative form of the title fitly indicates the author's attitude towards his subject. On the whole, he answers Yes.

but he is not dogmatic about it. He explicitly states, "I do not claim to know myself," and he very often carries on his argument by asking questions. The book is a metaphysical essay based upon a metaphor: the mind is compared to the instrument that electricians call a "coherer." Had the author confined himself to the nerve cells he might have made out an excellent case for something more than a mere metaphor, for obviously the regulation of pressure at the synapses may well be accomplished by some sort of physiological coherer. But Mr. Sarjant is interested mainly in metaphysics; he can claim, therefore, nothing more than an analogical argument. It is true that one of his chief points is that chemistry is in error when it maintains that changes in matter can take place only by means of conversion, whereas the true view, represented by the figure of the coherer, allows of change that implies increase of matter. This new system of chemistry enables the author to establish a satisfactory relation between mind and matter, not by bridging the gulf between them, but by abolishing the gulf. Mr. Sarjant's doctrine is one of immediacy and has a certain affinity to the current pragmatism. If one had to define it, perhaps the best way would be to say that it is Hegelianism grafted upon the Heraclitean flux, though it has to be admitted that the Leibnizian monad has a very prominent place in the argument.

The text is singularly obscure. Most readers will have great difficulty in getting at the author's meaning, not only because of the prolixity of his style, but because of the unusual, and in many cases inaccurate, meanings that he gives to words. "Reverend" is used for "reverent," "impassible" for "impassable," "reassimulating" for "reassimilating." One might be inclined to set down some of these errors to the credit of the printer, for there are many obvious misprints; but, when we find on one page the word "hypothesized" consistently used four times in an altogether wrong sense, we feel that the compositor is not the chief culprit. The difficulties the reader has to contend with may be gathered from the following passage, which is paralleled by scores of others:

We have spoken of this particular nineteenth century *impasse* as to the molecular becoming the mental, as illusory, and as if, being an "error" (though it was also the thought that had to be thought, and thus a mere progress growth-stage in greater science, and one of the progress-stages by which greater science grows), only detecting "error" and wrong as it is discardable, as "error" (in the activity of disknowing it) becomes incorporable in the new, which cannot be without this activity of disknowing—the rule of life being to be only able to have anything by means of an opposite *actively disknown*—it were no harm.

Towards the end of the book Mr. Sarjant says: "The trained philosopher will see that I have skimmed over parts of the problem of the greatest difficulty." But most trained philosophers will find less fault with this than with the erratic way in which the matter is presented. We approached the book with a distinct bias in its favour; we get quite enough of the academically respectable philosophy, and welcome freshness. We do not like Mr. Sarjant's lapses into frivolity, such as: "But you try and speak first to the categorical, and—by jiminy!" Yet we would willingly pass over all such eccentricities if only the rest were clear and fresh. There is much ingenuity in the book, but it has no chance in its present setting.

Mr. Sarjant is modest in his claims for his theory. He does not suggest that it is going to revolutionize modern thought in the ordinary sense of that term. Indeed, one of the most satisfactory chapters in the book is that which insists upon putting the ordinary first, leaving psychic research to deal with the exceptional. His main claim is that his theory will broaden the humanities and "reinstigate" and "reinforce" ideals. But is it not rather an impotent conclusion that, "if we are coherers, . . . we shall not see any further or hear any better or worse than we do now, only the method in which we see and hear and think we shall know to be different"?

Eastern Asia: a History. By IAN C. HANNAH.
(7s. 6d. net. Fisher Unwin.)

Mr. Hannah's aim in writing this history was clearly not to provide the short cut to knowledge on which some critiques of the first edition congratulated him. Every man, ignorant or not, talks of the East in these days, and it is the author's intention that those who have read his book shall talk of it and of our relations with it a little less ignorantly than before, and be a little more impressed with the profound and immemorial significance of the vast continent in which we of the West so inconsiderately set foot. Persia, Mesopotamia, Arabia, Syria, and Asia Minor are omitted from Mr. Hannah's survey as belonging more properly to the history of the Mediterranean, perhaps also as bearing less directly on the true focus of this book—the course and future of Western interference. The last hundred years in India, China, and Japan are treated with a detail altogether out of proportion to the rest of the book were it not the author's aim rather to provide a historical background to these events than to review in mathematical perspective the long ages of Eastern history. This focus has transformed a scrap-book of events into an admirable study. Such detail as is given is well chosen and significant, and, in spite of the blank it produces, Mr. Hannah perhaps did wisely to leave literature and art out of his history. It is undoubtedly the last chapters that command most attention. Mr. Hannah is singularly without prejudice; if we say that his sympathies are with the East we do not mean that they are anti-European. Though he is under no illusion as to the always questionable causes of Western interference and the unwisdom of the methods employed, he is equally alive to the energy, devotion, and skill that the problem of Eastern government has called into play in Europeans. The italicized statement that "Asia is only in a state of decay because of European interference" will prove a hard saying to many, and is certainly incapable of proof. However wide an interpretation be put upon "decay," Mr. Hannah appears to assign too creative a function to European interference. It would be more true to say that it has hastened the natural process of disintegration from which the new life springs. A map and bibliography would greatly have increased the utility of this able and suggestive book.

- Things Seen in Russia. By W. Barnes Steveni. Illustrated. *Seeley*, 2s. net.

MINOR NOTICES.

P. Vergili Maronis Opera Omnia, ex recensione HENRICI NETTLESHIP a JOANNA P. POSTGATE relecta. 2 vols. (£1. 11s. 6d. net. *Macmillan*.)

Memories are short, and we must repeat what we said in noticing the two previous classical volumes of the Riccardi Press. It is a triumph of modern typography, not only beautiful, but legible—a quality that is lacking in some of the most beautiful specimens of printing set forth in the *Times Supplement*. The text is that prepared by Henry Nettleship for "Bell's Corpus Poetarum," revised by Prof. Postgate. It gives, as the editor has elsewhere written, not what Vergil wrote (that no man knows or will know), but Vergil as he was known to the fourth or fifth century, only in spelling and punctuation it makes a distinct advance on the edition of Ribbeck. We believe that a special set has been printed for Eton leaving books, and we cannot think of a more suitable prize-book for a classical side. Head masters who share our view should lose no time in ordering copies, as the edition is limited to five hundred.

Fourteen Satires of Juvenal. Translated into English by ALEXANDER LEPER. New and revised edition. (5s. *Macmillan*.)

Dr. Leper, Warden of Trinity College, Melbourne, has virtually rewritten the joint version of the Satires, by Leper and Strong, published in 1882, and added the Sixth Satire. He has profited by the editions of Lewis and of Duff, and many obscure passages have been made plain, and certain emendations of the text have been adopted. Here is a sample taken somewhat at random: "The enterprises of the winds, the ghosts that Aeacus is a-torturing, the place from which another somebody is making for home with a golden sheepskin that he purloined, the size of the rowan-trees that Monychus is hurling—all this is echoed without ceasing by Fronto's plane-trees, by his marbles all cracked with the reading, the everlasting reading. Be the poet great or little, from all alike you may expect the same old song. So let me tell you, I too have flinched from the rod: I have pleaded with Sulla that he should retire

into private life and get sound sleep. It is a foolish leniency, when at every turn you run against so many inspired bards, to spare the paper which some one is sure to spoil." This is a faithful rendering, but it is prolix, and misses the point and vigour of Juvenal. *Quid agant venti* is rather "What the wild winds are saying." "The thief who made off with," &c., is near enough for *unde alius*. "What, have not I too flinched from the tawse?" It was a caning, not a birching. "'Tis folly to spare paper for scribblers" gives the five Latin words in seven in place of sixteen. We doubt whether it was worth while to add a bowdlerized version of the Sixth Satire. Those who have strong stomachs may consult Dryden or Gifford, and the late Mr. Jayes had the courage to produce a literal prose rendering.

Contes et Récits. Edited by J. E. MANSION, B. ès L. (1s. 6d. Harrap.)

In "Contes et Récits" M. Mansion has put together a very attractive collection of old-time legends, stories of real life, and historical tales, increasing slightly in difficulty as the book advances, the whole making an admirable third-year reader. Appended to it we find some excellent notes in French, explaining harder constructions, historical allusions, and the like—notes which in themselves presuppose a certain ease in understanding ordinary French words—and these are again followed by suggestions in French of subjects for free composition. Up to this point all the editorial work tends to keep the pupil in a French atmosphere and to encourage the teacher to use French as his medium; and then the whole tenor of the work is reversed by the insertion of forty-five pages of French-English vocabulary, in which it has been thought necessary to insert *pain, beurre, quatre*, &c., and where the learner is not even permitted to guess such words as *la promesse, la justice, sauvage*, or others equally near to their English equivalents. While we are willing to grant that a vocabulary of a few of the more uncommon words may mean a lawful saving of time to young children, we cannot express too strongly our opinion of the gain that will accrue to modern language work when the "complete" vocabulary has become, as it must eventually do, a thing of the past.

Récits Historiques. By EMMA MOFFETT. (1s. 6d. Harrap.)

In this book Miss Moffett has collected a series of historical incidents covering the period from 58 B.C. to the death of Henri IV. All the well known stories of French kings and heroes are to be found here, attractively told and fully illustrated, in a way to make a very pleasant introduction to French history. A preface gives a further general survey down to modern times, and there is an excellent chronology at the end, with comparative tables of events in French and English history. This should prove very useful, but it would be the better for a clearer separation being made between 52 B.C. and the first date after A.D., which happens to be 406; as it is, there is no wider spacing at that point than between any two successive years. There are a few purely historical notes, and a very full vocabulary. Such books are most welcome in making the French country and people more real to us, and we should recommend them more warmly still if they could also be published without vocabularies for the use of those teachers who deprecate giving their pupils help of this nature.

"Siepmann's Primary French Series."—*La Vache Enragée.* Par JEAN MACÉ. Edited by E. H. ARKWRIGHT, M.A. (1s. Macmillan.)

This primary series of French readers is edited on the same lines as Mr. Siepmann's more advanced modern language texts. There is, however, in addition, a short *questionnaire* and a key to the "Words and Phrases," making in all five appendixes which include a complete vocabulary. As a consequence many of the words and difficulties of the text are twice explained, either in the notes and the key or in the key and the vocabulary, an unnecessary amount of help being thus provided. "*La Vache Enragée*" is a fairy story concerning the reform of a spoiled child, the language of which is in places in advance of the subject-matter. In our opinion it would be used to best advantage for rapid reading by pupils who have passed beyond the primary stage.

"Siepmann's Elementary French Series."—*L'Homme à l'Oreille Cassée.* Par EDMOND ABOUT. Edited by EUGÈNE PELLISSIER. (2s. Macmillan.)

In "*L'Homme à l'Oreille Cassée*," the story of the mummified colonel of the First Empire brought to life under the Second, M. About has given free play to his vivid fancy. The result is a tale of so original a plot and of such strange and unexpected turns of fortune as is sure to hold the attention of any child who loves a good story of adventure. M. Pellissier's notes give valuable hints on pronunciation in addition to idiomatic renderings and very helpful grammatical comments. The well known appendixes of this series for which he, with Mr. Siepmann, is also responsible show the thoroughness and care which mark all this series. Both the text and the retranslation exercises, however, strike us as more

fitted for pupils in the "Advanced" than in the "Elementary" stage, and this in spite of the amount of help given in notes and vocabulary.

"Siepmann's Advanced French Series."—*Les Dames Vertes.* Par G. SAND. Edited by EUGÈNE PELLISSIER. (2s. 6d. Macmillan.)

It is a pity that M. Pellissier, in his interesting little preface on George Sand, has omitted to tell us to which period of her life "*Les Dames Vertes*" belongs, or even if it be a complete book in itself or merely an extract from one of her longer novels. The story is a romantic one, turning on the settlement of a law-suit, in the course of which the young lawyer, coming to discuss the case with his fair client, loses his heart to the other claimant, whom he meets under the guise of an apparition. The notes and retranslation exercises are both thorough and systematic, and the continuous passages have the advantage of being, like the text, written in the first person—a difficulty in which it is often hard to give sufficient practice.

Lectures et Exercices : Cours Supérieur. Edited by F. M. S. BATCHELOR. (2s. Black.)

We have in this book the fifth of a series of "Reform Readers," under the general editorship of Mr. Kirkman, and we cannot recommend it too strongly to the notice of teachers. The text, though consisting of extracts from different authors, preserves a certain continuity through its subject-matter which is confined to the period 1804-1871, as treated in history and in fiction. The standard of the French is therefore high enough to give good practice and supply a varied and modern vocabulary, and the extracts are bound to interest. Explanatory notes in French are appended to each section, and the book can also be supplied with the addition of English notes if required. The exercises, which are reserved to the end, are systematic, varied, and interesting, comprising both grammar and word-building and giving abundant oral and written practice on the text. In the case of the harder rules of syntax, a second exercise is provided in the following section to ensure a thorough grasp of the difficulty. The book is specially intended for preparation for the Senior Locals, and we are confident that any form that has worked conscientiously and intelligently through it will be able to face these examinations with good hope of success. We notice the omission of a *ne* on page 141, II B: "*Mots qui doivent pas être employés.*"

Elementary French Composition. By F. VICTOR MASSARD. (2s. 6d. Rivingtons.)

For those teachers who wish to begin translation into French at an early stage we cannot too warmly recommend this book of M. Massard's. It claims to be founded on the direct method of modern language teaching, and Part I is to be the stepping-stone between oral work and the beginnings of French composition. Accordingly this first part contains an easy consecutive story, divided into sections, with *questionnaire*, idioms, word-formation, and retranslation exercises all based on the text, and furnishing such constant opportunity for recapitulation as to secure the building up of a good and reasoned vocabulary, though it is, perhaps, a pity that the full notes on the idioms, appended to this part, leave no exercise for the pupil's ingenuity. Part II contains material for translation into French: again continuous pieces, and such as ought to be well within the range of a boy or girl who has worked thoroughly through Part I. Finally, M. Massard has added some very useful hints on syntax, with recapitulatory exercises on them in French and English. Many of the rules given are quite excellent—notably those on the rendering of English auxiliaries and on *c'est* and *il est*. To say, however, that *plus que* is only used before pronouns, and to quote "*Ne parlez pas de la sorte*" as an exception to the rule that *de* is used without the article after a negative, are regrettable defects. And we notice several misprints: page 33, "*celui que exerce*" (*que* for *qui*); page 166, "*Je fut obéi*"; page 167, "*J'ai en occasion*" (*en* for *eu*).

The Law and the Prophets; or, The Revelation of Jehovah in Hebrew History from the Earliest Times to the Capture of Jerusalem by Titus. By Prof. ALEXANDRE WESTPHAL. Translated and adapted by C. DU PONTET, M.A. (Pp. xxviii, 457. 8s. 6d. net. Macmillan.)

This interesting volume presents a narrative of Biblical history from the earliest times to the Fall of Jerusalem. The history is reconstructed according to a particular view, the most interesting feature of which is the author's theory that throughout we must see a persistent conflict between "Jehovism" and "Elohism," the former representing the higher and the latter the lower element in the religion of Israel. Thus the Temple of Solomon sanctioned Elohism; in the ninth century rival schools of Jehovist and Elohist prophets arose. After the exile "Levitical Elohism" triumphed, till it culminated in the Pharisaism of the New Testament period, when "the Elohist doctrine reaches its highest development and also

its widest aberrations" (page 402); in Jesus "Jehovism" reaches its climax, and in the Gospels we have recorded the story of "the moral rupture between the *Jehovist* Messiah and the *Elohist* clergy" (page 417). The book is pervaded by a profound religious spirit, but it suffers as a whole from too little attention being paid to the background of actual history as revealed by archaeological research; the reconstruction is often artificial, resting as it does upon a subtle interweaving of Biblical data which are not really continuous. Nor is Prof. Westphal's treatment of critical results always satisfactory. He fails also to do anything like justice to the legal religion. Nevertheless the volume is an exceedingly valuable and stimulating treatise, which ought to be read and studied by all who take an intelligent interest in Biblical problems.

Classical Papers of Mortimer Lamson Earle.
(12s. 6d. net. Frowde.)

Prof. Earle, of Columbia University, is known to classical scholars by his thorough and independent editions of the "Medea," the "Alcestis," and "Oedipus Tyrannus." His various contributions, mostly to the *Classical Review* and the *American Journal of Philology*, were well worthy of republication, and his lifelong friend, the late Prof. Ashmore, has added, by way of preface, a brief memoir. No future editor can afford to overlook his notes on the three tragedians. Though few of his many bold emendations are likely to find acceptance, yet they often point to difficulties that have been wholly overlooked or slurred over.

Lectures on the Theory of Functions of Real Variables. By JAMES PIERPONT, LL.D., Professor of Mathematics at Yale University. (20s. Ginn.)

In this second volume of Prof. Pierpont's "Lectures on Functions of a Real Variable" the same method of presentation is adopted as in Vol. I, the aim of the author being to stimulate interest rather than to write an exhaustive treatise. To attempt to value a book of this character after a month's acquaintance would be presumptuous, but, after reading Chapters VIII to XI and then going to Chapter XII, where the author gives his new theory of Lebesgue integrals, one realizes that it is quite possible to make difficult points clear without in the slightest degree sacrificing rigidity of treatment, and that Prof. Pierpont is not writing merely for his mathematical equals, but also for the student who is beginning this difficult subject. In this volume there is much, however, that is original and of which the advanced student cannot afford to be ignorant. In the first two chapters the author develops the original theory of integration introduced in Vol. I, and deduces results more general than those obtained so far with Riemann Integrals. Another piece of original work is the Theory of Lebesgue Integrals developed in Chapter XII and based upon a definition more natural than Lebesgue's. The author's treatment of the area of a curved surface also has distinct claims to originality. Owing to the necessarily complicated symbols, the printing must have presented difficulties, and the publishers are to be congratulated upon the results of the care that must have been given to the press work.

Advanced Calculus. By E. B. WILSON, Ph.D. (20s. net. Ginn.)

This treatise is encyclopædic. It begins with a revision of the formal results obtained in a first course on the Calculus, and a review of the fundamental theorems on functions of a real variable. Then follows three chapters on advanced Differential Calculus. Chapter VI deals with Vectors. Part II, consisting of a hundred pages, is devoted to Differential Equations and covers the same ground as Forsyth's treatise on the formal solution of Differential Equations, except that Hypergeometric Series and Solutions by Definite Integrals are not dealt with. Part III is probably the most valuable portion of the work, containing chapters on curvilinear integrals and Cauchy's integral, multiple integration and Green's Theorem, infinite integrals and contour integration, the Gamma and the Bessel Functions. Some idea of the density of the book may be gathered from the fact that Chapter XIV, consisting of twenty-one pages, contains paragraphs on the Gamma Functions, Dirichlet Integrals, Stirling's Formula, Error Functions, Bessel Functions and their asymptotic development. Chapter XV deals with the Calculus of Variations. Part IV is entitled Theory of Functions. It begins with important chapters on Series and Infinite Products. Chapter XVIII deals with Conformal Representation and Integrals on a Riemann Surface. Chapter XIX with Elliptic Functions; while the concluding chapter deals with Harmonic Functions. The advisability of condensing so much material into one treatise is open to question. It would be preferable that a student should purchase a small library including five or six standard works such as Bromwich's *Infinite Series*, Goursat's *Cours d'Analyse*, Whittaker's *Modern Analysis*, Osgood's *Funktionentheorie*, Forsyth's *Differential Equations* and Byerley's *Spherical Harmonics*, and that he should have access to a college library.

Elements of the Differential and Integral Calculus.

By W. A. GRANVILLE. (10s. 6d. Ginn.)

This revised edition of Granville's "Calculus" will be received with the assurance that any alterations or additions will have been suggested by actual use in class. The chief additions are contained in a useful chapter on approximate integration, and in further exercises drawn from physics and hydrostatics, while the important notion of integration over a plane area has been much expanded. At a time when every month sees some new textbook upon the calculus appealing solely to intuition for proofs of the fundamental theorems, it is gratifying to realize that a textbook of the character of Granville's "Calculus," which bases its fundamental theorems upon analysis, should succeed in its appeal to the critical faculties of the ordinary student. Experience shows that beginners find the book easy to understand, while they appreciate the vigorous treatment of the subject. It would be interesting to know why § 205 has been printed in small type. There is some danger of this analytic proof of the fundamental theorem of integration being regarded as an alternative to the intuitional "proof" of § 174. It is true that the phrase marked by an asterisk in § 205 would lead to a discussion on "integrable functions," but this is the kind of opening that a teacher would use to show his class the way in which mathematics is continually growing. A collection of more difficult examples would be a valuable addition. While agreeing with the author that drill is an essential part of mathematical training, and that a large number of carefully graded examples is a necessity, one feels that the student of more than average ability ought not to be deprived of the sense of increased power that follows on the successful solution of a difficult problem. This book can be especially recommended to private students.

Lectures on the Differential Geometry of Curves and Surfaces.

By A. R. FORSYTH, Sc.D., LL.D., Math.D., F.R.S. (21s. Cambridge University Press.)

"This volume is mainly intended for students who later may devote themselves to original work," and consists of the substance of lectures delivered as Sadlerian Professor at Cambridge. It therefore abounds with frequent references, and is inspiring rather than exhaustive. The name of Darboux occurs naturally with great frequency, and to appreciate fully Forsyth's work Darboux's treatise is essential. The examples for exercise are a splendid collection, and will help towards the fulfilment of the author's aim more than any other feature of the book. In the first chapter curves in space are discussed, the Serret-Frenet formulae being established and applied in the concluding paragraphs. Chapter II deals with the general theory of surfaces by the usual Gaussian methods, and concludes with Bonnet's theorem. Then follow chapters on lines of curvature, geodesics, &c. Chapter VII is of great interest, dealing with minimal surfaces. Related as these surfaces are in their essential notion to the calculus of variations and in their analysis to the theory of functions of a complex variable, the whole chapter is full of suggestion, and it is impossible for a serious student to read it and not turn afterwards to the work of the great mathematicians who have dealt with this subject and to whom references are freely given. Other chapters discuss such subjects as Weingarten surfaces, comparison of surfaces, deformation of surfaces, congruences of curves, and triply orthogonal systems of surfaces.

Analytical Geometry of Three Dimensions. By GEORGE SALMON, F.R.S. Revised by REGINALD A. P. ROGERS. Fifth Edition. Vol. I. (9s. Longmans.)

Several years having elapsed since the publication of the fourth edition of this treatise, a fifth edition has been undertaken by Mr. Rogers, under the direction of Trinity College, Dublin, and is being published in two volumes. In this first volume the substance of the fourth edition has been preserved, and the new material fits in with the rest of the book. It is this volume that will probably be used by most students preparing for mathematical honours as the standard textbook in English on solid geometry. Articles have been inserted on the Serret-Frenet formulae and on the application of Gauss's parametric method to conformal representation, geodesic curvature, and geodesic torsion. In the second volume it will be interesting to see how the editor carries out his aim of forming a connecting link between the work of Salmon and the more purely analytic work of Darboux and other modern mathematicians.

The Elements of Plane and Spherical Trigonometry. By J. G. HUN and C. R. MACINNES. (6s. net. Macmillan.)

The first half of this book of a little more than two hundred pages contains the essential elements of plane and spherical trigonometry as far as the solution of triangles and the simpler applications to the geometry of plane and spherical triangles; the second half consists of five-figure tables of logarithms and trigonometric functions, with instructions for their use. In range and

style this volume differs little from many other American textbooks, but it will be found an attractive introduction for those who do not look beyond the practical applications of the subject.

A General Sketch of Political History from the Earliest Times.

By ARTHUR D. INNES. (6s. net. Rivingtons.)

The thought that for the modest price of six shillings one should be able to purchase what is practically a political history of the world, is so disconcerting, that we instinctively turned to the author for some explanation of the fact. In his preface he tells us that since "separate histories are not isolated, but act on and are acted on by others," and since the conception of the unity of history, as a whole, "is needful to the right understanding of our own or any other specific history; and an acquaintance, sound so far as it goes, with the ground plan of general history is exceedingly helpful to the conception," he has aimed at presenting such a ground-plan, without so multiplying details as to prevent the student "from seeing the wood for the trees." Regarded in this light, and as nothing more than such a "ground-plan," this little work should be of considerable assistance not only to students of history, but to the general reader. In these days of specialization there is an increasing danger of not seeing the wood for the trees. Such a comprehensive survey as this should at least serve to remind us that our special period is not an isolated product, but part of a larger drama. It also serves to show us, in outline, how existing States came to be that which they are, knowledge always of value, yet seldom possessed. Mr. Innes is to be congratulated upon the successful way in which he has dealt with the extremely difficult problem of choosing between the essential and that which, though prominent, is of merely local or temporary importance. We certainly have no hesitation in allowing his modest claim to have produced a "ground-plan sound so far as it goes."

Cliftonian Verses and Fair Copies. By C. H. SPENCE.

(1s. Clifton: J. Baker.)

These are elegant trifles which have graced the pages of the *Cliftonian*. Most of them, we are informed, were written as fair copies for the Upper Fifths, Classical and Modern, and we envy Clifton boys their good fortune in having such unhackneyed themes to write on, and such good models to copy:—The Game and Play of Scrimmage, after Chaucer; Of Cricket Shop, a Baconian Essay; A Ballade of Rugs (watching a cricket match); "Speak roughly to your little boy," for Latin elegiacs. There are two epitaphs on C. G. Gordon which appeared in our volume of Prize Epitaphs. The Latin one has an unfortunate misprint. As a sample of the translations we may quote the Charles d'Orléans rondel, as all will know the original:

"The year has cast his cloak away—
His cloak of wind, and rain, and cold;
And dons new raiment brave and bold—
'Broidered with sunbeams his array.
The wild deer's bell, the wild birds' lay
Ring clear through every wood and wold.
The year, &c.
Once more the springs and streams display
Their jewell'd livery as of old;
Burnish'd with silver and with gold
The river sparkles glad and gay.
The year, &c."

Since the notice was written, death has cut short in mid career one of the ablest of our Public School masters.

Our Children's Health at Home and at School. Edited by CHARLES E. HECHT. (National Food Reform Association.)

In a goodly volume of nearly five hundred pages, the Secretary has edited a full report of the Guildhall Conference held in May, supplemented by the newspaper comments and correspondence that it provoked. A hundred and fifty pages of press cuttings is rather a large allowance, and this part of the volume the most conscientious of readers will skip. On the other hand, house masters and matrons will be grateful to have in a permanent form the detailed menus supplied by schools of various classes, and Mr. Hecht sums up very judiciously in the introduction the results of the Conference—"the little done, the undone vast."

A School Chemistry. By F. R. L. WILSON and G. W. HEDLEY. (In one vol., 4s. 6d.; in two vols., 2s. 6d. each vol. Clarendon Press.)

The two volumes entitled "Elementary Chemistry," "Progressive Lessons in Experiment and Theory," which were produced by the authors some time ago, are probably well known to most teachers of Chemistry, but, although these are excellent books, the complete course set forth in them demands an expenditure of time greater than that usually available in a school. The volume now under notice has been written on the same plan as that adopted in the work just mentioned, but the subject has been treated more

briefly. It is essentially a book to be read and worked from in the laboratory and provides textbook instruction, practical directions, and test questions. Any boy who has worked intelligently through the practical exercises, and has conscientiously pondered over the questions which follow his laboratory work, will have no difficulty with any examination of matriculation standard, and will have been provided with a solid foundation for more advanced work.

A Textbook of Inorganic Chemistry. By G. SENTER.

(6s. 6d. Methuen.)

Dr. Senter has given us a well written and informative textbook, which we can unreservedly recommend. The author probably had in view the needs of University and technical classes; but the book could be adopted with advantage in schools for the senior pupils who may be preparing for intermediate and scholarship examinations. A feature which is particularly commendable is the frequency with which quite recent research is pressed into service—always with good judgment and a due sense of proportion. The treatment of principles is sound; but the teacher will find it necessary to expand many of the statements, which are too concise for easy digestion. There is a slip on page 339, where we read that the combustion of unsaturated hydrocarbons must give rise to free carbon in a state of incandescence. The ordinary Bunsen flame affords an obvious disproof of this, and the non-luminosity cannot be ascribed wholly to the added oxygen. The wording of the second paragraph on page 340 would lead a student to believe that an ordinary gas mantle consisted of 99 per cent. thorium dioxide and 1 per cent. cerium dioxide. No reference is made to the oxy-acetylene burner, which is of interest, since the brightest light hitherto obtained was from an oxy-acetylene jet impinging upon a revolving cerium button. A little weakness in the treatment of flame and spectroscopy is more than compensated by the lucid manner in which Mr. Senter has dealt with solubility. The concluding chapter, on radioactivity, is printed in type which is reprehensibly small—probably in order to keep the size of the volume within bounds. This may seem a venial error, as the number of pages exceeds 580; but would it not be better to omit such *objets d'art* as the fluorides of antimony or the compounds of germanium? On the whole, we are impressed with the good selection of the information given, the clearness of the author's style, and the workmanlike character of the book as shown by the general arrangement and the accuracy of details.

An Elementary Treatise on Statics. By S. L. LONEY, M.A.

(12s. Cambridge University Press.)

Prof. Loney's new work on analytical statics is one of those rare books which at once take their place as the standard textbooks—at any rate, for the class of students for whom they are designed. His "Elements of Statics" is well known as one of the best of its kind, but something more advanced has long been wanted. Many passages in the newer book will be familiar to those who have read the "Elements," but the whole course is extended, and the author is now able to avail himself of the methods of the differential and integral calculus and of the simpler results of analytical geometry of three dimensions. The examples are more difficult and require more advanced methods for their solution. We have read with special interest the chapters on graphic solutions, the equilibrium of strings and chains, and attractions and potential; but the whole volume is valuable and will surely prove interesting to students at the close of their school career or during their first year at the University.

Geleite die draussen sind! Von THEODORE ZEDELIOUS. Edited by D. L. SAVORY, M.A. (1s. 6d. Rivingtons.)

Prof. Savory has chosen a touching story of fishing life for his latest German reader. In it we are shown the old mother who has waited four years for her son's return, comforted Sunday by Sunday by hearing his name read first on the list in the prayer for the missing, a sentence of which has been taken to form the title of the book. Except for a few fishing terms and an occasional colloquialism, for all of which the notes give adequate help, the style is straightforward, and the German offers a good vocabulary of common words and phrases. As in all this series, the exercises follow immediately on each section of the story and comprise an exhaustive set of questions on the text, very full and systematic grammatical exercises, and varied suggestions for free composition. Prof. Savory defends the interleaved *questionnaire*, so often criticized, as being intended for the pupil's use in his homework to test the thoroughness of his preparation. The outstanding feature of the series is that the editing is entirely in German—preface, notes, and exercises—so keeping it before the learner as a really living language, not one that can be understood only through the toil of translation into another tongue. We believe that, in almost every case, the paraphrase given in the note offers sufficient help over the difficulty, and thus the pupil makes the double gain of an old word revised and a new one acquired.

Harald, First of the Vikings. By Captain CHARLES YOUNG. (5s. net. Harrap.)

Having told the story of "The Last of the Vikings" Captain Young goes back to Harald the Fairhaired, and relates in full the reign of the Napoleon of Norway. It is a story of "battle with confused noise, and garments rolled in blood," and, vigorously as the various raids and forays, vendettas and vengeance are related, it cannot avoid being somewhat monotonous, and we are in danger of not seeing the wood for the trees. Harald was a man of blood and iron, but no harder or more selfish than the vikings whom, by his superior ability and force of will, he reduced to vassalage, and Captain Young presents him as a very perfect gentle knight with but one blot on his fair fame, the murder of Thorolf. Boieson is his chief authority, and there is no serious attempt to sift history from saga. The beautiful illustrations by Gertrude Demain Hammond enrich a volume that, in respect of paper, print, and binding, leaves nothing to desire.

"The Plain-text Poets."—*Historical Lyrics and Ballads.* Book I: Before 1485. Selected and edited by S. E. WINBOLT. (6d. Blackie.)

Of these twenty historical songs all but six are genuine lyrics, and, though we could well have spared Mrs. Hemans, Cowper's "Boadicea," Burns's "Bannockburn," and Drayton's "Agincourt" were inevitable. We suppose that questions of copyright account for the preference of E. A. Freeman's translation of "Brunanburh" to Tennyson's, and of Mrs. Hemans's "White Ship" to Rossetti's. Notes are barred in the series, but the glossary might have been fuller. We look in vain for "daw," "corynoch," "a fiery fairy," "dandring," "lafax."

The Four Men: a Farrago. By HILAIRE BELLOC. (2s. net. Nelson.)

A writer so prolific as Mr. Belloc, however lively his invention, is needs gruelled for new titles. His first thought is to distinguish himself from the vulgar herd of guide-book makers and writers of "middles," and his second to accept no brief, but give his fancy free play. He has used up "On Nothing," "On Everything," "On Something," and now, for a book on the by-ways of Sussex, he chooses an equally insignificant label. It is true that the way-side reflections on life, death, love-making, Shakespeare and the musical glasses are assigned to "Four Men," but each of these is "Myself" in a thin disguise—Mr. Belloc as an oratorian, as a French artilleryman, as a Balliol scholar, as an M.P. But it is Mr. Belloc as a Sussex man that pleases us best. He "paints with a peculiar passion" his home county, and "passionately sets down before they are forgotten his own horizon and his own fields." The solemn reflections, which we confess sometimes bore us, are interspersed with racy anecdotes, e.g. the story of Peter the Politician, who sold his soul, and with rollicking verse, e.g.—

"Duke William was a wench's son,
His granfer was a tanner;
He drank his cyder from the tun,
Which is the Norman manner.
His throne was made of oak and gold,
His bow-shaft of the yew—
That is the way the tale is told,
I doubt if it be true!

Wonders of Plant Life. By S. L. BASTIN. With forty Plates from Photographs by the AUTHOR and eight Autochromes by H. E. CORKE. (3s. 6d. net. Cassell.)

This is a more advanced botanical work than "Wild Flowers as they Grow," noticed in our last issue, and most of the illustrations are taken from exotics. The fertilization, propagation, and struggle for existence of phanerogams and cryptogams is described and illustrated by typical plants from all quarters of the globe; but the author's object is to interest, not to teach botany. In this he certainly succeeds, though his style leaves something to be desired. There are too many sentences in the form of notes of admiration or interrogation—"it is wonderful to observe" or "it is still a moot question."

Letters by William Cowper. Chosen and edited, with a Memoir, by J. G. FRAZER. 2 vols. (8s. net. Macmillan.)

All lovers of Cowper—and who does not love his prose if not his verse?—will welcome this admirable selection made by Dr. Frazer in his leisure hours, a choice of "such letters as either exhibit the charm and grace of his style at its best or illustrate his life, character, and opinions on books, men, and affairs." The bulk of the letters belong to the happy decade from 1780 to 1790—the years which saw the best of his poetic work.

The Child's Empire Picture Annual. (Religious Tract Society.)

A handsome picture-book that will delight the nursery. The simple rimes are unaffected, without sentiment or moralizing, and will appeal to children. Grown-ups will prefer the black-and-white to the somewhat flamboyant colour plates.

GIFT BOOKS.

Spiderland. By R. A. ELLIS. (3s. 6d. net. Cassell.)—This is a natural history book that we can commend from every point of view—matter, style, and illustrations. The facts gathered from a wide range of research and personal observation are set forth in a plain, unvarnished narrative and are so marvellous that comment or moralizing would only weaken their effect. Moreover, the author's photographs and drawings enable the reader to see the life of the spider "votiva veluti descripta tabella." The book is enriched by figures adapted from the late Dr. McCook's monumental work on American spiders. It is primarily intended for young folk, but old folk will equally find their account. At a meeting of the British Association an eminent naturalist and an eminent lawyer found themselves *tête-à-tête* without an idea in common. A spider saved the situation. The naturalist observed a couple in the corner of the ceiling and called the lawyer's attention to them. "The big one," he observed, "is the lady and the little one the gentleman. When the marriage ceremony is concluded, the wife will proceed to eat her husband." "Most interesting," replied the lawyer. "A remarkable case of post-nuptial settlement."

Through Holland in the Vivette. By C. KEBLE CHATTERTON. With Sixty Illustrations. (6s. net. Seeley.)—This is a book for the yachtsman and will fascinate those who have followed the course of the "Vivette" down Channel. It describes the cruise of a four-tonner from the Solent to the Zuyder Zee through the Dutch waterways. It recounts the many perils by land as well as by sea that environ the sailorman; but, even with these minute sailing directions, none but an experienced yachtsman will be tempted to repeat the experiment in so small a sailing craft without an auxiliary motor engine.

The Boy's Playbook of Science. By the late JOHN HENRY PEPPER. Revised, with Additions, by JOHN MASTIN. (5s. G. Routledge.)—It is now twelve years since the famous chemist whose name survives in "Pepper's Ghost" died, and the marvels of science—the telephone, the marconigraph, the aeroplane, radium, and X-rays, to mention only a few of the many recent inventions—call for a thorough revision which virtually constitutes a new work. The task could not have been committed to better hands, though we may doubt whether the majority of the experiments could be enacted "in an ordinary house kitchen with the assistance of the glass and crockery generally found there." Friction in the shape of cook has not been reckoned. Yet there is enough to employ a boy or youth with a scientific turn for all his holidays and leisure hours.

Babes of the Wild. By CHARLES G. D. ROBERTS. (6s. Cassell.)—The Wild is Silverwater, "the loveliest and loneliest of wilderness lakes"; and the Babe *par excellence* is a boy who, like Wordsworth's "best philosopher," is an eye among the blind, full of "obstinate questioning of sense and outward things." For him Uncle Andy, a replica of Uncle Remus, spins endless yarns of other babes of the wood, the furry and feathered folk—minks, polar bears, prairie dogs, otters, owls, crows, with some babes of the ocean, whales and swordfish, by way of a change. Uncle Andy, *alias* Mr. Roberts, is a born naturalist and writes of what he knows, though some of his stories—for instance the last, a child of five hugging a four-months-old bear cub which she mistakes for her own "Teddy"—are reminiscent of Horace's *animosus infans*.

Rambles in Florence. By G. E. TROUTBECK. With eight illustrations in water-colour by ROSE MCANDREW and thirty-two from photographs. (6s. Mills & Boon.)—Florence has been the happy hunting ground, not only of historians and novelists from Villari and Guicciardini down to Mrs. Oliphant and Mr. Gardner, from Boccaccio down to George Eliot and Anatole France, but of essayists and art critics innumerable—Ruskin, J. A. Symonds, Grant Allen, Mrs. Ross. Miss Troutbeck, who has told for children the story of Westminster Abbey, gives here in a rambling form (we mean no disparagement) her *impressions de voyage*. She pretends to no special artistic knowledge, but tells us quite simply how the sights of Florence strike a cultivated amateur who sees them for the first time. With a plan of the city or an index it would well serve as a guide-book. Miss McAndrew's water-colours are charming, exquisitely delicate, and rendering the atmospheric effects, and the photographs would certainly have won prizes.

Sport and Pastime in Australia. By GORDON INGLIS. (7s. 6d. net. Methuen.)—Sport, as Sir George Reid remarks in his Preface, is born in the bone of the English people, and in the virgin soil of Australia it has taken root and spread. Every form of sport, from horse-racing down to lawn tennis, is exhaustively treated by Mr. Inglis, including some unknown at home, such as surfing and angling for king fish which run up to 100 lb. A chapter is devoted

to the Sydney Grammar School, and a merited tribute is paid to its real founder, the late Mr. A. B. Weigall. It will be new to most cricketers that F. R. Spofforth was rejected for the school eleven. The book is well illustrated and may be recommended as a present for a young emigrant.

Teutonic Myth and Legend. By DONALD A. MACKENZIE. (7s. 6d. net. Gresham Publishing Co.)—This handsome volume, with three plates in colour from J. Doyle Penrose's paintings and numerous plates in monochrome from various sources, tells in plain English the myths of the two Eddas, Beowulf, and the Nibelungenlied. The text is founded mainly on Rydberg's "Teutonic Mythology." The selection of poetry is somewhat fanciful—old ballads and the "Faerie Queen," but nothing from William Morris or York Powell.

(1) "Beautiful England Series."—*York and Chester*. (2) "Beautiful Ireland Series."—*Munster and Connaught*. (2s. net each. Blackie.)—We have already had occasion to notice several of the "Beautiful England Series." These later volumes, "York" and "Chester," are in every way up to the level of the former ones. Mr. Haslehurst has had beautiful subjects for his water-colour sketches, and the results are very lovely. Whether we turn to landscape, such as "The Dee at Eaton," or distant city views, such as "Fishergate Postern," or ancient houses, such as "The Shambles" at York—all are equally satisfying. We do not find Mr. Alexander Williams quite so successful in his treatment of Irish scenes. There is apt to be a certain wooliness and over-finish in some of his paintings, which takes away from their strength and vigour. This is especially noticable in the mountain scenes. On the other hand, in the bolder ones, such as "Lowlands, Ballinlough," and "Achill Island," the atmospheric effects are pleasing and the general colouring far more satisfactory. The letterpress for the series, by various writers, is of an easy, anecdotal, semi-historic kind. It would serve as a guide-book, and yet is more literary in style than a guide-book pretends to be.

(1) *Things seen in Northern India*. By T. L. PENNELL. (2) *Things seen in Russia*. By W. BARNES STEVENI. (2s. net each. Seeley.)—Two more volumes of this very attractive series. The letterpress gives, in a pleasant, easy fashion, descriptions of places and people, the customs and superstitions of the different races. The great charm, however, lies in the excellent photographs by which they are illustrated. There are fifty of these to each

small volume, and the subjects and points of view are well chosen. In "Northern India," The Taj, The Tomb of Akbar, The Holy Tank at Alwar, A Canal Scene, Grass Carriers in the Hills, Sunrise on the Himalayas, seen through a tracery of leafless boughs, and A Himalayan Village are particularly good; while, in "Russia," the frontispiece is an admirable picture of a peasant woman, followed by others almost equally good of itinerant vendors of various articles and scenes of rural life, interspersed with effective views of the Kremlin, the Cathedral of Basil, and other places of interest.

The Book of the Kingdom. By Mrs. MACY. Illustrated by T. H. ROBINSON. (3s. 6d. net. Longmans.)—Mrs. Macy has here told the Bible story from the birth of Samuel to the death of David quite simply and straightforwardly in language that young children can well understand, and the book is profusely illustrated by Mr. T. H. Robinson. We wish that there had been more detailed background for the vigorous and well drawn figures; children certainly need this. In all other respects the pictures add greatly to the worth of a book which will be welcomed by many a parent and teacher. We venture to suggest, in view of further volumes, that the incidental poems are not on the same level as the letterpress. Mrs. Macy seems singularly lacking in a sense of rhythm.

Cranford. By Mrs. GASKELL. Illustrated in colours by H. M. BROCK. (3s. 6d. Seeley.)—He is a bold artist who dares illustrate "Cranford" since Mr. Hugh Thomson produced his matchless edition. Mr. Brock can venture and be no plagiarist. And yet, attractive as his pictures are, they lack "a gracious somewhat" that is present in the work of Mr. Hugh Thomson. What strange aberration, we wonder, has set Mary Russell Mitford's name as authoress on the cover?

Peeps at Delhi and the Durbar. By JOHN FINNEMORE. (1s. 6d. net. Black.)—The first half of the book is a sketch of past history—Delhi and its rulers hundreds of years ago to the time when the city was taken by the British troops after the Mutiny. The later half describes the Durbar of 1911 and the restoration of Delhi to its ancient place as capital of India. The twelve illustrations by Mr. Mortimer Menpes supply some gorgeous colouring and wonderful intricacies of detail in ornaments, embroideries, and costumes. "A Rajput Gentleman" and the barbaric "Warrior from Central India" are striking figures, and we look with interest on the "Sikh who helped to storm Delhi," while the warriors in chain mail carry us back to the Middle Ages.

FROM GINN & COMPANY'S LIST

Some Histories worth notice

THE DEVELOPMENT OF MODERN EUROPE

During the Last Two Hundred Years. An Introduction to Current History. By J. H. ROBINSON and C. A. BEARD.

Vol. I.—*The Eighteenth Century, The French Revolution, and the Napoleonic Period.* 374 pp. Price 6s. 6d.

Vol. II.—*Europe since the Congress of Vienna.* 433 pp. Price 6s. 6d.

READINGS IN MODERN EUROPEAN HISTORY

A collection of extracts from sources chosen with the purpose of illustrating the general changes in Europe during the last two hundred years, arranged so as to supplement and amplify chapter by chapter the writers' "Development of Modern Europe."

Vol. I.—410 pp. Price 6s. 6d.

Vol. II.—541 pp. Price 6s. 6d.

THE MYERS HISTORIES

By P. V. N. MYERS.

General History

794 pp. Price 7s. 6d.

Part I.—*A Short History of Ancient Times.* 388 pp. Price 4s. 6d.

Part II.—*A Short History of Medieval and Modern Times.* 438 pp. Price 4s. 6d.

Ancient History

617 pp. Price 7s. 6d.

Part I.—*Eastern Nations and Greece.* 369 pp. Price 4s. 6d.

Part II.—*History of Rome.* 230 pp. Price 4s. 6d.

Medieval and Modern History

751 pp. Price 7s. 6d.

Part I.—*The Middle Ages.* 454 pp. Price 5s.

Part II.—*The Modern Age.* 650 pp. Price 6s.

Outlines of Nineteenth Century History.

The last ten chapters of the above book. 138 pp. Price 2s. 6d.

AN INTRODUCTION TO THE HISTORY OF WESTERN EUROPE

By J. H. ROBINSON.

Gives a clear and interesting account of the all-important movements, customs, institutions, and achievements of Western Europe since the German barbarians conquered the Roman Empire. 714 pp., with Maps and Illustrations. Price 7s. 6d.

Two Volume Edition, dividing at the Sixteenth Century.

Vol. I.—368 pp. Price 4s. 6d.

Vol. II.—364 pp. Price 4s. 6d.

READINGS IN EUROPEAN HISTORY

Selections follow chapter by chapter the history given above, and are culled from all sources—chronicles, memoirs, letters, as well as State papers—thus giving the liveliest sense of reality to current events and personages.

Vol. I.—551 pp. Price 7s.

Vol. II.—624 pp. Price 7s.

Or an Abridged Edition, in One Volume, 607 pp. Price 7s.

COMPLETE CATALOGUE POST FREE ON APPLICATION.

BOOKS SENT ON APPROVAL TO TEACHERS.

GINN & COMPANY, ST. MARTIN'S STREET, LONDON, W.C.

PHILIPS' COMPARATIVE WALL ATLASES

EUROPE, BRITISH ISLES, ASIA (others in preparation). Under the joint editorship of J. F. UNSTEAD, M.A., D.Sc., Lecturer in Geography, Goldsmiths' College, University of London, and E. G. R. TAYLOR, B.Sc., Lecturer in Geography, Clapham (L.C.C.) Training College. Arranged for **Comparison** to show by means of Eight Maps of Geographical Phenomena the chief facts which can be expressed in Map form—Relief of Land, Pressure and Winds, Rainfall, Temperature, Vegetation, Products, Population, &c. Very clear and distinct; essentials only shown. Maps, singly, **2s. 6d.** each, also mounted on cloth and eyeleted, **3s. 6d.** each; complete from **21s.** according to style of mounting. An explanatory Handbook (**6d.** net) is supplied gratis with a complete set of the Maps. *Prospectus and coloured facsimiles on application.*

The newest, most adaptable, and most educational Maps obtainable.

Just Published

THE ESSENTIALS OF WORLD GEOGRAPHY

By J. F. UNSTEAD, M.A., D.Sc., and E. G. R. TAYLOR, B.Sc.
A broad view of the chief features of the earth and its inhabitants. The most important matters, both of physical and human geography, are explained in such a way as to be easily understood by junior pupils. Abundant diagrams and maps, to all of which careful and detailed reference is made in the text. Crown 8vo, 256 pages, **2s.**

GENERAL AND REGIONAL GEOGRAPHY

A new Textbook of Modern Scientific Geography for Teachers and Students. By J. F. UNSTEAD, M.A., D.Sc., and E. G. R. TAYLOR, B.Sc. With 140 Maps and Diagrams specially drawn. Second Edition. 520 pages, large 8vo, **6s.**

CONTOUR EXERCISE BOOK

By ERNEST YOUNG, B.Sc., and JAMES FAIRGRIEVE, M.A. A drawing book, in which the pupil can actually work out geographical problems. Contains numerous diagrams of contours and lines ruled for drawing sections. Size, 11 by 7 inches. **4d.**

A PROGRESSIVE COURSE OF COMPARATIVE GEOGRAPHY.

On the Concentric System. By P. H. L'ESTRANGE, B.A. Third Edition. Demy 4to, cloth, **6s.** net.
The most complete Modern Manual of Geography. In use at Rugby, Charterhouse, Marlborough, Malvern, Blundell's, Repton, Felsted, and many other Public Schools, Secondary Schools, and Training Colleges.

PRACTICAL MAP-READING CARDS

By H. H. GOODACRE.

Forty-eight Cards of exercises, measurements, and calculations, introducing graphical representation of distances, areas, heights, relative population, rainfall, longitude, and time sections and contours, &c. The nature of the exercises demands direct reference to an atlas.

- Part I. General World Geography and the British Isles.
 .. II. Countries of Europe. (Now ready.)
 .. III. British Empire. (Very shortly.)

MADAME

BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education.

The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studios, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnasium Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.

For particulars apply—THE SECRETARY.

MADAME

BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIUM TEACHERS.

Ling's Swedish System.

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

Miss LUCY ASHCROFT, Newnham College, Cambridge; M.A. Dublin.

A YEAR'S COURSE for WOMEN

STUDENTS, in preparation for the Cambridge Teachers' Certificate, will begin on January 16th, 1913. The Course includes Lectures on the Theory and History of Education by Miss LUCY ASHCROFT, M.A., Professor W. G. DE BURGH, M.A., and Mr. A. W. P. WOLTERS, M.A.; also Lectures on special subjects, including the teaching of English, History, Geography, Mathematics, Science, and Drawing, by Professors and Lecturers at the College, together with tutorial instruction, criticism lessons, and visits of observation. Practice in teaching is provided in the chief Girls' Schools of the district. The College offers facilities for students wishing to specialize in Gardening, Fine Art, Crafts, or Music.

Prospectuses and further information may be obtained from the REGISTRAR.

EXHIBITIONS.

One Exhibition, entitling to remission of the tuition fee of £20 for the Course, or two Exhibitions, entitling to partial remission of the fee, are offered for competition and are open to graduates. Entries should be sent in by December 10.

FRANCIS W. WRIGHT, Registrar.

UNIVERSITY OF LIVERPOOL.

GIRLS' SCHOOL TRANSFERS.

Messrs. GABBITAS, THRING & Co.,
36 SACKVILLE STREET,
PICCADILLY, W.
(Established 1873.)

TRANSFERS OF AND PARTNERSHIPS IN GIRLS' SCHOOLS.

Messrs. GABBITAS, THRING & Co. have a large number of Girls' Schools on the books of their Transfer Department, but issue no list of such Schools. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her.

The following are a few of the Schools now on their books:—

IN THE SOUTH OF ENGLAND.

No. 4,995. **O**PENING for starting a Boarding House in connection with a High School in a country town in the Home Counties, suitable for a lady with some capital and connection.

No. 4,992. **P**ARTNERSHIP suitable for a lady who has a few pupils and who can join another who has a well established School, and who is moving into larger premises, at a South Coast Health Resort.

No. 4,986. **T**RANSFER of Boarding and Day School for Gentlemen's daughters. Vendor about to be married. Containing 7 Boarders and 16 Day Pupils. Strictly for Daughters of Gentlemen. Fees for Boarders from £50 to £60. Gross receipts over £700. Profits £200.

No. 4,981. **T**RANSFER of flourishing Home School at favourite South Coast Health Resort, containing rather over 30 Boarders at prospectus fees of 60 to 75 guineas, and 9 Day Pupils at prospectus fees of 9 to 12 guineas. School practically full as to

GIRLS' SCHOOL TRANSFERS.

Boarders. Gross receipts over £2,000 and net profits over £900, both showing substantial increases over the average of the last three years. Excellent premises, on lease for 99 years. Price for property, Goodwill, and furniture, £4,800. Property good security for a substantial mortgage.

No. 4,954. **T**RANSFER, owing to the illness of the Principal, of an old-established and profitable School at a South Coast Health Resort. Fees for Boarders from 30 to 60 guineas, and for Day Pupils 9 to 18 guineas. School strictly for the daughters of gentlemen. Gross receipts over £900, and profits about £250. Goodwill £400 or capitation fee.

No. 4,890. **T**RANSFER of old-established, large, and flourishing Boarding School for gentlemen's daughters at South Coast Health Resort. Principals retiring. Full with 60 Boarders. Prospectus fees 60 to 75 guineas. Gross receipts of last twelve months considerably over £4,000, and profits over £1,200. Goodwill, £2,000.

No. 4,880. **T**RANSFER or **P**ARTNERSHIP with a view to **s**uccession. Flourishing School for Boarders only, at a favourite South Coast Resort. Steadily full, with rather over 30 Girls. Prospectus fees of 90 guineas, besides extras. Gross receipts about £4,400 last year. Average annual receipts of last four years about £4,000. Net profits for those periods over £750 and over £720 respectively. Goodwill of half share £1,000.

No. 4,614. **T**RANSFER of small school for Boarders only, on the South East Coast, containing 12 or 14 Pupils. Fees of £30 to £70. Goodwill at capitation fees.

IN OR NEAR LONDON.

No. 4,978. **T**RANSFER of old-established School for gentlemen's daughters, with a Kindergarten Department, in a London Suburb, established about 40 years, and conducted by the present Principals for over 20. Receipts of about £600, including those from subletting. Total profit about £275. Goodwill, £300.

No. 4,476. **P**ARTNERSHIP, possibly to **s**uccession, in Boarding and Day School in healthy Northern Suburb of London. A few Boarders paying on the average about £60 per annum, and about 40 Day Pupils, and Day Boarders, paying fees varying from 9 guineas for the youngest up to 28 guineas per annum, and considerable extras. Gross receipts over £1,000. Goodwill by capitation fee.

GIRLS' SCHOOL TRANSFERS.

IN THE NORTH OF ENGLAND.

No. 4,988. **T**RANSFER of, or **P**ARTNERSHIP with a view to **s**uccession to, a very successful Boarding and Day School, at a North West Coast Resort. Full with about 30 Boarders and the same number of Day pupils. Gross receipts over £2,000, increasing. Profit £300. For whole Goodwill £600. Half or one-third share with a view to succession.

No. 4,977. **T**RANSFER or **P**ARTNERSHIP to **s**uccession, of School in a Northern Seaside place, established over 40 years, purchased by the present vendors about twelve years ago. Strictly for gentlemen's daughters and with a very high educational standard. 30 Boarders at prospectus fees of from 65 to 66 guineas, and 30 Day Pupils and Day Boarders, prospectus fees from 9 to 27 guineas. Gross receipts nearly £4,000, and net profits about £800. Price of whole Goodwill £2,000, but one third or one-half share would be sold in the first instance.

ON THE CONTINENT.

No. 4,993. **T**RANSFER, or **P**ARTNERSHIP with a view to **s**uccession, to old-established and flourishing Girls' School in an important educational centre on the Continent. School established for 40 years, conducted by the present English Principals for over 15. Gross receipts over £2,500, profits about £250. Price for goodwill and school furniture of the whole £2,500. Very suitable for a GERMAN LADY who would take a half share in the first instance as a Partner with one of the vendors.

No. 4,985. **T**RANSFER of old-established Home School of high class, in a Continental Capital, usually containing 10 or 12 Girls. Prospectus fees, 100 guineas per annum. Gross receipts, over £1,200, and showing an advance. Goodwill £400.

No. 4,600. **T**RANSFER of Educational Home in a Continental Capital, now containing 12 Boarders. Fees 100 guineas per annum. Gross receipts of the last 12 months £3,000. Goodwill, lump sum or capitation fee.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

Telephone:
7021 Gerrard.

SCHOOL TRANSFER AGENCY.

(Established
1823.)

Proprietors—Messrs. GRIFFITHS, SMITH, POWELL & SMITH.

Offices—34 BEDFORD STREET, STRAND, AND 22 HENRIETTA STREET, COVENT GARDEN, LONDON, W.C.

Schools Transferred and Valued. No charge whatever will be made to Vendors of Schools or School Partnerships, by Messrs. Griffiths, Smith, Powell & Smith, unless a sale is effected or agreed upon.

SPECIAL NOTICE TO VENDORS.

As Messrs. GRIFFITHS, SMITH, POWELL & SMITH have at all times the names of a large number of intending Purchasers of Schools and School Partnerships on their books, they have every confidence in stating that they can readily effect a sale of any desirable Property they may be instructed to dispose of. All instructions receive the personal attention of one of the Partners of the firm.

No commission charge whatever will be made by Messrs. Griffiths, Smith, Powell & Smith, to Purchasers of Schools, or School Partnerships.

Applications from intending purchasers are solicited for the following properties:—

GIRLS' SCHOOLS.

NEAR LONDON.—First-class BOARDING AND DAY SCHOOL. Receipts £3,020; net profits £1,004. Number of Boarders 14, and 75 Day Pupils. Pupils constantly refused for want of room. SCHOOLS FOR SALE AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY, Ltd., Educational Agents, 158-162 OXFORD STREET, LONDON, W.

MESSRS. TRUMAN & KNIGHTLEY always have on their books a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, and therefore can offer unusual facilities for satisfactorily negotiating the TRANSFER OF SCHOOLS and arranging PARTNERSHIPS. All communications and inquiries are treated in the strictest confidence. The following are a few selected from their list:—

GIRLS' SCHOOLS.

S.W. OF ENGLAND.—Old-established **BOARDING SCHOOL FOR GIRLS.** 20 boarders paying from £42 to £60 per annum, and 4 day pupils paying from 12 to 18 guineas per annum. Average income £1,000 per annum; net profit between £360 and £380 per annum. The school stands 450 feet above sea level; accommodation for 24 boarders. Entire goodwill, school and most of the household furniture, £535. Excellent opening.—T 2056.

SOUTH COAST.—Old-established high-class **BOARDING SCHOOL** of over 30 pupils paying 100 guineas per annum. Good premises. Gross receipts over £3,500; net profit nearly £800 per annum. Entire goodwill £2,000; school and household furniture at a valuation.—T 2054.

WORCESTERSHIRE.—Good-class **BOARDING SCHOOL FOR GIRLS.** Established 25 years. 33 boarders, fees 45 to 51 guineas, and a few day boarders, fees 18 to 27 guineas, and a detached house. Dry and bracing climate; gravel soil. Receipts £1,724. Profit £360. Capitation fee accepted on pupils transferred. Successor should be a lady with Low Church views. Inspected and warmly recommended.—T 2015.

WEST COAST.—Two ladies, who are retiring, are prepared to hand over their high-class **BOARDING AND DAY SCHOOL** to their present Head Mistress and for whom a Partner is required. School thoroughly sound and quite full with 30 boarders. Receipts over £2,000; profit about £350, but could be considerably increased with reasonable economy. Half share of goodwill £500. School enjoys a high reputation and can be warmly recommended.—T 2036.

SOUTH COAST.—Very flourishing and high-class **BOARDING AND DAY SCHOOL for GIRLS** at a favourite health resort. 32 boarders, fees £63 to £78. 15s., and 9 day pupils, fees 9 to 12 guineas per annum, exclusive of extras. Receipts over £2,000. Profit over £900. Specially built premises with grounds of about an acre. Capitation fee accepted on pupils transferred.—T 2015.

PARIS.—The Principal of a first-class Educational Home in Paris desires to dispose of her connexion; 7 boarders paying fees from £150 to £200 per annum. Profit about £300. Accommodation for 10 pupils. A thorough introduction and excellent references given.—T 2006.

SOUTH-EAST COAST.—High-class and very successful **BOARDING SCHOOL FOR GIRLS** at a favourite health resort. Principals dissolving partnership and retiring; 56 boarders, fees from £60 to £100 per annum. Receipts £4,400, net profit £1,250. School has more than doubled its numbers during last four years. Goodwill £1,500, payable by instalments if desired.—T 1,139.

SURREY.—Very flourishing **GIRLS' HIGH SCHOOL**, with Kindergarten; old-established. 85 pupils, 16 of whom are boarders. Receipts £1,200, net profit £300. Splendid schoolroom accommodation for 120 pupils. Good residential neighbourhood, with plenty of scope for increasing present number of pupils.—T 1,189.

HOME COUNTIES.—Large, old-established, and very successful **BOARDING AND DAY SCHOOL.** Principal retiring. 50 boarders, 100 day pupils. Gross receipts over £3,000. Profit £500. Fine premises with field for games. Ca; itation fee accepted on all pupils transferred. Personally inspected and strongly recommended.—T 1,158.

CHESHIRE.—Principals removing their boarders to the seaside desire to dispose of the **DAY-PUPIL CONNEXION**, numbering nearly 100 pupils, and any boarders who may not go with them. Receipts from day pupils alone £1,310. One term's fees asked for pupils transferred. Exceptionally fine premises at moderate rent.—T 2,019.

GLAMORGANSHIRE.—**BOARDING AND DAY SCHOOL** with kindergarten. 19 boarders, 16 day pupils. Receipts £995, profit £140. Only £300 asked for goodwill, to include school furniture, gymnasium appliances, &c. Only part need be paid down.—T 2,031.

LONDON, W.—A high-class **BOARDING AND DAY SCHOOL** for the daughters of gentlemen in one of the nicest residential districts. 11 boarders, fees 100 to 150 guineas per annum, 21 day pupils, fees 24 to 30 guineas per annum, exclusive of extras. Receipts over £2,000, profit £400. Capitation fee accepted on pupils transferred. Strongly recommended.—T 2,044.

SOUTH COAST.—Under 80 miles from London. The principal of a high-class **BOARDING SCHOOL** for the daughters of gentlemen, with a connexion of 15 boarders paying good fees, desires to amalgamate with a lady able to introduce a similar number of pupils with a view to removing to larger and better premises in the immediate neighbourhood which will be available in March next.—T 2,016.

GERMANY.—First-class and very flourishing **FINISHING SCHOOL** of about 18 pupils. Receipts last twelve months, £2,600; considerable profit. Splendid opening for an English and German lady to take over School in partnership. Personally inspected and warmly recommended.—T 2,047.

NO CHARGE TO PURCHASERS.

Full particulars of the above and others may be obtained on application. Intending purchasers are invited to write stating their requirements. Address—158 to 162 OXFORD STREET, LONDON, W.

Additions to The Oxford and Cambridge Edition.

For Oxford Senior Candidates.

PHILIPPIANS and I and II PETER. Edited by Rev. Canon HUMPHREYS, M.A., and Rev. F. MARSHALL, M.A. With Special Maps, Introduction, and the necessary Notes for Senior Candidates. Full Comments on R. V. 1s. 6d

For Cambridge Preliminary Candidates.

KINGSLEY'S HEROES. Edited by Rev. F. MARSHALL, M.A., and R. G. GILL, B.A. With Notes required by Preliminary Candidates and Questions from past Examinations 1s.

A SIMPLE MANUAL OF GRAMMAR ON ORGANIC LINES.

By CHARLES and ARTHUR LOCKE. Price 1s. 6d.

This manual deals with the subject on bold and practical lines. Its plan is entirely original, its style fascinating and yet simple, and, though it contains no heresies, it inaugurates a new era in the teaching of Grammar.

CLEAR. BRIEF. ORIGINAL. INTERESTING.

SOME SALIENT FEATURES.

GENERAL IDEA The sentence as the unit in the teaching of Grammar.

MANNER OF EXPOSITION 1. A continuous and lucid explanation, instead of a series of disconnected paragraphs.

2. Progress from the known to the unknown.

3. Avoidance of definitions and technical terms, except at points where their aid will be welcomed.

4. Insistence on principles rather than on exceptions (these being in the main relegated to Appendices).

5. Variation of method, to prevent interest flagging.

METHOD OF ANALYSIS A new and simple method, involving the use of only 4 columns.

EXAMPLES AND EXERCISES. These range over all literature, and are varied in substance and style. Men of action are quoted as well as great writers, and care has been taken to make even the shortest passages forward the general aim of the book.

Complete list of Books, included in the Oxford and Cambridge Edition, required for the 1913 Universities' Local and other Examinations, post free. With a view to adoption for Class use, the publishers will be glad to forward Sample Copies post free.

"Oxon-Cantabs'" Guide and Syllabus Extracts for the 1913 Oxford and Cambridge Local Examinations and Complete Educational Catalogue post free.

London: **GEORGE GILL & SONS, Ltd.,** 13 Warwick Lane, E.C.

BELL'S NEW BOOKS

New Edition.

Revised and Enlarged.

ELEMENTARY ALGEBRA.

By W. M. BAKER, M.A., and A. A. BOURNE, M.A.

Complete. Ninth Edition, revised. With or without Answers, **4s. 6d.** ANSWERS separately, **1s. net.**

Part I.—To Quadratic Equations. Fifteenth Edition, revised, with Answers, **3s.**; or without Answers, **2s. 6d.**

Part II.—Fourth Edition, revised. With or without Answers, **2s. 6d.**

Messrs. BELL are now publishing a New and Revised Edition of **BAKER and BOURNE'S ELEMENTARY ALGEBRA.** In this edition the book has been revised so as to keep it in agreement with the most modern methods of teaching, and at the same time to introduce such simplifications as experience has suggested. The alterations in Part I are not numerous, but in Part II several chapters have been rewritten, fuller explanations have been given in the bookwork, and all sets of examples have been revised.

VOCABULAIRE FRANÇAIS.

FRENCH VOCABULARIES FOR REPETITION.

Elementary and Advanced, grouped in subjects, showing pronunciation phonetically, and irregular formation of the feminine and plural. By J. P. R. MARICHAL, L. ès L. (Paris), B. ès Sc. (Caen), Senior Modern Language Master, Secondary School, Southend-on-Sea. Crown 8vo, **1s. 6d.**

HIGHWAYS OF THE WORLD.

By A. E. MCKILLIAM, M.A. With Maps and Illustrations, **1s. 6d.**

This volume gives an account of the development of trade from the earliest times to the present day, including chapters on the Ancient Traders, the Hansa Towns, the Discovery of America, the East India Company, the Search for Gold, the Suez and Panama Canals, Polar Exploration, the Trans-Siberian Railway and "All-Red" Routes. The book is planned to form an introduction to Historical and Commercial Geography for lower forms in secondary schools.

HISTORY FROM CONTEMPORARY AUTHORITIES.

BELL'S ENGLISH HISTORY SOURCE-BOOKS.

Joint Editors: S. E. WINBOLT, M.A., Christ's Hospital, Horsham; KENNETH BELL, M.A., Fellow of All Souls College, Oxford. To be completed in about 20 vols. **1s. net each.**

FIRST VOLUMES.—NOW READY.

1547-1603. THE AGE OF ELIZABETH. Edited by ARUNDELL ESDAILE, M.A.

1603-1660. PURITANISM AND LIBERTY. Edited by KENNETH BELL, M.A.

1660-1714. A CONSTITUTION IN MAKING. Edited by G. B. PERRETT, M.A.

1714-1760. WALPOLE AND CHATHAM. Edited by K. A. ESDAILE.

1760-1801. AMERICAN INDEPENDENCE AND THE FRENCH REVOLUTION. Edited by S. E. WINBOLT, M.A.

1801-1815. ENGLAND AND NAPOLEON. Edited by S. E. WINBOLT, M.A.

This series is designed for use in the upper forms of Secondary Schools and for undergraduate students. It consists of extracts from contemporary authorities, and its aim is less to arrive at the truth in a given case than to provide data for the student to work on. For this reason the choice of selections is as wide as possible, and in all cases the exact source of the extract is quoted, and full bibliographical details given.

BELL'S LATIN PICTURE CARDS.

SPECULUM IMPERI ROMANI.

Edited, with Vocabularies and Exercises, by FRANK S. GRANGER, M.A., Professor of Classics, University College, Nottingham.

Cards I-VIII illustrate subjects found in the prose writers, Caesar, Livy, Cicero, &c. Cards IX-XVI those of the poets, Virgil, Horace, Ovid, &c.

The Complete Set of 16 Cards, price **1s. 3d. net.** Packets of 16 cards, confined to either series of subjects, or 16 of any one card, will be supplied, if desired.

This series is a direct outcome of the discussion on methods of Latin teaching at the Bangor Summer School of Latin, which promises to have such far-reaching effects. The Picture Cards are intended for use in the Third and Fourth years of Latin, when the more advanced authors begin to be read. The Vocabularies are arranged to furnish materials for conversation and composition, and cover fully the subject illustrated.

CONTES D'HIER ET D'AUJOUR'HUI.

(Illustrated.)

Edited, with Notes and Vocabulary, by J. S. NORMAN, M.A., and M. CHARLES ROBERT-DUMAS. Vol. I, **1s. 6d.** Vol. II (just published), **2s.**

These volumes are intended for second-year pupils, and contain Questionnaires and very full notes.

TALES FROM MOLIÈRE.

Edited by MARC CEPPI. **1s. 6d.** With Vocabulary and Notes, **2s.**

This volume contains selections from the most popular of Molière's plays, and being intended for pupils who have mastered the first difficulties of the language, as much of the original dialogue has been left in as possible.

OCCASIONAL NOTES.

THE Teachers' Registration Council has lost no time in getting to work. Since the preliminary roll-call, which we reported in September, it has held two formal meetings at the Board of Education.

The Registration Council. At the first Mr. Arthur Acland was, by a unanimous vote, elected Chairman, and expressed his willingness to serve for one year or two, if his doctor permitted it. Two Committees have been appointed: (1) the General Purposes, consisting of eight members, two selected by each section of the Council; (2) the Finance, of four members, one from each section. Mr. H. Durnford, the member for the University of Cambridge, has been appointed Treasurer. The preliminary steps have also been taken for the formation of the ten Registration Committees as prescribed by the Order in Council. When the Council next meets in December, it will proceed to the appointment of a Secretary. The terms of the advertisement show that the functions of this officer will be wider and more important than those of the Registrar under the old Registration Council.

ALL these are merely preliminaries, and it is not till the New Year that the Council will be able to set to work on the first duty assigned to it—"to establish the conditions of registration to be satisfied by persons applying to be registered," and we shall consider ourselves fortunate if by the end of the year there is a Register open to applicants. The old Council had no voice in framing regulations—it was a purely administrative body,

bound to take its orders from Whitehall and do as it was bidden by the Board of Education. The new Council is a legislative body, constituted, it is true, by the Board and financed for three years by the Board, but unrestricted in its action and unfettered by the Registration Council Order. The famous White Paper, Sir Robert Morant's conundrum as it has been happily called, is, under the new régime, one of the curiosities of official literature. As to qualifications, we feel that it would be impertinent on our part to tender any advice to the Council. We have before us the recommendations of several Associations, but they only show that professional opinion is still in a state of flux. One remark we may safely make. There must be many ways of entrance, and it will be impossible to make one strait gate for all.

THE Consultative Committee has always been a somewhat shadowy body, existing habitually in a state of suspended animation, from which it is occasionally recalled to conscious life by the fiat of the Board of Education. Its influence has not been largely felt. Its most important work, the Report on Examinations in Secondary Schools, reads more like an advocate's pleadings from his brief than an impartial investigation of the case. It has never gained the confidence of teachers, and the latest appointments to it will scarcely strengthen its authority. Only one, Miss Douglas, is a teacher; the others—Mr. F. W. Goldstone, M.P., Dr. H. A. Powell, Mr. R. H. Tawney, and Mr. F. F. Urquhart—belong to the laity. Of the twenty members of the Committee, seven now are teachers, and two are ex-teachers. By the Act of 1902, the Committee must consist "as to not less than two-thirds of persons qualified to represent the views of Universities and other bodies interested in education." The language is studiously vague, and we do not contend that the existing Committee does not legally satisfy the conditions laid down; but, if that is so, it merely shows how urgent is the need for some statutory body which shall be genuinely representative of the educational profession and shall have an independent life of its own. Such a body we hope we may find in the Registration Council.

THE buoyant optimism, tempered by cool judgment, which is Lord Haldane's most notable characteristic, found expression in his address as Chancellor of Bristol University. He has faith in the democracy, but he is alive to its weaknesses, its jealousy of great talent, its tolerance of a low level of ability, its demand for the same good things for everybody, irrespective of the capacity of the individual or the interest of the community. He sympathizes with the complaint of the Labour leaders that the Civil Service is too much a preserve for Oxford and Cambridge men, but he holds that this is because the ancient Universities have up to now given the best training. The remedy must be found not in lowering the standard of qualifications, nor in shovelling masses of elementary-school children into secondary schools or masses of secondary-school children into colleges, but in improving the teaching of the new city Universities and in carefully selecting those who are to be given a chance of profiting by it. Equal opportunity for all genuine ability is his ideal. It is an ideal at once sane and lofty, which may well be opposed to the hazy dream of free education for everybody from top to bottom.

ON some points Lord Haldane was more precise. He thought there were sufficient chances for the poor boy or girl to get into a secondary school, but not sufficient chances for him to get further. To provide such chances was one of the first duties of the new Universities. If the old Universities had an advantage in possessing a certain atmosphere, which could not easily be created elsewhere, they had the disadvantage of being hampered by tradition and dominated by the clergy. On the question of the curriculum the Lord Chancellor took a very broad line. His own leanings are clearly towards the classics, but he recognized that what is one man's meat may be another man's poison, and that some minds may be better developed by science or modern literature than by ancient languages. Here we touch the bed-rock of the whole question. Our educational controversialists are much too prone to discuss what is best for a certain abstract being called "a boy," just as the philosophers of the eighteenth century discussed what was best for an abstract being called "a man." In education, as in politics, it is well to remember Joseph de Maistre's saying, "La Constitution de 1795 fut faite pour l'homme. Or, il n'y a point d'homme dans le monde." "Boys" and "girls" do not really exist.

IT is evident from the announcements of the educational societies that the Montessori system of teaching young children—those whom we call "infants"—will be much discussed this winter. The subject is too big to be handled in even a column of notes, but we may put our readers on their guard against one or two misapprehensions. Mme Montessori's "Children's Houses," as her schools are called, are designed for the submerged tenth of the population of Rome and other great Italian cities. Their chief aim, as stated in the regulations, is to offer to children "the personal care which the parents are not able to give." Clearly this differentiates them from the ordinary school, which is the complement of the home, not the substitute for it. Mme Montessori herself, indeed, looks forward to the communizing of the home for all classes, and thinks that nearly the whole of the work which has hitherto been done by the mother will in future be done by public institutions. This is a big social problem, and whether humanity would gain more than it would lose by such an arrangement is a question on which opinions will differ profoundly. What is an ideal for some people will seem only a necessary evil to others. We will here make only one remark. The problem cannot be discussed as if it concerned the welfare of the children only. It concerns also the spiritual welfare of the parents. The care and upbringing of children is a moral education for the father and mother. We may well hesitate before accepting any system of education which would tend to deprive them of it.

MUCH of the more strictly pedagogic work of the "Children's Houses" has, however, no connexion with any social theories of this kind, and it deserves investigation by all who have to do with children of from three to seven years of age. Mme Montessori's fundamental principle is that each little child must be treated as an individual and left, under guidance, to find his own way to intellectual development. The function of the teacher—"directress" she is called in the Montessori schools—

is to provide the right environment and the right material, watch what the child does with that material, and guide and encourage his efforts. None of the child's actions are to be checked, except such as interfere with the comfort of others. Freedom is the first condition of physical and mental growth alike. Here, again, we venture on only one remark. This gifted lady (of what happy augury it is that it is a woman who is working out the problem of how little children should live) has evidently grasped a great truth; but is it the whole truth? Teachers should beware of "systems of education." Education is too big, too complex, too many-sided to be forced into a "system." To examine schemes and methods, discover the element of truth in them and hold fast to that, is useful; to be dominated by them is fatal.

THE changes in the organization of the work at Harrow which the Head Master has announced will give greater prominence to modern studies and greater opportunity for specialization in the highest forms. English, Latin, French, and mathematics will form the backbone of the curriculum in the lowest forms, the block which is the common foundation of the whole school. Greek is to be postponed; great stress will be laid on English, and every boy will learn drawing. When a new language, Greek or German, is begun, a period a day will be devoted to it. This is a point for which language reformers have long been contending, and we welcome its recognition. For mathematics, which will have a very important place in the curriculum, the whole school, classical and modern sides alike, will be broken up and rearranged. Amongst the options which will be permitted at the top of the school, English literature, and even art and music, will be included. These are important changes, and we wish Mr. Ford's experiment every success. Since Thring we have had no great head master with originality and the courage of his opinions.

AT the Church Congress at Middlesbrough Mr. Cradock-Watson read a paper on "The Church's Relation to the Secondary Schools." His advice to the clerics was not to strive or cry, but to preach and teach. In the few remaining independent schools the Church had rights to maintain, but in the bulk of State-aided and municipal schools she had no rights, and what was conceded to her was a privilege. To force her claims by legislation on reluctant or dissenting authorities was false policy. What mattered was the atmosphere of the school, and if the staff of the school was indifferent or hostile, religious instruction would not be instruction in religion. The teaching of the Church Catechism was, in his experience, of none effect. A creed should be the coping-stone, not the foundation, of a rightly ordered religious education. This is plain common sense, but we may take exception to one remark of Mr. Cradock-Watson, unless it was "meant ironical"—so long as the public schools were largely staffed by men in Holy Orders the ark of the covenant was safe in their hands. What of Eton under Keate?

A MARKED feature in the voluntary organization of teachers during the last decade has been the tendency towards segregation rather than unity. A large

**The Segregation
of Teachers.**

number of societies have sprung up, each interested in some particular branch of the curriculum or some special problem of education. Conferences at which all classes of teachers can meet and discuss broad questions are less popular than they used to be. This movement has not been without its advantages; it has certainly tended to more thorough work in separate branches of investigation; but it has had also the effect of making teachers concentrate their attention too exclusively on their own special work to the prejudice of their interest in education as a whole. Now the teacher who shuts himself within the "narrowing nunnery walls" of his own speciality will never be more than half a teacher. The subjects of the curriculum touch each other at so many points that no one of them can be well taught without at least occasional excursions into the territory of others. The historian needs the aid of the geographer, and the teacher of literature who dispenses with history must frequently detach the picture from the canvas on which it is painted.

Organization of Meetings. IT may be hoped that the organization of the January meetings of the various Associations will in some degree help to counteract this tendency towards segregation. A number of societies have arranged to meet at the same place, the University of London, during the second week of January. There will be a joint opening meeting, at which the Vice-Chancellor of Leeds University will initiate a discussion on some general educational topic, and also a joint conversation. A "British Association meeting" of teachers this gathering will not be, for the societies will sit for only one or two days each, but it is a step towards it. It should help to make teachers feel that they all practise the same craft, however diverse are the tools they use, and it should produce a good impression upon the public, by bringing secondary education prominently to the front. All honour to Mr. Herbert Garrod, who originated the scheme, and by his tact and perseverance matured it, though he did not live to see the fruit of his labours.

Frequent Changes of Staff. HEAD MASTERS of secondary schools would no doubt admit, as a body, that there are black sheep among them. Their claim to be given a large degree of autonomy in the appointment and dismissal of their assistants has been generally conceded, and would have been accepted even more willingly if it had been accompanied by evidence of a desire on their part to organize the government of schools in such a way as to ensure retribution for a head master who abuses his powers. It is, however, a rare thing for such abuses, however flagrant they may be, to be checked by governing bodies as at present constituted. We note with much satisfaction that the Associations of Head Masters and Assistant Masters are now taking joint action in the matter. In one case, the A.M.A. pointed out that an undue number of changes of staff had taken place in a certain school, and, in consequence of joint action with the Head Masters, the scandal has been ended. This is striking evidence of the working of the new spirit of professional solidarity.

THE Swansea decision has not apparently settled the question of the legality of discriminating between the salaries of teachers in provided and non-provided

**Discrimination
of Salaries.**

schools. In an inquiry conducted by Mr. Robert Younger in relation to a Church school at Llandysilio, Anglesea, the Local Authority contended, as was done at Swansea, that the school was "efficient," in spite of their giving to the head master, whose zeal and success as a teacher were admitted on both sides, a salary £20 a year lower than the scale for provided schools; and, further, that the head master having been appointed to a post open only to Church teachers, there could not be a standard of competency equal to that which would have resulted from open competition for the appointment. Mr. Younger disposed summarily—and, we think, conclusively—of these contentions and has declared that the Local Authority has failed to fulfil its duty under the Education Acts, 1870 to 1911. Whether the matter will be allowed to rest there remains to be seen.

WHEN a distinguished General doffs his feathered hat for the pedagogue's mortar-board, we expect to be told some plain truths. Sir Ian Hamilton in his address at Birmingham did not come up to expectations. The competitive examination, he said, encouraged selfishness; the record test, slyness; the influence of the cadet corps, sympathy. The small boy himself, we are told—out of the mouth of babes and sucklings—regards the competitive super-boy as a swat, the boy with the best record as a sneak, and the boy sergeant as the greatest man who ever lived. The actual educational machine had not itself been put together with any clear intention of creating a moral drift in any definite direction. Sir Ian's remedy is compulsory military training from twelve to eighteen. For a beggarly sum of little more than two millions a year, the whole of the youth of Great Britain and Ireland could be put upon their feet "literally and metaphorically." The reader is almost carried off his own feet—metaphorically—until he remembers that the same authority has pleaded with equal eloquence (in a Report written at the request of the Secretary of State for War) for the supreme value of the voluntary principle.

THE National Federation of Class Teachers has taken up a curious position on the question of the equal payment of men and women. At their annual Conference a resolution in favour of the same salaries for both was defeated by a large majority. Subsequently it was resolved that women teachers employed in boys' schools ought to be remunerated at the same rate as male teachers. It would appear that the class teachers think that teaching girls is either easier work or less important work than teaching boys. The only other possible explanation is that the men fear the competition of female labour. In any case, the position is obviously untenable. It is possible to argue that smaller salaries should be offered to women than to men for the same work because men have normally to support others besides themselves, and therefore a higher wage may be needed to attract them; but it would be difficult to find a good reason for remunerating work in girls' schools at a lower rate than that in boys' schools. We wonder whether the class teachers consider that men who teach girls should receive the lower salary, and what pecuniary value they would assign to work in mixed classes.

SIR WILLIAM OSLER, in his speech at the opening of the new Science School at Bradfield College,

discussed classical education from the point of view of the scientist interested in the training of future students of science. He believes in Latin and Greek for such boys and thinks they ought to be able to get as far in the study of those languages as they need go by fifteen or sixteen. They might then devote themselves mainly to science for the remaining two years of their school life. This seems to us very much like laying a foundation with the intention of building nothing on it. Such boys would give up the study of the ancients just as they were reaching the most fruitful part of the course. They would toil through the mists at the bottom of the mountain with no hope of ever breathing the invigorating air of the summit. Only the ablest would ever attain to Plato or Thucydides; most would only drudge through Caesar and the "Anabasis." A classical course which ends at sixteen is a trunk without leaves or fruit. Of modern languages for budding scientists the speaker said nothing.

**Sir W. Osler
on Classical
Education.**

BIRMINGHAM UNIVERSITY has decided against a general system of external degrees, while prepared to allow attendance at evening classes at the Birmingham Institute to qualify for admission to their examinations. We have not seen the Report of the University on the question, which is said to be weighty and closely reasoned. But it is easy to understand that a young, vigorous, and comparatively small University prefers to use all its influence towards attracting students to its classrooms rather than to its examination halls. Moreover, the existence of one efficient system of examinations for external students renders unnecessary any extension of the idea to other Universities. A proposal in the Birmingham Education Committee to reduce the University grant on the ground that the University did not offer sufficient facilities to evening students was defeated by a large majority.

**External
Degrees.**

IT has been suggested that one of the most valuable results of the Insurance Act will come from the opportunity it will afford of recording the life-history of the lowest classes, the submerged tenth. Social reform can only be based on knowledge of actual conditions, scientifically collected and analysed. The question has been raised whether schools also ought not to take their part in the compilation of *dossiers*. Mr. H. Gregory, in an article published in the *A.M.A.*, suggests that a system of school records would greatly improve the tone of a school and increase in many ways the fruitfulness of the teacher's work. Under present conditions a teacher's knowledge of a boy's character goes unrecorded, although it might often give hints of the greatest value to parents or employers. And it would be a good thing to encourage teachers to study more closely the personalities of their pupils. There are, no doubt, practical difficulties, especially those which beset the giving of testimonials, but the experiment would be well worth trying.

**School
Records.**

THE *Schoolmaster* thinks that our remarks last month on what we believe to be one of the causes of the failure of many elementary-school children in secondary schools showed ignorance of the classroom work of primary schools. We do not propose to prolong this controversy, and are quite content to leave our po-

**Primary
and Secondary
Teachers:
the Missing Link.**

sition, that, in the judgment of the ablest of the elementary teachers themselves, there is too much mere talking and listening in such schools. We will end with an observation with which our contemporary will certainly agree. These differences of opinion between elementary and secondary teachers show how urgent is the need for conferences and discussions between the two parties. "Delirant reges, plectuntur Achivi." The old tag may be freshly translated, "the masters and mistresses hold aloof from one another and the children suffer." The common platform is badly needed, but unhappily the centrifugal forces amongst teachers seem at least as strong as the centripetal.

EVERYMAN, which made its appearance last month, promises to provide a penny *Spectator*, and starts with a distinguished list of contributors. Education is not overlooked, and the first number has a slashing article on "The Neglect of German." We have long preached on the same text, but we cannot welcome an ally who so obviously overstates his case. He challenges any reader of *Everyman* to convict him of exaggeration, and we will take up the glove. It is not true that the study of German is steadily going back in the United Kingdom. We have reached and passed the nadir. The last Report of the Scottish Education Department (Scotland is singled out for its neglect) states that German in schools is steadily improving. No mention is made of the last Regulations of the Board of Education permitting aided schools to take French and German without Latin. The Oxford Professorship of German, "established through the munificence of a patriotic German merchant," is mentioned, but the Cambridge Professorship is ignored. "You cannot get a German paper at an English club." On reading this the present writer turned to the table in his club on which foreign newspapers are laid, and found six of them were German. The anecdote with which the article closes is double-edged. An eminent German publicist and editor was recently addressing a select gathering of English statesmen and journalists, including the writer, on an Anglo-German *entente*, and he was compelled to speak in broken French! "Que messieurs les assassins commencent!" is the obvious retort; but we frankly admit that Germans know English better than Englishmen know German.

**The Neglect of
German.**

LOCAL AUTHORITIES.

THE ninth report of the City of Manchester Education Committee recalls the retirement of Mr. J. H. Reynolds, who during the past thirty-three years served that Authority with so much distinction. Mr. Reynolds advocated the cause of technical instruction with apostolic zeal and conviction, and his labours were supported with exceptional munificence by the City Council. The great Municipal School of Technology, of which he was the first Principal, is in a sense a monument not only of civic enterprise, but of the devotion and pertinacity of the individual who conceived it. At this institution the class entries for the session 1910-11 were 11,626, representing a total of 629,070 student hours of instruction, of which 258,701 were in day departments and 371,278 in evening classes. In this connexion the Committee directs attention to the considerable difference in the Government grants. The statistics of students' hours worked show a relationship between day and evening departments of approximately 2 to 3, whilst the comparison of grants is roughly 2 to 7; that is to say, £9,296 was received in respect of evening work and only £2,598 for day departments.

Manchester.

Co-operation of Employers. THE importance of the assistance which can be rendered by employers in stimulating the efforts of evening students can hardly be over-estimated. The Manchester Committee is able to state that monthly reports were supplied to sixty-three firms dealing with 312 students attending evening classes, or day apprentice courses. The example of one large company, who have established an "education of employes" department, may be specially mentioned. An official is appointed to take charge of the work, and in this way the closest co-operation is maintained between the technical school and the company, to their mutual advantage. Seventy-nine pupils, whose fees were paid by the firm, were in attendance, and in the case of two facilities were granted for their attendance in the daytime for one week in every six, to enable them to undertake special work in the school laboratories. Experience shows, it is stated, "that fruitful results accrue where employers are willing to co-operate in this way."

A Birmingham Employer. THE Managing Director of a large business undertaking, not in Manchester, but in Birmingham, recently informed the writer of these notes that for many years the Company he represented had made a practice of rewarding any member of the staff for satisfactory attendance at evening classes. They did not favour any particular subject or course of study. The employé followed his own inclination, and, from the firm's point of view, it was quite immaterial whether he attended classes in subjects likely to be of use in his employment or otherwise. They were prepared to reward effort and perseverance, and were not concerned with the particular directions in which those qualities were exercised. And my informant stated that, from a strictly business point of view, the money annually expended in these rewards for study had been a sound investment. He was convinced, and his co-directors were convinced, that the encouragement given to those in their service—from the office boy to the managing clerk—to improve themselves was an expenditure which was more than justified by the results.

Sheffield. A LARGE firm in Sheffield has recently proposed to all their apprentices a scheme of continuation school study embracing the needs of the artisan in the workshop, the artist in the studio, and the manager at the desk. The firm offers to pay all fees of students who make 90 per cent. of the possible attendances and to defray the cost of books of those who pass the examinations.

Higher Technology. WHILE the Manchester Municipal School of Technology attracts a large number of students for various branches of instruction, its main purpose has always been to provide facilities for advanced technological training. During the session under review 208 students were enrolled as students of the Victoria University in the Faculty of Technology, 93 to qualify for the degree of Master and Bachelor of Technical Science, and 115 for the Certificate of Technology. Fifteen post-graduate students were engaged in research work and original investigations.

Manchester: Training of Teachers. ALTHOUGH the Committee has provided a generous scheme of scholarships, whereby elementary-school children between ten and twelve years of age can gain admission to secondary schools, the number of candidates desiring to become teachers shows a serious decline. In 1908 there were 481 candidates; in 1910, 212; and in 1911, only 83. The scheme of the Committee contemplates that boys and girls who may ultimately enter the teaching profession will secure admission to recognized secondary schools either by scholarship or as ordinary fee-paying pupils at twelve or thirteen years of age. One hundred and fifty exhibitions are offered annually to boys and girls from fourteen to sixteen years of age already in recognized secondary schools who wish to become teachers. These exhibitions are of the value, as a rule, of free tuition for two years, together with an annual allowance of £5 for books and travelling expenses. For pupils from sixteen to seventeen years of age, who comply with the regulations of the Board for the recognition of bursars, a hundred and fifty bursaries, of the value of free tuition and a maintenance allowance of £10, are also offered. The hundred and fifty bursars are in due course required to become student-teachers and attend for three days a week in public elementary schools and two days weekly at the secondary school. They receive free tuition and an allowance of £25 and £20 for men and women respectively. At the end of the period of student-teachership the hundred and fifty teachers are expected to enter training colleges.

Manchester: Elementary Education. TURNING to the section of the report dealing with elementary education, the limits of space render it impossible to notice more than a few points in Mr. C. H. Wyatt's admirable review. Like other Authorities, Manchester is being pressed by the Board of Education on the question of "defective" school buildings, and it is stated that, since 1903, nearly half a million has been expended by the Council on the provision of new schools and on improvements and additions to existing buildings. The teaching staff in Manchester now numbers 3,621, of which 71.6 per cent. is certificated. Nine years ago there were 174 supplementary teachers; now there are 50. The number of children on the books divided by the number of assistant teachers of all grades gives an average of 41. The total payments for elementary education on the revenue account was £532,674, and it is pointed out that six years ago 54 per cent. of the cost of maintenance was provided by Government grants. Last year the proportion fell to 46 per cent. "Year by year the tendency of the Government grant has been to diminish proportionately to the demands made on the local rates, whilst at the same time the requirements of the Government in the direction of increasing the staff of teachers and the general cost of maintenance demanded by the Board of Education have considerably increased."

Domestic Teaching. A TOTAL of 7,970 girls received instruction in Cookery, 3,326 in Laundrywork, and 475 in Housewifery. "It is the settled opinion of all those who desire to see improvement in public elementary schools that practical instruction in these subjects is one of the most hopeful changes in schools for girls, and the leading up of the class courses to the full time course in the Housewifery schools (carried on in cottage centres) has been most carefully encouraged in Manchester." Manual instruction was given to 11,220 boys at forty-seven centres. The country school for town children—the provision of which was undertaken by voluntary effort—supplied a school holiday of a fortnight's duration in each case for over three thousand children. The whole cost for maintenance, including railway fare, is met by 7s. paid for each child.

Backward Children. THERE is an interesting contribution in the Report, by Dr. H. Herd, on the subject of "backward children." He refers to an investigation made three years ago, when it was found that, of four thousand children of thirteen years of age, 33.5 per cent. failed to reach the sixth standard, although normally a child of that age should be in the seventh standard. Further analysis of the details showed that the percentage of failure reached 43.1 per cent. in poor class schools, while it was 31.4 per cent. in medium class schools and 24 per cent. in schools of the suburban class. The condition of affairs in the girls' department of one particular school in a "poverty" area has now been investigated. An inspection of the registers revealed a low standard of attainment among a considerable proportion of the pupils, but this, as Dr. Herd points out, is only a superficial indication of backwardness or otherwise. The children were, therefore, examined for the presence or absence of physical defect, and with the assistance of the teacher an estimate was formed of their mental powers. Of 187 children examined, 104 were distinctly backward, and of this number 13 were of the mentally defective class. Dr. Herd divides the remaining 91 into three groups. In the first group he placed the children whose mental backwardness was attributable to physical deficiency, and they numbered 47. In the second group there were 26 children in whom no physical defect was detected, while the third group of 18 children were intermediates between the first and second groups. These investigations are of great value, and ought to be extended. As Dr. Herd says, some modification of the curriculum is required for backward children, and the problem is one which must be solved by the educationist and the school doctor.

Kent. FROM Manchester, with 122,000 children on the registers of elementary schools, and its many admirable developments incidental to the problems of a great city, it is a considerable step to the administrative county of Kent. With 85,521 children on the school registers, there are 2,500 teachers of all grades, and the cost per head of teachers' salaries has increased from £1. 18s. 3d. in 1903-4 to £2. 16s. 9d. in 1911-12. The total cost of maintenance is now £3. 9s. 9d. per scholar, as compared with an average of £3. 4s. 9d. for the previous five years. The Government grants amounted to £2. 1s. 2d. per child. The amount raised by way of loans for new school buildings and improvements since the appointed day reaches the total of £146,845.

Cheaper School Buildings. VARIOUS efforts have been made to cheapen the cost of school buildings, but the results have not been altogether encouraging. As a rule, if the building is efficiently planned, it is worth just what it costs. The Kent

Committee are about to try an interesting experiment in the cost of a small school for one hundred and twenty children. The framework of the building is to be of light steel, with boarding outside and asbestos sheeting inside, the intervening space being filled with concrete. The estimated saving compared with an ordinary brick building is said to be £500, or about 30 per cent. The Nottingham Education Committee is also proposing to erect a timber framed school, which, it is claimed, will cost little more than half the amount of a brick building. The Northumberland Authority has tried the experiment of a timber framed building externally and internally sheeted with "Fram" fireproof plates. The cost of the building for three hundred scholars, excluding out-offices, boundary fences, and asphalted playgrounds, was £2,151—a little over £7 a school place.

THE opportunities available for young people of the present day to extend their educational attainments are surely abundant. The prospectus of the evening classes in the County Borough of Birkenhead offers an attractive series of organized courses for those engaged in various industries and employments. It is an excellent scheme.

Birkenhead Evening Classes.

SCIENCE NOTES.

THE School Nature Study Union provides an excellent winter program for its members, and it is safe to predict a continuance of good attendances. A full list of subjects and speakers may be found in the October number of *School Nature Study*, which is published by George Philip & Son. The subjects dealt with in this particular issue include "treacling" for moths, the secret friends and foes of the cabbage, thoughts on drawing, spiders, the camera in Nature study, bird migrants, and an account of an organized excursion of the S.N.S.U. The last-named item is mainly of geological and ecological interest, so that it will be seen how wide is the outlook of the enthusiasts who lead the Society. A careful reading of the articles shows a well balanced attention to the scientific and aesthetic sides, an absence of padding and a presence of much information of practical use to the teacher. The journal is printed on paper with a glaze that is unnecessary and pernicious.

Nature Study.

NOT all teachers of Nature study can keep up to the standard at which the Union aims. This is, indeed, more than could fairly be expected. Unfortunately, the weaker teachers seem to fail very seriously in this subject, usually from inadequate care and fullness in the provision of material. Other causes of failure are the want of power of first-hand and critical observation, and the mistaken idea that a fresh object must be studied at each lesson. It is impossible to reconcile such an idea with the true aim of the work, which should be to develop the growth in the children of scientific interest coupled with an increasing appreciation of beauty. The handwork included in the lessons should contribute to the main aim—not to the making of exhibition objects. By the cultivation of critical observation by the teacher, we imply the habit of independent thinking and what has been called "the critical attitude" towards scientific theories. The need for this is more obvious—we do not say more necessary—in the science lessons for the higher classes in secondary schools. We will therefore illustrate by a short reference to the dogma so often taught, that "heat is molecular motion."

Danger of Discontinuity.

What is Heat?

In the first place, such a description of heat fails to offer any satisfactory explanation of the law known as the Dulong and Petit Law of Atomic Heat. Secondly, the known constitution of matter shows that any kinetic theory of heat must pay attention to the energy associated with the smaller particles—the hierarchy from electrons to the molecular aggregate. Again, to ascribe conduction of heat merely to molecular impacts is to ignore internal radiation within the conductor. In his address to Section A of the British Association, Prof. Callendar developed a modified caloric theory, suggesting that molecules of caloric might be neutral doublets formed by union of a positive and negative corpuscle of electricity. We are not trying to state Callendar's views precisely, still less to defend them. Our present object is to impair the digestion of the orthodox swallower of scientific dogma.

PARADOXICAL as it may appear, it is the critical attitude which leads to the establishment of doctrines upon real sound bases of observation and logic. Thus the brilliant investigations into the motions of individual par-

A Pious Belief confirmed.

ticles of matter, which we owe to the genius of Sir J. J. Thomson, have given the first rigorous and direct proof of an article of faith which most of us have accepted without question, viz., that the individual molecules of any given substance all have identically the same mass. It appears that such a proof was only possible to one who had the insight to question the validity of the creed.

THE *Morning Post* devoted a column recently to the revised timetable at Harrow. We see many changes of undoubted importance and value—e.g. increased attention to English literature—but either the writer of the article or the new curriculum shows a failure to realize the legitimate claim of science to contribute to the intellectual life of boys and men of the present century. We hope that the neglect of scientific studies is more apparent than real, otherwise the nation will continue to suffer from the inability of Cabinet Ministers and Permanent Secretaries to understand modern civilization. The Public Schools Science Masters hold their Annual Conference on January 8 and 9. Perhaps the time has come for a special effort to secure attention to the part which should be played by science in the Public Schools?

PROBABLY many of us have burnt iron wire in a jar of oxygen. We began with gas cylinders; became wiser, and used jam or pickle jars carpeted with blotting paper and a layer of water. More recently we have taken to playing on a glowing bundle of wire with a jet of compressed gas from the oxygen cylinder. At the conclusion of the fireworks we exhibit the iron oxide, and perhaps refer to meteorites and the sparks from rails on which a train is being braked to a sudden standstill. But the spherulitic residue, the production of which is one of the objects of the teacher's demonstration, has been a hindrance to the engineer who wants to "cut" steel by burning a narrow gap through the metal. Of late years the process has been so developed that twelve-inch hardened steel armour plate can be cut as if it were butter. The neighbouring metal is heated by an oxy-acetylene jet; then a separate high-pressure jet of oxygen does the "cutting," and blows away the oxide as it is formed. Quite recently the apparatus has been made portable by the substitution of petrol for acetylene. The cut is as smooth and as narrow as if performed with a saw.

Steel-cutting by Oxygen.

REFRACTORY MATERIAL.

SO much has been wisely written lately with regard to the feeble-minded, but so deplorably little—except for the occasional appearance of a Reformatory scandal—has been said of the right treatment of the borderland children, that the appointment of a Commission to inquire into the Reformatory system has created a sense of pleasurable surprise. Its advent is most opportune, and teachers will welcome eagerly any light its investigations throw upon the proper management of children who are not feeble-minded at all and yet are abnormally troublesome and difficult or even abnormally obtuse.

The rapid growth of secondary schools throughout the country has tended to increase disciplinary difficulties by bringing under their care during adolescence a large number of boys and girls whose homes are unsatisfactory, or who for some other reason tend to be especially difficult to deal with successfully. Indeed, apart from any special home surroundings, the addition of so many boys and girls of that age to those already under their care must add considerably to their responsibilities. In even the biggest and best of our schools, public or private, all teachers must know well that there come from time to time pupils who in a lower walk of life would be despatched to the State Reformatories, while there are frequently boys and girls there who would really benefit by special disciplinary treatment.

It would not be too much to say that in every school of over forty scholars there is at least one pupil of this type, and all of us who have taught them know that they constitute not only a difficult problem in themselves, but also, only too often, a centre of disciplinary trouble. Scientific thinkers would probably classify them more precisely, but it will give a.

workable method if we grade them in four divisions: those who have one notable and apparently incurable fault, usually lying; those who find in all discipline a direct incentive to revolt; those who appear to be incapable of responding to the ordinary educational methods and yet are not weak-minded; and, finally, those who are passing through one or other of these stages as a temporary phase due to some obvious or obscure health condition.

Perhaps none of these classes, with the possible exception of the third, would at first sight seem a borderland case, and yet probably most teachers would agree that in certain cases such children are wholly abnormal and constitute a difficulty which is not met by routine treatment.

In one of the most able and interesting of the articles in the book published by the Head Mistresses' Association, the statement is made that in all cases of unusual breaches of discipline medical advice should be called in. Most of us would welcome it, but many of us would welcome still more the advice of a specialist who had made it her business to study profoundly all cases of abnormal development. The profession of an educational pathologist would be not only most interesting but might well be one of very real assistance to harassed staffs who are often little fitted to cope with eccentricities by the very breadth of their experience of normal childhood. Even without the smallest claims to a professional standing of that description, it might yet be useful if tyros would air their views in order to provoke contradiction and enlightenment.

Of all the classes suggested, the girl—for we are chiefly considering girls—who is consistently perverse in her reaction to rules and discipline is the best known to us. She is the invariable heroine of the girls' school story, notably of those by Mrs. L. T. Meade. In real life her prettiness, fascination, and power of leadership, with which she is always endowed in stories, are less marked, but she is still endowed with enough to increase her difficulty. The problem in her case is, of course, the choice of methods between the stern break-her-will method of some schools and the comparatively elastic discipline which, coupled with constant and varied occupation, makes other schools so successful with such cases. The dare-devil girl helps to fill the reformatories, and it is possible that she might more advantageously be taught in schools of some other description.

The dull girl is a problem better dealt with in boarding than in day schools. In these schools and in certain private schools she is drafted into parallel divisions and plied with varied instruction, largely of a home arts nature, calculated to develop the child on what is perhaps her stronger side without lowering her self-respect or sapping her purposiveness by grading her with younger girls. Frequently, of course, her inattention or lack of sustained effort, her languor or her depression are due to anæmia, and the brain, improperly nourished, is really incapable of prolonged or co-ordinated effort. A definite and remediable physical cause so often underlies the difficulties experienced by this type of child that its diagnosis has become almost a commonplace. What is also a commonplace and is less easily remedied is the fact that such cases are particularly numerous in the very schools where least is done for them, in the new provincial secondary schools.

The girls we educate there are by no means only the brighter pupils from the elementary schools, but are in only too many cases the ultra stupid girls with the added defects of malnutrition and lack of helpful home stimulus. Examination requirements, based largely on mathematics, decide the grading of the forms, and it is no uncommon thing for a big girl of fifteen or sixteen to find herself classed with small girls of eleven or twelve. Where selection committees have exercised normal care, the girl, whether scholar or "free placer," must have been at ten or eleven a fairly normal child. Her development has not been maintained at puberty, and though the school cannot be held responsible for improper nourishment, the charge of improper treatment must lie at its door. The result cannot but be bad and can hardly

fail to retard her development and to inculcate a depressing sense of inferiority.

Of all classes of borderland children none is so difficult as that of the semi-morbid girl who is either temporarily, or temperamentally, the victim of some one fault. Two or three years' teaching must convince any teacher of the comparative frequency of cases of persistent lying, of occasional theft, and of, yet more rare, incendiarism. These are perhaps the cases most frequently found of abnormal faults, and are the cases with which the ordinary day school is the least fitted to deal. Undoubtedly there ought to be paying schools under Government supervision to which children could be sent without any of the stigma of the reformatory, where, under very specially skilled and devoted teachers, their abnormal peculiarities could be specially treated. Till they exist we have the alternative of expulsion or of reformation, to be accomplished in perhaps six crowded hours five days a week. The position is difficult and the problem not an easy one. Head mistresses are usually quick to recognize that the girl who steals is not wholly a free agent and to feel that strict justice does not demand punishment so much as cure; but they are faced, particularly in secondary schools, with the probable moral effects upon the whole body of their pupils, of any apparent lenity.

In most cases where expulsion is avoided punishment takes its place. It is unlikely that the educational pathologist of the future will counsel either. In nineteen cases out of twenty, the theft is committed by a girl just adolescent who is obviously stimulated by a desire for notoriety. The morbid state of mind which aches for excitement and for notice is not sufficiently remembered. It often happens, however, that the culprit has either forfeited or has never gained the approbation of her school friends. She is usually a failure on the hockey field, and perhaps finds that successful competition in healthy pursuits is closed to her. Motives of revenge, not so much on individuals as on fate, may inspire her, but more often an intense desire to be the heroine of her own novel seizes her and she chooses incendiarism or theft as an effective method. These crimes are usually distinguished by a mixture of cunning and ingenuousness due in part to childish lack of forethought, but also to the unstable workings of an unbalanced mind which works in spasms or perhaps one might say in chapters of the novel, often weaving elaborate brain-pictures and then suddenly and impulsively committing the crime, more as the half-foreseen result of previous brooding than of deliberate intent.

To such girls public punishment may after all be acutely painful, but it is also the exact fulfilment of all that their worst side desires. Expulsion would mean the permanent brand of dishonesty where none was really deserved, while punishment ministers to her morbid sentimentality and probably raises her to the rank of a martyr in the eyes of some of her schoolfellows. The doctor and the schoolmistress seldom agree in the treatment of these cases, but the educational doctor, bearing in mind the moral needs of the school just as much as of the individual, would almost certainly urge that only a minimum of public punishment should be inflicted. Apart from the effect on the girl herself, it is not unlikely to provoke emulation in other nervous and excitable girls. The public punishment should be limited to the withdrawal of all marks for at least a month, a measure whose real advantage would be the suspension of all routine machinery in her case. Unhampered by competition, she would be in a position to benefit by a changed curriculum. A minimum of ordinary lessons might be required and in their place restitution work should be put as a substitute.

In cases where the theft has been one of money, definite hand-work, needle-work, basket-work, carpentry, &c., should be arranged, and the articles made should be valued and bought and the money credited to her account until the girl can restore it in full to her creditor. Such restitution work would not be very hard to arrange, though work involving accurate measurement and real concentration—portfolio making or carpentry, or perhaps gardening—is much to be preferred to mechanical needlework, which allows the mind to brood.

Its moral effect can be enormous, and, whatever the theft, would be proportionately great. Not only would the girl's mind be stimulated and her moral tone and self-respect restored, but she would go back to her companions (from whom she would have been partially separated by the necessities of her work, and not by any obvious penal distinction) to be welcomed by the wholesome respect that children show for one who has redeemed the past.

A new type of constructive morality might well be started and applied, not only to cases of theft but to lying. Repeated lying should be dealt with very carefully and scientifically, and should be classified by motive rather than by result. Timidity is at the root of most untruthfulness, but a corollary should be added that abnormal liars are usually very affectionate and emotional children (though this is by no means always the case), and their ready and recurring repentance proves that while they are fully capable of understanding the iniquity of individual cases, they have no real moral sense in that direction and are not capable of the sustained effort of formulating and applying a general principle.

A cursory analysis of the effects of punishment upon such a child convinces us of its necessity, if we are to establish painful associations with the fault, and of its futility if our object is to establish any purposeful continuity of thought which may be elevated to the height of a moral principle.

In the case of theft, restitution work had for its psychological basis the good effects of the concerted action of body and mind in building up a memory and almost a habit of honesty to counteract the impression left by the act of theft.

With most children bodily habits and actions are of greater permanence than mental acts, and where the latter are evidently felt as isolated phenomena this peculiarity would seem to continue even after puberty. Our aim therefore must be to create a bodily association or habit of truth-telling which shall serve to bridge over gaps between isolated instances until capacity for incorporating moral principles be attained.

After every lapse from truthfulness, as the experienced teacher knows, the timid child reduces her mind to the level of an idiot's by many nervous lies and excuses, by fright and by tears. In that state (called "being sorry") she is usually left, and no clear impression is made at all. The lie specialist would probably advocate that after punishment the child should be required to write down quietly what had occurred, even such a bald narrative as "I am sorry, but I did tell you a lie. I did break the plate." This crystallizes what did occur and also minimizes the temptation to whitewash it afterwards. Then, borrowing for a more wholesome purpose French criminal procedure, reconstruct with the child what had happened. Ask her again if she broke the plate, if possible in the same room and with the same formula and audience as before, and let the child's last memory of the occurrence be her own courageous confession and subsequent commendation.

It may sound an artificial scheme, but indeed it has proved beneficial when nothing else has seemed to help the child, and is sound, surely, if we remember not only the Lange-James theory but also our own bewildered miserable childish aches and confusions of mind, or our own desire for any opportunity to prove amendment and the disheartening regularity with which when it came it took us unawares.

It is, after all, only by establishing a chain of right reactions to simple stimuli under artificially natural circumstances that the Borstal or any other system works. Why should children who are in special institutions lack the benefits of educational research and advance, and why, on the other hand, should not abnormal girls and boys in our ordinary schools receive specialized care and attention and the treatment definitely appropriate to their case? If the Home Office could co-operate with the Education Department in this Commission, the ordinary teacher might indeed hope to give and receive help in the proper treatment of all children who may be classed as refractory material.

RUTH S. M. PETO.

JOTTINGS.

THE following are the arrangements that have been made for demonstrations of the Dalcroze Rhythmic Gymnastics:—Friday, November 15, 8 p.m., London, Caxton Hall (Music Teachers' Association). Saturday, November 16, 3 p.m., Cheltenham (Ladies' College). Monday, November 18; Tuesday, November 19, 7 p.m., Leeds—Albert Hall, November 18; Town Hall, November 19 (Leeds University, Education Committees of Leeds City and the West Riding). Wednesday, November 20, 5.30 p.m., Manchester (Victoria University). Saturday, November 23, 3 p.m., London (Goldsmiths' College). Monday, November 25, 8.15 p.m., London University (University Extension Guild).

A WOMAN impostor is visiting schools, pretending to place her granddaughter, aged eight, at a boarding school. She settles everything and leaves, returning later on to say that she has lost her purse, and borrowing her fare to Dover, Tunbridge Wells, &c. She gives her name as Mrs. Bartram, and a reference to a clergyman in Dover. Any head mistress she may visit should immediately inform the police.

A LONDON branch of the "Guilde Internationale," which has its home in the Rue de la Sorbonne, Paris, was opened at Gordon House, Gordon Square, last month. Here young French students resident in London will now have the opportunity of attending classes in preparation for the "Certificat Primaire" and the "Certificat Secondaire," and English conversation will be made a special feature of the work. It is also intended to form classes in preparation for the examination of the Cambridge Syndicate, designed specially for teachers who wish to gain a certificate of proficiency in English—this for foreigners only—French, or German. We have already discussed this examination, which will be held for the first time next June, in connexion with the Cambridge Higher Local Examination. Non-student members will also be eligible for membership of the Guild on payment of five shillings as an annual subscription. This will allow access to the reading-room, admission to the social gatherings, and restricted use of the information bureau.

THE REV. CECIL GRANT appeals to the public to subscribe a capital sum (in shares) sufficient to start a Montessori side at St. George's School, Harpenden. All he needs is a schoolroom and two teachers—one to teach and one to keep in touch with the parent establishment in Rome. Before subscribing we should like to know what exactly the "Montessori Method" is.

A DISTINGUISHED lady educationist lately visited the Froebel Institute, where she had heard that the method was being practised. She was shown the classes at work, and, on leaving, expressed to the Principal her perfect satisfaction. "Why," she asked indignantly, "is not the Montessori method adopted in every school in the kingdom?" The Principal was obliged to confess that she had never heard of the Dottressa, and was simply endeavouring to build on the foundation that Froebel had laid.

A FIRST LESSON IN ENGLISH HISTORY.—"Have any of you heard of Julius Caesar? Can anyone tell me who he was?" Bright Child: "Please, teacher, I know. He was the King's dog."

THE business of the University Tutorial Press has grown so rapidly that it requires additional capital to acquire the freehold of its printing and bookbinding works at Foxton and extend its premises. It has, during the past twelve months, published no fewer than fifty-two new books.

THE inaugural meeting of the Science Association will be held at the London Day Training College, Southampton Row, on Saturday, November 23, at 3 p.m., when an address will be given by Prof. Henry E. Armstrong on "Science befitting Girls." Subscriptions (5s.) should be sent to the Hon. Secretary, Miss I. H. Jackson, Godolphin and Latymer School, Hammersmith, W.

LINDSEY HALL LECTURES.—On Thursday, the 14th inst., at 8.30, Prof. Jacks, editor of the *Hibbert Journal*, will lecture on "Religion and the Need of Salvation."

THE editor of *Everyman* cannot be expected to know much of our great head masters, but, before introducing Mr. A. C. Benson, as probably the best living authority on secondary education, he

should have consulted the "Dictionary of National Biography." Mr. Benson's father, the Archbishop, was never Head Master of Eton. Magdalene College, Cambridge, is robbed of its final *e*, but this a trifling peccadillo.

CAMBRIDGE LOCAL EXAMINATIONS. — The Class lists of the Cambridge Local Examinations held in July show that the total number of candidates entered was 7,647, exclusive of 505 who were examined at Colonial centres. In the Senior Examination 1,118 boys and 1,368 girls passed, First Class honours being gained by 100 boys and 25 girls. Of the Junior candidates 1,655 boys and 935 girls satisfied the Examiners, 171 boys and 25 girls being placed in the First Class. In the Preliminary Examination 289 boys and 250 girls passed.

OBITUARY.

E. D. A. MORSHEAD.

WE regret to record the death of Edward Doidge Anderson Morshead, one of our oldest and most valued contributors. After a long but painless illness, he passed away on October 24, in his sixty-fourth year.

The third son of the Rev. John Morshead, a Devonshire rector and squire, he knew and loved his native country as Thomas Hardy loves Dorsetshire or Mr. Belloc Sussex; and he was never happier than when telling a Devonshire story in the purest *patois*. Next to Devonshire he loved Winchester, where the greater part of his working life was spent. Gaining a Foundation Scholarship in 1862, he passed in due course to New College, Oxford, and, after a brilliant University career, was elected Fellow in 1874. In 1872 he was appointed by the late Dr. Ridding to a Winchester mastership, which he held, first under Dr. Ridding, and then under his brother-in-law, Dr. Fearon, for thirty-two years. As Tutor of the Upper Sixth and Form Master of the Lower Sixth, he was largely responsible for the classical work of the highest forms, and the many brilliant scholars whom Winchester produced during these years will gladly testify their indebtedness to Morshead's inspiration. It is hardly a paradox to say that he was too clever to be an ideal schoolmaster. Though the kindest of men, he could not "suffer fools gladly," and the winged epigram, though it was never barbed, would fly out, to the discomfort of the stupid boy who missed the point and only perceived that he was being laughed at. On the other hand, there was no master so ready to help lame dogs over stiles, and his leisure hours were always at the disposal of those who sought his aid.

His resignation in the plenitude of his powers came as a shock and a surprise not only to the school, but to his friends and colleagues, and it was characteristic. Only the head master knew of his intention, and he thereby shunned any formal leave-taking or public testimony to his services. He could still satisfy Dr. Arnold's test of running up the school steps three at a time, but he wisely determined to throw himself into other work while strength and adaptivity remained. He established himself "across the bridges" in a large house surrounded by mean streets, warehouses and offices, and, with his wife to aid him, he soon made it a centre of light and warmth. He was a manager of schools, where his visits were always welcome, and he invited the masters and mistresses to his table, round which, under his genial humour, the demurest of schoolma'ams and the starchedest of head masters unbent. He lectured to the Working Men's College; he taught the Grey Ladies of Southwark Greek. But he did all, as it were, by stealth. He never appeared on a platform, and his large charities were anonymous.

To the public Morshead is known only as a translator, and his "House of Atreus" (the Aschylean trilogy), published in 1881, still holds the field against its many rivals. His "Agamemnon" appeared almost simultaneously with Browning's, and Mr. Browning spoke of it to the present writer as far the best of its kind, though he maintained that his word-for-word version was the only true translation. With French, German,

and Italian literature he was as familiar as with Latin and Greek, and it is hoped that his shorter translations, many of them in manuscript and some that have appeared in this journal, may be collected and published. This should include a version in stanzas of the "Paradiso," which only needed the finishing touches, and *vers d'occasion*, always witty and sometimes beautiful, often addressed on post cards to friends. He had a genius for friendship, and, like a prince, he scattered largess amongst his friends. As it dates back twenty-eight years, we may reprint his epitaph on Gordon:—

By those for whom he lived he died; his land
Awoke too late, and crowned dead brows with praise.
He, 'neath the blue that burns o'er Libyan sand,
Put off the burden of heroic days.
There, strong by death, by failure glorified,
O never proud in life, lie down in pride!

If to live and labour for others, oblivious of self and careless of fame, is a note of heroism, Morshead too has "put off the burden of heroic days." In physical proportions, no less than in intellect, he towered above his fellows: "in wit a man, simplicity a child."

PROFESSOR SKEAT.

[A PERSONAL TRIBUTE.]

"I SHALL not say one word of my own," writes the sorrowing Boswell, "but adopt those of an eminent friend, which he uttered with an abrupt felicity, superior to all studied compositions. He has made a chasm which not only nothing can fill up, but which nothing has a tendency to fill up. Johnson is dead. Let us go to the next best: there is nobody; no man can be said to put you in mind of Johnson." These words might have been spoken of that successor of Johnson who was laid to rest in Cambridge on Friday, October 11. There was more than a kinship of common study between them; the same dogged industry, the same brusqueness of manner and rough impatience of insincerity. The two names, Johnson and Skeat, may well be coupled as the pioneer of English lexicography and the first systematizer of English philology. Both men were arbiters of words and sought to trace the devious ways by which they have come down to us. Both men strove to make us proud of our noble language and literature, and strove not in vain.

Skeat was "too inaccessible," says the obituarist in the *Times*. The charge may be boldly challenged. It is true that he lived among his pyramids of books, working regular hours each day, and he was never gentle with the interrupter. I know that at times he was much pestered by inquirers who wanted information without toil of search. I saw his reply to one of these molesters. There was an absence of velvet phrase: a few references, and "Go search." I doubt whether he would have got any references from Dr. Johnson. But to the young and sincere student Prof. Skeat was always gracious. I wrote to him recently in regard to the spelling of Greek words in English. By return I had a full and thorough reply, characteristic in every way, sharp as a sword in incisiveness, and with it a charming personal note, almost his last. It was a principle with him never to leave letters unanswered.

The funeral service was in the Chapel at Christ's, the college with memories of Milton and of Skeat's contemporaries and friends, C. S. Calverley and Walter Besant. The bier was of unpolished oak, and a cross of roses lay thereon. What better could be said of the strong exterior and inner graces of him we mourned? The severe simplicity of the service was most meet. Prof. Skeat hated ceremony, and loved the naked beauty of life. *Nunc dimittis*; and we were out into the quadrangle of Christ's, rich with October sunlight and red with decaying climbers. The procession forms again, and we march through the narrow Cambridge streets into the ample fields, and leave him sleeping on the borders of the town he loved and that loved him. As I passed the open grave I was reminded of the inscription on the Lichfield tablet . . . "to the memory of a man of extensive learning, a distinguished moral writer, and a sincere Christian."

S. W.

ALICE OTTLEY.

IT was with deep regret that all who are interested in the secondary education of girls heard of the death of Miss Alice Ottley, the first Head Mistress of the Worcester High School. She had devoted her life to the cause of education, and no small part of her achievement was the opening up to her own distinguished brothers the early opportunities which were to bear so much fruit later on. But it is on account of her own work for girls that she will be chiefly remembered. As a teacher she had distinguished gifts. She was eloquent without being verbose, and clear without being dry; she was sternly insistent on accuracy in detail, and in demanding the highest degree of finish possible, without letting her pupils lose the inspiration of great ideas. As a Head Mistress she combined great powers of organization with scrupulous attention to details, and an almost despotic authority with quick appreciation of any contribution made by those who assisted her to the improvement of school methods. But, great as were her intellectual gifts and force of personality, it is perhaps her extraordinary humility and love of others by which she will be longest remembered, and her influence on the characters of all with whom she came in contact was of that abiding kind that there are hundreds of women and girls who would say that they owed the best kind of success and happiness in their lives to the wise and loving help of Alice Ottley.

M. A. DOUGLAS.

At the meeting of the Executive Committee of the Association of Head Mistresses on Saturday, October 12, the following resolution was proposed by the President, supported by Miss Robertson, and carried unanimously: "That the Executive Committee of the Association of Head Mistresses desire to express their sincerest sympathy with the family of Miss Ottley in their great loss. They also wish to record their deep sense of the value of her educational work. As the first Head Mistress of the Worcester High School for Girls, as one of the most valued members of the Worcester City and County Education Committee, and as a member and Vice-President for very many years of the Association of Head Mistresses, she never failed to devote her distinguished powers to furthering the highest aims of education."

GIFT BOOKS.

Green Willow, and other Japanese Fairy Tales. By GRACE JAMES. With Illustrations in Colour by WARWICK GOBLE. (5s. net. Macmillan.)—We welcome a new edition of these rare and strange exotics visualized, as it were, in the exquisite illustrations. It is only unfamiliarity that prevents the admission of Japanese myth and fable to the world's Pantheon, and already Lafcadio Hearn has done much to popularize them. It might be well to give in notes or a glossary the meanings of the Japanese words, and there are occasional slips in the English that need correcting—"stronger than me," "you who was," "unfortunately, it has been my misfortune," "a groove [for a grove] of bamboo shoots."

The English Fairy Book. By ERNEST RHYS. With Illustrations by F. C. WILNEY. (6s. Fisher Unwin.)—These refurbished tales are dedicated to Stella, a seven-years darling to whom they were first told in "the language proper to Fairyland." Stella must have thought that its confines were reached when she heard the recipe for a fairy philtre, and, if critical, she will have inquired how a Canterbury shepherd comes to be talking broad Somerset and why the headless huntsman is drawn with a head of a Yankee type. These are small defects, and the old favourites, "Jack the Giant Killer," &c., are excellently retold; but many of the fifty-five, interesting as they are to the folk-lore, will have no meaning to children.

Elfin's Song: a Book of Verse and Pictures. By FLORENCE HARRISON. (6s. net. Blackie.)—If we did not know Miss Harrison's previous colour book, we should say that she had written a delightful volume of children's verse and found a sympathetic illustrator, and, as it is, pencil and pen are so perfectly matched that we know not whether to give the first place to verse or pictures. The poems remind us sometimes of Christina Rossetti—the poet after her own heart—sometimes of R. L. Stevenson, and sometimes of Blake; but they are not echoes, and both poems and drawings (black-and-white and coloured) have a charm of their own. We have seen no more fascinating Christmas present for a child.

The Scholar Gipsy and Thyrsis. By MATTHEW ARNOLD. With Illustrations by W. RUSSELL FLINT. (3s. 6d. net. Philip Lee Warner.)—A new edition of the quarto published two years ago, which many lovers of Oxford and its poet must have coveted. Mr. Flint has looked on Oxford with Matthew Arnold's eyes and caught its charm; but in the reproduction the water-colours are a little woolly. Mr. E. H. New's pictorial map in the old style of cartographers is an appropriate addition.

Mary the Mother of Jesus. An Essay by ALICE MEYNELL. With twenty Plates in Colour after the water-colour drawings by R. ANNING BELL. (16s. net. Philip Lee Warner.)—Mrs. Meynell is a Roman Catholic, but there is little in her graceful essay to offend any devout Protestant. Starting from the Gospel narrative, she recounts earlier and later traditions, but these she gives for what they are worth, and makes no attempt to distinguish fact from fiction. It is with Mariolatry as it has influenced art, literature, and morals that the author is concerned. "The history of the devotion to Mary has been the history of the arts" is a hard saying, only partially true if we accept Mary as the symbol of *das ewig-weibliche*, and "Shakespeare, the one great exception, puzzles our thought." To say that Matthew Arnold's paraphrase of Isaiah will not fit the music of Handel does not carry us much forwarder, and throughout the appeal is frankly to sentiment. We can admire the quotations from Coventry Patmore and Francis Thompson, poets to whom scant justice has been done, and yet prefer "The Nativity" of Milton. We may admit that his "Eve" is not our ideal of womanhood, and yet doubt whether she would be improved had she been taken to the Confessional. But the text serves merely as the frame for Mr. Anning Bell's water-colours, and these have given us unmixed pleasure. He has discarded the conventional treatment of the Old Masters, and portrayed the Holy Family as visualized by a religious painter of the present age. "Mary and the Lady Saint Anne" might have been named "The First Reading Lesson," yet the figures everywhere are invested in the purer ether and purple light of sacred art. It is almost needless to add that the colour-printing of the Medici Press leaves nothing to be desired.

Heroes of Science. By CHARLES R. GIBSON. (5s. Seeley.)—A bibliographical and anecdotal account of some of the makers of science, from Pythagoras down to Lord Kelvin. There is no attempt to trace the rise and progress of scientific ideas, but the personal history of these heroes, as far as it is known, is pleasantly told. Dacier cannot be accepted as an authority on Pythagorean doctrine. His harmony of the spheres is not anticipation of the Copernican theory, nor have the atoms of Anaxagoras any real connexion with electrons. In the life of Darwin his relations with Wallace should not have been overlooked.

The Romance of Submarine Engineering. By T. W. CORBIN. (5s. Seeley.)—We are all interested in submarines, but few of us know how far back the invention goes, or could give an account of the various experiments by which the submarine has become an integral part of the Navy, though the recent disaster shows how much has still to be done. Mr. Corbin's book is so clearly and graphically written that it would enable even a non-professional to pass a creditable examination in the subject, and the cognate subjects of subaqueous engineering and cable-laying are treated with the same lucidity.

The Thoughts of the Emperor Marcus Aurelius Antoninus. In the translation of GEORGE LONG. With twelve illustrations in colour by W. RUSSELL FLINT. (10s. 6d. net. Philip Lee Warner.)—We welcome in this form Mr. Russell Flint's water-colour drawings, originally published in an *édition de luxe* now out of print. It is only the lilies and languors, which the Emperor shuns, that lend themselves to illustration; but the artist has viewed them with the calm, clear eye of the philosopher, and his studies of the nude are as chaste as the Venus of Melos. The frontispiece, a single figure standing out against the surf, is admirable.

The Gateway to Chaucer. Stories from the Canterbury Tales. By EMILY UNDERWOOD. Illustrated by ANNE ANDERSON. (5s. net. Nelson.)—We have here six of the Tales, with Prologue and Interludes. It needs but a little help from the teacher to enable boys and girls to read Chaucer with more ease than they read Shakespeare, and we do not share the editor's fear that they will resent it as a lesson in a foreign language, but, like Lamb's Tales, the "Gateway" may serve as an introduction. To include the Wife of Bath's Tale was a bold venture, but in its present form it is an innocent fairy tale. In the picture the wife is an arch maid riding side-saddle, with a skirt that sweeps the ground; the pair of sharp spurs are hidden, let alone the scarlet hose. On the other hand, the Franklin and the Merchant is a spirited drawing, and the colours throughout are pleasing.

Tales of the Gods and Heroes. By Sir GEORGE COX. Sixteen Coloured Plates by INNES FRIPP. (6s. net. Nelson.)—Sir George Cox was a fine scholar, and his Greek myths are told in plain.

(Continued on page 742.)

Editorial Offices: BURLINGTON HOUSE, CAMBRIDGE. *Publishing Warehouse:* HIGH STREET, NEW OXFORD STREET, W.C.*Printing and Bookbinding Works:* FOXTON, near CAMBRIDGE.

THE UNIVERSITY TUTORIAL PRESS LIMITED was incorporated January 1st, 1902. In 1908 the extensive premises at Foxton, near Cambridge, were completed, and the printing of the publications of the UNIVERSITY TUTORIAL PRESS LIMITED, which had been in part executed at Cambridge, was removed to the new factory at Foxton. In 1910 and since that time the whole of the Printing and Bookbinding connected with the UNIVERSITY TUTORIAL PRESS has been executed in its own Works. The growth of the business of the Company has been continuous since its incorporation in 1902, and, in spite of the heavy expenses attached to the removal of the Works, a dividend of 6 per cent. per annum has been paid each year, with the exception of the year ending 1908, when 5 per cent. was declared.

THE PUBLICATIONS of the UNIVERSITY TUTORIAL PRESS LIMITED in its early days were designed almost exclusively for London University examinations, but its work has developed far outside these limits—a satisfactory feature for the last few years is the substantial expansion of the trade with the Colonies. In Africa, Australia, Canada, Ceylon, China, Egypt, India, and New Zealand, the Company is represented by Agents who stock its publications.

THE TRADE FOR THE CURRENT YEAR shows an increase over the trade for the corresponding period of any other year since the formation of the Company. During the last 12 months no fewer than FIFTY-TWO NEW BOOKS have been published, apart from new editions.

ADDITIONAL CAPITAL is now required:—(1) For the purpose of acquiring the freehold Printing and Bookbinding Works situated at Foxton, at present in the occupation of the Company; the plot on which the Works stand has a frontage of 575 feet. (2) On account of the purchase of the Sub-lease (17 years) of 25 High Street, New Oxford Street, W.C., now occupied by the Company as its London Publishing Warehouse. (3) To provide further working capital.

THE FOLLOWING FIGURES are taken from the last Balance Sheet, for the year ending December 31st, 1911:—

Stock-in-Trade, Work in Progress, Plates and Copyrights, Paper and other Stock, Machinery,	£	s.	d.
Plant and Type, Fixtures and Furniture	39,269	10	4
Due from Debtors at end of Quarter	7,234	7	6
Due to Creditors at end of Quarter... ..	5,125	19	4
Profit for the year 1911	2,430	2	8

Prospectuses and Forms of Application may be obtained from the SECRETARY OF THE COMPANY,

BURLINGTON HOUSE, CAMBRIDGE.

vigorous English, without any of Kingsley's moralizings or Hawthorne's modern embellishments, but they are austere expurgated for the young person, and Mr. Fripp avoids even more carefully any suggestion of the "nude, natural, and Greek." The shipwrecked Odysseus, as he appears to Nausicaa, is not Homer's begrimed mariner, stark naked and holding a bough before him, but a sturdy climber in an elegant chiton and cap to match; and Polyphemus is not the one-eyed monster of the Odyssey, but an athlete who would grace one of Prof. Sandow's bold advertisements. The pictures themselves are well drawn, and the colours are harmonious, but they fail to illustrate Greek mythology.

The Story of Heather. By MAY WYNNE. (2s. 6d. Nelson.)—The autobiography of an Exmoor pony, who has many adventures with masters—good, bad, and indifferent. It is very prettily told, and will be a favourite in the nursery.

Aesop's Fables. Illustrated by CHARLES FOLKARD. (6s. Black.)—The illustrations are full of humour—sometimes broad, as in the peasant pulling out the amorous lion's teeth; sometimes sly, as in the cat advising the sow not to go abroad. The costumes of the animals are of all ages, and Mr. Horne's learned preface on the age and origin of the Fables seems rather out of place.

The Boy's Book of Adventure. By ERIC WOOD. (3s. 6d. Cassell.)—Thirty-four stories of deeds of heroism, hairbreadth escapes and dare-devil escapades, some old, some new, and nearly all worth telling. Roosevelt's "Ride for Life" will be read with fresh interest. Mr. Wood is not an Alpine climber; apparently he mistakes Zermatt for a peak.

"The World's Romances."—*Sigurd and Gudrun.* By W. E. SPARKES. (2) *Faust and Marguerite.* By ETHEL M. WILMOT-BUNTON. (3) *Paolo and Francesca.* By W. E. SPARKES. (4) *Lancelot and Guinevere.* By GLADYS DAVIDSON. (Each 2s. 6d. Nelson.)—(1) We doubt if much is gained by putting the tale of Gudrun and her lovers into the mouth of a lady who tells it to her maidens as they ply the needle; but, apart from the setting, we can unstintingly praise the narrative, clear and written in nervous English. (2) Goethe's "Faust" cannot be retold like an old saga; it is far too complex, and the fable is but the framework of the drama. The second part is a phantasmagoria, and has wisely been disguised as an epilogue to the play. Some of the lyrics have been well rendered. (3) Who does not know the line "Quel giorno più non vi leggemmo avanti" and the ending, but how many could relate the tragedy from the beginning? Here we have the history in full, and the climax is reached in the last chapter. (4) The title informs us that the story is retold from original sources, but the telling is *fin de siècle*. "Lost to their surroundings for one supreme moment, the man and the woman stand alone in a marvellous world of their own creating—a golden world of tremulous joy; and there they secured each other's soul and loved, once and for all time. How simple it was and how wonderful!" We may admire or we may not; but this is not the world of the "Morte d'Arthur" or of the Mabinogion.

Tota. By Mrs. HOBART HAMPDEN. (3s. 6d. Macmillan.)—A capital child's story of the kidnapping and rescue of a little English girl, her wooing in the zenana by the Rajah's son, a child of her own age, whom she half converts to the morals of an English nursery, and who holds the bridge like another Horatius while his bride escapes. The bag of black stones which prove to be emeralds is a false note and will arouse scepticism even in the youngest reader.

With Nature through the Year. By T. CARRERAS. (3s. 6d. Jarrold.)—A serviceable companion for the young naturalist. The numerous woodcuts will help him with his botany, but the photographs leave something to be desired. There is too much moralizing for our taste on the wickedness of fox-hunting, on the blind impiety of the name *adona*, on the impropriety of lovers carving their initials on trees. We hope our young friend will not accept the *dong-d'leeong* as the correct pronunciation.

Folk-tales of Bengal. By the Rev. LAL BEHARI DAY. With thirty-two Illustrations in Colour by WARWICK GOBLE. (15s. net. Macmillan.)—This is a new and welcome addition to folklore, breaking virgin soil unexplored even in Mr. Lang's encyclopædic "Fairy Books." The author, already known to us by his "Peasant Life in Bengal," has himself collected the materials and simply cast in English form the stories by his "Gammer Grekel" and old Bengali women, so that we have the pure native tradition untainted by literary embellishments or Western influences. There is a haunting witchery in the refrain of each story:

"Thus my story endeth,
The Natiya-thorn withereth.
Why O why dost wither,
Why, O ant, dost thou bite?
Kort! kort! kort!"

Arrested by the frontispiece, we turn to the second story—the

sticking of a mystic jewel in the king-serpent's head by a King's son and a Minister's son—another Damon and Pythias. The latter is voluntarily turned to stone to save his master's life and restored by cutting up the first-born child of the Rajah's son and his water bride. In this bare analysis it resembles many familiar fairy tales; but the details and the local colouring give it a cachet of its own. The illustrator has caught the spirit of the East—his colours are rich, but not gaudy, and his figures are well drawn and well grouped.

The Big Book of Fables.—Edited by WALTER JERROLD. Illustrated by CHARLES ROBINSON. (7s. 6d. net. Blackie.)—We cannot accept the Editor's apology for the Fable—*et prodesse volunt et delectare poetæ*. It is only foolish children, he opines, who want the jam without the powder, the story without the moral. Rousseau objected to fables because of their low morality. We have no such qualms, and consider "Brer Rabbit" an admirable child's book. We object to them because they do not satisfy Horace's second postulate. For children they have no charm. Anatole France, in his reminiscences of childhood (see Translation Prize), tells us that the one kind of literature he could not stomach was fables. What child will be improved by the moral—

"Anger a vengeance worth avoidance hath,

That bringeth damage to the quick-to-wrath?"

La Fontaine, we allow, is charming, but hardly so in these translations, e.g.—

"This is the same result
Of being too difficult."

It is a handsome volume, and the black-and-white illustrations will please children; but we wish that Mr. Charles Robinson had exercised his clever pencil on worthier materials.

Black Evans. By K. S. WARREN BELL. (Black.)—Lovers of football will find much to attract them in "Black Evans." The question of Rugger v. Soccer looms large throughout the book; there are several spirited contests in the football field. A new head master comes to Christ's College, bringing with him a number of boys from his former school. Of course they do not get on with the old boys, and a general spirit of resentment and rebellion is abroad. Mr. Talbot is not tactful with anyone, least of all with Black Evans, who is, we must admit, a singularly unprepossessing, and even dangerous, person to have about. Things go from bad to worse, and end in something like a personal combat between Talbot and his refractory pupil; but at this critical juncture a small boy, who has been unmercifully bullied, runs away, and becomes unconsciously the agent for a reconciliation. It would have been interesting to know whether he recovered. There are some well drawn illustrations by E. M. R. Whitwell.

(1) *The Little Guest*; (2) *Jasper.* By Mrs. MOLESWORTH. (2s. 6d. each. Macmillan.)—These are fresh editions of two very attractive stories by this favourite author for children. It is needless to say they are well told, and both have some excellent illustrations by G. Demain Hammond.

The Right Sort. By L. H. BRADSHAW. (Black.)—Templeton, the hero of the story, is nothing if not athletic. His cricket is undeniable, so that it is very hard luck for him, when his father's misfortune obliges him to try to cram for a scholarship, to back out of playing in a match, and practically ensure the defeat of his school. The mystery he makes about this not unnaturally causes him to be misjudged, and he shows some strength of mind in sticking to his resolve to say nothing, till his prowess in a swimming match, when he sacrifices his personal ambition for the good of the school, restores him to favour. He is, on the whole, a well meaning boy, but quite "the right sort" would not, when head of the house, slip out at night to go to the theatre, though his escape from detection adds an exciting chapter to the story.

The Treasure Galleon. By ROWLAND WALKER (3s. 6d. Routledge.)—As may be supposed, this is a story of the Spanish Main in the days of good Queen Bess. There is plenty of incident—storms and sea-fights, the rescue of prisoners from the clutches of the Inquisition, and an arduous march over the Cordillera to reach the Magdalena River. The author has a tendency to become sentimental in and out of season, and this has rather an incongruous effect in the midst of the stirring scenes he has set himself to describe. There are some well-drawn illustrations, but in "A Narrow Escape" nothing could have saved the boat from going over the falls.

The Western Scout. By BESSIE MARCHANT. (2s. S.P.C.K.)—Elgar Hunt was only a boy when he and his uncle and aunt started a general store in Prince Rupert town, but he had been training as a Boy Scout, and was sensible and resourceful beyond his years. It was not merely the difficulties of shopkeeping that he had to contend with; there was a mystery in the background and more than one singularly unpleasant man, untroubled by scruples, to make head against. The story is well written, and Elgar's adventures will be followed with interest.

(Continued on page 744.)

ORA MARITIMA SERIES.

Edited by Prof. E. A. SONNENSCHNEIN, D.Litt. (Oxon.).

Each of the Readers in the Series (illustrated with pictures and maps) consists of a continuous story written in the language to be studied, and so constructed as to form the basis of a systematic study of Grammar. They thus combine the interest and vitality of a real story with a thorough training in the fundamentals of the language concerned.

The terminology recommended by the Joint-Committee on Grammatical Terminology, in their Report of 1911, is adopted in the new volume *En Vacances* and the new edition of *Am Rhein*.

NEW VOLUME NOW ON SALE.

EN VACANCES. A French Story for Beginners. With Grammar and Exercises on the Elements of the regular Accidence. By M. I. EBBUTT, M.A., and ANATOLE LE DU, Professeur Agrégé de l'Université. Cloth 8vo, price 2s.

This volume has been added to the Requisition List for Senior Departments by the London County Council.

"The merits of the Ora Maritima Series need no commendation from us. The subject of *En Vacances* is the life of a French family during the summer holidays, and we think the authors may rest assured that their work in no ways falls short of the high standard which the earlier volumes of the series have set."—*Secondary Education*, March 15th, 1912.

"A thoroughly intelligent and interesting method of teaching the French language."—*The Guardian*, January 13th, 1912.

PREVIOUS VOLUMES.

"After twenty years' experience of teaching Latin to small boys, I have found Professor Sonnenschnein's *Ora Maritima* and *Pro Patria* by far the best introductions to the language available for use with British boys. The text is thoroughly virile, breezy, and instructive, and it contains now and again touches of dry humour which appeal irresistibly to youngsters, and give quite a holiday atmosphere to the books. The exercises present none of those bugbears in the shape of unexplained constructions so disheartening to boys and so aggravating to masters. I can most warmly recommend these books to all who desire to teach Latin as a living language."—J. K. BLACKWOOD, Clarye, Belfast.

1. **ORA MARITIMA.** A Latin Story for Beginners. With Grammar and Exercises on the Elements of the regular Accidence. By the Editor of the Series. Seventh Edition, 1912. Cloth 8vo, price 2s.

Adopted as a prescribed subject for the Cambridge Preliminary Local Examination of 1912.

"*Ora Maritima* is just A1, clearly right in conception and admirably executed."—P. A. BARNETT, H.M. Chief Inspector for the Training of Teachers.

"The most attractive introduction to Latin that has come under my notice, and I have seen most of them in the Secondary Schools which I inspect."—JOHN KERR, LL.D., late H.M. Chief Inspector of Schools and Training Colleges in Scotland.

2. **SUPPLEMENTARY EXERCISES to ORA MARITIMA.** By Miss M. L. STAFFORD SMITH, M.A., Head Mistress of the Durham High School for Girls. Limp Cover, price 1s.

3. **PRO PATRIA.** A Sequel to "*Ora Maritima*." With Grammar and Exercises to the end of the regular Accidence. By the Editor of the Series. Second Edition. Cloth 8vo, price 2s.

"We have adopted both *Ora Maritima* and *Pro Patria* in our Latin classes at Manchester Grammar School."—J. L. PATON, Manchester Grammar School.

"The books are admirable, and under the guidance of a skilful teacher their use in class is followed by excellent results."—MICHAEL E. SAULER, LL.D., Vice-Chancellor of the University of Leeds.

"I have had both books prescribed for use in our earliest standards. They were acknowledged by the committee which passed them to be unequalled for the interesting way in which they present the subject. I think no praise is too high for them."—W. G. WEDDERSPOON, M.A., H.M. Inspector of Schools and Training Colleges, Burma.

4. **THE GREEK WAR OF INDEPENDENCE.** A Greek Story for Beginners on the same lines as "*Ora Maritima*" and "*Pro Patria*." With Grammar and Exercises to the end of the regular Accidence. By C. D. CHAMBERS, M.A. Cloth 8vo, price 3s.

"Felicitous in design and able in execution."—*The Journal of Education*.
 "It gives reality and interest to the early study of Greek."—*Educational Times*.
 "We strongly recommend the book to all schoolmasters."—*The Oxford Magazine*.

5. **AM RHEIN.** A German Story for Beginners. By Professor K. WICHMANN, Ph.D. Second Edition, 1912. Cloth 8vo, price 2s.

"The adventures of Siegfried, related by Professor Wichmann in that simple and graceful narrative style to which both the story and the German language lend themselves so well, will commend themselves to the schoolboy."—*Modern Language Teaching*.

The Publishers will be happy to send a free copy of any of the volumes in this series to teachers who make application for them with a view to their introduction.

 Broadway House, Carter Lane, London, E.C.

TEACHING GEOGRAPHY ON SCIENTIFIC LINES.

THE NEW GEOGRAPHY ATLASES. (MAP EXERCISES.)

The teaching of Geography during the last ten years has undergone a complete revolution. Geography is no longer regarded as a conglomeration of unrelated names and places, or of facts and statistics, but as a science which shows us how physical laws affect climate, and how climate and soil account for vegetable and animal life, and how these in their turn determine the position of our cities and towns, or briefly—as they affect human life—how environment shapes, and determines the destiny of the races of mankind. The object of this book is to enable this idea to be carried out in Schools.

For this purpose, the most important countries begin with a nameless Relief Map. From this and his Geography book or manual the pupil can make a Physical Map of the country.

With a knowledge of the Physical conditions and of the climate he can proceed to determine a map of the products of the country (natural and manufactured). These determine the position of our towns and cities, another means of communication.

Other Maps can be used for Isobars, Isotherms, Rainfall, Vegetation, Density of Population, &c. Some of these could be graphically shown on the squared paper appended to the map of the country. More especially should this be done with exports and imports, the height of mountains, and the Growth and Density of Population, &c., &c.

THE WORLD, 4½d. net; **AMERICA**, 4½d. net;
BRITISH COLONIES, 4½d. net.

OXFORD LOCAL EXAMINATION.

THE WORLD, 4½d. net. Containing 51 Maps, with 8 pages of squared paper.

AMERICA, 4½d. net. Containing 4 Relief Maps, 31 Blank Maps, with 12 pages of squared paper.

BRITISH COLONIES, 4½d. net. Containing 4 Relief Maps, 27 Blank Maps, with 12 pages of squared paper.

BRITISH ISLES, 3d. net. Containing 11 Maps and 6 sheets of blank paper.

EUROPE, 3d. net. Containing 13 Maps and 10 sheets of blank paper.

London: JOHN MARSHALL & CO., 42 Paternoster Row.

Glasgow: THE GRANT EDUCATIONAL COMPANY, Ltd., 91 & 93 Union Street.

A BOOK THAT "MAY BE USED WITH ADVANTAGE
 WITH ANY FRENCH GRAMMAR."

EIGHTH EDITION. With Supplementary Easier Exercises.

Fcap. 8vo, cloth, interleaved. Price One Shilling.

Hints on French Syntax.

By FRANCIS STORR, B.A. Camb., Officier d'Académie, Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

"Mr. Storr's Hints are to the purpose. They are intended for schoolboys, but grown-up people who wish to avoid making elementary blunders in either writing or speaking may use them with advantage."—*The Athenaeum*.

Extract from Author's Preface.—At the request of several Masters and Mistresses, who have used the Hints with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

The Lost Exile. By GERTRUDE HOLLIS. (2s. S.P.C.K.)—The story of a boy who sets out to find his uncle who was exiled to Siberia as a young man and lost sight of. Ivan Draper, who is half English, half Russian, has the advantage of speaking both languages with equal fluency, but, more than that, he gains a very powerful friend by saving his life in a street accident. It is this friend who plans what he shall do and, unknown to the boy, secures his protection while doing it. We feel inclined to protest, as King Padella did when Giglio pursued him with a fairy horse and fairy armour, that Ivan does not deserve so much credit after all. On the one occasion when he is left unprotected he has a very narrow escape of being hung, but, as the absent guardian remarks, "Never mind—we were in time."

Miss Netherby's Niece. By ALICE M. CHESTERTON. (3s. 6d. Nelson.)—Beryl Daynton is a girl of many gifts. She is beautiful, clever, rich, and popular; but there is something wanting, and her discerning aunt suddenly decides that, instead of going to college on leaving school, she shall go for two years to live with her mother's relations, who are in straitened circumstances and do most things for themselves. We cannot but sympathize with Beryl, whose little world is upheaved in this startling manner, but in this case the end justifies the means; and those who follow Beryl through her years of probation will have pleasure in seeing her become much more broad-minded and prepared to take her share of work in the world.

The Story of Richard Doubledick. By CHARLES DICKENS. (1s. Constable.)—We are glad to see this story, so admirably told to the Seven Poor Travellers, published independently and at such a reasonable price. The print is large and clear, with wide margins. The numerous illustrations are not altogether satisfactory. Some quality in the paper may account for defects in the reproduction of the black-and-white drawings, but in those in monochrome there is a chalky effect which is displeasing. The drawing is good in almost all cases, but Taunton, Doubledick, and Mary Marshall all look too old.

The Coming of Carlina. By L. E. TIDDEMAN. (2s. 6d. Jarrold.)—Carlina is quite a nice child, though extremely passionate, and only to be controlled through her affections. Having led a very free life in Italy under the care of an old Italian servant who is devoted to her, she finds it difficult to settle down to school ways in England. She refuses to be snubbed by the older girls, and indeed tells them what she thinks of them with a plainness of speech worthy of a Quaker. There is the not uncommon interlude of a suspected theft and its consequences; the whole locket episode is rather ridiculous, but all ends well, and Carlina is certainly much more attractive than the average schoolgirl.

The Bravest Boy in the Camp. By ROBERT LEIGHTON. (2s. 6d. Jarrold.)—Mr. Leighton tells this story with his usual skill, and all will be interested in the way in which Roddie Bowen, who believes himself to be the son of a man who was discharged from the British army for cowardice, proves that he has pluck enough and to spare. The attack on Chris Hopton's stockade by Indians, the pursuit of the redskins who have carried off his daughter, a hunting expedition and scouting work for the troops who have been called out to suppress the Indians, supply sufficient excitement and make a good story.

The Girl's Budget. Edited by JEAN M'INTOSH. (Nelson.)—The retold classics, such as stories from "The Faerie Queene," will find favour with girls—more favour, we hope, than the somewhat trivial romantic short stories which complete the budget, and which for too long have been considered a girl's special prerogative. The Siegfried illustrations are original and effective, but others leave much to be desired. "Lorna Doone" fares especially badly.

Three Jovial Puppies. By J. A. SHEPHERD. Rhymes by E. D. CUMING. (3s. 6d. Blackie.)—This is a puppy version of the "Three Jovial Huntsmen." The coloured drawings, of the Cecil Aldin type, are clever and amusing and full of spirit.

Wee Tony. By S. R. PRAEGER. (3s. 6d. Blackie.)—A simple little story of a day in Tony's life—a story such as small children love. The pictures tell their tale obviously and forcibly, and in many cases quite prettily. Tony feeding the ducks is a most attractive little person.

The Georgie-Porgie Book. By J. and M. CLAYTON. (Nelson.)—A book of little verses to string together some well drawn and fanciful mouse pictures.

The Maisie-Daisie Book. By ANNE ANDERSON. (Nelson.)—Little rimes for the seasons, with some delicate coloured illustrations.

The Jolly Book. (Nelson.)—"The Jolly Book" is quite a jolly book, full of short stories and verses, new and old, and plenty of good coloured illustrations and black-and-white drawings.

A Boy of the Dominion. By Captain F. S. BRERETON. (5s. Blackie.)—Joe Bradley is an English boy who, seeing no prospect

before him in the old country, decides to emigrate and make the most of his very small patrimony in Canada. He is plucky and resourceful and makes friends wherever he goes, with one exception in the person of a man who would profit by his death. The fighting of a fire at sea, and the tracking of Hurley supply plenty of excitement, and the accounts both of work and sport will appeal to all boys. W. Rainey's illustrations are good in drawing, but rather curious in colour.

(1) *At Agincourt*; (2) *Through Three Campaigns.* By G. A. HENTY. (3s. 6d. each. Blackie.)—We are always glad to see new editions of Mr. Henty's books, and these are good specimens of his work. The three campaigns are the Relief of Chitral, the Tirah Campaign, and the Relief of Coomassie. Both volumes are very well illustrated by Wal Paget.

(1) *Foes of the Red Cockade*; (2) *In the King's Service.* By Captain F. S. BRERETON. (3s. 6d. each. Blackie.)—New editions of two capital stories. The first has very well drawn illustrations by W. Rainey; the second, which is a tale of Cromwell's invasion of Ireland, by Stanley L. Wood.

John Graham, Sub-Lieutenant R.N. By T. T. JEANS. (6s. Blackie.)—Anyone who is not to the manner born may fail to appreciate at their proper value the diversions as well as the *désagrément*s of a young Naval officer's life and the rough-and-tumble of the gun-room. Sub-lieutenants and "snotties" alike are ready to risk anything for the chance of a lark or a scuffle, and discipline on the "Hotspur" seems distinctly lax. But then John Graham has not the art of keeping order among his motley crew. He is always just going to interfere in cases of bullying or insubordination, but rarely gets so far as doing so. There is much rivalry between the "Hotspur" and the other ships of the Atlantic fleet, and excited feeling runs high in the many contests between them, whether they are "practising evolutions" or having a football match. These are described with spirit, and some good yarns are spun by the Warrant Officers. Boys will find plenty to amuse them here. Some of the illustrations are very effective.

SAFE NOVELS.

"Collection Nelson."—*Ève Victorieuse.* Par PIERRE DE COULEVAIN. (1s. net.)

The lady who has adopted this masculine *nom de guerre* (George Sand started the fashion) makes nationalities her speciality, and her study of England in "L'Île Inconnue" was pronounced a striking likeness by those who were most capable of judging, her sitters. She has now turned her attention to America and produced a striking portrait of the American woman on the Continent. The title gives a clue to the plot. Curiosity (in the French rather than the English sense of the word) is the mainspring. "Eve" leaves her husband, and Dora, her understudy, leaves her *fiancé* behind, both *blasées* with New York society and determined to see and taste all that the Old World has of rare and strange—love *in primis*, which Eve's husband, a man of science, has defined as an electric current and of which she has not yet felt the shock. An Italian Don Giovanni is the dynamo with which she toys and is within an ace of being electrocuted. She tries in vain Roman Catholicism as a lightning conductor, and is saved by a white-robed Brahmin who touches her brow, and, hey presto! the obsession of the magnetic count is gone for ever. Psychic force has done the trick, and the Brahmin well deserved his £10 fee. The *Ève vaincue* marries the count, and we leave her triumphant as the niece of a future Pope, whose favour she has won by her skill at billiards. There is no attempt at poetic justice. The subject is risky, but in the treatment there is nothing to offend the most fastidious. Pierre de Coulevain reminds us of an eminent English authoress who, in preparation for a novel dealing with French life (so the story runs), gave her husband a £10 note to explain and report to her what Paris dissipation was like. As we have hinted, we are not impressed with the story, but for its acute characterization of American and Italian society the novel is well worth reading.

London Lavender. By E. V. LUCAS. (6s. Methuen.)

Mr. Lucas has the rare gift of *flanerie*, and, though "London Lavender" is classed by the publishers as a novel, it no more satisfies the accepted definition than Thackeray's "Roundabout Papers." The *flaneur* (hero must we call him?) takes a flat in a lodging-house run by two decayed gentlewomen with the wife of a keeper in the Zoo as an understudy, and the other flats are occupied by a mixed lot who have nothing in common except that they are all cranks and all confide their troubles or secrets to the hero. Here is material enough for your vulgar novelist, but not for Mr.

(Continued on page 746.)

BLACK'S GEOGRAPHIES

By J. B. REYNOLDS, B.A.

REGIONAL GEOGRAPHY.

Demy 8vo. Price 2s. each. Bound in cloth.

HORLICK'S MALTED MILK.

THE IDEAL FOOD DRINK FOR ALL AGES.

The wholesome nutrition of pure, rich milk and
choice malted grain, supplying strength and
vigour, with little tax on digestion. Delicious,
nourishing, and refreshing.

PREPARED IN A MOMENT WITH WATER. NO COOKING.

Used instead of tea, coffee, or cocoa at meals,
develops healthy bodies and clear brains. Equally
useful to the vigorous and the weak, the business
or professional man, the youth, the maid, the
mother, the child, or the infant.

An efficient corrective of insomnia,
taken hot before retiring.

In Glass Bottles, 1s, 2s, 11/-, at all Chemists and Stores.
Liberal Sample for trial free by post on request.

HORLICK'S MALTED MILK COMPANY,
SLOUGH, BUCKS, ENGLAND.

Lucas, who soon tires of London and goes off in the company of Mr. Cecil Sharp in quest of folk songs and dances. Even England soon bores him, and he flies to Rimini to find there the perfection of sea-bathing. But the sketches themselves are most of them of the first water, and who cares to examine the silk on which the pearls are strung? Most of them, we say, for we do not care greatly for the symposium of novelists—too close for our liking to life—but Mr. Lucas can make an original picture out of so threadbare a subject as the Derby and spin a detective yarn out of the stolen Leonardo of the Louvre. About the whole book there hangs a scent of lavender.

The Heather Moon. By C. N. and A. M. WILLIAMSON. (6s. Methuen.)

Mr. and Mrs. Williamson long ago established a close connexion between romance and motor-cars, and this is another of their pleasant, readable books combining a love story with the delights of a motor tour in Scotland. Barrie is a bright lovable heroine, a little tactless, as when she remarks before her widowed hostess "I suppose widows may talk as much as they like about love, having had it and passed it by," but that may be set down to her youth and curious upbringing. Mrs. West, however, does not forgive this artless remark, and her instinctive distrust of Barrie as a probable rival quickly deepens into dislike. Mrs. West's first marriage has been a failure, and she has set herself to capture Somerled the millionaire artist. She does not stick at a trifle in pursuing this quest, and she very nearly succeeds in wrecking Barrie's happiness. The attempted Scotch marriage is a little absurd to begin with and melodramatic in its ending. Barrie is so anxious to learn all about the places she sees by the way, and all the men are so eager to teach her, that the guide-book element is too prominent. But, on the whole, the information thus imparted is interesting.

Olivia Mary. By E. MARIA ALBANESI. (6s. Methuen.)

Mrs. Cheston is rather a disappointing person. It is continually impressed on us that there is much strength and power behind her fragile appearance and hesitating shyness, but we are never able to realize it; we only see there is a "dark mystery" behind. She shows, it is true, some stoical endurance in her relations with the Kurtiss brother and sister, who vie with Sylvia Ambrose in being insufferable. Isabel Matheson and her father are the only people with whom we are in sympathy, for Olivia Mary—the re-

iteration of the double name is irritating—has chiefly herself to thank for the very unpleasant position in which we leave her—a half willing slave to a son who, for all his previous spoiling, treats her with sheer brutality when his own interests are touched. The secret of the plot is well kept.

HORACE, ODES I, 9.

LO! gleaming white with piled snows,
Soracte stands; the forests strain
And groan beneath their burdened boughs,
And nipping frosts the streams enchain.
O thaw the cold! pile on the wood!
The hour admits not niggard hand;
Bring out, mine host, in generous mood,
That Sabine jar of four-year brand.
Leave to the gods the rest, who, when
The embattled winds have ceased to lash
The seas to rage, give peace again
To cypress and to ancient ash.
To-morrow's fate seek not to learn,
But aught the day may bring perchance
Set down as gain, nor lightly spurn
The joys of youth and love and dance.
Green youth to crabbèd age must yield;
Let lovers now, their troth repeating,
Whisper in moonlit close or field
At trysting hour their wonted greeting.
Now let the maiden's merry laugh
Betray in what coy nook she lingers,
While forfeit ring is snatched from half-
Reluctant arm or rebel fingers.

G. W. R.

From RALPH, HOLLAND & CO.'S LIST.

Business Geography.

By J. HAMILTON BIRRELL, M.A. Crown 8vo, cloth, 208 pp. (containing 50 Maps and Diagrams). 1s. 6d. net; post free, 1s. 9d.
"We thank Mr. Birrell for this excellent handbook, which is informing from beginning to end, and must be of very great service both to teachers and students of Commercial Geography."—*The Schoolmaster*.

"This practical and compact primer has much to commend it."—*The Athenæum*.

"We heartily recommend it for use in Supplementary, Higher Grade, and Secondary Schools, while for Continuation Classes and Business Colleges it should prove the book that has been long awaited."—*The Educational News*.

The Cambridge Modern History

Planned by the late Lord Acton, LL.D. Edited by A. W. Ward, Litt.D., P.B.A.; G. W. Prothero, Litt.D., F.B.A.; and Stanley Leathes, M.A., C.B.

Complete in 14 volumes. Royal 8vo. Bound in Buckram. Price £8. 15. 0 net.

"It is as a work of scientific accuracy and profundity that *The Cambridge Modern History* stands unrivalled. So far as truth can be ascertained by mortal men, so far as learned, impartial criticism can be final, we have them there." The recent publication of *The Cambridge Modern History Atlas* completes the work to which the Daily Telegraph gives such high praise, and of which the Westminster Gazette said "it is the most ambitious historical work ever contemplated."

A booklet giving a full description of the *History*, lists of the contributors and chapter headings, and further matter of interest, will be sent post free on receipt of a postcard addressed to M.H.P. at the address below.

The work may also be obtained in leather bindings in three styles, and until further notice orders will be accepted on the instalment plan, full particulars of which will be sent on application. The volumes are sold separately in the buckram binding at the following prices, viz.: Text volumes 16s net each, General Tables and Index 16s net, Atlas 25s net.

A Historical Work of First Importance.

THE GROUNDWORK OF BRITISH HISTORY.

BY

GEORGE TOWNSEND WARNER, M.A.,

Sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c.

AND

C. H. K. MARTEN, M.A.,

Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and full Index.

764 pp., super-crown 8vo, 6s. Also in Two Parts, 3s. 6d. each.

Mr. G. M. Trevelyan in the *Morning Post* says: "It is to be hoped that this book will be widely used in the upper and middle classes of our schools. The want of a good school history on a level with modern standards of historical knowledge and educational method is a very real want indeed. The present volume is neither dull nor vulgar. It is written by scholars and gentlemen, who are yet thoroughly modern in their conception of how history should be taught—a conception based on experience."

A GENERAL TEXTBOOK OF ELEMENTARY ALGEBRA.

Covering the ground of a School or ordinary College Course.

By **A. E. LAYNG, M.A.**, formerly Head Master of Stafford Grammar School. With or without Answers, **4s. 6d.**

. On the recommendation of very many influential teachers, this Algebra is issued now in two Parts, cloth, at **2s. 6d.** each.

Exercises only:—Exercises to Book I, **1s.** With Answers, **1s. 6d.** Exercises to Book II, **1s. 6d.** With Answers, **2s.**

A FIRST COURSE OF ALGEBRA.

Embodying Graphic and other Solutions and Applications to Arithmetic and Geometry, and forming a brief First Course.

By **A. E. LAYNG, M.A.** With or without Answers, **2s. 6d.**

ARITHMETIC.

By **A. E. LAYNG, M.A.**, formerly Scholar of Sidney Sussex College, Cambridge. Cloth, complete, **4s. 6d.** In Two Parts, **2s. 6d.** each.

Exercises only:—One Vol., complete, **2s. 6d.** Part I, 5,000 Examples, **1s.** Part II, 3,500 Examples, **1s. 6d.**

A NEW SPANISH READER

ON MODERN LINES.

Edited by **R. D. MONTEVERDE, B.A. (Madrid)**, Examiner to the London County Council; Lecturer at the Birkbeck College, West Ham Municipal Technical Institute, St. George's College, &c. **2s. 6d.**

Just published.

SCIENTIFIC METHOD.

ITS PHILOSOPHY AND ITS PRACTICE. By **F. W. WESTAWAY, B.A.** Super-crown 8vo, **6s.** *Just published.*

This résumé of philosophic principles and review of the development of Scientific Method should be found invaluable by all who are interested in the methodical procedure of scientific investigation.

WORDS: THEIR ORIGIN AND USE.

A Correlated Scheme of Spelling, Derivation, Reading, Dictation, and Composition.

By **F. W. CHAMBERS** and **A. J. KER.**
In Two Books, **8d.** each. Teachers' Books, **1s.** net each.

SYSTEMATIC INORGANIC CHEMISTRY from the Standpoint of the Periodic Law.

A TEXTBOOK FOR ADVANCED STUDENTS.

By **R. M. CAYEN, D.Sc.**, and **G. D. LANDER, D.Sc.** **6s.** net.

A TEXTBOOK OF ORGANIC CHEMISTRY.

English Translation from the German of **A. BERNTHSEN, Ph.D.**

New Edition.

FIRST ENGLISH EXERCISES.

By **FRANK JONES, B.A.**, Assistant Master, King Edward's School, Aston, Birmingham; Lecturer in English at the Birmingham and Midland Institute; Joint Author of Scott and Jones's "Latin Course." **1s. 6d.**

Reprinted from "A First English Course." For class use where the master prefers to give the grammatical exposition orally.

 Prospectuses giving full particulars of above books will be sent post free on application.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON.

GLASGOW AND BOMBAY.

METHUEN'S NEW SCHOOL BOOKS

A HANDBOOK OF PHYSICS.

By W. H. WHITE, M.A., B.Sc., A.R.C.Sc., Lecturer at the East London College and St. Mary's Hospital Medical School. Crown 8vo, 7s. 6d. [*Textbooks of Science.*]

This book traces the establishment of the Principles of Physics, and draws from modern everyday life abundant instances of their application, instead of giving detailed descriptions of time-honoured experiments. It amply covers the ground of the "Intermediate" Examinations of London and other British Universities. Paragraphs are marked to facilitate its use by medical students, and some prominence is given to physiological matters.

A SECOND YEAR COURSE OF ORGANIC CHEMISTRY FOR TECHNICAL INSTITUTES.

By F. B. T. THOLE, B.Sc., Lecturer in Organic Chemistry, East Ham Technical College. With Plates and Diagrams. Crown 8vo, 2s. 6d. [*Textbooks of Science.*]

This book forms Vol. II of a series designed to meet the requirements of students in technical institutes. It deals with that portion of the subject necessary for the second year student, and covers the syllabus for Stage II of the examination held by the Board of Education. It is hoped, however, that it will be found useful for those students taking the first year of their B.Sc. Course.

The book contains an account of the properties of the carbocyclic compounds, their general synthesis, and their utilization for industrial and scientific purposes. Questions of constitution and the chief reactions associated with this class of compound are fully discussed and carefully explained.

MODERN RESEARCH IN ORGANIC CHEMISTRY.

By F. G. POPE, B.Sc. (Lond.), F.C.S., Lecturer in Organic Chemistry. With 261 Diagrams. Crown 8vo, 7s. 6d. [*Textbooks of Science.*]

This volume is an attempt to bring, in a concise form, the development of some of the more important branches of organic chemistry before the chemical student. The results of the most recent research work are embodied in the text, and a bibliography is given at the end of each chapter, so that the student may be able to make use of current literature.

Volume I of a series of three. Volume III is also ready. A SHORT HISTORY OF EARLY ENGLAND.

To 1485. By H. J. CAPE, M.A., B.A., F.R.Hist.S., Head Master of the Mathematical School, Rochester. Crown 8vo, 2s. 6d.

The author has endeavoured to carry out the suggestions contained in two recent and most valuable Memoranda of the Board of Education. By limiting the space devoted to the less instructive reigns, it has been possible to treat at greater length the events of outstanding importance, while the great movements of history are discussed in their European bearing and not merely from the influence which they exercised upon our own country. It is, however, hoped that the book will satisfy the requirements of those who need a practical textbook for examination purposes.

STORIES FROM AMERICAN HISTORY.

By ALICE BIRKHEAD. With a Map. Crown 8vo, 1s. 6d. [*Stories from the Histories.*]

This is the third volume in "Stories from the Histories" and is uniform with the other volumes. American History is a romance of many-sided interest, and such a book as this will serve to prepare a way for a fuller study of its different phases.

STORIES FROM SCOTTISH HISTORY

By E. M. WILMOT-BUXTON. With a Map. Crown 8vo, 1s. 6d. [*Stories from the Histories.*]

This book is written in the same style as the other volumes in the series.

METHUEN & CO., Ltd., 36 Essex Street, London, W.C.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.

All Letters respecting Advertisements and Subscriptions should be addressed—
"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed. "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE TEACHING OF INSTRUMENTAL MUSIC.

By WILLIAM PLATT.

ALTHOUGH in the majority of schools some arrangement is made for the teaching of instrumental music, the subject is in so many respects a special one that probably few headmasters could boast of a technical command of it. Among head masters of public schools, I can only remember Dr. McClure, of Mill Hill, as having a musical degree. Therefore, while modern methods may be slowly, yet surely, invading the schoolroom, it will not be out of place to consider whether the music room has any corresponding advance to show.

I remember hearing many years ago a complaint from a teacher of music that the drudgery of learning was such that his more musical pupils could not stand it, and only those who had less sensitive ears plodded on! A more remarkable confession was surely never made by any teacher, and one is forced to wonder how far it was justified. Any trained educationist would reply at once that the method of teaching must be badly at fault; but the majority of music teachers have, unfortunately, no training in the general principles that underlie sound teaching.

Then, again, it is worthy of observation that when cultured amateurs are listening to music they tend to discuss "expression" as being the centre in which the soul of the music lies. Critics will prefer as a rule to use the wider but less concentrated word "interpretation" to denote that which they seek before all things in a player; but he who listens to the majority of music teachers will hear them discuss "time," "fingering," "runs," "left-hand work," as if the sole art of teaching music consisted in the production of a living rival to the pianola! After that, one is not so surprised to find that the girl applauded by her music teacher can often so successfully bore every listener in the drawing-room.

I once had a pupil sent to me whom I knew to be artistic in temperament. She brought me her three latest pieces; two of them I saw to be so tiresomely valueless that I did not ask

her to play them to me; the third was a French Romance pretty and gracefully emotional. She played this to me without a vestige of expression, so I straightway sat down and played it to her as its Southern composer had intended it should be played—that is to say, with plenty of vibrant feeling. When I had finished I was astonished to hear her cry out enthusiastically, "What a beautiful piece it is!" She had learnt to play without having the least idea that it could be, or should be, made beautiful! What singular logic it is that makes the playing of two or three wrong notes a grave error, yet takes no blame to itself if every note in the piece is played wrongly! The girl in question soon developed a very charming expressive style, and was able to render such pieces as the Adagio from Beethoven's "Sonata Pathétique" with real taste and feeling.

Nor is this an isolated instance; if space permitted, I could cite many others. Many a girl is called unmusical when in sober fact she is really dulled by the conscientious banalities of her teacher. Most children love expression: it appeals strongly to their dramatic side. Wake them up to the expressive possibilities of a piece, and they will play it with a zest that no other means will make them show. Light and shade should be taught as soon as possible—that is to say, as soon as the child has grasped the rudiments and begins to get some control of its fingers. After that, he, or more probably she, should never be allowed to play inexpressively. She should also always be consulted as to the emotion of the piece. "What shall we make of this? What does this express?" the pupil should always be asked. Even if she is content at first to follow her teacher's expression, she should be taught to listen for expressive values, to delight in them as in the very essence of the music. Nor should these values ever be stereotyped: it should be an axiom that the best player never plays the same piece twice alike. And the true teacher should indeed treasure every little expressive touch which is the pupil's very own.

It will doubtless be asked what place the usual "finger exercises" would take in such a scheme. The plain answer is that a well-chosen piece provides the very best of finger exercises, especially for the young player. The concert player may be left to choose whatever he finds best for his particular style; the learner will be very liable to contract from finger exercises the grave faults of an inexpressive touch and a cramped action of the hand. Such a piece as Beethoven's Variations in G provides the best possible exercise while being all the while living music. It has great variety of expression; it has arpeggios in one variation, trills in another, scale passages in another, counterpoint in another; the pupil needs nothing better than this. Nor is it the only classic piece to provide such material.

The sound teacher must choose with the greatest care the pieces which he gives to his pupil, and they must all be *music*. Nothing but the best is good enough. Intelligent lads and lasses, who enjoy Shakespeare in their English class and Molière and Daudet in their French class, are not to be spoon-fed in music time upon some fourth-rate composer's teaching-gruel. And this consideration brings me to a very weighty aspect of my subject, and one that receives far too little attention. I have in my hand at the present moment the music set by the Associated Board of the Royal Academy of Music and Royal College of Music for their School Examinations (Higher Division, List B). Music thus selected by our two leading Academies is specially printed in a book by itself, and is adopted by teachers all over the country as their standard teaching material. What, then, is its artistic value?

The book contains four compositions, of which two are "studies" and two are "pieces." For the benefit of the uninitiated I ought to explain that, while occasionally a "study" will possess real artistic value, yet for the most part studies bear much the same relation to true music as "Around the rugged rocks" bears to "Tiger, tiger, burning bright." The first study in the book, that of Berens in C, is a technical exercise, and as such should not, I maintain, find its way into the examination room. The examiner's business is to find out what the student can do with his technique—that is to say,

what he can interpret; to examine upon the basis of such studies as this is to confuse dexterity with music; to encourage the utterly inartistic idea, already too prevalent with music teachers, that finger-gymnastics have a value of their own apart from what they can accomplish, just as if a steam-engine would be any good if unconnected with anything tangible to drive!

The second study, Heller in A minor, has rather more variety and a little more music in it, but is essentially of the kind that "never would be missed." The first of the two "pieces" is by Bach, one of the giants of our art: and for that I suppose we should be truly thankful. Yet, though it is admirable to choose Bach, I doubt if this particular piece is admirably chosen. Despite its strength and dignity (qualities seldom lacking in its author), it is far from being in the first rank of its composer's work; but we must be thankful that Bach was chosen at all.

With two studies and one dignified Old Master, the last piece was almost bound to be something with modern warmth of expression; then with what disappointment we turn to Horváth's "Spanish Serenade," a shallow, meretricious production which owes its best idea to Grieg. Surely the Academy or College must have some student who can turn out better than this kind of tinsel? The mistakes in musical grammar, which occur in the 10th, 13th, 17th, 23rd, 25th, and 49th bars, would not much matter if the piece had any vitality; but it has none, and I pity those who have to labour at it.

It must be a disappointment to all who love music to find that, out of the fourteen pages of this book, issued on the authority of our two chief teaching bodies, twelve pages belong to the scrap-heap and only two pages are music at all. It is a disappointment to find everywhere teachers whose one idea of pianoforte playing is fluent rapidity, who can neither play nor teach their pupils to play any slow movement with intelligence or expression. It is a disappointment to hear a certificated player and teacher apologize for putting "too much feeling" into a grandly beautiful Beethoven Largo when truly she had put into it far too little. It is a disappointment to hear a teacher boast that it is her method to put twenty girls to twenty pianofortes all in one room at one time, making them play the same piece all together, and to be told that this is done at a large provincial Academy of Music. And yet, strangely enough, despite all this, I am an optimist. Because, after all, it is not the schools, academies, or teachers that do the best of the music teaching anywhere; it is the great masters, and they have a wonderful way of finding out their own. Loving eyes bend over the music, loving hands play it tenderly, despite all errors and imperfections. Mozart is teaching many a one, Schubert many another. And above all and beyond all towers the mighty figure of Beethoven, leading into his magic kingdom of purified emotion all those who have thrilled at his poignant call.

SPELLING AND THE STAGE.

A TALK WITH MR. WILLIAM ARCHER.

THREE years ago *The Journal of Education* had an interview with Mr. Archer in regard to the plans of the Simplified Spelling Society, of which he was Secretary. At that time the proposals were somewhat nebulous—a few prunings here and there of anomalies and excrescences; nothing more. But there were hints in the conversation that a full scheme would one day be submitted. That day has come. A complete program for the reform of the current spelling and the release of those golden hours that are spent in teaching word-whims is now submitted for open, frank discussion. It has received the general approval of Prof. Gilbert Murray, of Prof. Skeat, of Vice-Chancellor Michael Sadler, to choose at random from a distinguished list of names; while Sir William Ramsay has definitely decided to use what he calls the worthier instrument of this "nyu speling." Lectures are being given up and down the country; local branches are

in process of formation; a monthly journal, the *Pioneer*, is issued with spellings according to the new system; articles are appearing in the press, not alone of the United Kingdom, but of other lands; and altogether a more effective challenge than ever before is hurled against the citadel of conventional spelling.

There is food for the humorist in the fact that the offices of the Society face the British Museum. I believe the situation has already been hit off in the name of one of Landseer's pictures. Mr. Archer is a chief apostle of the new movement, or, more strictly, an old movement in a new dress. He is, of course, accused of sacrilege, and a thousand voices cry out that the vessels of the altar shall never be flung into the melting-pot. But those who know how eminently sane and sincere a man the missionary is will prefer that he should speak for himself.

"This new scheme," he said, handing me the document, "is submitted as a suggested way of escape from the jungle of our present spelling. We do not ask our members to accept every detail in the manner of verbal inspirationists. Membership of the Society bespeaks sympathy with the general movement for reform, not necessarily with this particular scheme. What we want is to arouse thought and interest. The logic for reform is irresistible; the educationist is with us in urging revision of the current values, and the great philologists are our best allies.

"We have submitted a full—and, in the opinion of many, a much too radical—scheme because we feel that at bottom the problem is a problem for the elementary schools. On an average a year of each child's school life is wasted in learning will-o'-the-wisp word-forms. Think of the loss this means to the nation when multiplied ten times ten thousandfold. The study of the mother-tongue has become a living thing at the present day, but yet we make difficult by the retention of the current spelling what ought to be a smooth and easy way into our noble literature. Moreover, the child-reason suffers: it cannot proceed from 'plough' to 'cough,' from 'height' to 'weight'—it has to take on authority the very matters it ought to be able to set down of its own searching. How are we to give these children relief? By merely reforming a few of the more outrageous spellings? This is something, and we do not discourage it; but the true simplification is to make the spelling a delight, to make it rational and consistent. In the name of these thousands of children we submit our scheme.* It is thoroughgoing, I know, though not sufficiently so to satisfy the phoneticians. We have kept within the limits of the present alphabet, following the line of least disturbance; these limitations account for any awkwardnesses in the notations we have chosen, but we wanted to retain as much of the old as ever we could, consistently, of course, with giving a real measure of relief to the children. We ask educationists to discuss the scheme, to criticize it and improve it, to help us in appealing to the Government for a Commission of Inquiry."

"And when did you first take up the cause of spelling reform, Mr. Archer? What was the manner of your conversion?"

"It is many years ago now, and like most origins, somewhat dim. In 1901, I think it was, Mr. Bernard Shaw disputed with me on a point of policy. We were at one as to the need

for reform, but Mr. Shaw advocated, as I believe he does today, the adoption of a complete phonetic alphabet. I argued then, as I argue now, that such an instrument of precision could be used only by trained phoneticians, and that to encourage every one to reproduce his own pronunciation in the minutest detail would lead to all sorts of divergences of dialect. A certain standard must be accepted. We cannot all write just as we speak; but the standard may easily be fifty times nearer than the current spelling to the speech of all of us. My friend, Prof. Brander Matthews, reawakened my interest in the subject when the American Simplified Spelling Board was initiated, and when Prof. Skeat and Dr. Furnivall founded the Simplified Spelling Society in this country I became secretary."

I intruded a pessimistic note. Reformers of the written word have sprung up, wrought at their task, and died without leaving an excrescence the less. So many failures, can there be any promise of success now?

"You must remember that phonetics are being taught in our schools. Children are educated to hear and understand the sounds of the language. Before long there will grow up a generation to which the present forms of spelling are no longer sacred. Reform must come: we believe it is worth while to expedite it and restore to the child the year lost amid the dust and weariness of spelling lessons. In the struggle for commercial supremacy, we cannot afford to waste school-time on what positively injures the young mind, inasmuch as the current spelling laughs reason to scorn."

Mr. Archer pointed out other signs of daybreak. The public mind is less averse to change than was the case twenty or thirty years ago. Speaking generally, the press takes up a kindlier attitude; and, above all, teachers—the real masters of the situation—deeply feel the need for revision.

It was time to turn to another theme. I wondered if the cause of "clean spelling" was in any way associated with the health of the drama.

"Not definitely, I fear. But, of course, anything that tends to make people give more attention to the sounds they utter will have the effect of purifying the speech of the stage. 'Clean spelling,' as our Treasurer, Prof. Rippmann, puts it, will conduce to 'clear speech.' Incidentally, one may mention that 'G. B. S.' fixed upon the speech of Queen Victoria as the best standard, but now Mr. Forbes Robertson is his model. I, as a Scotsman, agree."

As idle a task were it to have kept Don Quixote at home as to keep the Censor and the Censorship (which Mr. Archer has compared to Rozinante) out of our conversation.

"While it is the office mainly upon which we wage war, we do feel that the present occupant is specially undesirable. The author of 'Dear Old Charley' should not hold the blue pencil. It is probable that a petition may be presented to the King. His Majesty cannot, of course, abolish the Censorship, but he has control over the servants of his household."

"The music-hall may react on the theatre and prove a bane?" I suggested.

Mr. Archer understood the question. It was free from commercial reference and merely bespoke anxiety for the true life of the drama. The reply was lighted up with optimism. "We shall see presently that the drama is at present too healthy a child to cause alarm to its guardians. Unnatural restrictions there are, Mr. Brookfield not the least of them. They must be cleared away; in fact, the wine of renewed youth is bursting the old skins. The strength of the feeling against the Censorship is a sign that the drama is attaining real power and cannot bear the galling restriction which is placed upon all serious work. New writers are springing up with a message from life and skill to tell it. When a repertory theatre opens in a provincial centre, writers begin to illustrate in the drama the life of that city. I may quote Manchester and Glasgow."

I interpolated the name of Miss Sowerby, and Mr. Archer emphasized that "the remarkable play" which has made her famous is full of local colour. "The drama is getting close to life."

The tide of optimism swept on. "There is no need for

* The Scheme in brief :—

we	mi	tho	thru	dyu	
joi	mount	curl	sister		

(It will be seen that *ee, ie, oe, uu, yue* may be reduced before another vowel or finally.)

lamentation about the present condition of the drama. Mr. Brookfield stands condemned by the fact that he has openly avowed his blindness to the new light and life which is everywhere about him."

We turned to the Irish players. They stand in exposition of Mr. Archer's hopeful words. They gave a further text, too, on which to speak of the futility of a Censor. In Ireland there is no preliminary censorship. The police may, of course, take proceedings to sweep the stage clean of anything indecent and offensive. It is the right of the law to deal with smeared literature. "As a piece of writing," said Mr. Archer, "Synge's 'Play-boy' is a masterpiece. And yet I can understand an Irishman's hissing it. If I were an Irishman I think I should do so myself."

"And now as to the cinematograph," I interrogated; "may not its popularity be inimical to the drama?"

"I do not see how the cinematograph at its best can contribute to dramatic education. It is in a separate class. The 'kinema' does, of course, help to steal audiences from the theatres, and thereby exercises a commercial influence. To my mind the cinematograph can be made a very powerful instrument of popular education. At present the instrument is, for the most part, put to very trivial use. It is the tool of foolish farce and cheap sentimentalism. Just as it is the business of society to organize theatres and keep them worthy, so I feel the cinematograph must by public action be saved from vulgar and trivial ends. But the whole question is scarcely relevant to the drama."

Again we came to talk of the crusade for the simplification of spelling. Mr. Archer is full of zeal in this matter. He has given no end of time and energy to propaganda. What is the real underlying motive of it all—"the anthracite at the centre," as Lord Rosebery would say? The claims of reason, naturally; Mr. Archer likes best to speak of "Rational Spelling." But more: there are the claims of the children. Other subjects—if, indeed, spelling can be called a subject—must wait. I agree with Mr. Archer. On a grand national scale we are flinging a child's privileges into the dust. Educationists are not unaware of this. Vice-Chancellor Sadler (of Leeds), Principal Sir James Donaldson (of St. Andrews), Miss Burstall, M.A. (of the Manchester High School for Girls), are distinguished supporters of the Simplified Spelling Society.

The appeal of peace is here placed last, that it may the less readily be forgotten. Mr. Archer's words haunt one: "By rendering English more accessible to foreigners we shall help to break down what is really the great barrier to mutual understanding—namely, the linguistic barrier. Peace has its roots in language."

SYDNEY WALTON.

MR. SADLER ON DOMESTIC SCIENCE TEACHING.

THE Vice-Chancellor of Leeds University (Mr. M. E. Sadler) gave an address on Monday, October 14, at the distribution of Diplomas to students of the Yorkshire Training School of Cookery, at the Albert Hall, Leeds. After referring to the high reputation of the Training School and to the work which it had done since its establishment in 1874, he said that, on the side of scientific method, the University had for a long time been closely associated with it through the long-sustained interest and co-operation of Prof. Smithells and Mr. Calam. The trend of educational thought made the practical study of domestic science a factor of increasing importance both in elementary and secondary schools.

The President of the Board of Education had recently referred the subject of practical work in secondary schools to the Consultative Committee for inquiry and report, thereby showing that such studies as the training school fostered were regarded as increasingly important in higher as well as in elementary education. During the next ten years there would probably be a great development of continuation schools, in many of which an important place would be taken by courses in domestic science. The Universities (Leeds and London leading the way) were already co-operating in the work of training teachers of domestic science, and he hoped that scientific research into the values and economic aspects of foodstuffs would have in future a more conspicuous place among the activities of the Universities.

In view of the steady rise in the status of the study of domestic science in national education, the preliminary training of girls who intended to prepare themselves to be teachers of the subject was receiving increased attention. A liberal education, gained by a prolonged course of study in a secondary school, was likely to become indispensable as a preparation for the technical and scientific training through which the intending teachers had to pass. Parents who had this branch of the teaching profession in view for their daughters would be well advised in securing for them the general intellectual training which was given by the full course of a good secondary school. Addressing the students, Mr. Sadler said that they were going to take their place in a great profession now about to organize itself, with the sanction of the State, upon a large plan, and with increasing opportunities of public service.

In conclusion Mr. Sadler said that Leeds was rapidly becoming one of the great centres of English education. Its elementary schools, the special schools, the trade schools, the evening classes, the secondary schools, the Technical School, the School of Art, the Yorkshire Training School of Domestic Economy, the City Training College at Headingley, and the University formed an array of institutions which were recognized throughout the country and by visitors from other lands as one of the distinctive marks of the city. He hoped therefore that the time was not distant when the City Education Committee would be in a position to give further efficiency and distinction to the educational system of Leeds by furnishing the Yorkshire Training School of Domestic Economy with buildings more in consonance with its educational possibilities, and better adjusted to its opportunities of extended service.

REVIEWS AND MINOR NOTICES.

"The Loeb Classical Library." Edited by T. E. PAGE and W. H. D. ROUSE.—(1) *The Apostolic Fathers*. Vol. I. By KIRSOPP LAKE. (2) *The Confessions of St. Augustine*. By W. WATTS. 2 vols. (3) *Euripides*. By A. S. WAY. Vols. I and II. (4) *Philostratus, the Life of Apollonius of Tyana*. By F. C. CONYBEARE. 2 vols. (5) *Propertius*. By H. E. BUTLER. 1 vol. (6) *Terence*. By JOHN SARGEANT. 2 vols. (Each volume 5s. net. Heinemann.)

Mr. James Loeb has undertaken a Herculean labour, beside which "Bohn's Classical Library" sinks into insignificance, and which can only compare with that monument of Bollandist erudition, the "Acta Sanctorum," now in its sixty-third volume. The scheme, if realized, will give us all that is worth preserving of Greek and Latin literature from the Homeric poems to the Fall of Constantinople, and that not in cumbrous folios like the "Acta," but in dainty pocket volumes, text and translation facing each other, appealing equally to the learned and the layman. We may doubt whether one aspiration of the editors will ever be realized—whether the lay reader of these translations will "turn to the page opposite to hear the true sound of those voices of the past" and read in the original the literature "which is the foundation of all modern culture." It is true that there were "Suffragists in Athens and land agitators in Rome"; but we doubt whether a study of the "Ecclesiastusae" or of Pliny's "Letters" would have affected Mr. Lloyd George's politics, and there is as much truth in Bismarck's saying that Russian is quite as difficult as Greek and far more useful as in Gladstone's that ancient culture is the best instrument for the performance of the greatest functions of life. Greek must become more and more an *εγκαλλώπισμα πλούτου*, and there is all the more need for busy men of adequate translations such as are here offered.

The first instalment of ten volumes reveals the most formidable difficulty that confronts the editors. Of the great masterpieces of antiquity we have already excellent versions—versions that will doubtless be superseded, for in translation there is no finality, and each age needs its own interpreter, but the best that this generation can produce. But most of these are copyright, and it is only the failures or partial failures that can be secured for the "Library." In the list of further volumes we are relieved to find no announcement of yet another translation of Homer and Virgil, and we cannot welcome the hundredth version of Horace's "Odes." It is

regrettable, but perhaps unavoidable when the field is so vast, that two scholars should have employed themselves on the "Life of Apollonius" and on a prose version of "Propertius."

One more general remark. We hope that in future volumes the editors will condescend more to enlighten the ignorance of the general reader. If ever a book needed a full introduction it is "The Confessions of St. Augustine." The index to "Propertius," which is much more than an index, gives just the help that is essential for the non-classical reader.

The so-called "Apostolic Fathers" have been often translated, but for theologians they can never lose their interest. They are our sole external evidence for determining the dates of New Testament writings and the main authority for the constitution of the primitive Church. Prof. Lake does not concern himself with either of these aspects, and the name of Bishop Lightfoot is hardly mentioned. As to dates, his conclusions are that Clement I, the third or fourth Bishop of Rome, was probably a slave or freed man of the Flavian family, and wrote in the last decade of the first century, and that Clement II wrote *circa* 150 A.D.; but whether he was a Roman, a Corinthian, or Alexandrian is left an open question. The "Didache" he puts early in the second century, though the "Two Ways," which it embodies, is earlier. But, apart from these questions that to the theologian are fundamental, there is much in the volume to attract the layman. Clement I relates the story of the phoenix in all good faith as a testimony to the resurrection. In Clement II we find the cryptic utterance of Jesus that the millennium would come "when the two shall be one, and the outside as the inside, and the male with the female neither male nor female." The appeal of Ignatius to the Romans not to try to save him from martyrdom is sublimated stoicism: he will wheedle the wild beasts and force them to tear him limb from limb. Even then we see the Pope in embryo. The Romans are bidden to regard their Bishop "even as our Lord Himself," and the Epistle of Barnabas, which was nearly admitted to the canon of the New Testament, beggars the typical interpretations of the Old Testament to be found in Browning's "Christmas Eve." The 118 circumcised members of Abraham's family = IHT, the Greek letters, and prefigure Jesus on the Cross. The interpretation of the tabooed animals of Leviticus has to be conveyed under the decent veil of Latin.

We have not been able to consult the Rev. E. Berwick's version of 1811, and may take Prof. Phillimore's* word for it as utterly untrustworthy, but have compared pretty carefully the two simultaneous versions, and our judgment is that, while both are trustworthy, Prof. Phillimore's is the more racy and readable. The following parallels are taken from the opening pages:—

C.—The life of A. of T.

C.—For that he would not stain the altars with blood nay, rather the honey-cake and frankincense and the hymn of praise; these, they say, were the offerings made to the gods by this man.

C.—The swans set up a dance around her.

C.—[Young eagles] as soon as they are able to rise in the air outsoar the parent birds, especially when they perceive the latter to be greedy and to be flying along the ground in order to snuff the quarry.

Ph.—The honour of A. of T.

Ph.—"Make not your altars bloody," he would say. A honey-cake, an incense of gums, a chanting of psalms—such were the offerings that this man rendered to the gods.

Ph.—Formed themselves in a choir around her.

Ph.—Outfly the old birds, especially if they observe in them a lickerish appetite and an inclination for low, earthly flutterings around savoury fleshpots.

On page 6 we think Mr. Conybeare is right in making Plato's own doctrines the rough sketch and what he learnt in Egypt the added colour, not *vice versa*; and "Founder's kin," "the Goat's rivers," are not improvements on "the first settlers," "Aegospotami."

We have chosen for comment the two least familiar of the

authors translated. Mr. Way's version of Euripides is already well known. In brilliance he cannot compete with Prof. Murray, but he takes fewer liberties with the text. Prof. H. E. Butler's "Propertius" is as good as prose version can be. Nothing but verse could do justice to the final elegy, but we may quote as a model prose rendering the concluding lines:

My pleading is accomplished; rise, ye my witnesses that weep my loss, and wait Earth's kindly sentence that shall give the reward my life hath earned. Even heaven hath unbarred its gates to virtue; may my merit win its guerdon and my ashes be borne to dwell with my glorious ancestors!

Mr. Sargeant's "Terence" we must reserve for future notice.

(1) *History of English Literature from "Beowulf" to Swinburne*. By ANDREW LANG. (6s. Longmans.)

(2) *A First Sketch of English Literature*. By Prof. HENRY MORLEY. New and enlarged edition with a Supplement bringing the work down to the deaths of Swinburne and Meredith. (7s. 6d. net. Cassell.)

It is not easy to treat with perfect candour the work of an author so recently departed, and reviewers who received the book almost on the day of his death followed perforce the Latin adage, as it is vulgarly interpreted, and said nothing but good of the dead. Fortunately this could be done without any *suppressio veri* or straining of conscience; the merits were so many and conspicuous and the flaws so few and venial. The interval that has elapsed since his death, though it has not lessened our regret for the loss of our most accomplished man of letters, permits us to criticize his latest work with the freedom and outspokenness that he himself would have desired.

We have coupled with it what may well serve as a standard of comparison, a History of Literature of established fame, that reached us almost simultaneously. The Supplement brings it up to date and we naturally turned to the notice of Andrew Lang:—"A voluminous and versatile writer who has distinguished himself as translator of Homer, as historian of Scotland, as an editor of fairy tales, as an authority on totems, as a biographer and a critic."

In the limited space it would not be easy to improve on this, but suppose the tables turned—Andrew Lang writing on Henry Morley—we should have had some personal note, some touch of colour, been told that he devilled for Dickens, was an Extension Lecturer and lectured without a note, or that he was the antipodes of his namesake Lord Morley.

We may select for comparison, somewhat *ad aperturam libri*, Donne, a literary Dr. Jekyll and Mr. Hyde, fully treated in both Histories. A précis of Mr. Lang's account would run thus:—"Donne, John: an unreadable poet with an astounding but perverted wit; in youth a Lothario whose amatory poems combine all the vices of Horace, Martial, and Byron; a cleric who took orders to please the King and help his own poor estate; and whose late repentance, though sincere, only half redeems his fame." Thus reduced to a skeleton the account seems a gross caricature, but as clothed by Mr. Lang we may indeed complain that it is a very partial portrait, but we cannot help admiring the art and skill of a literary Sargeant. Of the two Anniversary Poems we read: "There seemed reason to fear that Donne would celebrate Miss Drury, whom he had never seen, once a year while his life endured." We learn that Donne condemned angling as a cruel sport and that he was a telepathist, though his claim to the title is not allowed by Psychical Research. "Happily his metaphysical style did not affect Lovelace and Herrick." How it affected Francis Thompson (not included) would be more to the point. The capping instance of his badness as a versifier is the rime of "yet" and "spirit," but we need the context to determine the heinousness of the offence. Did not Tennyson in a mature poem make "hair" rime with "her"? So what is allowed to be a good line "the pure and innocent face Spoke in her cheeks" is marred by a misprint ("on" for "in") and by not completing the second line "and so distinctly wrought That one might almost say her body thought." Sir John More, Lieutenant of the

* "Philostratus in honour of Apollonius of Tyana." Translated by J. S. Phillimore. 2 vols. (7s. net. Clarendon Press.)

Tower, should be "Sir George." These are slight flaws and only show that the book had not received the author's final revision. On the very next page we find

that horrid one

Beginning *ardebat formosum pastor Corydon*—

a line that Byron, lax metricist as he was, could never have perpetrated. That Donne was Dean of St. Paul's and the most famous preacher of his day is not thought worthy of mention. It would be tedious to pursue the parallel. Suffice it to say that Morley gives a more impartial but colourless account of the metaphysical divine and poet, softening the shadows and bringing out the high lights.

Mr. Lang warns us in his Preface not to look for an encyclopædia, and, as in an up-to-date school map, we may count it to him for righteousness that the number of names is reduced. His list of authors does not reach five hundred. Under A, in Morley, we find Lord Acton, Ainger, Akenside, Alison, Allingham, Aneurin, Anselm, Arnold (Sir Edwin and Thomas), T. Ashe, besides many minor authors, all absent from Lang. We doubt whether Mr. Edmunds, whose Supplement is as sound and scholarly as the body of the work, was well advised in including living authors. The two works are, in fact, disparate, and, as we should advise a student of history to read Green's "History of the English People" (here pronounced "acro-cornithian") and supplement it with Franck Bright, so would we have him use Lang and Morley.

We chose for a special purpose the account of Donne, but it would be most unfair to take this as a sample of Mr. Lang's work. Whenever Mr. Lang's sympathies are engaged he is inimitable, and has the rare gift of inspiring the enthusiasm that he himself feels. So it is with Dr. Johnson, with Fielding, with Jane Austen, and, above all, with his beloved Sir Walter Scott. Macaulay in a casual *boutade* abused his hero, and Mr. Lang shows that he too can "dust the varlet's jacket."

We have often had occasion to complain that in English histories literature is ignored, and Mr. Lang is likewise open to the charge of disregarding literature, if not history, the philosophy of history, and with it all philosophy and science. Of recent historians, "Hallam is the one who will last best." Seeley, Maine, and Maitland are not mentioned. Prescott and Motley have four pages between them, while Darwin, Huxley, and Herbert Spencer are polished off in less than half a page. Dr. Arnold was something more than the father of Matthew, and "Ouida" and Miss Braddon might well step aside for Blake and Clough. For a second edition, which is sure to be shortly required, we might add to the errata that the quotation on page 585 is not from Tacitus, but an incorrect version of an epitaph by Shenstone; that Johnson's biographer was James, not Alexander, Boswell; that Wordsworth's college at Cambridge was St. John's, not Trinity.

In the last words of the Preface we have "a dying fall": "Through much reading and writing they that look out of window are darkened, and errors come"; but the light of genius shines clear to the end.

The Outlines of Educational Psychology. By WILLIAM HENRY PYLE, Ph.D. (1 dol. 25 c. Baltimore: Warwick & York.)

One is surprised at the first sentence in the preface: "The fact that we have had no general textbook in educational psychology has led to the preparation of this book." On this side of the Atlantic it cannot be said that such books are lacking, and Prof. Welton's excellent work, that preceded the present volume by some seven months, rather marks the end of the period during which a general textbook on this subject was necessary. Future writers, we expect, will be called upon to confine themselves to the working up of some special department. Perhaps we cannot blame Dr. Pyle for not referring to Prof. Welton's "Psychology of Education"—there was hardly time—but it is disconcerting to find that Instincts are fully treated in this volume, yet the long list of references at the end of the chapter includes no mention of Dr. McDougall's work. Similarly, Suggestion and Contrariance are

treated with no reference to Mr. Keatinge, who has made this subject peculiarly his own. If Americans expect to be read on this side, they should treat the field of English-writing people as one.

In itself the book amply justifies its claim to a place among the textbooks. The selection of subjects is quite different from that of the older type of book. After treating of Body and Mind and Heredity, the author proceeds to deal at some length with Instincts, classing them in different chapters as individualistic, social, environmental, and adaptive, the last including play and imitation. Habit gets three chapters, including its relation to moral training. Memory and Attention get a chapter each, and a short section on Fatigue ends the volume. Anyone who wishes to get the full benefit of the book should have a good teacher to fall back upon. In itself the text is not difficult, though it is deliberately written as an outline to be elaborated by teacher and students. Condensed as it is, the text reads well and is quite clear (though in his second edition Dr. Pyle, in the interests of his less fortunate readers, should expand his treatment of the four types on page 228). It is in the treatment of the exercises that the great difficulty will be found. After the fashion of the more recent American textbooks on this subject, each chapter is followed by a set of questions as well as by a full set of references for further reading. The references to American authors seem very good, and if French and German writers are poorly represented that is probably because the ordinary student cannot be expected to give the time that such references would imply.

It is the questions, however, that concern the teacher most. Of these there are between twenty and thirty at the end of each chapter. They are of very unequal interest and value, but this is not only unavoidable but actually an advantage to the practical teacher, who knows only too well that he needs all sorts of questions to meet the needs of a large class. There is a grim sort of retaliation implied in the author's note that "the questions, for the most part, are selected from those asked by my students when the matter of this book was presented to them in class." This probably accounts for the fact that so many of them are unanswerable. Here, again, we must not be understood to be raising an objection; what is wanted is to stir the students to thought, and many of these insoluble problems are very well suited to this end. Very frequently nothing more is involved than a bit of introspective work so arranged that it can be tested. Occasionally the question becomes very intimate, as in "Did you ever want to kill anybody? Did you ever plan to do so?" In such cases we suspect that the main value of the exercise will be the subjective effect; but this effect is in itself very valuable. Many of the questions are quite elaborate, but when this is the case they are broken up into sections, so that even the duller students may benefit by them.

The questions certainly form the most original part of the book, which is only what is to be expected when we are dealing with a volume intended to be put into the hands of students; yet even in the exposition of the subject the author is individual. It will be noticed that in the subjects treated there is no mention of what bulks so largely in most textbooks, the Will. Somewhere between Habit and Attention the Will has disappeared. There is no Ego at the beginning of the book, and no Will at the end. Dr. Pyle does not proclaim himself either as a materialist or a determinist; but in his treatment of Attention it is quite plain that he adopts as a working hypothesis the determinist position. If Attention is "only the clearness aspect of conscious processes," there is no room for subjective control. Dr. Pyle makes it quite clear that he understands the crudeness of speaking about Attention as the work of some sort of arbiter that seizes certain conscious processes and lets others go; but he makes the frank statement, "We can, however, now, since we know what we mean, continue to use the language of everyday life and say that we attend to this or that." Whether we will or not, we are all driven back to this practice, though we are not all so honest as Dr. Pyle in admitting it. Sooner or later "the arbiter" is assumed, once at least, to get over an other-

wise impassable gulf. Munsterberg's "subjective control" begs the arbiter when it is described as "taking the control of our destiny out of the hands of a changing environment and putting it within ourselves." With this begging of the question every honest educator must have a good deal of sympathy. Why should he be called upon to settle the most fundamental problem in philosophy before he can begin his work? With this view Dr. Pyle appears himself to agree, for at an earlier stage, in dealing with Consciousness, he says: "We need not concern ourselves in this book with the metaphysical question whether Consciousness is a causal element in the physical series. This makes no difference to education." Here we at least are willing to follow our author, and, since "the arbiter" thrusts himself to the front every time the determinist tries to describe the problem of control, we may claim that here too it "makes no difference to education."

Military Architecture in England during the Middle Ages. By A. HAMILTON THOMPSON. (7s. 6d. net. Oxford University Press.)

This book may be heartily recommended to all who take an interest in the past. Those who regard castles only as picturesque ruins will find in it a large number of admirable photographs which make it worth having as a mere picture-book; and these are supplemented by sketches and plans, mainly the work of the author, but also borrowed from Clark, Viollet-le-Duc, and other sources. Those who care to study the letterpress closely will find themselves well rewarded. It requires some effort, for the information in it is closely packed, but it is very well arranged. The author's object is not to describe individual castles one after another, but to explain and illustrate the development of castle-building in England. He deals with the subject in its historical connexion, and as each new feature presents itself his store of knowledge enables him to give apt examples from many different places. He has added a bibliography which contains a long list of special monographs.

On the vexed question of the Saxon *burh*, Mr. Thompson does not follow Mr. G. T. Clark in identifying it with the Norman castle. He finds the weight of evidence entirely on the side of Mrs. Armitage and other recent investigators who have challenged that theory. He quotes from Domesday the expression "Burgum circa castellum," showing that they were not two names for the same thing. His general conclusions are: (1) The castle was a foreign importation into England, of the period of the Norman conquest. (2) It consisted, in its simplest form, of a moated mount or *motte*, with a bailey or base-court attached. (3) Its earliest fortifications were entirely of timber, save in rare instances. Such mounts are pictured in the Bayeux tapestry, finished or in course of construction (Hastings). Symbolizing the dominion of the feudal lord, they came to bear the name *domgio*, which became in French, *donjon*, and in English, "dungeon." Though the majority were of wood at first, there were exceptions; several English castles, e.g., London and Colchester, have stonework of the period of the Conquest.

A chapter is devoted to the progress of attack and defence, which reacts so much on the art of fortification, and the references to contemporary chronicles will be found useful. The Crusades had a marked effect both on siegecraft and on castle building, for the methods of the East were far in advance of those of the West. Similarly, France was in advance of England. The Edwardian castles in Wales, fine examples as they are, fall short of Carcassonne and Coucy. The development of the castle was checked by the advent of gunpowder, and in the fifteenth century its powers of resistance began to be secondary to its convenience as a residence. Tattershall, of which we have heard so much lately, is an example of this period, and so is Hurstmonceux:—

An unrivalled opportunity for studying the progress of the castle in England is provided by a comparison of Hurstmonceux with its neighbours at Pevensey and Bodiam. Pevensey, taking us back, in its outer circuit, to the Roman era, is, so far as the actual castle area is concerned, a Norman mount-and-bailey stronghold, with stone fortifications chiefly of the thirteenth century. Bodiam represents one of the

last and highest efforts of perfected castle building in England. Hurstmonceux is a house designed for ease and comfort, but keeping something of the outer semblance of the stronghold of an English landowner.

There is an index of places and persons and an index of subjects, and the book is creditable to the publishers and to Mr. Francis Bond, the editor of the series of which it forms part, as well as to the author.

The Early Naturalists, their Lives and Work. By L. C. MIALL. (10s. net. Macmillan.)

"Strenua nos exercet inertia" is, or should be, Prof. Miall's motto. Since retiring from the active work of teaching he has busied himself with the old naturalists, and now gives us the cream of his researches. Endless musty tomes in medieval Latin and black-letter German must have been ransacked to produce this volume in which there is not a trace of pedantry or a dull page. The secret of success is that Prof. Miall writes of what he knows and sows with the hand, not with the sack. Insects and plants have the foremost place, for the double reason that these are the subjects in which the author is most interested and that zoology and botany were the first in point of time of the Natural Sciences. The study of the bee is a romance, and we can here trace each step of advance from Aristotle to Hübner. Even more remarkable and instructive is the account of the wild guesses, the rash generalizations and faulty observations by which in the end the secret of the fertilization of flowers was discovered, a secret that any intelligent child of to-day thinks he could have discovered for himself. Incidentally we learn that to Galileo must be ascribed the invention of the microscope as an instrument of research, though Roger Bacon can claim to have discovered convergent lenses.

Open where we will we find some interesting fact. Thus, every schoolboy knows that "fuchsia" is named after Fuchs, but how many of us know who Fuchs was or who gave his name to the flower? Most of us in our day have converted Réaumur into Fahrenheit, but few of us could account for the eighty degrees between freezing and boiling point. As a sample of the style, and for its intrinsic worth, we will quote one generalization:

The maxim which should guide our work is not *from the simple to the complex*, nor yet, as some philosophers have taught, *from the more needful to the less needful*, but *from the known to the unknown*—from truths either discovered by steady effort or stumbled on by accident to new truths springing out of past acquisitions and verified by observation and experiment. Biologists, like other scientific discoverers, have a rugged peak to climb, and are often urged to try this or that infallible method—of Bacon, Descartes, or Comte—a method which generally turns out to be either misleading or impracticable. There is but one way—to wriggle up as you can. . . . It is a great thing to possess natural aptitude for the work, a great thing too to be obstinately bent on getting to the top, but the successful climber often owes much to good luck wisely turned to account.

Among my Books. By FREDERIC HARRISON. (7s. 6d. net. Macmillan.)

This is a wonderful book for an octogenarian to have written. It shows no falling off in verve, vigour, or versatility. Except that the matter reveals three-score years' and more of reading and study, we might mistake it for the work of a youthful enthusiast in letters. In spite of the identity of title, it has little in common with Lowell's essays. Mr. Lowell, though we knew him chiefly as the Ambassador and the humorist, never quite succeeded in divesting himself of the professional gown, and he lectures to us on his books. Mr. Harrison, though he has played many other parts, is essentially the *littérateur*. He chats to us from his arm-chair, tells us what he likes and what he dislikes, and has no fear of the academic Mrs. Grundy. The one thing he cannot stand is pedantry, and, so long as a writer has something to say and says it plainly and effectively, he can read with no less relish the "Confessions of Rousseau" than the "Confessions of St. Augustine," can turn from the "Divina Commedia" to "Tom Jones."

When conversing on Greek literature he is at his best, and he might well have taken for his motto the sentence of Goethe that Herr Loeb has prefixed to his "Classical Library": "Study Shakespeare, study Molière, but, above all and before all, study the ancient Greeks." To Mr. Harrison Aeschylus is the greatest of tragedians, "Oedipus Rex" the greatest tragedy in the world, and Aristophanes the prince of comedians. The two articles on Homer are a real contribution by an amateur and clear away many learned cobwebs.

When he turns to modern literature, he writes with equal charm—tells us, for instance, the editions that he uses and how he came by them; but here he shows some prejudices and limitations. It would be easy to pick out dicta that Matthew Arnold would have pronounced *saugrenus*. Byron is enthroned beside Wordsworth, Shelley, and Keats, and Manfred is "a Dantesque vision of 'Man and Destiny,' which lifts it above any similar poem of the nineteenth century." "Goldsmith was a poor creature, and so were Sterne and Lamb and De Quincey" (the italics are ours). "The intolerable cacophony of Meredith disbars his claim to be a poet." Swinburne's verse is "a tarantula of alliteration, assonance, consonance, and artful concatenation of words." "In Memoriam" is "local, insular, and academic."

Such *obiter dicta* lend some colour to the charge of Early Victorianism that Mr. Harrison foresees will be brought against him by up-to-date critics, and they do show that he is not in touch with the latest developments of literature; but these limitations matter little when, both by precept and example, he sends us back with renewed gusto to the best books.

Education and Citizenship in India. By LEONARD ALSTON. Director of Non-Collegiate Students in Economics and History, Cambridge, formerly temporary Professor at Elphinstone College, Bombay, Litt.D., Trinity College, Melbourne. (4s. 6d. net. Longmans.)

Dr. Alston appears to have written this volume as a dissertation on a subject propounded for the Maitland Prize, Cambridge, 1909—"the teaching of experience in India on the question how far secular education can foster a sense of duty." The question has a most plausible appearance, but it is none the less a foolish one, and it is not surprising that Dr. Alston himself acknowledges that it "can hardly be said to have received an answer in this volume." If it be true that Western observers are hopelessly unable to understand the mental attitude of the Indians, or that the Indian notion of ethics is quite different from the Western notion, the inquiry seems futile; and if it be several degrees from the truth, yet the wretched inadequacy of secular education in India affords a very limited basis of observation—observation in any case grievously deflected by preconceptions and prejudices of the observer. Dr. Alston in fact fills his thesis with multifarious quotations from all sorts of observers, without critical discrimination of time or circumstances. Like the haggis, it is "fine confused feeding"; but, unlike the haggis, it is not very nourishing. Dr. Alston has much to say about education and religion, but what is the point of it all? One wants to get hold of solid facts and to get down to the bedrock of principle; till that be done, opinions are all in the air. Of course Dr. Alston discusses the question of the connexion of education with political unrest, and he writes with manifest fairness about the National Congress; but, as one opinion is as good as another, there is no solid conclusion. When he quotes the diatribes of General Chesney, he misses a great opportunity in neglecting the crushing answer of the late ex-Chief Justice of Calcutta, Sir Richard Garth. However, the very tangle of opinions may stimulate readers to attempt a disentanglement. For the question of education is now forced to the front in Indian politics, and it can no longer rest in the pitiful position that it now occupies. It will be difficult to sustain the thesis that education is, or can be, detrimental to the sense of duty.

Textbook of the Principles of Physics. By ALFRED DANIELL. (17s. net. Macmillan.)

It is a pleasure to welcome a new and revised edition of this deservedly popular work. The progress of physics during the past decade has been so rapid, the discoveries of such fundamental importance, and the conception of matter so revolutionized, that one is apt to forget the solid basis of fact and be lost in the vague mists of speculation. In this book a connected account of the leading principles of modern physical science is placed before the reader. The advantage of a uniform notation throughout is an

obvious one, for the relations of the most diverse physical quantities to the underlying foundation of matter and energy are given in this way a significance which cannot fail to impress the student with the essential unity of the subject. In a supplementary chapter the work of recent years on radioactivity and the electronic theory of matter is briefly reviewed. The new facts do not altogether subvert the older concepts of science; they rather supplement them. We realize to-day more than ever that the atom is no figment of the imagination, no mere working model utilized as an aid to thought, but that it exists as a complicated structure, the storehouse of an immense supply of energy. The properties of matter in bulk remain untouched; the difference lies in our interpretation, which has become more microscopic. With the aid of the electron it is possible to give a simple explanation of the phenomena of radioactivity, of the conduction of electricity in matter, of magnetism, and of optics. But still there are difficulties. Gravitation continues to provide an insoluble problem. Moreover, a great controversy has arisen around the question of the nature and even of the existence of the ether. With a discussion on these fascinating subjects, which probe into the very heart of the philosophy of being, the book concludes. A useful summary of dimensions and nomenclature is appended, together with a bibliography, in which the most notable books and periodicals are listed. As a college textbook this volume is to be heartily recommended. It was primarily designed to meet the requirements of medical students, but this restriction is now quite unnecessary. The needs of all students of physical science are amply provided for.

Personal and Party Government. By D. A. WINSTANLEY. M.A., Fellow and Lecturer of Trinity College, Cambridge. (4s. 6d. net. Cambridge University Press.)

Mr. Winstanley writes "a chapter in the political history of the early years of the reign of George III, 1760-1766," narrating the essentials of the struggle between the Crown and the Whig party from the accession of George III to the downfall of the first Rockingham administration. There is no intention of setting forth the complete history of the period; the object is to disengage the particular contest from the tangled and involved course of events. Mr. Winstanley is generous enough to acknowledge that both George and his opponents were free from selfish and ignoble motives—a generosity that might well receive some qualification, but, if an error, an error on the safer side. The detailed course of the struggle, though rather tiresome and not always interesting, is constitutionally important; and Mr. Winstanley has worked it out with extreme care and fairness from the Newcastle, Hardwicke, and Bute papers in the British Museum, and indeed from all the accessible documents. "When all reservations have been made," he concludes, "it remains true that Pitt, by refusing to throw in his lot with the Whigs at the critical moment of their fortunes, did not a little to gain for the King the authority which he was so grossly to misuse." He justifies a high opinion of Newcastle's political insight: "the disastrous events of the years which elapsed between the fall of Rockingham and the fall of North were to show that Newcastle was right and Pitt was wrong." The monograph will be a very valuable companion to the general history during the six important years it covers.

Dictionary of German and English, English and German.

By MAX BELLOW. (6s. net. Longmans.)

Bellows came as "a boon and a blessing to men," and will long survive the pens of the advertisement. We cannot anticipate the same fortune for Bellows's German dictionary, even if the promised pocket edition, to match the French, is produced. In German the words common to the two languages—that is to say, identical in spelling—are so few that we see no advantage in printing the two parts concurrently on the same page. Words like "mammon," "onyx," "opal" are so rare that there is no saving of space; and common words, in the wider sense, like *gut*, "good," *schwimmen*, "swim," appear on different pages. We hope this arrangement will be abandoned. New features to be commended are—the indication of genders by different types and of declensions and conjugations by reference to the introductory Accidence (this, though claimed as copyright, is to be found in Sachs), and lastly, the inclusion of many new technical terms and expressions. "Suffragist" and "suffragette" should be included. "Hackberry" is given as "eine Art Zürgelbaum," but the latter word is not recognized, nor is the common English name, "bird-cherry." We cannot oblige the editor with any misprints.

A History of the British Constitution. By J. HOWARD B. MASTERMAN, sometime Professor of History in the University of Birmingham. (2s. 6d. net. Macmillan.)

Mr. Masterman's familiarity with the best and the latest authorities may be traced not merely in his general handling of his subject, but in the very language of his text. He selects the main features, and presents them pointedly. Yet, as so often happens, one cannot

but feel that his work is rather an excellent summary for those that already know the outlines than a book of instruction for those that do not. It is so difficult for the scholar to place himself at the point of view of the pupil, who must go elsewhere for much that is implied or left unexplained. The space is narrow, and Mr. Masterman hopes that readers will be led to a more detailed study in the books he recommends; and it may be unreasonable to expect more for half-a-crown. Mr. Masterman is discreet in his comments on present constitutional conditions and tendencies. His remarks on the anticipated Second Chamber reform are not profound; and he is not free from ecclesiastical bias. He may be quite sure that, if "the successful working of the Parliamentary system depends greatly on the informal intercourse of members in the lobby and the smoking room," there will be no difficulty whatever in maintaining "this kind of camaraderie" in a mixed assembly. The little book forms a scholarly, instructive, and interesting introduction to the large and complicated subject.

Scripture Teaching in Secondary Schools. Papers read at a Conference held in Cambridge, April 1912. Edited by N. P. WOOD, with a Preface by F. C. BURKITT. (1s. 6d. net. Cambridge University Press.)

We gave in our May number a fairly full report of this Conference, but the authorized text of the papers read is well worth printing in full, and it is enriched by useful bibliographies and copious references to standard works. We welcome, too, Prof. Burkitt's preface, with its glowing testimony to Edward Bowen's power as a teacher of the Bible. The speakers, we are informed, were chosen without distinction of denominational creed, but they may fairly be described as representing the Left Centre. Of the eleven, seven were clergymen of the Church of England. The thanks of all teachers are due to Mr. Cradock-Watson, who organized the Conference, and we are glad to see the announcement that it will meet again next year. We hope that the Left will then be represented. In the first paper we are told that to put Mr. J. M. Thompson's book, or the substance of the book, into the hands of boys would be little short of a crime, and there was no one to take up the challenge, nor is any such book (Mr. Montefiore's admirable Old Testament, for instance) mentioned in the bibliography.

A Modern English Grammar. By J. HUBSCHER, Ph.D., and H. H. C. FRAMPTON, M.A. (4 fr. Lausanne: Payot.)

This is more and less than the title promises. It is a conversation book and reader as well as a grammar, and the grammar is framed for foreign (presumably French) readers. In England we have more than one French grammar written in French, but, as far as we are aware, there has been nothing similar in France. The dual authorship is warrant that the English is correct and idiomatic. It is a defect that there is no direct reference to the difference of French and English idioms and that the pupil is left to discover them for himself from the examples. Thus, in the third lesson, we find "What are we doing? We are working," long before there has been any mention of a continuous present.

The Psalter of the Church. The Prayer Book Version of the Psalms with Introduction and Marginal Notes. By JAMES G. CARLETON, D.D. (Pp. xxx, 280. 4s. net. Cambridge University Press.)

"This Handbook of the Prayer Book Psalter," the author explains, "is designed to meet the case of the many Church people who would welcome help—if given in a concise and easily apprehended form—towards a better understanding of the Psalms, but for whom the study of elaborate and diffuse commentaries is out of the question." Each Psalm is given in the Prayer Book Version, with brief marginal comments and explanations; where corrections in translation are required the R.V., or R.V. margin, is cited. The use of the Psalms for ordinary and special days is noted (including the use of the American Church). A short general introduction (including some tables) completes a useful volume. The mystical interpretation of the Psalms is often referred to as well as their use in the New Testament. A brief indication of modern methods of interpreting the Psalms historically would have made the volume more valuable.

Le Juif Polonais. Par ERCKMANN-CHATRIAN. Edited by C. MANLEY. (1s. Heath.)

It may be a surprise to some readers to find in "Le Juif Polonais" the original of Henry Irving's famous "Bells," so familiar to English audiences of the seventies and eighties. For dramatic representation of a tortured conscience the play is hard to surpass, and the natural style of the dialogue and the charm of the local colour serve to enhance the effect of the tragedy. Mr. Manley's preface contains both biography and criticism, the latter partly compiled from quotations from reviews. There are brief English notes, and the inevitable French-English vocabulary, which, however, omits

words that are absolutely identical in the two languages. We rather question the suitability of this play as a school book except for the highest forms, and we cannot help feeling that these would enjoy their reading more without the interruption of the 1, 2, 3, &c., which point them to the notes at frequent intervals.

Puritanism and Liberty (1603-1660). Compiled by KENNETH BELL. (G. Bell. 1s.)

The use of original sources to illustrate history is increasing amongst teachers, and this latest addition to Bell's series of source-books is a good example of the kind of volume which is being produced to meet the demand. Letters, memoirs, statutes, official documents, speeches have been all freely drawn upon. We should have liked more extracts from the speeches and letters of prominent men, and some teachers will certainly think that some of the space given to official papers, such as the Petition of Right, might have been better occupied by matter which would bring the pupils into closer contact with Hampden, to take one instance; but, on the whole, the selection is well done, and the extracts such as will add flesh and blood to the dry-bones of a textbook.

Primary German Course. By O. SIEPMANN. (Macmillan.)

This volume follows the method of Mr. Siepmann's other language books—a method which is too well known to need description. It is intended for pupils who begin German at twelve and thirteen, and for whom the "Public-school German Primer" is a little too heavy. The matter of the reading lessons has the merit of being rather more lively and interesting than it is in many books of this kind, and a noticeable feature is the frequent repetition of the same vocabulary in the earlier exercises. The author still adheres to detached sentences as a composition exercise. We doubt the desirability of much of this kind of work, and should have liked more exercises of the "New Method" type. But we would not exclude the continuous passages for translation into German.

French Self-Taught. Thimm's System. Enlarged Edition, revised by J. LAFFITTE. (Wrapper, 2s. 6d.; cloth, 3s. 6d. Marlborough.)

French pronunciation, we hold, cannot be taught by the book, and the transliteration, which here occupies so large a space, is, we fear, labour lost. *L* is not "as in English"; the *o* of *pomme* is not "pum," like *u* in "dull"; and *colère* should, at any rate, be *co-lair*, "col-air." On the other hand, the vocabularies will be found most useful, including, as they do, cycling, motoring, type-writing, photography, law, and commerce, and much else that is neglected in most conversation books. Syntax is hardly touched, but the conjugation of verbs is thoroughly drilled in; and there is a key to the exercises.

The Science of Etymology. By the Rev. WALTER W. SKEAT. (4s. 6d. net. Clarendon Press.)

Yet another among the books reviewed this month the publication of which preceded by only a few days the author's death. Of Prof. Skeat's work as a philologist we speak elsewhere, and here need only say that his last production shows no sign of age or decay. Like Browning's grammarian, he pursued his life's task to the very end. In spite of the similarity of title, the book has little in common with Max Müller's "Science of Language." It is all applied science, and there is no attempt at theory or discussion of first principles; in fact, the author disclaims having advanced anything that is new. What he has here done is to collect and rearrange materials collected by other philologists. This does not mean that Prof. Skeat was a mere compiler. He sank no new shafts, but he gives here samples of the nuggets he has himself found (e.g., the derivation of "Carfax" and "cark"), and still more specimens of the base coins that he has nailed to the counter. To profit by the book the reader must be acquainted with the author's "Principles" and his "Primer of Etymology"; and the chapters on Lithuanian and Slavonic, Armenian, Albanian, and Persian appeal only to specialists. The full index makes it an invaluable book of reference.

Selections from Ovid's "Heroides." Edited by L. W. P. LEWIS and C. H. BROADBENT. (2s. E. Arnold.)

We have here seven of the letters somewhat abbreviated. To each there is a short introduction giving the story and a running précis of the text. The notes are brief, but pass over no difficulty, and there is a vocabulary. This may seem excessive help, but it is not more than is wanted for a first reader in Latin verse.

French Composition. By F. GUILLIOT and H. PROIX. (2s. 6d. net. Ralph, Holland.)

This manual by two Paris professors has many qualities to recommend it. It is in two parts, of which the first may be called a grammar *ad hoc*. Rules are brief, and the merit lies in the application—the well chosen examples and exercises. The second and more valuable part consists of short passages for translation

taken from a variety of authors and in various styles, but all of them such as will interest the pupil. Very full assistance is given in foot-notes—far too full, we should say, for use as a class-book. Our experience of such books is that, unless the pupil is set the passage a second time without the notes to guide him, taught to swim without the corks, he does not learn the art of swimming.

The Circling Year. By W. PERCIVAL WESTELL. With 36 Coloured Plates, &c., by C. F. NEWELL. (6s. Nelson.)

The late Dr. Verrall, in one of his daring paradoxes, classified the "Odes" of Horace under the four seasons, and compilers of natural history for the young have of late inclined to the same method. There is much to be said for the skilful guide who takes the child by the hand and shows him month by month what he may see in his walks abroad if only he is directed where to look. But, thus started, he must be taught to observe for himself and draw his own inferences, and this is where Prof. Miall is pre-eminent. Mr. Westell knows his subject well and has the gift of easy exposition, but he does not to the same degree excite curiosity. The coloured plates are good, especially the flowers; the birds are somewhat too highly coloured.

Wild Flowers as they Grow. By H. ESSENHIGH CORKE. With Descriptive Text by G. CLARKE NUTTALL. Fourth Series. (5s. net. Cassell.)

We have already more than once called attention to this series as one of the triumphs of photography in colours, and need only say that the twenty-five flowers of the present volume are equally successful examples of an art "which in its piedness shares with great creating Nature." Nothing could be truer in form and colour than the fritillary and bird's-nest orchis or more beautiful than the hedge convolvulus and white water-lilies. Art is justly given precedence to science; but Mr. Nuttall's text, with the careful dissections of the flowers, make the volume not only a thing of beauty, but a capital first lesson in botany.

Scenes from European History. By G. BURRELL SMITH. (2s. 6d. E. Arnold.)

This book by the Senior Master of the Royal Naval College, Osborne, is the result of experiments in English History teaching intended to give pupils some notion of contemporary European history. Twenty of the most decisive movements—monasticism, the Papal power, the rise of Prussia, the liberation of Italy, for instance—are sketched in outline, mostly under the heading of some great name—St. Benedict, Hildebrand, Frederick the Great, Bismarck—and in the summary at the end they are connected with contemporary English history. The scheme is well carried out and will be welcomed by teachers of English history who are not prepared to reduce their scant allowance of time by introducing a separate course of general history.

"Blackie's English Texts." Edited by W. H. D. ROUSE.—*Clarendon: Cavalier and Roundhead.* (6d.)

We have here seven chapters from Clarendon's "History of the Rebellion," the longest and most interesting being the imprisonment and trial of the King. Teachers will be glad to have in so convenient a form an original document, and there could be no better exercise than the discovery and correction of Clarendon's *ex parte* statements.

Historical Lyrics and Ballads. Book II: *After 1485.* Selected and edited by S. E. WINBOLT. (6d. Blackie.)

Mr. Winbolt has, like Lucretius, pursued the untrodden paths of the Muses and given us some broadsides that have never before appeared in an anthology. King Charles's lines written in captivity are worth including, but we cannot say the same of the Papist doggerel on Thomas Cromwell or the seventeenth-century ballad on the Spanish Armada, which *metri gratia* doubts whether the defeat was in May or September. The glossary, as we noticed in Book I, might have been fuller. Even Macaulay's schoolboy will not know the meaning of "rombelow" and "ferlie."

The Log of the Blue Dragon II: In Orkney and Shetland. Written by various hands and now set forth by C. C. LYNAM, Owner and Skipper. (5s. net. Sidgwick & Jackson.)

All who sailed with Skipper Lynam in "Blue Dragon I," will gladly accompany him on a second cruise. A ship's log is at best but the raw material for literature, but a log written by a schoolmaster, a publisher, a poet, an artist, a photographer, and a humorist (as in a Greek play one actor takes several parts) is unique, and the veriest landlubber cannot fail to be interested in the adventures of a small yacht (it measured only 43 by 10 ft. extreme length and breadth) while exploring the Ultima Thule. The yachtsman who cares to follow in the track will find "The Log" an invaluable *vade mecum*. We look forward to the completion of the trilogy in "The Blue Dragon's Dash for the North Pole."

Spinoza: his Life and Philosophy. By Sir FREDERICK POLLOCK. (5s. net. Duckworth.)

This is now a standard work on the subject. It appeared in 1880, went into a second edition in 1899, and now appears in the "Crown Library" with a couple of pages of addenda and corrigenda. These bring the reader into touch with the notable additions that have been made to Spinoza literature and criticism in the last twelve years. It is interesting to note that no further light has been thrown upon the vexed question of Spinoza's view of individuality in a future life. For the general reader there is no better exposition than this. The publishers deserve well of the public in making it more accessible.

Divorce and Morality. By C. S. BREMNER. With a Preface by Sir A. CONAN DOYLE. (1s. net. F. Palmer.)

This small volume gives a résumé of the history of divorce, beginning with the law of Imperial Rome, and a digest of the contemporary law in the chief countries of the world and statistics of its operation. Its main thesis is that the Catholic theory of the indissolubility of marriage does not promote morality even in the narrow sense of the word, and *jungendo mortua vivis* is productive of even worse ills than illicit connexions. It proves to the hilt, if any proof were needed, that reform of the divorce law is one of England's crying needs. Miss Bremner has such a good cause that she would have been better advised not to endanger it by somewhat heated protests against the subjection of women.

Messrs. Bacon have published a new *Contour Globe* in accordance with the Regulation of the Education Department that "relative land levels and sea depths should be indicated by colour gradations." The colour scheme is based on that decided upon by the International Map Committee, the varying elevations of land being shown by shades of green, brown, and pink, and the differing depths of the sea in shades of blue. In addition the political divisions are defined by a red line, and the principal railways indicated. The globe is nearly 15 inches in diameter—giving an approximate scale of 540 miles to the inch—and is mounted on a polished stand with brass graduated semi-meridian. A compass is also attached. It is an admirable aid to the teaching of geography, and should have a large sale in secondary schools. The price, 25s. net, is very moderate.

From the same publishers we have received a new *Contour Wall-Map of the Mediterranean Lands*, in the production of which assistance has been given by Prof. Myers, M.A., and Colonel Maunsell, R.A. This map includes all the countries which at any time formed part of the Roman Empire, or affected it externally. Both ancient and modern names are given. It is well adapted for use with large classes, the size being 76 by 40 inches. The price, on cloth, rollers, and varnished, is 16s. It can also be obtained mounted and cut to fold at the same price.

We have just received Mr. John Davis's new Catalogue of (mainly) out-of-print Books on Education. Readers interested in old books on this subject should send to Mr. Davis, at 13 Pater-noster Row, for a copy of this useful list.

WE have received from the "Dusmo" Company a sample of their special preparation for use when sweeping floors to prevent the dust rising. It resembles a fine sand, chemically treated to remain always moist. After a thorough test, on wood, linoleum, and stone, we can endorse the Company's claim that not a particle of dust will rise in sweeping if instructions are followed. It is not necessary to sprinkle the floor all over, as is generally done when using tea-leaves or wet sawdust, but a few handfuls are put down and pushed before the broom. The dust mixes with the preparation, and is effectually prevented from rising. Another form of "Dusmo" for use on carpets is equally good. Principals of schools should take advantage of the firm's offer to allow them to test "Dusmo" free of charge. It is estimated that the cost in a large school will not be more than 1½d. per pupil per annum.

DISCRETION is the better part of valour, and Mr. A. C. Benson has balked our curiosity by ignoring all but the title of "Scrutator's" article. He takes, instead, as the text of his discourse a recent speech of Mr. Rendall, in which the Head Master of Winchester "talked of hanging on for dear life to the priceless inheritance of Greek" and parleying with modern subjects at the gate. The result of this "grand old fortifying classical curriculum," according to Mr. Benson's experience as a college tutor, is that public-school boys come to him incapable of writing a passable essay, unable to arrange a subject, or to express themselves in English. They are not naturally stupid, but their intellectual faculties have been simply in abeyance.

UNIVERSITIES AND SCHOOLS.

LONDON.

The new session has opened peacefully, with the appointment of four new University Professors. Dr. F. J. C. Hearnshaw has been appointed Professor of History at King's College. He comes to us with a record of successful work at Hartley University College, Southampton. Mr. Harold Hilton, who has been head of the Mathematical Department at Bedford College since 1907, has been appointed a University Professor, and will continue his work at Bedford College. Dr. J. W. Nicholson has been appointed Professor of Mathematics, and Mr. A. H. Jameson, Professor of Civil Engineering, at King's College. These new appointments, which have been made in consequence of the new London County Council grant, will strengthen materially the teaching staff of the University.

The Report of the University Extension Board for 1911-12 has been published. It records a great increase both in the number of students working for diplomas in the Humanities and of students attending the Sessional courses. The Board also controls the work of the University in inspecting and examining secondary schools, which also shows an encouraging development. A new scheme of school commercial certificates has come into operation.

A holiday course was organized at Ramsgate in 1912, in addition to the course which has been held in London since 1904, and a school of town planning, attended by fifty students, was formed at Hampstead Garden Suburb.

Mr. R. H. Tawney, formerly Scholar of Balliol, has been appointed Director of the Bureau, which is to be established under the Ratan Tata benefaction, for the investigation of the causes of poverty. Mr. Tawney has taken an active part in the work of the Workers' Educational Association and in social work at Toynbee Hall.

OXFORD.

The Vice-Chancellor made an innovation this year by delivering his annual review of the University year in English instead of in Latin. There have been grumbles by those who see in the change a sign that Oxford is losing its old-worldliness which is supposed to be its charm, but it has great advantages. It seems to show that the University is becoming more conscious that a review of its progress concerns not only its members, to whom Latin is supposed to offer no difficulties, but the nation at large. The Vice-Chancellor spoke at some length of the progress of University reform, which he claimed had been substantial, laying special stress upon the Finance Board. That, indeed, starts with a most excellent list of members. The representations of a Board of men so distinguished both for their financial and business ability and their devotion to the University are certain to be sound and to carry weight. As the Board's most important powers are advisory, not compulsive, this second point is all the more important. New legislation was promised for this term on two subjects—an entrance examination and a curriculum for a business career. We have not heard details of either of these proposals. The first has been long under consideration. Its form is, of course, conditioned by the refusal of Convocation to abolish compulsory Greek in any way; but both sides in that dispute agreed that some reform of Responsions was essential.

The Vice-Chancellor devoted a considerable portion of his speech to the question of poor students. He called attention to the extent to which part of that difficult problem is in a way towards solution by the work of the Tutorial Classes Committee, both in its Tutorial Classes and in the classes at Oxford in the summer, of which I said something last month.

A Committee of Council has drawn up a full report of the working of that committee and laid it before the Colleges, in order that they may better understand the aims and results of the movement, and in the hope that they may be able to do something to help it out of its financial difficulties. At the same time the Vice-Chancellor rightly insisted that it was still essential to make Oxford more accessible to poor students by lessening expenses.

The Vice-Chancellor also explained that one of the most urgent problems before the University is the provision of adequate laboratories for chemistry and for engineering. A great deal has been done by the Oxford University Endowment Trustees. They have allotted to chemistry £15,000, and under certain conditions a further £10,000. £10,000 is available for the Engineering laboratory.

The number of Freshmen who have joined the University this October has gone down slightly from last year—873 as against 922, but the decline is almost entirely accounted for by the fact that this is a year in which no new Rhodes scholars come from the United States. The presence of one of those 873 Freshmen has brought Oxford, and especially Magdalen, into all the illustrated papers. A great effort has been made to allow the Prince of Wales to live like an ordinary commoner: surely the wisest plan. Though he has his own tutor and a

suite of rooms in Magdalen such as no ordinary undergraduate has, he attends lectures and plays games in the happy state of an ordinary mortal.

Appointments.—Mr. David Pye, formerly of Trinity College, Cambridge, Assistant to the Professor of Engineering, has been elected to a Fellowship at New College; Mr. David Ogg, formerly scholar of Lincoln, has been elected to an Open Fellowship in History at New College; Mr. Arnold Toynbee has been elected to a Tutorial Fellowship at Balliol; Mr. R. H. Owen, formerly scholar of Wadham College, who has been a master at Clifton, has been made a Tutorial Fellow at Worcester; Mr. R. G. Collingwood has been made a Tutorial Fellow of Pembroke; the Rev. C. L. Parker, late Senior Scholar of St. John's College, has been made Chaplain Fellow of University College; Mr. H. C. Bazelt, of Wadham, has been elected to a Fellowship in Medical Science; Mr. G. D. H. Cole, of Balliol, to a Fellowship in Classics at Magdalen.

CAMBRIDGE.

The October term is still so young that it has little news of its own.

The Vacant Places.

The Long Vacation had plenty, and mostly of death and change. The deaths of Dr. Verrall and the Master of Caius came just at the end of the May Term. Caius has a new Master in Dr. Anderson, but we have not yet a Professor of English Literature. The *Review*, indeed, has had a paragraph reminding Mr. Asquith that the Chair is in the Royal gift, but there has been no response. Mr. Birrell, indeed, disclaimed at Bristol, so far as he himself is concerned, the rumour that Dr. Verrall's successor is to be a retired Cabinet Minister. This narrows the field somewhat, for it is hard to see who is left for us among Cabinet Ministers but Lord Morley. It would be a great thing to have him, but it does not seem very likely. But perhaps by the time this is in the hands of our readers the appointment will have been made.

A significant figure passed from Cambridge in the late Master of Jesus, who first came up an incredible time ago, and had been associated with the life of the University and his own College in ever so many effective and genial ways. His successor, too, is still to be elected at the moment of my writing.

Mr. Scott, of St. John's, has vacated the office of Vice-Chancellor.

The New Vice-Chancellor.

The troubled era of reform, through which he was to steer us, did not come. Non-Placet was the spirit of his reign, but he steered us all the same, with much general satisfaction to the people steered. Kindness and courtesy are the chief Vice-Chancellorial arts, and Mr. Scott is not lacking in them. He never plunged during his two years of office, and cancelled numbers of the *Reporter* did not mark his path. He yields place to Dr. Donaldson, of Magdalene, and here I cannot do better than quote the *Review*, which emphasizes the "breadth of outlook" that a non-Academic career has helped to give him, and "looks forward with confidence to the steady progress of Cambridge during his time of office." One might add, perhaps, some reference to the moral courage which leads Dr. Donaldson to associate himself with good causes, whether they are popular or not.

It is not often that the Fitzwilliam receives so remarkable a legacy as that left to it by the late Mr. C. B. Marlay, of Trinity College, whose bequest includes the lease of his house in Regent's Park and his collection

The Fitzwilliam Museum.

of pictures, engravings, plate, jewellery, bronzes, Japanese and European weapons, pottery, porcelain, glass, books, and furniture, and the sum of £80,000 for their housing and upkeep. Many classes of object unrepresented so far in the Museum are comprised in the bequest, and a large extension of the building will be needed. Some pictures have been moved there already and a number more are, meanwhile, in the new Lecture Rooms in Benet Street.

New courts are in process of erection at Emmanuel and Queens'

The Growth of the University.

Colleges. The Museum of Archaeology has been enlarged and the Engineering Department extended, while the new Observatory in Solar Physics, transferred from Kensington to Cambridge, is already commenced. At the same time we have three hundred more freshmen than in 1900, though the entry in 1909 was a little larger. Last year was the only one in the last half-dozen or so when we had less than eleven hundred freshmen, and then we only missed the figure by two. The perpetual dread of the University reformer that, if we do not change everything at once, all the youth of the country will go to Oxford looks less pressing in view of these figures.

As your readers are probably aware, the voting on the proposal to

The Divinity Degrees.

open degrees in Divinity to others than clergy of the Anglican Communion was postponed till this term, and it is still before us. There are various notes to be heard, but not yet with much emphasis. There are the usual Non-Placet prophets, solid on the certainty of the Grace being rejected; and there is a number of semi-Progressives, each with a feel-

ing that, if some modification of existing machinery could be added to the Grace, the general principle would be safer—and so on. The suggestion is heard also that the weak spot is that the award of degrees, if they are thrown open, will still be in the hands of the Divinity Professors. The Buddhist D.D. and the Agnostic D.D. are still bugbears, and more will be head of them, openly or in quiet, before the voting. The Bishop of Ely's frank endorsement of the scheme ought to suggest to some of the clergy who may be coming up to vote that neither the Church nor the University nor the Christian religion is in a very great danger. But some people love archaism for its own sake, even if it serve no useful purpose—the better, perhaps, if it serve no purpose at all, and is only a picturesque obstacle to progress! They may not be many, but a pose is of little use unless it is kept well before the public gaze, and such persons will not listen to reason from the Bishop of Ely or the Dean of St. Paul's or any one. Perhaps no human community is quite free from irrational elements, and we ought not to hope to be.

The latest Classical Tripos scheme, the gist of which is the offer of grammar, philology, and the laws of prosody, as an alternative to verse composition, has been discussed in the Senate House. It received more criticism than blessing, and its fate is still uncertain.

CAMBRIDGE TRAINING COLLEGE FOR WOMEN.—Fourteen students passed the examination held last June by the Cambridge Syndicate in the Theory and Practice of Teaching, seven being placed in the Second Class and seven in the Third Class. Twenty-two new students have entered the College this term: nineteen of these have graduated at a University, fourteen of whom have taken a degree in Honours; the total number of students is now thirty-seven, thirty-four resident and three non-resident. The following candidates have been awarded scholarships or bursaries for September:—Scholarships: Miss E. Dawson, M.A. Aberdeen, Honours, Classics, Class I; Miss L. D. Adams, B.Sc. London, Honours, Mathematics, Class II; Miss E. G. Wright, M.A. Aberdeen, Honours, English, Class II; Miss G. Dyson, B.Sc. Wales, Honours, Botany, Class II. Bursaries: Miss M. D. Ball, Natural Sciences Tripos, Class III, Cambridge Geography Diploma (Newnham College); Miss D. M. Clark, M.A. St. Andrews; Miss D. Evans, B.A. Wales; Miss G. E. Foster, B.A. Royal University of Ireland; Miss J. E. Jones (Somerville College); Miss E. Rea, B.A. (Queen's University, Belfast). Miss Mullock, M.Sc. Manchester, Vice-Principal and Lecturer in Mathematics at the Cambridge Training College, has been appointed Mistress of Method at Bristol University. The vacancy on the staff has been filled by the appointment of Miss J. D. Archibald, B.A., Mathematical Tripos, Class II (first Senior Optime), late Scholar of Newnham College and Assistant Mistress at Wimbledon High School.

WALES.

The Public Records of Wales. The Royal Commissioners on Public Records in their first report make the important recommendation that the records formerly preserved in Wales should be re-transferred to the Principality, provided that satisfactory arrangements are made for their preservation, order, and use. These public records were removed to London originally because there was no security that those conditions could be satisfied locally. The Commissioners have now received sufficient information to justify them in making a recommendation, without delay, that the demand that the records relating to the history of Wales should be kept somewhere in the locality should be conceded. There is no adequate objection in principle to placing them again in Wales, provided satisfactory guarantees were given for their future care. The Commissioners are of opinion that their return would facilitate and encourage the study of Welsh history and antiquities, and that the establishment of a general repository for the Welsh records in Wales would tend to save minor collections from neglect or dispersion. The Commissioners regard it as essential that the national repository should be near a good library, where there is a collection of legal, historical, and antiquarian books for the proper aid of the study of the documents by students, and also that it should be near one of the University Colleges. There are two hundred sacks of unarranged Welsh records, and the Deputy Keeper frankly admitted that "this is a discreditable state of things." Many of these documents are of great historical interest, and likely to further the progress of historical study in the Principality. It is probable that the national repository will be fixed at either Cardiff or Aberystwyth, as these two towns seem to fulfil most adequately the conditions laid down by the Commissioners.

Salaries of Primary Teachers. As the result of the inquiry by Mr. R. Younger, K.C., the Board of Education has sent a lengthy document to the Anglesea Education Committee endorsing his findings that there should be no differential treatment of teachers in the non-provided schools as regards salaries. We have therefore heard the last probably of the "Welsh Revolt" policy, as all

the County Education Committees will now be obliged to submit to the decision of the Board of Education in the matter.

Publication of Results. Severe comment has been made on the recent practice of some of the Liverpool and Manchester daily papers which circulate in North Wales in publishing the Central

Welsh Board Certificate lists of different schools in columns and groups, on the ground that this system of publication tends to invite invidious and unfair comparisons as to the efficiency of the schools mentioned. The Central Welsh Board have ceased for many years to publish lists of successful candidates (except the list of Honours candidates), for the reason that they used to be subjected to very unfair treatment by curious and ignorant people. The performance of different schools in the annual examination were carefully analysed, and by a liberal use of decimals and percentages, a fictitious order of merit of the schools was made out, in which the public, imbued with exaggerated ideas as to the values of examination results, was very prone to believe. But if there is any further extension of the practice of the *Liverpool Post* and *Mercury*, these reprehensible comparisons will be made again, to the great detriment of education. The Welsh County Schools Association has always condemned the publication of examination lists in such a way as to tend to institute competition between school and school. There is, therefore, a certain amount of curiosity among head masters as to the source of the above lists. Did they emanate from the schools or from the Central Office?

Glamorgan Scheme. Under the new scheme for the control of the Glamorgan Intermediate and Technical Education Fund, it is provided that all funds and property of the Cowbridge School managers be transferred to the County Council. The County Council, out of part of the income of the property representing the Edward Lewis Foundation, is also to pay to the Gelligaer School governors £500 annually. There has been a long-standing dispute between the latter and the Council as to the financial arrangements.

Mr. R. Madoc Jones, M.A., assistant master at Llanberis County School, has been appointed Head Master of Llandudno County School, in succession to the late Mr. J. M. Archer-Thomson, M.A.

SCOTLAND.

As the Universities have been mainly occupied with examinations and the work incident to the beginning of a new session, there is not much academic news to record this month. At St. Andrews Mr. Edward W. Shann has been appointed Assistant in Natural History; Mr. George A. Johnston, M.A., Glasgow, as Assistant in Moral Philosophy; and Mr. John D. Craig, M.A., as Assistant in Latin. At Glasgow the Rev. George Calder, M.A., B.D., has been appointed Lecturer in Celtic. Mr. Calder is the author of several works in Gaelic, and has edited an important Irish text. Mr. John R. Peddie, M.A., has been appointed Lecturer in English Literature, and Mr. Leonard Russell, M.A., B.Sc., and Mr. William Anderson, M.A., Lecturers in Logic at Glasgow University. At Edinburgh University Mr. Hector Burn-Murdoch, B.A., LL.B., has been appointed Lecturer in English Law, and Mr. Alexander Miles as Lecturer in Clinical Surgery.

Glasgow University has suffered a great loss in the sudden death of its Registrar, Mr. William Innes Addison, who had been in the service of the University for twenty-five years. He was an admirable Registrar, with a most accurate knowledge of the complex business and regulations of the University, and he made valuable contributions to the history of the University in his Roll of the graduates from 1727 to 1897, with biographical notes, and in his account of the Snell Exhibitioners, as well as in lesser publications. He had practically completed a volume of the "Matriculation Albums" of the University from 1728 to 1858, in which the names of over seventeen thousand students are recorded, and, in a very large number of cases, biographical notes are added.

The late Lord Stormonth-Darling has bequeathed £500 to the General Fund of Edinburgh University "in recognition of his long connexion with the University as student, representative in Parliament, and member of the governing body."

Sir John Struthers's Report on Secondary Education in Scotland for 1912 gives statistics as to the number of secondary education centres in Scotland, and by implication replies to some of the criticisms of the Department on the ground that it has discouraged higher education in rural schools. There are 251 centres of secondary instruction, well distributed over the country as a whole. Of these, 142 provide a five years' course, while 109 offer normally a three years' course only. Fifty-six of the schools are secondary schools of old standing, and the remainder are higher-grade schools. "It is the simple truth to say that" the higher-grade schools "include practically every primary school in Scotland which in the past has given evidence of doing anything like efficient and systematic secondary work." It is also pointed

(Continued on page 762.)

LIBRAIRIE LAROUSSE, PARIS

GOOD FRENCH BOOKS.

Larousse Dictionaries.

The best and most famous French Dictionaries, indispensable for study and practical use.

JUST PUBLISHED.

Larousse de poche. The only strictly complete and practical French Pocket Dictionary in existence. In addition to a complete vocabulary, it contains all modern words, geographical terms, &c., also a Grammar of the French language and a short history of French literature. Over 85,000 words with their definition and pronunciation, in one volume, reduced to pocket size. An attractive book of 1,292 pages, thin paper, size 10.5 by 16.5 cent., weighing 315 grammes. Cloth, 6 fr.; in smooth leather and case, 7 fr. 50.

FORMERLY PUBLISHED.

Petit Larousse illustré. The best, most complete, and profusely illustrated of all handy French dictionaries. A handsome volume of 1,664 pages, illustrated with 5,800 engravings; 130 plates, of which 4 are coloured; and 120 maps, 7 in colours. Price, cloth, 5 fr.; leather, 7 fr. 50.

Le Larousse pour tous, encyclopædic dictionary in two volumes. The ideal dictionary for all who like to have a French dictionary more extensive than an ordinary one; with all the words of the language, pronunciation, etymology, synonyms, antonyms, a complete grammar simplified, history of literature. 1,950 pages; 17,325 engravings; 216 maps, black and coloured; 35 coloured plates. Paper, 35 fr.; half-morocco, 45 frs.

Nouveau Larousse illustré, encyclopædic dictionary in eight volumes. The newest, most practical, and richest illustrated of the large encyclopædic dictionaries, edited by over 400 eminent collaborators, with an important essay on the French language and all sciences. 7,600 pages; 237,000 articles; 49,000 engravings; 504 black and coloured maps; 89 coloured plates. Paper, 230 fr.; half-morocco, 275 fr.

Grand Dictionnaire Larousse, encyclopædic dictionary in seventeen volumes. The most comprehensive of all encyclopædic dictionaries. 24,500 pages; 2,864 engravings. Paper, 650 fr.; bound in half-morocco, 750 fr.

Masterpieces of French Literature.

(Bibliothèque Larousse.)

Fine volumes in library size (13.5 by 20 cent.). Interesting illustrations, notes, and criticisms. All great French writers, classical and modern, will appear in this new collection, the finest and most up to date of all.

JUST PUBLISHED.

VICTOR HUGO: Œuvres choisies illustrées. Two volumes of about 550 pages each, illustrated with 60 engravings, of which 48 are full-page. (Poetry, 1 volume; Prose, 1 volume.) Each volume, sewed, 5 fr.; cloth, 6 fr.

PREVIOUSLY PUBLISHED.

out that rural schools are quite free to give higher education, on condition that there is evidence of the teacher's competence for the work, and that adequate provision is made along the lines of ordinary supplementary courses for those pupils who intend to leave school without entering on a course of secondary education.

On the other hand, an influential body of men engaged in teaching and educational administration met at Perth about the end of September, and formed themselves into an association for securing higher education in rural schools. In course of discussion it was maintained that the Secretary for Scotland, in his defence of the Education Department, evaded the real question, viz., the actual working of the regulations, the discouragement of higher work, and the clogging of the time-table with non-educational subjects. Some extraordinary cases were adduced of successful higher work in country schools deliberately stamped out by inspectors. There was general agreement as to the need of immediate action, as, owing to the policy adopted by the Department for the training of teachers, all the rural schools in Scotland would in the course of a few years be staffed by teachers whose attainments would be insufficient for carrying on higher work. As was pointed out in these notes last September, the only way in which the very real grievance of the rural communities can be met is by appointing an Advisory Council for Education in Scotland, and by extending the areas of School Boards, in order to equalize rating and enable the Boards to make satisfactory provision for secondary education within their own areas.

A Committee of the Scottish Classical Association has issued a report on its inquiry into the study of Greek in Scottish schools. It shows that during the five years from 1906-7 to 1911-12 there has been a very great decline in the number of pupils studying Greek in the schools. There has been a decrease as follows:—(1) of 496 pupils studying Greek, a fall of 40 per cent.; (2) of 130 presented for Lower Greek, a fall of 40 per cent.; (3) of 75 presented for Higher Greek, a fall of 33 per cent.; (4) of 156 beginning Greek, a fall of 38 per cent. The decrease has taken place almost entirely in schools under the Education Department. In other schools there is no evidence of any serious decrease in the numbers, and no danger of the study of Greek disappearing. The Committee are of opinion that there are two main causes of the decline: (1) the equalizing of the marks for Greek with those given for French and German in the bursary competitions of three of the four Universities; and (2) the rigid insistence by the Department on a uniform intermediate curriculum, with compulsory drawing and science for all. It would appear, they say, to be only a reasonable concession were the Department to allow pupils intending to proceed to a University degree in Arts to substitute Greek or German for these two compulsory subjects in the last year of the Intermediate Course. This permission was granted up to 1906-7, and the decline in the study both of Greek and of German has been specially great since that year.

The Education Department is, of course, not entirely to blame for the decline; but its insistence on a uniform course up to the stage of the intermediate certificate has undoubtedly accentuated it, and it is the opinion not only of language teachers, but also of scientific men, that, although the teaching of science in the schools is desirable for pupils who do not intend to take an Arts course in the Universities, it is practically a waste of time for those who do. An Arts student, who must take at least one science in his course, will learn science at the University much more quickly and effectively than at school. On the other hand, the school is the only place in which a good grounding in languages can be obtained.

At the annual meeting of the Educational Institute Dr. Morgan, the retiring President, made a strong plea for wider administrative areas for Education: "958 School Boards to manage or over-manage the educational affairs of Scotland! I say there are at least nine hundred too many." If we replaced them by a really comprehensive set of Local Authorities, we should get managers with a large outlook upon the entire educational necessities of their district, we should do away with much wasteful competition and overlapping, we should terminate such anomalies as local school rates varying from less than 3d. to more than 5s., we should remove undesirable inequalities of salaries both rural and urban, we should get a fairer system of promotion of teachers, and we should abolish the petty tyranny that sometimes disfigures small School Boards.

IRELAND.

The Universities have opened the winter session this month with examinations for Honour degrees and Moderatorships, the results of which are in course of publication. A Chair of Architecture has been established in the National University, to which Prof. William Scott has been appointed. Designs have been already accepted for the new University College, Dublin, which is to take the place of the old building in Earlsfort Terrace, and the work of construction will probably soon be started. The governing body propose to expend a sum of £160,000 on the completed scheme, and a sum of £95,000 on the first section, which they intend to proceed with at once.

The question which looms in the forefront of public discussion at present, Home Rule, casts its shadow in the educational world as elsewhere. The future of the Irish Universities was the subject of a lively debate in the

House of Commons on October 21, when Mr. J. H. Campbell, junior member for the University of Dublin, moved an amendment on Clause 2 of the Home Rule Bill to prevent the Irish Parliament from having any power of dealing with Trinity College or Queen's University, Belfast, both which institutions under the new Legislature the hon. member compared to a canary shut up in the same room with a cat. Mr. Redmond deprecated the demand for safeguards for Trinity College, of which, he said, the great bulk of Irish people, Catholic as well as Protestant, were proud, and which had in the past been the Alma Mater of the most distinguished Nationalist leaders, but professed himself willing to agree to any safeguards that might be desired. Mr. Birrell spoke in a similar strain, and said that if there were any need of safeguards it was in the case of Queen's University, which was a new and comparatively poor foundation, largely dependent upon an annual grant of £18,000, which, as the Bill now stood, might be diverted by the Irish Parliament to other educational purposes, and though he did not consider that contingency likely, he undertook, either on the Report stage or when Clause 3 was reached in Committee, to introduce words which would give substantial effect to the amendment. On this assurance Mr. Campbell withdrew the amendment.

That Mr. Campbell's action was unofficial and undertaken solely on his own responsibility transpires from a letter published by Prof. J. P. Mahaffy in the *Times* of October 23, in which he states that there is in Trinity College "at least a strong minority who look upon such an exemption from Irish control as a great danger in the future to Trinity College." The Provost, while declaring that he shared Mr. Campbell's views, has also stated that his action was in no sense official. As an able leader in the *Irish Times* of October 23 points out, such a safeguard, if it were ever to be really required, would be practically useless, since it might be easily evaded, while it would be fatal to Trinity's educational interests, by setting up a barrier of distrust between the Protestant and Roman Catholic youth of Ireland.

Mr. Birrell's scheme for the improvement of the status of lay secondary teachers has been the subject of an active discussion in the Press, in which the chief participants have been the representatives of the Catholic Head Masters' Association, of the Association of Secondary Teachers (Ireland), and of the Ulster Branch of the Incorporated Association of Assistant Masters, and also Prof. Culverwell and individual teachers. The Catholic Head Masters make the following demands, which, they state, were practically agreed to by all parties at a conference with a Committee of the Intermediate Board and with Mr. Birrell on January 29: (1) That a register of secondary teachers should be established, (2) that one registered teacher should be employed for every twenty-five pupils on the Intermediate roll, (3) that there should be no distinction made between lay and clerical or religious teachers, (4) that a certain salary should be given as a minimum to each teacher, with an increment from the new grant, (5) that teachers during efficiency and good behaviour should have reasonable security of tenure, and not be dismissed without timely notice, and (6) that a pension scheme should be established on certain conditions. The Association of Secondary Teachers have addressed a letter to Mr. Birrell, in which they suggest (1) that the standard for registration should be a high one, and that assistant teachers should be given direct representation on the Registration Committee, (2) that the salaries proposed are inadequate save as initial ones, and require to be supplemented by increments and pensions, and that a portion of the grant, say £10,000 a year, should be set aside for the next ten years as nucleus of a pension fund, (3) that three months' notice of dismissal is preferable to six, provided the period be included in the school session, (4) that it is undesirable to discriminate between lay and religious teachers, and that the employment of one registered teacher for every twenty-five pupils on the school roll should form the basis of the grant. The Ulster Branch of the Incorporated Association ask that the grant should be expended, according to the original scheme, solely for the benefit of lay teachers, but object to the principle of distributing it in proportion to the amount received by each school under the Intermediate Education Act, as they consider the existing examination system an evil. They also desire to see teachers represented on the Registration Committee, and insist on a University degree or the equivalent, as well as experience, as a qualification for registration. Unfortunately for the outside public, the statement of the various parties concerned as to what took place at the historic conference on January 29 by no means agree. According to the Ulster representatives, the question whether lay and clerical teachers should receive the same treatment did not come up at all, and the scheme of registration proposed by the head masters was opposed by all the representatives of the assistants. One thing is evident from the whole controversy: that the Catholic lay teachers do not see eye to eye with the head masters on the question of their status as compared with the

(Continued on page 764.)

A DUSTLESS SCHOOLROOM.

Can this ideal be realized?

THE ANSWER ADMITS NO DOUBT.

You can keep your School Dust free, and Healthy, by using Royal DUSMO; the certain Cure for the Dust Evil.

'DUSMO'

The Dustless Sweeping Powder.

By Special
Appointment to

His Majesty
the King.

Just a **thin line** of **DUSMO**, swept over
the floor, cleans the boards and absorbs
every particle of dust.

*A free trial will be granted to any Public
School for one month without obligation.*

**The cost of DUSMO in Elementary Schools does not exceed 1½d. per pupil
(seating accommodation) per annum.**

Contractors to H.M. Office of Works for use in the Public Buildings and Offices.

religious. Some of them have written very bitterly on the position of lay assistant masters in Catholic schools, while the position of Catholic lay women teachers is described in a forcible article by Mrs. Sheehy Skeffington, M.A., in an article in the *Irish Review* for October.

At a recent meeting of the Hierarchy at Maynooth, held in order to install Dr. Hogan, the Vice-President, as President of the College in place of Dr. Mannix, Archbishop of Pharsalus and Coadjutor Archbishop of Melbourne, the new grant was discussed, and in the statement furnished to the Press the Bishops protest against the discrimination between lay and religious teachers, and also claim that in settling the qualifications for registration allowance shall be made for the special circumstances of nuns and other religious teachers.

The (Protestant) Schoolmasters' Association, while welcoming the grant, suggest (1) that special consideration should be given to the circumstances of small schools; (2) that a distinction should be made between resident and non-resident teachers, and the minimum salaries for the former should be £80 and £50 for men and women respectively (this is a distinction to which the assistant teachers strongly object); and (3) that three months' notice should be substituted for six months'. Meantime, while the parties likely to benefit by the grant are disputing as to the terms of its allotment, it is to be hoped the grant itself will not be withdrawn or diverted to other purposes. Mr. Birrell has stated recently in the House that he hopes to introduce a Bill dealing with methods of examination under the Intermediate Education system before Christmas.

The Irish language formed the subject of another politico-educational debate in the House on October 23, when Mr. Malcolm moved an amendment on the Home Rule Bill reserving to the Imperial Parliament the power to ensure the maintenance of English as the sole official language in the Irish Parliament, Law Courts, and public service, and incidentally attacked the Gaelic League as a virulent political organism. Mr. Birrell made the common-sense reply that, if ever Irish became the spoken language of the Irish people again, it would not be in the power of the English Parliament to prevent their using it, and that until it did the amendment was not needed, and quoted statistics from the census sufficient to show how remote at present was the probability that it ever would. The amendment was finally defeated after vigorous controversy, which to those on this side of the Channel must seem very futile.

SCHOOLS.

ACTON COUNTY SCHOOL.—The usual free places have been awarded to scholars from Acton and Chiswick. The competition was considerable. T. Dunsmore has gained a place in the last Civil Service (Intermediate) competition; D. J. B. Lee won the Bowman and Yorke Scholarship; E. C. Parkin and R. Wigginton obtained Intermediate (County) Scholarships last term. Eight boys took Junior (County) Scholarships. Eighteen boys (out of twenty candidates) passed the London (School) Matriculation, with two Honour certificates and twenty-two distinctions. H. Ginsburg goes to Downing with a college and a county scholarship; H. M. Lacey is at King's College, London, with an Engineering Scholarship and a L.C.C. Scholarship. Lucas passed the London Intermediate Science. Mr. E. J. Salter has joined the staff, and is in charge of the new Commercial Form. The organ is now fixed in its place in the gallery and is a great acquisition.

BIDEFORD, EDGEHILL GIRLS' COLLEGE.—The twenty-eighth Annual Prize Day was held on October 2. A public luncheon was held in the Gymnasium and was presided over by the Mayor of Bideford. The prizes were distributed in the afternoon by Mrs. W. H. Reed, of Exeter. The Head Mistress, Miss E. O. Johnson, B.A., in submitting her report, said that the numbers were still increasing. During the year, in the Oxford Local Examinations, eight candidates were successful in the Senior Division, one with Third Class Honours; in the Junior fourteen, two obtaining Third Class Honours; and in the Preliminary eleven, one obtaining Third Class Honours and Distinction in English (bracketed Seventh in England).

BRADFORD GRAMMAR SCHOOL.—On October 10 the school celebrated the two hundred and fiftieth anniversary of the granting of its charter, and the event was signalized by conferring on Dr. Keeling the freedom of the city, presented to him by the Lord Mayor in a handsome silver casket. At the banquet in the Town Hall, the Master of Trinity College, Cambridge, proposed the health of the school. Speaking as a governor of five great schools, he said that the great duty of governors was to spare no pains in choosing the best possible head master and then to let him alone. Under Dr. Keeling the numbers of the school have risen from 360 to 580.

BRIGHTON (ST. MARY'S HALL).—Founder's Day was celebrated on October 22, when the Annual Sermon was preached at St. Mark's Church, by the Rev. Canon Weitbrecht, Ph.D., D.D. J. Batson has been awarded an open scholarship of £50 a year for three years (Mathematics) at the Royal Holloway College; London Intermediate Arts, J. Batson; London Matriculation, M. Boodle, M. Platts; Cambridge Higher Local, Group A. R. Farrow, M. Hudson, Honours Class II; M. Painter, K. Segall, H. Thwaites, Passed; Oxford Senior Local,

Somerset; G. E. Crawford, Esq. ("Grammaticus"), Manor House, Clifton, Bristol; Miss E. M. Newbold ("E.M.N."), 7 Broadwater G. Hunt, O. Thwaites, Honours Class III; J. Newton, A. Norris, A. Sadgrove, F. Shildrick, M. Watson, Passed; R.D.S. Full Certificates, M. Boodle, G. Hunt.

CENTRAL FOUNDATION SCHOOL, COWPER STREET.—Sir Edward Busk, Chairman of Governors, distributed the prizes on October 24. Three scholarships of £50 a year had been awarded to G. A. Daws-well, scholar of King's College, Cambridge; A. J. Hartley, scholar of Sidney Sussex College; and R. Reichert, scholar of Peterhouse. Sir Edward announced the intention of the governors to add shortly to the buildings a new laboratory, a gymnasium, and more classrooms.

CHARTERHOUSE SCHOOL.—By the revised statutes the number of scholars will be in future not less than sixty, of whom not less than ten must be elected annually by competitive examination; age of scholars, between twelve and fourteen. Six scholarships of £80 will be awarded annually to boys under sixteen who have been a year in the school. There will be twenty leaving scholarships of £80 for four years to be held at any University in the United Kingdom.

WEST HARTLEPOOL MUNICIPAL HIGH SCHOOL FOR GIRLS.—On Tuesday, October 8, the new Municipal High School for Girls was opened by Mrs. Walter Runciman. The chair was taken by Alderman Macfarlane, for many years Chairman of the Higher Education Committee of the town, who gave a short account of the school and the reasons for building it, and, on behalf of the Education Committee, presented Mrs. Runciman with a gold key as a memento of the occasion. After formally declaring the school open, Mrs. Runciman said it gave her great pleasure to perform that duty for the first Municipal High School in the town. The Committee had provided an excellent building and equipped it well; but, though they were assured that all had been done as economically as possible, it was hardly possible that some rate-payers should not complain of expense. The expenditure on education did not give an immediate and obvious return, but she ventured to predict that in future years it would be said that the building of the High School was the best investment the Committee had ever made. Mrs. Runciman concluded by promising to present a picture to the school. A hearty vote of thanks was passed to Mrs. Runciman for her kindness, and Miss Brew, the Head Mistress, gave a short address. The school has been built to accommodate three hundred pupils, and can be extended to provide for a hundred more if need arises. There are now in the school 184 pupils.

WORCESTER HIGH SCHOOL FOR GIRLS.—The "Alice Ottley" scholarship, value £12 a year for three years, has been won by Jessica Grove. The Council's Scholarship, value £15 a year, tenable for two years, has been awarded to Mary Chappel, the candidate who did best in the Oxford and Cambridge Joint Board Lower Examination. In the Cambridge Higher Local Examination, M. Moncur gained First Class Honours in Groups A (Literature). K. Whitehead was placed in the Second Class with distinction in English Language and Literature. In Group B (Languages) L. Spencer was distinguished in Spoken French, Spoken German, and S. Naylor was also distinguished in Spoken French. The following have joined the staff this term: Miss M. N. Brown, M.A., Cambridge Modern Language Tripos; Miss E. C. Payne, B.Sc. Lond.; Miss L. D. Baynes, Oxford Final Honour School Literae Humaniores; Miss C. Harrison, Art Mistress, Teachers' Illustrating Certificate.

PRIZE COMPETITIONS.

The Translation Prize for October is awarded to "Ragged Robin." *Proxime accesserunt* "Chingleput," "Saxon."

Winners of Holiday Prizes are:—John W. Morrell, Esq. ("J.W.M."), 28 Abbey Street, Silverdale, Staffs; Miss Mary Holmes ("X³"), Homerton College, Cambridge; Miss E. Gatti ("G.A."), 59 Ashley Hill, Bristol; Leonard D. Cane, Esq. ("Enac"), 19 Tivoli Place, Ilkley, Yorks; Miss S. S. Batterbury ("Sirach"), 13 Balgown Road, Beckenham, Kent; Dr. K. L. Batterbury ("Gothicus"), Berkhamsted, Herts; A. R. Mathie, Esq. ("Cymore"), Ardinglea, Munster Road, Teddington, Middlesex; Miss L. Story ("Rufa"), Royal School, Bath; Miss F. Storr ("Tramp"), Ingleside, 12 Angell Park Gardens, Brixton, S.W.; Miss E. G. Batterbury ("Bérisal"), Berkhamsted, Herts; Miss Evelyn C. Hewer (pseud.), Bedford College, Baker Street; Stanley C. Rowland, Esq. ("S.C.R."), 1 Monmouth Street, Bury, Lancs; V. Le Creu, Esq. ("Kuri"), 7 Broadwater Down, Tunbridge Wells; Miss Haslem ("Bob"), The Nook, Park Road, Wokingham, Berks; A. B. Pearce, Esq. ("Tantalus"), Bedlington Vicarage, Northumberland; Miss E. Richmond Faraday ("Ver-nice"), 41 Heaton Road, Withington, Manchester; G. E. Marshall, Esq. (G. E. Marshall), 3 Highlands, New Road, Ilminster.

PITMAN'S LATEST LIST

A STORY OF INFANT SCHOOLS AND KINDERGARTENS.

[Just Published.

By Miss E. R. MURRAY, of the Maria Grey Training College, Hampstead. In crown 8vo, cloth, 156 pp., 2s. 6d. net.

This book supplies in a readable form what has not previously been within reach of the ordinary student, viz., an account of the Kindergarten movement, combined, with the story of the rise not only of our Infants' Schools, but of our system of national education. The following names of a few chapters will show the ground covered:—Before the Days of Infants' Schools; Robert Owen and the First Rational Infant School; Wilderspin and the Infant School Societies; Progress of the Froebel Society and the National Froebel Union; Developments from Within; The Montessori System.

THE INNER LIFE OF GEORGE ELIOT.

A Study of the Mental and Spiritual Development of the Novelist. By CHARLES GARDNER, M.A. In crown 8vo, cloth gilt, gilt top, 5s. net.

FRENCH PROSE WRITERS OF THE NINETEENTH CENTURY AND AFTER.

An Advanced French Reader. With Biographical and Critical Notices in French, and Literary and Bibliographical Notes in English.

By VICTOR LEULIETTE, B. ès L., A.K.C.

Crown 8vo, cloth gilt, 350 pages, 3s. net.

The Nation says:—"The book is on the whole the best advanced French Reader we know. It is certain to give students a heightened appreciation, not only of the flexibility and resources of the French language, but of the wealth and fascination of French thought and of the French outlook upon the world."

JOHN PYM.

By C. E. WADE, M.A. (Oxon.), Barrister-at-Law. Demy 8vo, 7s. 6d. net. *The Journal of Education* says:—"Mr. Wade has earned the gratitude of all students of English History by this masterly account of the life and labour of John Pym. Any student of history who wishes for an impartial yet vivid picture of the troublous and momentous times in which John Pym lived and worked, should lose no time in perusing Mr. Wade's scholarly work."

MAKERS OF NATIONAL HISTORY SERIES.

Edited by the Ven. W. H. HUTTON, B.D.

Each Volume in crown 8vo, cloth, with Frontispiece, 3s. 6d. net.

CARDINAL BEAUFORT. By L. B. RADFORD, D.D. **VISCOUNT CASTLEREACH.** By ARTHUR HASSALL, M.A. **ARCHBISHOP PARKER.** By W. M. KENNEDY, B.A. **FRANCIS ATTERBURY.** By the Very Rev. H. C. BEECHING, M.A., D.Litt. **GENERAL WOLFE.** By E. SALMON. **EDWARD IV.** By LAURENCE STRATFORD. **THOMAS BECKET.** By Ven. W. H. HUTTON, B.D.

THE STUDENT'S GUIDE TO POLITICAL ECONOMY.

Crown 8vo, cloth gilt, 232 pages, 2s. 6d. net. By F. H. SPENCER, D.Sc., LL.B., *Lecturer in Economics and Director of the Day Commercial School, City of London College.* Comprehensive in character and modern in doctrine, this textbook deals with the whole subject in outline, and is written in simple and intelligible language.

PITMAN'S INDUSTRIAL AND SOCIAL HISTORY.

By GEORGE COLLAR, B.A., B.Sc. (Lond.). In crown 8vo, cloth, with over 100 illustrations, 284 pages, 2s.

PITMAN'S COMPLETE MERCANTILE ARITHMETIC.

With Elementary Mensuration. By H. P. GREEN, F.C.S.P.T., Head Arithmetic Master, Pitman's School. Crown 8vo, cloth gilt, with Key, 646 pages, 4s. 6d. net. Complete book without Key, 600 pages, 4s. net. Key separately, 1s. net. Also in Three Parts:—Part I, 300 pages, 2s. 6d. net. Part II, 208 pages, 1s. 6d. net. Part III, 100 pages, 1s. net.

VEST POCKET LIST OF ENDINGS OF FRENCH REGULAR AND AUXILIARY VERBS.

With notes on the Participles and the Infinitive. Size 2½ inches by 1½ inches, 48 pp., limp cloth, 2d. net.

ATHLETIC TRAINING FOR GIRLS.

Compiled and Edited by C. E. THOMAS. In crown 8vo, cloth gilt, with illustrations, 3s. 6d. net.

The Times says:—"This book gives a great deal of valuable instruction as to the playing of games and the performance of athletic exercises, but its primary object is to emphasize the necessity for and discuss the present methods of scientific athletic training."

GALLOWAY & PORTER, University Booksellers, Cambridge.

Down, Tunbridge Wells; J. I. Scott, Esq. ("Beeks"), 28 Thorpe Lea Road, Peterborough.

Par malheur, j'avais déjà le pli du bureau, le goût des découpages faites patiemment le soir à la lampe, le sens profond des images, et, quand je sortais de mes amusements d'artiste prédestiné, c'était par des coups de folie, par une rage de désordre, pour jouer éperdument à des jeux sans règle, sans rythme, au voleur, au naufrage, à l'incendie. Tous ces appareils de buis verni et de fer me parurent froids, lourds, sans caprice et sans âme, jusqu'à ce que ma marraine y eût mis, en m'en enseignant l'usage, un peu de son charme. Elle soulevait les haltères avec beaucoup de crânerie, et, portant les coudes en arrière, elle me montrait comment les barres, passées sur le dos et sous les bras, développent la poitrine.

Un jour, elle me prit sur ses genoux et me promit un bateau, un bateau avec tous ses gréements, toutes ses voiles et des canons aux sabords. Ma marraine parlait marine comme un loup de mer. Elle n'oubliait ni hune, ni dunette, ni haubans, ni perroquet, ni cacatois. Elle n'en finissait point avec ces mots étranges et elle mettait comme de l'amitié à les dire. Ils lui rappelaient sans doute bien des choses. Une fée, cela va sur les eaux.

Je ne l'ai pas reçu, ce bateau. Mais je n'ai jamais eu besoin, même en bas âge, de posséder les choses pour en jouir, et le bateau de la fée m'a occupé bien des heures. Je le voyais. Je le vois encore. Ce n'est plus un jouet. C'est un fantôme. Il coule en silence sur une mer brumeuse, et j'aperçois à son bord une femme immobile, les bras inertes, les yeux grands et vides.

By "RAGGED ROBIN."

Unfortunately I already had a natural bent for sedentary occupations, a love of sitting in the evenings painstakingly cutting out by the light of the lamp, and a deep feeling for pictures. I forsook these amusements, natural to the born artist, only in sudden fits of freakishness, in a frenzy of disorderliness, to fling myself into games without fixed rule or definite form, to play at robbers and fires and wrecks at sea. All this apparatus of iron and polished wood seemed to me heavy, cold, passionless, and soulless, until my godmother, in teaching me how to use them, had given them a little of her own charm. She swung the dumb-bells with a pretty swagger, and, putting back her elbows, showed me how the rods, placed across the back and under the arms, develop the chest.

One day she took me on her knees and promised me a ship, a ship complete with rigging, and sails, and cannon at every port. My godmother used nautical terms like an old sea-dog. She forgot neither fighting-top, nor poop, nor shrouds, not top-gallant, nor sail-royal. There was no end to the strange words, and she used them all as if for love of speaking them. No doubt, to her they were full of meaning: fairies always sail the sea.

I have never had that boat. But I have never, even as a little child, needed to possess a thing in order to enjoy it, and the fairy boat has filled my thoughts through many hours. I saw it long; I see it now. No more a plaything, it has become a vision. It glides noiselessly over a misty sea, and there aboard I see a woman, motionless, with nerveless arms and eyes wide and unseeing.

We classify the 127 versions received as follows:—

First Class.—Vercingétorix, Felix Trenwith, Ragged Robin, Saxon, Constantine, W.B.D., Medina, Rursus, Emil, Chingleput.

Second Class.—E. A. Avant, Perysatetes II, Fortes et Fidelis, H.F.L., Cosette, Tarr, Katty Ann, Greenfinch, Menevia, Anno Domini, R.A.P., Eleventh hour, Francesca, Evangeline, Savilian, Macnamara, Enac, Numberfour, Teramnos, Les Quennevais, Simonetta, Philos, N.W.N., Mousmé, A.C.L., Muquet, Amaryllis, Dreamer, Fridjof, Bamberg, Janua, Maidenhythe, Eftersay, Sapiens, Pussy 7, Jack Brown, H.N., S.E.H., E.A.D., Phantom, Nessko, Giraffe, Cleopatra's Needle, Duck.

Third Class.—Primrose, Pont-Sainte-Maxence, L.D.H., Sinn Fein, Jean-Jacques, Logan, H.M.J., Brugge, Gothicus, Sirach, St. Clare, Undine, A.G.M.S., Goyle Hill, Esbie, W.S.W., Max, Moriendo vivo, A.C.E., Nil desperandum, Roy, Espérance, Hic est, Myra Hans, Sobraon, Matine Bee, Jelly, Rousille, L.M.R., Lagual, Bardolph, Quatre feuilles, E. Tyrrell, Peter Bell, Agnus, A.H.K., Guillaume de Morillon, E.E.H.

Fourth Class.—Nil desperandum (foolscap), Betty, Electra, M.J.R., M.E.M., S.M.C., K.A.B., Stebbs, Nosslo, M.G.H., Sans souci, A.R. Gill, E.M. Stephenson, A.G.M., Cock shot, Dapper.

Fifth Class.—Sosalin, Jusso, Janson, F.L., Tyro, Ana, Quip, P.R., Unity, Flora, H.M.G., Pascal, Kip, Duo, Asp, A.U.K., Rover, L.R.

A knowledge of the context was a distinct advantage, but it was

A WORK OF GREAT IMPORTANCE.

EDUCATIONAL HANDWORK

A Complete and Varied Course for Schools.

By WILLIAM TAYLOR,

Instructor to the Lindsey Handicraft Classes for Teachers, &c.

With an Introductory Letter by Mr. WALTER BIRKETT,
Inspector of Schools to the Lindsey County Council
Education Committee.

Book I. FOR JUNIORS.—176 pages, fcap. 4to, with 40 Photo
Illustrations and 182 Working Diagrams. Cloth, 3s. 6d. net.

Book II. FOR SENIORS.—312 pages, fcap. 4to, with 69
Photo Illustrations and nearly 300 Working Diagrams.
Cloth, 5s. net.

Schoolcraft says: "At a time such as the present, when all forms of handwork are receiving considerable attention, a book such as that prepared by Mr. Taylor is extremely welcome. The schemes are excellently arranged and progressive in character. A good book at a small cost."

Education says: "Much trouble has been taken to make the manual of real service, the diagrams being clear, and the directions simple and direct. It is by self-denying pioneer work such as the writer of this valuable book sets out that a step forward is definitely achieved. We cordially recommend the book."

Educational Handwork says: "The whole work from cover to cover is well got up and well illustrated and much time and labour has been spent in the preparation and publication of the books."

Full particulars and specimen pages of both books may be had
post free on application.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

NOTE.

The December issue of "The Journal of Education" will be ready on November 30, 1912. It will contain the Index and Title Page for the yearly volume Vol. 44, Jan.-Dec. 1912.

Advertisements must reach the Office by
November 23.

not hard to gather from the extract itself that these were reminiscences of early childhood. Let me recommend all who have not read it to read one of the most perfect of child studies, "Le Livre de mon Ami."

If the situation had been grasped, it would have been impossible to translate *le pli du bureau* "the student's stoop" or "a turn for office work." "Cutting-out," again, suggests the tailor or milliner, and, we must add, paper figures. *Le sens profond des images*: "a keen appreciation of pictures." *Par des coups de folie*: "to indulge in mad pranks, in a fit of riotous mischief, to play like a lunatic at robbers, a shipwreck, a house on fire, games without rime or reason." "Folly," "theft," "incendiarity" were common mistakes. *Sans caprice et sans âme*: "prosaic and spiritless" or "unimaginative and lifeless." *Un peu de son charme*: "a touch of her own charm." *Avec beaucoup de crânerie*: "like a drill sergeant." *Elle mettait, &c.*: "she mouthed them as though she loved them." *Une fée, &c.*: "a fairy takes naturally to the water." The godmother has been before described as a fairy. *Les bras inertes*: "with arms hanging limply at her side and large lack-lustre eyes." The child had been taken to see his godmother laid out for burial.

Two Prizes of one Guinea are offered for the best translation of the following extracts from Mörike's "Mozart auf der Reise nach Prag" and Höltz's "Mailed":—

Sie stiegen Arm in Arm über den Graben an der Strasse und sofort tiefer in die Tannendunkelheit hinein, die, sehr bald bis zur Finsternis verdichtet, nur hin und wieder von einem Streifen Sonne auf sammetnem Moosboden grell durchbrochen ward. Die erquickliche Frische, im plötzlichen Wechsel gegen die ausserhalb herrschende Glut, hätte dem sorglosen Mann ohne die Vorsicht der Begleiterin gefährlich werden können. Mit Mühe drang sie ihm das in Bereitschaft gehaltene Kleidungsstück auf.

"Gott, welche Herrlichkeit!" rief er, an den hohen Stämmen hinaufblickend, aus. "Man ist als wie in einer Kirche. Mir scheint, ich war niemals in einem Wald, und besinne mich jetzt erst, was es doch heisst: ein ganzes Volk von Bäumen beieinander! Keine Menschenhand hat sie gepflanzt, sind alle selbst gekommen und stehen so, nur eben weil es lustig ist beisammen zu wohnen und wirtschaften. Siehst du, mit jungen Jahren fuhr ich doch in halb Europa hin und her, habe die Alpen gesehen und das Meer, das

Grösste und Schönste, was erschaffen ist: jetzt steht von ungefähr der Gimpel in einem ordinären Tannenwald an der böhmischen Grenze verwundert und verzückt, dass solches Wesen irgend existiert, nicht etwa 'una finzione di poeti' ist, wie ihre Nymphen, Faune und dergleichen mehr, auch kein Komödienwald, nein aus dem Erdboden herausgewachsen, von Feuchtigkeit und Wärmeleucht der Sonne grossgezogen. Hier ist zu Haus der Hirsch mit seinem wundersamen zackigen Gestäude auf der Stirn, das possierliche Eichhorn, der Auerhahn, der Häher." Er bückte sich, brach einen Pilz und pries die prächtige hochrote Farbe des Schirms, die zarten weisslichen Lamellen an dessen unterer Seite, auch steckte er verschiedene Tannenzapfen ein.

MAILED.

Der Schnee zerrinnt,
Der Mai beginnt,
Die Blüten keimen
Den Gartenbäumen,
Und Vogelschall
Tönt überall.

Pflückt einen Kranz
Und haltet Tanz
Auf grünen Auen,
Ihr schönen Frauen,
Pflückt einen Kranz
Und haltet Tanz!

Wer weiss, wie bald
Die Glocke schallt,
Da wir des Maien
Uns nicht mehr freuen:
Wer weiss, wie bald
Sie, leider, schallt!
Drum werdet froh!
Gott will es so,
Der uns dies Leben
Zur Lust gegeben.
Geniesst die Zeit,
Die Gott verleiht!

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by November 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

BOOKS BOUGHT AT GOOD PRICES.

HORACE MARSHALL AND SON

The New Latin Delectus. By W. JENKYN THOMAS, M.A., and E. P. DOUGHTY, M.A. Illustrated. In Two Parts. 1, 1s. 6d. 11, 2s. 6d.

For the earlier reading of boys and girls in schools with a leaving age of about sixteen. The Contents include:

Stories of Ancient Rome	Myths of the Lesser Divinities
The Gods	Myths of the Heroes
Myths of the Creation	Scenes from the Story of Troy
Myths of the Great Gods	Scenes from the Story of Aeneas

The *Athenaeum* says:—"Simplified Livy, Eutropius, and in verse Horace, Ovid, &c., are used; and the whole seems admirably fitted to take the place of the Caesar usually given at this stage, which may well be postponed."

A Heuristic Arithmetic. By C. GRANVILLE, B.A., and C. E. RICE, M.A. **Method Book.** Part I, 2s. 6d. **Examples Book.** Part I, 1s.

English History in English Poetry. From the French Revolution to the Death of Queen Victoria. By C. H. FIRTH, M.A., LL.D., Regius Professor of Modern History in the University of Oxford. Annotated. Price 2s. 6d.

This book contains a long and valuable introduction, dealing with the manner in which the poetry of the period may be used to illustrate its history, together with selections from the poems, classified according to the topics to which they refer. It is intended to be studied in connexion with the history of the period in the Upper Forms of Secondary Schools.

THE JOURNAL OF ENGLISH STUDIES.

A Magazine devoted to matters concerning the Teaching and Study of English.

The Second Number, now ready (price 1s. net), contains articles by J. M. ROBERTSON, M.P., KATHARINE TYNAN, P. B. BALLARD, M.A., H. A. TREBLE, M.A., &c., &c.

JOHN GRAHAM, Sub-Lieutenant, R.N.

A Tale of the Atlantic Fleet. Illustrated by C. M. PADDAY. Large crown 8vo, cloth extra, olive edges, 6s.

In this new story that great naval writer, Fleet-Surgeon Jeans, takes his readers away from scenes of war, and deals with the Atlantic Fleet as it is in peace time. The doings of the middies and the life on board H.M.S. *Hotspur*, with the rivalries of the ships of the fleet, provide lively, interesting material. Boys especially will revel in the graphically told description of the famous football matches between the various ships' teams. Fleet-Surgeon Jeans has surpassed himself in his latest book, which will appeal alike to young and old.

TRIUMPHS OF ENTERPRISE.

The object of this new series is to tell the story of the wonderful achievements of human enterprise and to set forth the marvels of science and nature. The text will explain the course of a particular feat of engineering, or how such an object is produced or evolved, and all in vivid and compelling manner, without the burden of tedious technical explanations.

Crown 8vo, cloth extra, 3s. 6d. Profusely illustrated throughout.

The following volumes are issued this season :—

CONQUESTS OF ENGINEERING.

By CYRIL HALL.

WOOD AND WHAT WE MAKE OF IT.

By CYRIL HALL.

NEW AND POPULAR EDITIONS. Illustrated by Eminent Artists.

By G. A. HENTY.

AT AGINCOURT. The White Hoods of Paris. 3s. 6d.

TRUE TO THE OLD FLAG. A Tale of the American War of Independence. 3s. 6d.

THROUGH THREE CAMPAIGNS. A Story of Chitral, the Tirah, and Ashanti. 3s. 6d.

By CAPTAIN F. S. BRERETON.

IN THE KING'S SERVICE. A Tale of Cromwell's Invasion of Ireland. 3s. 6d.

FOES OF THE RED COCKADE. A Story of the French Revolution. 3s. 6d.

Lists of all the volumes in these series post free.

Write for full particulars to BLACKIE & SON, Ltd., 50 Old Bailey, E.C.

Supplement to THE JOURNAL OF EDUCATION.

No. 520.

NOVEMBER 1, 1912.

NELSON'S NEW GIFT BOOKS

6/- Tales of the Gods and Heroes. By Sir G. W. COX.
NET. Beautifully Illustrated with 16 high-class reproductions from Paintings by Prof. FRIPP.

This large and handsome volume contains the stories from Sir G. W. Cox's famous book with the above title, together with his "Tales from Greek Mythology."

6/- Camp-Fire Tales. Edited by RICHARD WILSON, B.A. 24
NET. Coloured Drawings by EDWIN NOBLE, and numerous Pen and Ink Sketches.

The hunting books of recent years provide excellent reading for adventure-loving boys, and in this volume the editor makes judicious selection from some of the most striking episodes to be found in this class of literature.

6/- The Circling Year. By W. P. WESTELL. 36 Beautiful
NET. Coloured Plates and nearly 150 line Illustrations.

This book has been prepared to meet the constant and insistent demand for young people's guides to the beauties and wonders of Nature.

6/- The Girl's Budget. Edited by JEAN M'INTOSH.
NET. 32 Coloured Plates.

The aim of the editress of this attractive volume is to provide wholesome reading matter for growing girls, which allows for natural sentiment without giving way to sentimentality.

5/- The Gateway to Chaucer. By EMILY UNDERDOWN.
NET. Numerous Coloured Plates and Dainty Sketches.

This beautiful book forms an excellent companion to Miss Underdown's well known "Gateway to Romance," and contains the most suitable stories from those told by the Canterbury Pilgrims.

3/6 Masterman Ready. By Captain MARRYAT. Coloured
Plates and Line Decorations.

3/6 Miss Netherby's Niece. By ALICE CHESTERTON.
Well Illustrated.

3/6 Nelson's Children's Annual, "The Jolly Book."
Cloth. This well-known Annual is literally a "bumper." It contains no less than 48 Plates
2/6 Paper in full colour and 300 pages of black-and-white pictures.
Boards.

2/6 The Story of Heather.
By MAY WYNNE. Coloured Illustrations by DOROTHY POPE.

2/6 Memoirs of Napoleon. Abridged from Bourrienne.

Price 2/6 each.

The World's Romances.

The style of reproduction of these books is that usually associated with a much higher price. Each is beautifully printed, bound in canvas with picture cover, and illustrated with 8 reproductions from drawings by a well known artist. The stories are simply but vigorously told from the best available sources.

Faust and Margaret. Illustrated by NORMAN LITTLE.

Lancelot and Guenevere. Illustrated by JAMES FRIPP.

Sigurd and Gudrun. Illustrated by FRANK C. PAPE.

Paola and Francesca. Illustrated by W. MATTHEWS.

THOMAS NELSON & SONS, 35 and 36 Paternoster Row, London, E.C.
Edinburgh, Dublin, Leeds, Manchester, Paris, Leipzig, and New York.

**Central Institute for
Swedish Gymnastics,**
16, 17, & 18 Paddington Street,
Marylebone, W.

Telephone: 872 Mayfair.

The School World of January 1912
says: "This college for men students
... will provide a first year's course
fitting students for posts in elemen-
tary schools, and a second year's
course enabling the graduate to take
charge of any school of whatever
standing. Anatomy, physiology,
theory of movements, hygiene, and
kindred subjects necessary for a
complete grasp of physical training
will be taught by experienced teach-
ers. This will be a noteworthy addi-
tion to the facilities for training in this
subject. ... this new college has been

most cordially welcomed by the Parliamentary Secretary representing the Board.
... As a sign of progress, and in the hope of a better future for the physique of
the youth of the nation, the new 'Central Institute' will be cordially welcomed."

PUPILS ARE NOW RECEIVED.

The Institute also undertakes the instruction in
Physical Exercises on the Swedish System for Schools
in the neighbourhood. Recreative Classes—Gymnastics
and Fencing—are held in the afternoons and evenings.
For particulars apply to the Principal—

ALLAN BROMAN,

From the Royal Central Institute of Gymnastics, Stockholm.

THREE EXCELLENT SCHOOLBOY PLAYS FOR CHRISTMAS.

THREE MERRY COMEDIES FOR SCHOOLBOYS AND SUCH.

By C. A. PELLANUS. With Illustrations. Demy 8vo, cloth, 2s. 6d. (Postage 3d.); or separately sewed, 1s. each. (Postage 1d.)

1. **Too Clever by Half.**
2. **A New Start.**
3. **The First Day of the Holidays.**

These plays are admirably constructed and richly humorous. They make little demand upon the home or the school for either scenery or dress. They are never stupid or vulgar, and they never allow the interest of the audience to flag. "For sheer good humour and high spirits we have seen nothing to beat them."—*Daily News*.

SHAKESPEARE'S TWELFTH NIGHT.

Acting edition for Schools and Amateurs, by A. F. M. GREIG and ORLANDO BARNETT. Crown 8vo, sewed, 1s. net. (Postage 1d.)

A few changes in the Acts and the Scenes and a certain amount of editing which has been necessary—the elision of a word here, the change of a line there—will, it is hoped, have made this version suitable for the use of schools and amateurs who cannot attempt the production of the play under the elaborate conditions which have hitherto obtained.

"CLASSICS AND THE DIRECT METHOD."

An Appeal to Teachers, by W. H. S. JONES, M.A., Perse School, Fellow and Lecturer at St. Catharine's College, Cambridge. Crown 8vo, sewed, 6d. net.

This pamphlet discusses the attempts of reformers to make the teaching of Latin and Greek more rapid and more profitable. The principles underlying the reform are fully dealt with, and a summary is given of the methods usually employed. Two students who have been trained on "reformed" lines give their opinions of its value, and the pamphlet closes with an appeal to teachers.

VOICE PRODUCTION WITH THE AID OF PHONETICS.

By C. M. RICE, M.A., A.R.C.M., Chaplain of King's College, Cambridge. Crown 8vo, stiffened boards, 1s. 6d. net. (Postage 3d.)

"The explanations, even of the organs connected with breathing, are clear. Articulation, pronunciation, &c., are dealt with in a practical way. Much of the advice given concerns speakers as well as singers."—*The Athenaeum*.

"If you want to get on the right line of voice production you should not fail to get this excellent little book."—*Woman Teacher Magazine*.

"This most informing little book. . . . A book of this kind makes its appearance quite at the right time."—*London Teacher*.

"A careful, strictly practical, and in many ways original treatise, by an experienced teacher—for the use of the singer and the reader."—*Times*.

JUST PUBLISHED.

BRITISH VIOLETS.

A Monograph by Mrs. E. S. GREGORY, with an Introduction by G. CLARIDGE DRUCE, M.A., F.L.S. Royal 8vo, numerous Illustrations, 6s. net. (Postage 4d.)

This monograph is the outcome of more than a quarter of a century's special attention to the Nonium Section of the Genus *Viola*. Though written primarily for the critical Botanist, the book should prove of great use and interest to the less scientific student. The volume will be illustrated with both line and half-tone blocks. The author is a recognized authority on violets, and is a contributor to the "Cambridge British Flora."

THE SYMPOSIUM OF PLATO.

Edited with Introduction, Critical Notes, and Commentary, by R. G. BURY, M.A., formerly Scholar of Trinity College, Cambridge, and editor of "Philebus" of Plato. 8vo, cloth, pp. lxxi + 179, 7s. net. (Postage 4d.)

THREE IMPORTANT BOOKS BY CANON FOAKES JACKSON.

1. **Biblical History of the Hebrews.** Crown 8vo, 6s. net.
2. **Biblical History for Junior Forms.** Old Testament. 2s. 6d.
3. **Nearly Ready.** With the collaboration of B. T. DEAN SMITH, M.A., Vice-Principal of Westcott House. **Biblical History for Schools New Testament.**

Cambridge: W. HEFFER & SONS, Ltd.

and to be obtained from all Booksellers.

THE CHARACTER-FORMING INFLUENCE OF VOCATIONAL EDUCATION.*

By CLOUDESLEY BRERETON.

EDUCATION has in the past been mainly concerned with the production of the man and the citizen. Doubtless the stress laid on the particular end in view has not been the same in all countries. In Germany, for instance, the predominant note has probably been the love of disinterested learning, in France the pursuit of culture, in England the development of will-power. On the other hand, except in the preparation of the future divine, doctor, lawyer, or teacher, the professional or vocational side of education has been lost sight of, or else has been provided for in special schools with a more or less direct utilitarian bias.

The chief problem of education for the next twenty years, as I conceive it, is to graft these detached utilitarian establishments on to the main trunk of national education at all its stages, to bring them in fact into organic and living connexion with it, or else, where such establishments do not exist, to engraft and develop in our schools of general culture such bifurcations and branches as shall prepare the pupils to some extent for their future careers and callings. Hitherto the ordinary school—which represents the preparation for life—has been too much divorced from the special school which represents the preparation for livelihood. And one of the factors in this isolation—or, rather, in preventing a *rapprochement*—has been the mechanical conception of life which, derived directly from the current philosophy of the times, has dominated our whole conception of organization and administration. It has led directly to the conception of education as consisting of separate divisions and types, complete in themselves and merely juxtaposed. This essentially mechanical and lifeless conception is now giving way before the more fruitful and life-giving biological conception that all education is organically one, and that the soul or spirit should be able to pass through the entire organism from the root to the uttermost branches. In more than one country the baneful effects of education being thus split into isolated parts is still to be seen. In England, in France, in Germany certain portions of education are under one authority, certain portions are under another, and too often there is no clear co-ordination or co-operation between the different authorities concerned.

Unfortunately this permanent divorce between the school of general culture and the special schools results in a separation of spiritual ideals and economic aims which is not only harmful to both, but especially to the individual in whom they ought to be combined. The school of general culture when separated from the special school remains as heretofore too much of a cloister of hot-house reared virtues, that are more or less liable to perish when exposed to the rough-and-tumble of the world. Or, at best, it tends to produce a sort of caste morality, while allowing the pupils to adopt a thoroughly different code of ethics in the business world or even in the world in general. On the other hand, the special school, if wholly divorced from the moral influence of the school of general culture, tends to substitute Mammon for God and to make self-interest and self-advancement supreme. By itself it can never rise to the idea of a profession, much less a business, being really a vocation. At most, it can only create a sort of inter-professional honour which morally is little superior to the freemasonry known as honour among thieves.

Isolated, the school of general education tends to barren idealism which too often, unable to take abiding root in a workaday world, withers away; isolated, the school of special education tends to ruthless realism—to the grim doctrine of "devil take the hindmost" and all it connotes. Only a close union of the two can produce the best type of individual—the man of action inspired by high and humane ideals. If the future

* Paper read at The Hague Moral Education Congress.

pupil, therefore, is to be properly equipped for the struggle of life, he must come under both forms of training. And herein lies the general weakness of elementary education in most countries to-day. In spite of abundant signs of improvement, especially in England, it is still too exclusively a school of general culture. It is still too little a preparation for livelihood. There are, in fact, large sides of the potential *Thätigkeit* of many pupils which are either ignored by it or else only insufficiently taken into account. Only the literary boy who by a scholarship can pass on to a higher institution may be said to be deliberately preparing himself for what may ultimately be his life's career. But the boys who will be, or could be if properly educated, mechanics, agriculturists, designers, and skilled artisans in general—how can they form any vocational ideals if they hardly know before leaving school what calling they are going to follow? The very root idea of vocation is initiation or self-dedication, not simply for selfish motives—it implies, in fact, as far as the world is concerned, the desire not merely to get the best of it, but to make the best of it. And this initiation again implies a preliminary period of self-preparation, which should begin while the pupil is still in the ordinary school.

If, then, vocational education is to produce its genuine effects, if it is to inspire the pupil with a taste or liking for his future calling, as well as to develop his aptitude for it, it must in its turn take into account the tastes and aptitudes of the pupils, or, in other words, it must sift out and cater for the broad categories of human activities, aptitudes, and talents which have hitherto been all more or less lumped together, especially in the elementary school, in an undifferentiated category.

Vocational education means, then, the sifting out and selection of those who are suitable for the vocation they are likely to follow, in place of the present system of compelling all and sundry to come in and partake of one form of education which is predominantly literary. It means, in fact, the provision of sufficient alternative types of education, so that in future we shall be really organizing the selection in place of the present wasteful methods of natural selection, with their ruinous aftermath of failures and *non-valeurs*.

Happily the number of broad, fundamental categories into which the talents of mankind can be divided are comparatively few. There are the more purely abstract ones, the literary and scientific, which are catered for in our secondary schools; the mechanical or constructional, which is provided for to a certain extent where engineering sides exist; the artistic, especially in the sense of art applied to design, which is scarcely recognized in the ordinary school; and the biological, dealing with life in all its forms, and especially with agriculture, which, so far as most countries are concerned, is very scantily dealt with, though there are signs that it will become much more prominent in the near future.

If, then, as we have seen, vocational education means giving the pupil a foretaste in the school itself for his future work, then it clearly stands to reason that education will have to modify its present courses of study; it will, in fact, have to create special branches and bifurcations within the schools of general culture, or special schools outside them, though in full communion with them ethically and educationally, wherein the pupil may obtain an initiation into the type of career he is best fitted for, by receiving a training in the basal studies that underlie it and some preliminary practice in the type of work he is likely to undertake.

But to follow up this thought would take us too far. It is probably advisable, however, to dissipate here certain current fallacies about the nature of vocational education, and to point out the probable results on civilization that will, in the long run, attend the working out of this potent conception.

Vocational education is not a new label for the gospel of "get rich quick." Its very name implies, not merely the preservation of the personality in the man of business, but also of a sense of duty to the community. Neither is it a new scheme under a high-sounding name for supplying the capitalist with cheap expert labour in the form of superior hewers of wood or drawers of water. It does not aim at turning

every man into a soulless specialist, but of preserving in every specialist the sense of humanity. While laying stress on the need of preparing every man for his life's work as far as possible, it equally insists that the curriculum shall be in all its stages a harmonious whole of liberal and technical studies. It recognizes that any sound specialization must rest on an all-round culture of the body, the mind, and the soul; not isolated, as heretofore, from one another in watertight compartments, but forming as far as possible an indissoluble whole, whether the ultimate aim be directed towards bodily labour, mental expertness, or some essentially spiritual profession. Vocational education seeks to cultivate on the one hand originality, individuality, personality, while conciliating them with personal ethics and civil and social obligations.

And now for the possible results. For a whole century we, in Europe, have been under the spell of the industrial revolution; and the anarchy it has produced in every sphere of life, religious, social, and economic, by breaking down the old order of things, seems to be growing in some ways worse rather than better. Personally, I do not believe that a dead level form of society is likely for the next few millenniums at least. At most it will continue to act as the distant ideal of one section. The next stable type of society to be evolved will possibly be a hierarchy of classes, though it is hardly likely to bear much resemblance to that of the *ancien*, or even the present, regime, which is apparently in full dissolution or transformation. Personally, I believe that such a society can only arise out of a revaluation of service rendered—the ideal, in fact, on which all previous forms of society have always reposed; and that can only be rendered possible by a re-stratification of the industrial world—that is to say, by a re-formation of classes in the industrial world—by the re-constitution, in fact, of an industrial hierarchy, in which the producer will more nearly come by his own in wages and in social prestige and repute. It will be, in fact, a re-creation of the old Guild system on a wider and more liberal scale, in which every profession and calling would find representation. Again, such a transformation would be immensely expedited by national education acting as a kind of sorting-out agency of the younger generation according to their aptitudes and aspirations, while inspiring in these neophytes a foretaste for their future calling. Otherwise, how can labour rise to a sufficient pitch of efficiency to take itself out of the toils of unskilled employment, let alone its machine-made servitude; and, what is still more important, how can these new social organisms possess the requisite spiritual forces to knit them together and to one another if they are not manned and controlled by persons who possess a high sense of their vocation or calling in respect to themselves, their profession, and the community?

THE CIRCULATING SCHOOLS IN WALES IN THE EIGHTEENTH CENTURY.

CIRCULATING schools were an outstanding feature in the life of poorer classes in Wales during the eighteenth century. At that time the population, numbering about 500,000, were almost wholly employed in pastoral farming and lived in scattered villages. Even Swansea, the largest town, included only 6,000 inhabitants, while Cardiff had but 1,870. These nomadic institutions, therefore, half propagandist, half philanthropic, were exactly suited to a primitive and sparsely habited country.

These schools originated with a definite purpose. Education was not then thought necessary to the individual either as a potential voter or as the basis of race culture, but it might become a necessary concomitant to the saving of souls by a particular religious party. Consequently, the activities of the S.P.C.K. in Wales about 1700 led to a petition addressed to the Archbishop of Canterbury on the need for Welsh schools.

Interested persons from different parts of Wales were persuaded to become corresponding members of the Society, and at their local instigation several schools were set up. One John Harris, of Llantrisant, finding that "several of his parishioners who are above five miles distant from church . . . upon discourse . . . have a spice of Atheism or indifference running through the family," opened two schools in his parish in 1709. At Oswestry, in 1713, there were "thirty poor children brought up by a mistress, the boys to read and say the Catechism and Lewis's explanations upon it by heart for 7s. 6d., and another teaches them to write and cast accounts for 2s. 6d. The girls learn to read . . . knit, sew, and spin for 10s."

But these sporadic efforts made little headway, and probably there was no educational care for the poor until in 1728 Griffiths Jones, of Llandowror, near Tenby, a corresponding member of the S.P.C.K., horrified at the ignorance displayed by a catechetical class of his parishioners and their inattention to his sermons, began a school to give a minimum amount of knowledge on which to base further instruction.

The cost of this first school—or, rather, class—was paid in 1728 out of the offertory of the small country congregation of Llandowror. So well received was the idea that it spread first to neighbouring villages, and in 1737, when the first complete accounts were published there were about 2,000 scholars attending 37 schools scattered over eight counties.

Their founder was not a man of rank. Educated at Caermarthen Grammar School, he was ordained at St. David's without a degree. In 1716 he received the living of Llandowror from the private gift of Sir John Philips of Pictou Castle, whose half-sister he had married, and remained in that parish, a plain country parson, until his death in 1761. Of his personality little can be gathered from the eulogies of contemporaries, who obscure his true character by superfluous adjectives after the fashion of the mid-Victorian epitaph. But all agree that he was an eloquent preacher and had the charm of "a rare and pleasing accent." His own writings display, however, the unusual combination of idealistic piety and a power of practical organization. It was this faculty that gave success to the schools, for, though their itinerant type and religious basis appealed to a volatile and emotional race, yet this very plan depended even more on good central organization than would a system of a more permanent kind. Such was their originator's capacity, that in 1757, after twenty years' work 9,000 persons were being taught in 220 schools.

Griffiths Jones from pioneer became controller of a movement almost national. He collected funds, started new schools, appointed teachers, interested clergy and laymen in the neighbouring effort, published their reports in his annual statement ("Welch Piety: an Appeal to the Charitable and Well-disposed"), and, in short, drew together the threads of a whole system. In several ways these schools differed from earlier and later foundations. Their aim was religious, and the pupils were of all ages. "Many above fifty and some above sixty and even seventy attend these schools and learn to read with their spectacles." In some cases two-thirds were adults, including "hired servants, day labourers, married women," and the like. With a clear end in view the knowledge necessary to be taught could be fixed at a definite minimum—the learning to read. "Neither the poor nor any other are offered to be taught writing or ciphering in these schools . . . for as they are for the most part very poor they cannot afford to stay very long in school"; besides, with a frankness worthy of a Holmes Circular, "it is by no means the design of the spiritual charge to make them gentlemen." They were, however, to be taught to read in Holy Scripture by help of the sound maxim that "ignorance is hardly ever to be remedied by preaching alone without catechising." Bibles and other books provided by the S.P.C.K. must be in the vernacular, "the true British tongue, the only language they understand or can possibly afford to learn." Some reasons given for reading in Welsh are commonplace, some striking, as that "very few Catholics know Welsh only," and a fear is expressed that Welsh will die out as "Manks hath done."

Having this simple standard to attain, "wherever there was

a desire for a school it was published in two or three churches round that teaching and books will be given gratis to as many as will accept." Three, four, or six months was the usual length of the school visit, generally between September and May, but some schools opened for part of the summer. Occasionally, at the request of a district, they returned for a second or third period. To provide a meeting place, "the parish Church or Chapel is used, or, where we are obliged to, hire a house on moderate terms."

The masters were at first appointed by Griffiths Jones, and even during later years, when distance made this impossible, he called them together for instruction for a few weeks with the assistance of "a hopeful young clergyman." Their duties were not light. The numbers varied in each school; in some there were a hundred and fifty, in others only fifteen, while the average was about sixty. Not only were they to teach these pupils of all ages from seventy to seven for several hours during the day, but they were to go round at night and instruct "in the neighbourhood as many as not in school." Further, they were to keep a register "with the names, places of abode, age, quality, calling, condition, disposition, manners progress, and learning of all taught," and to be ready to receive visits of inspection from their local patron, who sent a report to Griffiths Jones. Thus, in 1751, the Vicar of Llangerniew wrote: "Forty boys and girls in school this summer; some of them I have heard read the Bible perfectly well and to my very great satisfaction . . . and so diligent and indefatigable is the old man who teaches that I never once surprised him as doing nothing or absent from his charge or employment." Or, again, one in 1746, signed by David Samuel and six laymen of Pencarry, certifies that "the bearer has been from 1st day of November till 31 January teaching . . . and was in no way a disparagement to his profession, being industrious and faithful . . . to the comfortable education of the illiterate in their mother tongue, which we hope will end in the salvation of their souls."

Sometimes a zealous master found it difficult to avoid an accusation of "Methodizing," as Wales was then thrilling to the ardent teaching of Wesley's followers—that most powerful of the periodic religious ferments characteristic of the Celtic temperament. In general, however, the letters show the masters to have been earnest, sober, and diligent men, who cannot have been passing rich on £10 a year. No expenses of organization could be borne by those taught, who not uncommonly "received their wages in bread-corn," and subscribers from England and Welsh border counties provided the funds of maintenance. In 1741, for instance, £850 was given, and, as about four thousand persons were taught that year, Griffiths Jones's statement that "six poor children were taught for every 20s." appears to be corroborated.

The aims of this system, which lasted for nearly fifty years, were realized directly in that many old and young learned to read, reverence and intelligence in Divine service increased, and some unseemly habits were altered. "The young people, in taking leave of dancing upon Sundays, have caused a great outcry among the wicked fiddlers and harpers." Indirectly their civilizing effect must have been very great on a people always responsive and suggestible.

For some years after the death of their founder, the schools endowed by his fortune of £7,000 were continued through the benevolent interest of Mme Beavan, widow of a Rector of Caermarthen who had always been a warm supporter of the scheme. In 1779 she died also, and the endowment, through a lawsuit, passed into Chancery, and, though reconstituted in 1807, the movement in a revived form met with little success.

That a system apparently well established and providing so suitable a basis for more complete organization collapsed entirely was not solely due either to loss of a central guiding power or to pecuniary dislocation. Griffiths Jones, though conscious of the need for reform in the Church, was yet unwilling to break away from it. But at the same time feeling ran high, so that we are told "an unfortunate curate, having lost his place in his manuscript through reproof of an unruly parishioner and finishing with a few awkward sentences, was thereupon accused of Methodistical practices," i.e. preach-

ing extempore, and dismissed accordingly by his indignant vicar. Obviously such orthodoxy would look askance at Griffiths Jones's suggestion of catechetical teaching, and, indeed, the subject was alleged to have been in dispute in the Bishops' Court for twenty years. On the other hand, neither did the revivalists seize their opportunity and take up the work of one who warned his supporters to "teach nothing contrary to Church law," and so in a day of extremes the good work of a moderate man fell to the ground. The spirit, if not the letter, of his plan was taken up by the Sunday Schools of Wales under Thomas Charles of Bala; but these circulating schools must rank as the first attempt to teach the poor as a class, and their success is the chief feature in Welsh educational history in the eighteenth century.

COLONIAL AND FOREIGN NOTES.

WESTERN AUSTRALIA.

- Immigration increases, the population grows! And, as the Report just received indicates, the schools grow with the population. The number of scholars on the registers of the Government primary schools at the end of 1911 (the year dealt with) exceeded that for 1910 by 2,922—a larger addition than has been recorded for any year since 1897. The percentage of attendance to enrolment was 84.21. The number of schools open has been more than doubled in nine years. During the year an attempt was made, for the first time, to organize a regular system of medical inspection throughout the State. With 1912 a new system of physical exercises, one which is being adopted all over Australia, came into use, most of them being taken by girls as well as by boys, and camps of instruction for teachers are organized. The reader will ask what Western Australia is doing in the matter of Continuation. In the year 1911 evening continuation classes, intended for those who leave school at fourteen, the limit of compulsory attendance, were established in fourteen different centres and were attended by between nine hundred and a thousand pupils, admitted free provided that they attend regularly for three evenings a week. Applications have been received for the extension of these classes to many new centres. "While compulsory attendance is undoubtedly a desirable thing," says the Minister, "it can hardly be said to be a matter of immediate urgency at present, for the simple reason that the applications for classes with voluntary attendance tax the funds available to the last penny."
- The number of teachers employed at the end of the year was 1,109, showing an increase of 78 for the year. Of the 937 regular adult teachers, 485 were head teachers and 452 were assistants. The percentage of men teachers has again fallen—from 41.6 to 39.5. Western Australia, like other States, has to face the fact that it must pay more for men teachers or rely in a large measure on women. Owing to a lack of assistants for the large schools, twenty trained and certificated teachers were drawn from Great Britain. We regret to say that in some colonies, if we may allow ourselves to

use the word still, such imported teachers have been regarded with suspicion and dislike, as if they were "blacklegs." Colonists should remember that the new-comers are not foreigners, but citizens like themselves of no mean Empire.

GERMANY.

We wrote last month that the schemes of instruction (*Lehrpläne*) in the higher schools remain practically unchanged. With the beginning of the school year 1912-13 new schemes came into force in the *Realgymnasien*, *Oberrealschulen*, and *Realschulen* of Baden having French as *Unterbau*. We print that for the *Realgymnasien*. It will be seen that the alterations, indicated by the figures in brackets, are few, Latin and mathematics losing a little, science gaining. The optional subjects—shorthand, manual work, practical exercises in physics, chemistry and biology, as well as Greek—are not included.

Obligatory Subjects.	VI.	V.	IV.	Unter-III.	Ober-III.	Unter-II.	Ober-II.	Unter-I.	Ober-I.	Total Hours a Week for each Subject.
1. Religion	2	2	2	2	2	2	2	2	2	18
2. German	5	5	4	3	3	3	3	3	3	32
3. French	6	6	6	3	3	3	3	3	3	34
4. Latin	—	—	—	8 (-2)	8 (-2)	5 (-1)	5	5	5	36 (-5)

Total for the Class	28	28	28	31 (-1)	31 (-1)	32 (-1)	32 (-1)	32 (-1)	32 (-1)	274 (-6)

This scheme should have some interest for teachers; for it shows how a German school is organized when French is the first language taken, Latin being introduced only in the fourth school year, and in the class called *Untertertia* (Lower Third). They might look at it also to see whether it bears out our contention that the range of instruction in the German higher schools is wider than in the English. The nearest equivalent in England to the *Realgymnasium* would be the modern side of a public school, or a large town school in which Greek is taught only to a few pupils. Our readers will know how the English boy in the highest form of such a "side"

or school would fare. Now consider the German boy in *Oberprima* of a *Realgymnasium*. He is in school for thirty-two "hours" (*Stunden*, not full hours) a week; in addition, he will certainly devote some time to optional subjects. Besides two hours a week of religious instruction, he gets one hour of philosophy. He learns three languages (French, Latin, and English) as well as his own, his linguistic studies occupying fourteen hours of the week, or, if history be included in them, sixteen. Mathematics claim five hours, gymnastics two; drawing receives one hour. Observe that to crown all this there are five hours of "Nature knowledge" (*Naturkunde*).

Now it is this *Naturkunde* which, as it seems to us, forms the most notable feature in the German time-table.

Naturkunde. The new Baden Scheme describes the aim of it thus: "The pupils are to be made acquainted—so far as is possible through their own observation—with the most important bodies in Nature (*Naturkörper*), with their structure and their life, with their dependence on one another and on their surroundings. Pupils must grow familiar with the structure and the life-processes of man, and with his place in the world of Nature. Through experiments they are to receive a knowledge of the most important natural phenomena, and to be taught the laws under which physical and chemical processes go on. The instruction must yield a picture of the world (*Weltbild*) in which, beside the position of the earth in the universe, beside a history of the earth's crust and of the development of the organic world on it, man in his physical relations, and also in the foundation of his thinking and knowing finds a place." *Naturgeschichte*, for which, to avoid "natural history," we have put "history of Nature," is a German term covering the *descriptive* sciences, such as botany and zoology. The rudiments of these two sciences are taught up to *Quarta*, in which form elementary instruction about minerals and stones is introduced, as well as instruction about certain physical phenomena. The study of botany and zoology, which has been intensified, is ended in *Untersekunda*. In *Obersekunda* the teaching under the rubric of *Naturkunde* is chiefly of chemistry and physics, to each of which subjects two hours are allotted; but formal mineralogy and lithology are also begun. Biological matter is treated in *Prima* not by means of dogmatic exposition, but in connexion with observed examples—physiological facts relating to movement, nutrition, and feeling. *Oberprima*, besides getting instruction in physics, astronomy, and chemistry, studies prescribed sections of biology: sexual and non-sexual multiplication, metagenesis, parthenogenesis, palinogenesis, evolutionary history of selected lines of descent, relations of living things to one another, and their distribution, earliest history of man. Now, if you sum the whole matter up, does the English boy in a "first set, modern," receive the same width of instruction as the German *Oberprimaner* in a *Realgymnasium* or not? We do not forget that the German boy would be, on an average, about a year and a half older than the English; we are concerned only to show what the German secondary school teaches.

We pass to the *Volksschule*, primary schools being as precious to us as secondary. How many "hours" is the *Volksschullehrer*, or primary teacher, required to teach in a week? The regulations just issued at Münster, in Westphalia, illustrate the modern requirement. Every teacher, it is laid down, must give as many lessons (*Stunden*: "hours") as the scheme of instruction renders necessary. But a maximum of 32 for men teachers, and 28 for women (technical instructresses included), may not be exceeded. In schools of more than one class the imposition of this maximum is to be avoided. Head teachers (*Rektoren*) must not be asked to give more than 22 lessons a week. In fixing the number of lessons for a teacher, age and any other circumstances that may impair capacity are to be taken into account. Another item of news about the German *Volksschule* will astonish English medical officers. The much-condemned slate seems to be coming to honour again. The Mannheim Kreisschulrat declares that experience of school examinations shows that when the children use exercise books they write too slowly, too carefully, and therefore too little. Much better results were got in arithmetic, for example, in the days when slates were used. It is said that a demand for a return to the slate is growing both in Germany and in France. But, if with fewer sums there goes better health, perish the slate!

The Berlin magistrates have accepted a scheme for the establishment of a compulsory industrial and commercial continuation school for girls (*gewerbliche und kaufmännische Pflichtfortbildungsschule*). It must be remembered that by a change of Imperial Law it has been possible, since the 1st April, 1912, for the obligation to attend a continuation school to be imposed on girls as well as boys by *Ortsstatut* (let us say, local law). The Berlin scheme

will form the subject of further discussion, and needs the approval of other authorities. Let us consider, nevertheless, what the German capital proposes to do for its girls. With a few exceptions, the scheme requires attendance of the continuation school by all girls engaged in industrial or commercial pursuits from the time when they leave the primary school to the close of the school half-year, in which they have completed the seventeenth year of life. Servant maids cannot be called on to attend. The instruction comprises arithmetic, book-keeping, drawing, and domestic economy, as well as vocational knowledge (*Berufskunde*), and a knowledge of life (*Lebenskunde*). This *Lebenskunde* is quite a new subject, of which the aim is to train a girl for the discharge of her duties as wife and mother. All the lessons must be given on week-days between seven o'clock in the morning and seven in the evening. We observe that Germany is paying increased attention to the formative and moral influence of Continuation. Hitherto more stress has been laid on its economic value as a means of increasing the productive power of the nation. Those who teach and those who write of education are more concerned with the moral influence; but, if the English people ever learns how its industrial supremacy is threatened by the waste and loss of power in adolescence, *there will be some tarring and feathering done between Whitehall and St. James's Park.*

FRANCE.

Let us return to a subject on which we touched last month—the syndicates and syndicalism of the French *instituteurs*. Pray remember that it is the primary teachers who are concerned, and of them, as is estimated, some six thousand. Now between these *instituteurs syndiqués* and the Government war is raging. The first shot, so to speak, was fired in the middle of August, when the Congrès des Syndicats d'Instituteurs met at Chambéry, its proceedings causing general consternation throughout France. It seems that the teachers commenced and ended their meetings with the singing of the "Internationale." Since, as one of them remarked, *le ventre parle plus fort que l'esprit*, the teachers demanded, to buy bread, a higher commencing salary; whilst the *féministes* urged the right of women to the same rate of payment as men received. Ultimately the Congress pronounced unanimously in favour of uniform salaries for all public officials having equal general culture. If the teachers passed resolutions in favour of co-education, they were hardly to be blamed; on the other hand, it was unwise of them to approve in public assembly the doctrines of Malthusianism. They went further. They showed their intention of pursuing their ends by the methods of syndicalism; they voted an address of sympathy with a revolutionary organization and condoned with an offender punished for breach of military discipline. The Congress was too "red" even for the French Republic. That is why M. Guist'hau, the Minister of Public Instruction, issued his circular requiring that the syndicates should be dissolved by September 10; which passed, it was supposed at first that the provincial syndicates had broken up. But this proved to be a mistake. And the Syndicat des Instituteurs de la Seine never left any doubt as to its course. On October 4 it declared in its general assembly that it would not dissolve, "ni le gouvernement ni le Préfet de la Seine n'ayant qualité pour exiger une décision qui relève exclusivement de la compétence des tribunaux." We cannot, in a monthly journal, relate the progress of the war concurrently. Enough that, at the moment when we are writing, both legal and disciplinary measures are being aimed at the Syndicat des Instituteurs de la Seine.

No need to say that lively discussions accompany the strife!

**The Teacher
cannot be a
Working Man.**

We pick out two significant utterances. M. Steeg pointed out, in answer to the teachers' claim to solidarity with the working classes, that a teacher cannot be a mere working man. A cabinet-maker constructs a chair, and he has then done with it. The teacher is compelled to continue and reinforce his teaching by the example of his life. Even on the humblest of the class a certain measure of abnormal restraint and self-dedication is incumbent. Should not Society recognize this in estimating the equivalent to be given to the teacher for his services, although he himself may lay no stress on it?

Again, about September 18, M. de Pressensé, President of the League of the Rights of Man, addressed a letter to the Minister of Public Instruction, in which he begged him to renounce the measures adopted or designed against the *instituteurs*, and to allow them to take their part in the modern quest of liberty. The case for the Government is that the teacher may not be a syndicalist because he is a *fonctionnaire*, a public official, or, as we say, a Civil

Servant. Clearly it follows that, where the teachers are Civil Servants, the Government may cripple them at will in the exercise of their political rights. If we point out this, our readers must not deem us infected with syndicalism! The Germans taunt us with having *keine Schulverwaltung*—no School Administration. We answer that education in England is administered as the people, after weighing continental systems, has decided that it shall be administered. "England hat keine Schulverwaltung" ought to be translated "English teachers are not Civil Servants of the Crown." Whatever they may lose by that, they keep their rights as citizens beyond menace or diminution.

CAPE OF GOOD HOPE.

Strange that in our talk of the Empire we seldom mention its most imperial achievement—the planting of schools on its remote frontiers! One of the Inspectors in the Province of the Cape of Good Hope describes a school (Horee, A. 3) which illustrates the nature of this outpost work. It is situated in a narrow kloof on the north side of the Kouga river, and can be reached only by a two hours' ride on horseback from the nearest farm. The building, writes the Inspector, "is almost unique as a schoolroom; it is a portion of a wattle-and-daub hut, with just space enough for three desks; the teacher cannot take two paces in any direction, and the door must stand open all the time. There are tobacco plants suspended from the thatched roof, and various other stores hanging round the walls." The school, be it added, was opened quite recently, and a new building (24 ft. by 14 ft.) will be ready for occupation at the beginning of next quarter.

CORRESPONDENCE.

GYMNASTIC TEACHERS AND FORM MISTRESSES.

To the Editor of *The Journal of Education*.

SIR,—I should be glad of space in your columns to write upon a matter on which, with many other gymnastic teachers, I feel very strongly; that is, the lack of responsibility shown by the form mistresses of secondary schools towards the physical development of the child in the classroom. Gymnastic teachers, after a hard fight, have made the teaching profession realize that formal physical training is not only a necessity under the artificial conditions of school life, but also a science requiring expert knowledge on the part of the teacher. But, as this realization has come to the average form mistress, so also has come the feeling that she may shift the whole of the responsibility of the child's correct physical development on to the shoulders of the gymnastic mistress. That it is impossible for her to discharge adequately that responsibility is obvious to anyone who will pause a moment to consider the division of time between mental and physical work which obtains in a secondary school. Out of twenty-five hours a week in school the gymnastic teacher has the child in her hands for not more than four, including games; and she sees the child under the best conditions—in the gymnasium or on the playing fields, when its movements are unhampered, its circulation vigorous. For the other twenty hours the child's physical development is under the supervision of the form mistress; its growth, not being confined to the four hours a week it spends with the gymnastic mistress, takes place for its greater part under the care of others; and, in school at least, not under the most favourable conditions. It requires, therefore, the more consideration. The form mistress has to guard against the effects produced by long sitting in cramped positions, by the awkward physical labour of writing, by the persistent tax upon the attention, by imperfect methods of heating, lighting, or ventilating the classroom; and she it is who, being responsible for the child's physical development during the greater part of its school life, and under such circumstances, not only knows least of its physical needs and desires, but has no realization of what is her responsibility in the matter. I use the word "realization" advisedly; superficially she is aware of the importance of the effects of school conditions upon the physique. She receives instruction upon the subject during her professional training; not what would be considered instruction in an elementary training college, where the teachers from the first are made wholly responsible for the mind and body of the child; but she receives a certain amount of information about the hygiene of the classroom and the ill effects of bad posture. This instruction, however, has no substance; it takes no practical hold upon the student's mind; and, when she finally takes a post in a secondary school, her observation of physical deficiencies and malpositions has been so little tested or practised that she simply does not recognize a harmful position when she sees it. Should this be pointed out to her, it does not strike her as a lamentable lack in her training; every good school, she reflects, has a trained gymnastic mistress on the staff, and anything pertaining to the child's physical development is her business.

The numbers of round backs and sunk chests we see in any collection of secondary-school girls, the preponderance of certain forms of spinal curvature, are sufficient to raise distrust of this generation's physical development in the mind of any observer. I myself, if called upon, can, from five years' careful examination of girls of eighteen to twenty who have come from secondary schools, give figures regarding spinal curvatures which, by themselves, form an indictment of the injurious positions which form mistresses allow the children in their classes to fall into, especially while writing. If you would see a class of girls at their best, go into a gymnastic lesson where careful correction of position is given. If you would see them at their worst, go into a preparation hour, where the mistress in charge is mainly on the watch for some

infringement of the rule of silence. Under which teacher's influence does the child, in its school life, principally come? Whose is the greater responsibility?—Yours, &c.,

October 13, 1912.

L. E. CROWDY,
Teacher of Physical Exercises,
St. Gabriel's Training College, Camberwell.

INCOMPETENT TEACHERS.

To the Editor of The Journal of Education.

DEAR SIR,—Some of us read with the greatest pleasure Miss Hodgson's article on Incompetent Teachers in the September number of your paper. But, when so many teachers up and down the country know the need of improvement in the conditions under which we work, why do we leave it for a mistress in a training college to open the subject and plead for the debutantes from her college? May I also comment on the remark, "the tenderest-hearted head mistresses might be trusted to reject the failures"?

I think I am right in saying that, if there is one privilege more than another to which the members of the Head Mistresses' Association cling, it is their absolute power in the matter of appointing and dismissing their assistants. If the tenderest-hearted of them all will, simply and solely on her own judgment, take her living from a woman who has chosen her life's work and spent years, energy, and money in qualifying herself for it, what can one expect from the normal and hard-hearted?

Many years of connexion with schools of all kinds has satisfied me that long-needed reforms in the conditions of girls' secondary schools are imminent, which will prove to be improvements. A system which gives autocratic power to head mistresses is sure to be abused by some, and who does not know that, in addition to the many happy schools of the land, there are the few to be avoided, because tact, common sense, and sometimes even a sense of honour are completely lacking in the Head? In such schools assistants can retain their position only by confusing "devotion" with adulation of the Head, and "loyalty" with mischief-making among colleagues; and one asks, ought these things to be?

Assistant masters have protected themselves by the Endowed Schools (Masters) Act, 1908. The N.U.T. this Easter, during the Conference at Hull, expressed its opinion that the same protection—*i.e.* that the power of dismissal be placed with the governing body of the school—should be secured to all assistants in schools supported by public funds. Some of the large educational authorities work strictly in accordance with this Act, and, wherever it has been in force for any length of time, one can say with truth it has answered admirably. Tyrannical autocracy has been eliminated, and with it the sycophant and the slave. Justice for all has brought happiness to all. Individuality and its refreshing effect on the taught is not checked.

The head mistress has "arrived" and enjoys comparative security of tenure, though no one would grudge her the right of appeal from the governing body to the Board of Education or the Registration Council. The assistant mistress is on trial, and, besides the sense of duty that both share alike, has the spur of ambition. Should not the assistant's position be secure against the faulty judgment of the head? Is failure in personal relations with *one* Head proof of incompetence in *all* classrooms? What guarantee have assistants of the justice to be expected at the hands of a woman who claims the absolute right to make or mar others? Will taking the power of dismissal from the Head and vesting it in the governing body—who, as a matter of discipline, will uphold her authority wherever possible—entirely undo the corporate life of the school? Consider all things, and is not the right to refuse a testimonial as much as anyone, particularly a public servant, ought to have?—Yours truly,

AN INCOMPETENT TEACHER.

CHRISTIAN EDUCATION OF WOMEN IN THE EAST.

To the Editor of The Journal of Education.

SIR,—Some months ago you allowed me space in your columns in which to state particulars concerning a Conference on the Christian education of women in the East, to be held at Oxford early in September. That Conference is now a thing of the past, but its influence is likely to be far-reaching in educational circles. The members consisted of about a hundred and fifty University women engaged in teaching, and the speakers included the President of the Association of Head Mistresses, the Principal of St. Mary's College, London, the Head Master of Repton, and other educational leaders. Work in the East was represented by Mr. Arthur Mayhew, of the Indian Educational Service, and Miss Garrett, Inspectress of Schools in Eastern Bengal and Assam, as well as by men and women who have had long experience in the service of missionary societies.

All the speakers alike insisted upon the urgency of the appeal which is made to the West by the needs of Eastern women and girls as they emerge from the seclusion of centuries into the freedom brought to them by Western civilization. The character of the education which they receive at this crisis is of supreme importance in determining the future not only of Eastern nations but of ourselves, for women are taking a conspicuous place in the new national movements, and the social problems which confront Eastern reformers are closely bound up with those which perplex us in England.

In view of the importance of the subject, a provisional committee to act as a body of reference has been appointed, the members being Miss Douglas, Head Mistress of the Godolphin School, Salisbury; Miss Gray, High Mistress of St. Paul's Girls' School, London; Miss Richardson, of Westfield College, London; Miss Wood, Principal of the Cambridge Training College; and Miss Woodall, Head Mistress of Milton Mount, Gravesend. Miss de Sélincourt, formerly Principal of the Lady Muir Training School, Allahabad, has consented to act as Honorary Secretary to the committee, and will be glad to receive any questions or suggestions sent to her at 26 Belsize Grove, London, N.W. At the request of the members a report of the Conference has been prepared, and its publication has been kindly undertaken by the Student Christian Movement. It will shortly be issued at 2s. net.—Yours faithfully,

A. W. RICHARDSON.

Westfield College, Hampstead.

MILL HILL SCHOOL.—On October 26 there was a large gathering of Old Millhillians and other friends of the school to celebrate the coming of age of the Head Master. Sir Albert Spicer, Chairman of the Governors, presided, and on behalf of the Governors offered to Dr. McClure his congratulations and thanks for the splendid services he had rendered to Mill Hill. It was mainly due to him that their buildings now stood on a freehold estate of no less than 80 acres, and comprised the new chapel, the gymnasium, the scriptorium, the sanatorium, the chemical laboratory, and the library. Dr. McClure had proved himself one of England's great head masters and had served not only the school, but the whole teaching profession. Major Temperley, as President of the Old Millhillians' Club, which now numbered over a thousand members, presented Dr. McClure with a gold watch and chain and a cheque, and Mrs. McClure with an opal and diamond pendant. The Captain of the School presented a service of silver plate on behalf of the boys. Sir Henry Miers, Principal of the University of London, unveiled a portrait of Dr. McClure painted by Mr. Fred Yates. The portrait was a good likeness of a good and great man. Dr. McClure, in responding, said that he and his wife were deeply moved by these spontaneous tokens of affection. He had that day received congratulations from China, Ceylon, Africa, and almost every part of the civilized world. The company then adjourned to the music schools, built by the subscriptions of Old Millhillians, and Sir H. Miers unveiled the commemoration tablet.

THE Cambridge Local Examinations Syndicate have issued Regulations for Certificates of Proficiency in Modern Languages. The examination will include (1) translation from English into French, (2) from French into English, (3) an English essay, (4) a French essay, (5) French phonetics, (6) oral: dictation, reading, and conversation. The same *mutatis mutandis* for German and English. The examination will be held in Cambridge and London, June 16–20, 1913, and is specially designed for teachers, and satisfies a long-felt want.

PATON'S LIST of SCHOOLS and TUTORS IN INDIA.

See next
two pages.

His Excellency the Viceroy.

"I am directed to thank you for the copy of the List of Schools which you have sent for His Excellency."

The Commander-in-Chief in India.

"His Excellency desires me to acknowledge receipt of the copy of this year's List of Schools. He will have it circulated at Army Headquarters, and feels sure it will prove of interest and value to those who have children they wish to place in schools."

H.H. The Maharajah of Jaipur, Rajputana.

"I am directed by His Highness the Maharajah to acknowledge with thanks the receipt of a copy of this year's List of Schools. The information which the book furnishes is very valuable and has interested His Highness the Maharajah very much."

H.H. The Maharajah of Gooch Behar.

"I am directed by His Highness to convey his thanks to you for sending him a copy of List of Schools and Tutors, and to assure you of His Highness' appreciation of this useful publication."

H.H. The Maharaja Gaekwar, Baroda.

"I have the honour to acknowledge receipt of your letter, forwarding for H.H. The Maharaja Gaekwar's acceptance a copy of your List of Schools for 1912, and thank you for the same on His Highness' behalf."

H.H. The Ruler of Bhopal.

"I write to acknowledge with thanks the receipt of a copy of this year's List of Schools which you so kindly sent to Her Highness the Ruler of Bhopal."

The Financial Commissioner, Punjab.

"I am much obliged to you for the copy of your List of Schools. I have more than once had to refer to your work in connection with my son's education."

The Archbishop of Calcutta.

"I have received your beautiful List of Schools, and have placed it in a conspicuous position in my library at the disposal of the parish priests of the town, who may have occasion to advise parents in the choice of a school for their children."

The Archbishop of Madras.

"I have much pleasure in acknowledging receipt of your beautiful edition of List of Schools, for which His Grace thanks you."

The Archbishop of Simla.

"The Archbishop of Simla is much obliged for the List of Schools, and he will be glad to refer to it in the case of parents asking advice re schools at home."

The Archbishop of Agra.

"His Grace the Archbishop of Agra directs me to inform you that he has received the book kindly sent him, and to convey his best thanks to you for the same."

The Bishop of Lahore.

"I acknowledge with thanks the receipt of your book, List of Schools. I am convinced that it will be very useful, as often parents come to enquire to what schools they can send their children."

The Bishop of Tinnevely and Madura.

"I beg to thank you most cordially for the copy of your most useful List of Schools and Tutors. It is a mine of valuable information, and I am very glad to have it."

The Bishop of Nagpur.

"I have much pleasure in thanking you for your 'List of Schools and Tutors, 1912.' As it contains some of the Catholic Schools, it may be at times of use to some of our people wishing to send their children to England."

The Archdeacon of Madras.

"I beg to acknowledge with many thanks the receipt of your List of Schools."

The Archdeacon of Bombay.

"I am in receipt of your copy of this year's List of Schools, which is very well got up and appears full of useful information for parents."

The Archdeacon of Lucknow.

"I have received the copy of this year's List of Schools, and hope this book will prove of interest and assistance to parents under my charge."

The Senior Chaplain, Bengal Establishment, Calcutta.

"I send you my best thanks for your present of a copy of your List of Schools for 1912, a very useful book."

The Senior Chaplain, Bengal Establishment, Darjeeling.

"Your List of Schools has come safely to hand. If I hear of people wanting a school, I will gladly show them your work."

The Senior Chaplain, Murree.

"Thanks for the copy of this year's List of Schools. When asked about recommending English Schools, I will consult your book."

The Senior Chaplain of Quetta, Baluchistan.

"Many thanks for your most useful book."

The Chaplain, Bareilly.

"I have to thank you for sending me a copy of this year's List of Schools. I hope it may be of interest and assistance to parents out here seeking schools for their children."

The Chief Engineer and Secretary to the Government, Punjab.

"I am in receipt of the copy of your List of Schools, for which I thank you. I have presented it to the Simla Municipal Library as a book of reference, and doubtless it will be consulted by the readers there."

The Residency, Nepal.

"I am obliged to you for the copy of List of Schools. It is a most interesting publication."

The Principal of Aitchison College, Lahore.

"I am much obliged by your sending me a copy of your List of Schools. It is a most useful book and has already been much in demand by my friends."

Pulsne Judge, High Court, Allahabad.

"Sir G. E. Knox thanks Messrs. Paton for the copy sent of List of Schools. He is often asked about schools, and will show the book to others."

Pulsne Judge, High Court, Calcutta.

"I have to acknowledge, with thanks, the receipt of the copy of this year's List of Schools. The compilation is most interesting and will be useful to my friends."

Pulsne Judge, High Court, Madras.

"I have to thank you for the List of Schools—it may prove of use to some of my friends."

The Vice-President, Legislative Council, Naini Tal, U.P.

"I am obliged to you for sending me a copy of your List of Schools, which will be of interest to my friends."

Member of Council, Simla.

"I am obliged for the List of Schools, which will, as it happens, prove very useful to some friends of mine."

Member of Legislative Council, Punjab.

"Many thanks for the copy of List of Schools; I have no doubt I shall find it very useful."

Member of Legislative Council, Oudh.

"List received, with many thanks. Although of no immediate interest to me, it will be in the course of the next two years."

Delhi Club, Delhi.

"I beg to acknowledge the receipt of copy of your List of Schools, which has been placed in the Reading Room."

Sind Club, Karachi.

MADAME BERGMAN ÖSTERBERG'S PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT, FOR RESIDENT STUDENTS.

The College, the first of its kind in England, was opened in 1885, with the view of training educated women as Teachers of Scientific Physical Education. The Course of Training conducted by a large and competent staff of teachers, extends over two years. It includes the study of Anatomy, Physiology, Hygiene, Anthropometry, and Theory of Movement. In practical subjects instruction is obtained in Ling's Swedish Gymnastics, Dancing, Outdoor Games, and Medical Gymnastics and Massage. At the end of the Course, examinations are held and certificates of theoretical knowledge and practical efficiency in teaching are awarded to successful students.

The College, which provides 50 separate bed-sitting rooms and several large studies, is situated on very high ground, gravel soil, on the confines of an extensive heath, half an hour from town. It stands in its own fine grounds of fourteen acres, which contain an Outdoor Gymnasium, Running Track, Cricket and Hockey Grounds, Lawn Tennis Courts. The Indoor Gymnasium, 70 ft. by 35 ft., and the Medical Gymnasium Room, 50 ft. by 25 ft., lofty and well ventilated, are fitted up in the most perfect style, all the apparatus having been designed and executed in Stockholm.

The immediate neighbourhood offers over one thousand children for the students' practice as teachers. Hundreds of posts have been obtained through this College, a list of which is to be obtained with the Prospectus.

Students admitted in September.
For particulars apply—THE SECRETARY.

MADAME BERGMAN ÖSTERBERG'S UNION OF TRAINED GYMNASIUM TEACHERS. *Ling's Swedish System.*

Aim of the Union: To advance the cause of Physical Education on scientific lines.

In placing members of this Union as Teachers in Schools, careful and discriminating choice is exercised, and the exact requirements of each School specially considered.—PHYSICAL TRAINING COLLEGE, DARTFORD HEATH, KENT.

SCHOOLS FOR SALE AND PARTNERSHIPS.

Messrs. TRUMAN & KNIGHTLEY, Ltd., Educational Agents, 158-162 OXFORD STREET, LONDON, W.

Messrs. TRUMAN & KNIGHTLEY always have on their books a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, and therefore can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS and arranging PARTNERSHIPS. All communications and inquiries are treated in the strictest confidence. The following are a few selected from their list:—

GIRLS' SCHOOLS.

WILTSHIRE.—Old-established **BOARDING SCHOOL FOR GIRLS.** 20 boarders paying from £42 to £60 per annum, and 4 day pupils paying from 12 to 18 guineas per annum. Average income £1,000 per annum; net profit between £360 and £380 per annum. The school stands 450 feet above sea level; accommodation for 24 boarders. Entire goodwill, school and most of the household furniture, £550. Excellent opening.—T 2,056.

SOUTH COAST.—Old-established high-class **BOARDING SCHOOL** of over 30 pupils paying 100 guineas per annum. Good premises. Gross receipts over £3,500; net profit nearly £800 per annum. Entire goodwill £2,000; school and household furniture at a valuation.—T 2,054.

WORCESTERSHIRE.—Good-class **BOARDING SCHOOL FOR GIRLS.** Established 25 years. 33 boarders, fees 45 to 51 guineas, and a few day boarders, fees 18 to 27 guineas. Large detached house. Dry and bracing climate; gravel soil. Receipts £1,724. Profit £360. Capitation fee accepted on pupils transferred. Successor should be a lady with Low Church views. Inspected and warmly recommended.—T 2,015.

WEST COAST.—Two ladies, who are retiring, are prepared to hand over their high-class **BOARDING AND DAY SCHOOL** to their present Head Mistress and for whom a Partner is required. School thoroughly sound and quite full with 30 boarders. Receipts over £2,000; profit about £350, but could be considerably increased with reasonable economy. Half share of goodwill £500. School enjoys a high reputation and can be warmly recommended.—T 2,036.

SOUTH COAST.—Very flourishing and high-class **BOARDING AND DAY SCHOOL for GIRLS** at a favourite health resort. 32 boarders, fees £63 to £78. 15s., and 9 day pupils, fees 9 to 12 guineas per annum, exclusive of extras. Receipts over £2,000. Profit over £900. Specially built premises with grounds of about an acre. Capitation fee accepted on pupils transferred.—T 2,035.

KENT.—Middle-class School; established 1870. 11 boarders, 60 day pupils. Exceptionally fine premises and grounds. Low rent. Receipts £700, profit £300; entire goodwill £350. Only part of the purchase money need be paid down.—T 2,064.

SOUTH-EAST COAST.—High-class and very successful **BOARDING SCHOOL FOR GIRLS** at a favourite health resort. Principals dissolving partnership and retiring; 56 boarders, fees from £60 to £100 per annum. Receipts £1,400, net profit £1,250. School has more than doubled its numbers during last four years. Goodwill £1,500, payable by instalments if desired.—T 1,139.

SURREY.—Very flourishing **GIRLS' HIGH SCHOOL**, with Kindergarten; old-established. 85 pupils, 16 of whom are boarders. Receipts £1,200, net profit £300. Splendid schoolroom accommodation for 120 pupils. Good residential neighbourhood, with plenty of scope for increasing present number of pupils.—T 1,189.

HOME COUNTIES.—Large, old-established, and very successful **BOARDING AND DAY SCHOOL.** Principal retiring. 50 boarders, 100 day pupils. Gross receipts over £3,000. Profit £500. Fine premises with field for games. Capitation fee accepted on all pupils transferred. Personally inspected and strongly recommended.—T 1,158.

CHESHIRE.—Principals removing their boarders to the seaside desire to dispose of the **DAY-PUPIL CONNEXION**, numbering nearly 100 pupils, and any boarders who may not go with them. Receipts from day pupils alone £1,310. One term's fees asked for pupils transferred. Exceptionally fine premises at moderate rent.—T 2,019.

GLAMORGANSHIRE.—**BOARDING AND DAY SCHOOL** with kindergarten. 19 boarders, 16 day pupils. Receipts £995, profit £140. Only £300 asked for goodwill, to include school furniture, gymnasium appliances, &c. Only part need be paid down.—T 2,031.

LONDON, W.—A high-class **BOARDING AND DAY SCHOOL** for the daughters of gentlemen in one of the nicest residential districts. 11 boarders, fees 100 to 150 guineas per annum, 21 day pupils, fees 34 to 30 guineas per annum, exclusive of extras. Receipts over £2,000; profit £400. Capitation fee accepted on pupils transferred. Strongly recommended.—T 2,044.

SOUTH COAST.—Under 50 miles from London. The principal of a high-class **BOARDING SCHOOL** for the daughters of gentlemen, with a connexion of 15 boarders paying good fees, desires to amalgamate with a lady able to introduce a similar number of pupils with a view to removing to larger and better premises in the immediate neighbourhood which will be available in March next.—T 2,046.

GERMANY.—First-class and very flourishing **FINISHING SCHOOL** of about 18 pupils. Receipts last twelve months, £2,600; considerable profit. Splendid opening for an English and German lady to take over School in partnership. Personally inspected and warmly recommended.—T 2,047.

NO CHARGE TO PURCHASERS.

Full particulars of the above and others may be obtained on application. Intending purchasers are invited to write stating their requirements. Address—158 to 162 OXFORD STREET, LONDON, W.

GEORGE GILL & SONS, Ltd.

PATON'S LIST of SCHOOLS and TUTORS IN INDIA.

His Excellency the Viceroy.

"I am directed to thank you for the copy of the List of Schools which you have sent for His Excellency."

The Commander-in-Chief in India.

"His Excellency desires me to acknowledge receipt of the copy of this year's List of Schools. He will have it circulated at Army Headquarters, and feels sure it will prove of interest and value to those who have children they wish to place in schools."

H.H. The Maharajah of Jaipur, Rajputana.

"I am directed by His Highness the Maharajah to acknowledge with thanks the receipt of a copy of this year's List of Schools. The information which the book furnishes is very valuable and has interested His Highness the Maharajah very much."

H.H. The Maharajah of Cooh Behar.

"I am directed by His Highness to convey his thanks to you for sending him a copy of List of Schools and Tutors, and to assure you of His Highness' appreciation of this useful publication."

H.H. The Maharajah Gaekwar, Baroda.

"I have the honour to acknowledge receipt of your letter, forwarding for H.H. The Maharaja Gaekwar's acceptance a copy of your List of Schools for 1912, and thank you for the same on His Highness' behalf."

H.H. The Begum of Bhopal.

"I write to acknowledge with thanks the receipt of a copy of this year's List of Schools which you so kindly sent to Her Highness the Ruler of Bhopal."

Financial Commissioner, Punjab.

"I am much obliged to you for the copy of your List of Schools. I have more than once had to refer to your work in connection with my son's education."

Archbishop of Calcutta.

"I have received your beautiful List of Schools, and have placed it in a conspicuous position in my library at the disposal of the parish priests of the town, who may have occasion to advise parents in the choice of a school for their children."

Archbishop of Simla.

"The Archbishop of Simla is much obliged for the List of Schools, and he will be glad to refer to it in the case of parents asking advice re schools at home."

Archbishop of Agra.

"His Grace the Archbishop of Agra directs me to inform you that he has received the book kindly sent him, and to convey his best thanks to you for the same."

Bishop of Lahore.

"I acknowledge with thanks the receipt of your book, List of Schools. I am convinced that it will be very useful, as often parents come to enquire to what schools they can send their children."

Bishop of Tinnevely and Madura.

"I beg to thank you most cordially for the copy of your most useful List of Schools and Tutors. It is a mine of valuable information, and I am very glad to have it."

Bishop of Nagpur.

"I have much pleasure in thanking you for your 'List of Schools and Tutors, 1912.' As it contains some of the Catholic Schools, it may be at times of use to some of our people wishing to send their children to England."

Archdeacon of Bombay.

"I am in receipt of your copy of this year's List of Schools, which is very well got up and appears full of useful information for parents."

Archdeacon of Lucknow.

"I have received the copy of this year's List of Schools, and hope this book will prove of interest and assistance to parents under my charge."

Senior Chaplain, Bengal Establishment, Calcutta.

"I send you my best thanks for your present of a copy of your List of Schools for 1912, a very useful book."

Senior Chaplain, Bengal Establishment, Darjeeling.

"Your List of Schools has come safely to hand. If I hear of people wanting a school, I will gladly show them your work."

Senior Chaplain, Murree.

"Thanks for the copy of this year's List of Schools. When asked about recommending English Schools, I will consult your book."

Chaplain, Bareilly.

"I have to thank you for sending me a copy of this year's List of Schools. I hope it may be of interest and assistance to parents out seeking schools for their children."

Chief Engineer and Secretary to the Government, Punjab.

"I am in receipt of the copy of your List of Schools, for which I thank you. I have presented it to the Simla Municipal Library as a book of reference, and doubtless it will be consulted by the readers there."

British Resident, Nepal.

"I am obliged to you for the copy of List of Schools. It is a most interesting publication."

Principal of Aitchison College, Lahore.

"I am much obliged by your sending me a copy of your List of Schools. It is a most useful book and has already been much in demand by my friends."

Puisne Judge, High Court, Allahabad.

"Sir G. E. Knox thanks Messrs. Paton for the copy sent of List of Schools. He is often asked about schools, and will show the book to others."

Puisne Judge, High Court, Calcutta.

"I have to acknowledge, with thanks, the receipt of the copy of this year's List of Schools. The compilation is most interesting and will be useful to my friends."

Puisne Judge, High Court, Madras.

"I have to thank you for the List of Schools—it may prove of use to some of my friends."

Vice-President, Legislative Council, Naini Tal, U.P.

"I am obliged to you for sending me a copy of your List of Schools, which will be of interest to my friends."

Member of Council, Simla.

"I am obliged for the List of Schools, which will, as it happens, prove very useful to some friends of mine."

Member of Legislative Council, Punjab.

"Many thanks for the copy of List of Schools; I have no doubt I shall find it very useful."

Delhi Club, Delhi.

"I beg to acknowledge the receipt of copy of your List of Schools, which has been placed in the Reading Room."

Sind Club, Karachi.

"I beg to inform you that the List of Schools for 1912-13 sent by you has reached here safely, and that it has been placed in the Club Reading Room for the perusal of the Club Members."

SIXTEENTH EDITION NOW PREPARING. For particulars apply to

J. & J. PATON, 143 Cannon Street, LONDON, E.C.

PATON'S LIST of SCHOOLS and TUTORS IN THE COLONIES.

The Secretary of the Rand Club, Johannesburg.

"I am obliged for the copy of List of Schools, which has been placed in the Library."

The Hon. Secretary, Durban Club, Natal.

"I have to thank you for the copy of List of Schools and Tutors, which has been placed in the Club Reading Room for the information of members."

The Secretary, Mafeking Club.

"I am in receipt of yours of September 29, covering a copy of your publication of List of Schools and Tutors, and beg to thank you for same. I have placed your book in the Reading Room, and feel sure it will be read with interest by many of the members."

The Secretary of the Canadian Club, Montreal.

"I beg to acknowledge receipt of your List of Schools and Tutors for which I thank you on behalf of the Executive Committee."

The Secretary, Vancouver Club, B.C.

"I have your copy of List of Schools and Tutors, and it shall find a place in our Reading Room."

The Penang Club, Straits Settlements.

"We thank you for the copy of your new List of Schools, which will be put in the Library."

The Secretary of the Hong Kong Club.

"Best thanks for your new List of Schools, which you have kindly presented to the Club."

The Secretary, St. George's Club, Grenada.

"I am in receipt of the copy of your new List of Schools, which has been placed on the Reading Room table for the information of members."

The Secretary of the Weld Club, Perth, W.A.

"The work will prove a valuable addition to our Library, and I am very much obliged to you for it."

The Secretary of the Athenæum Club, Hobart, Tasmania.

"I am directed by my Committee to accept, with thanks, your List of Schools, and to congratulate you upon the very excellent publication."

The Secretary of the North Queensland Club, Townsville.

"I thank you for your List of Schools and Tutors. The book has been placed in the Reading Room for the convenience of members."

The Hon. Secretary of the Mombasa Club, East Africa.

"On behalf of the Committee of the above Club, I have much pleasure in acknowledging receipt of your excellent book. It has been placed in the Reading Room, and I am sure will be fully appreciated by the married members."

Messrs. Frost & Shipman, Perth, W.A.

"We beg to acknowledge receipt of your new List of Schools, which we have very much pleasure in thanking you for. It seems to us to be a very fine and valuable work, and we shall certainly try and make use of it by the means you indicate, and shall be very pleased to forward your interests in any way."

The Superintendent of Methodist Schools, St. John's, Newfoundland.

"It is a very nicely bound volume, with numerous illustrations, and replete with information. I shall be delighted to furnish needed information to any parents whom I know to be desirous of sending their children to an English School."

The Bishop of Belize, British Honduras.

"Many thanks for sending your List of Schools and Tutors. It will be a useful reference book when I am consulted by parents who wish to send their children to school in England; it contains a vast amount of valuable information about English Schools not to be found elsewhere."

Messrs. J. & W. Pitts, Merchants, St. John's, Newfoundland.

"I am looking over your book with great interest, and shall take pleasure in placing it in the hands of friends who are contemplating sending their children to English Schools."

The Chief Justice of Malta.

"Your new List of Schools certainly contains very valuable information, which I shall make it a point to communicate to any of my friends who may be inclined to send their children to England for education."

The Bishop of Ontario.

"Many thanks for the copy of your new List of Schools. It is interesting and may be useful, as I am often asked to recommend an English School."

The Royal Mail Steam Packet Co., Grenada.

"We are in receipt of the copy of new List of Schools, and shall have much pleasure in submitting same to clients of ours who are sending their children to school in England."

The Librarian of the Legislative Library, Victoria, B.C.

"I wish to thank you for your courtesy in presenting to the Provincial Library of British Columbia a copy of your List of Schools. I need scarcely assure you that the volume will be carefully preserved on our shelves for future reference."

The Government Agency, Northern Province, Ceylon.

"In acknowledging receipt of the List of Schools, I have the honour to state that I will place the book in the Town Library, where it will be accessible to all."

Member of the House of Representatives, Sydney.

"I acknowledge, with pleasure, the receipt of this year's List of Schools. The book is a valuable one, containing information which will prove valuable to every reader. I shall be pleased to place same before many Australian parents to peruse this splendid edition."

The Librarian, Government Library, Pretoria.

"Many thanks for the presentation copy of List of Schools. It is an admirable compilation, and we are especially glad of it owing to the large number of enquiries we have re suitable English Schools. Please charge us for next year's issue."

The Provincial Commissioner, Central Province, Warri, Southern Nigeria.

"I am very pleased to accept the copy of your new List of Schools, and have to thank you for same. No doubt the information will prove of service as well as interest to officers serving in this Province who have families at home."

The Senior Puisne Judge, Penang, Straits Settlements.

"I have to thank you for the handsome volume containing a List of Schools. I have transferred it to our Library here, where parents having children to be educated will be most likely to see it."

The Attorney-General for Antigua, W.I.

"It is a most interesting work, and I shall gladly place it at the service of my friends with young sons."

SIXTEENTH EDITION NOW PREPARING. For particulars apply to

J. & J. PATON, 143 Cannon Street, LONDON, E.C.

Messrs. LONGMANS & CO.'S SCHOOL BOOKS.

INDEX.	

OCCASIONAL NOTES.

WE give elsewhere the program and time-table of the Conference Week of Educational Associations, to be held in the University of London from January 6 to January 11. Thirteen associations have agreed to take part in the movement, but we have recorded only those meetings that are open. The object of the promoters, announced as long ago as 1906 in the *Teachers' Guild Quarterly*, was to bring together all the scattered ranks and sections of teachers for mutual intercourse and deliberation, and, if necessary, common action—in fact, to form an Educational British Association. We are still far from realizing this aspiration. The Head Masters still stand aloof, and it is hard to see how the N.U.T., by reason of its numbers, could ever join in. Yet the first and hardest step has been taken, and we have little doubt that the "Conference Week" will live and grow. The first subject to be discussed, "Should Teachers be Civil Servants?" is a burning question that concerns all teachers, and Mr. M. E. Sadler is the opener.

HITHERTO the Montessori method has been applied only to children of seven and under, and we have discussed it elsewhere as a new kind of Kindergarten, but Mr. Holmes believes that the truth and force of the principle is such that the lady's doctrines will find their way into schools for older pupils. On this point we should like to hear him at greater length. No doubt greater liberty for doing work in their own way and doing work in which they find a particular pleasure, because it suits their intellectual temperament, might well be accorded to

boys and girls, if it can be done without upsetting the school. On the other hand, painless, unconscious learning is by no means an ideal to be aimed at. What the teacher of older children has to do is to train them to learn with effort and hard thinking. And, so far from aiming at schools where children will be permitted to do merely what they like, one of the most important things schools can do—and possibly it is the thing they can do best—is to train children to do cheerfully and energetically what they do not like. The theory of the American humorist, "it does not matter what children do in school, as long as they don't like it," is not further removed from the truth than some of the "lollipop" doctrines of education which are so ardently advocated nowadays.

NEWMAN said that theology was the queen of sciences, and the University of Cambridge has decided that it is to be treated as a science, though perhaps not exactly in Newman's sense of the word. That is the meaning of the vote in the Senate, by which the Doctorate of Divinity has been thrown open to students of all forms of religious belief, or of no belief at all. The degree of D.D. will no longer connote the acceptance of the theology of the Church of England or any other theology, but only advanced knowledge of the subject. Study and thought are made perfectly free; the University reverts to its true function, which is not to fix belief, but to encourage learning—not to prescribe a doctrine, but to foster the examination of all doctrines. Theology becomes a science—that is, a body of knowledge the foundations of which are subject to investigation by each succeeding generation, and whose fabric can never be anything more than the clumsy attempts of the human mind to explain phenomena of the ultimate nature of which it must remain for ever ignorant.

WE have no desire to see the Inspectors of elementary schools drawn entirely from the ranks of elementary teachers, and we very much doubt whether the mass of teachers in primary schools desire it themselves; but there is certainly a strong case for some reform. The number of inspectors who have had any substantial experience of school work—for we can hardly reckon as such periods of six, ten, or twelve months spent in an elementary school—is insignificant. Many of them are appointed when very young, perhaps by Presidents who remember Disraeli's dictum, "Genius when young is divine." Unfortunately these young men are not all geniuses, nor is genius the thing that is specially required. What is needed is rather knowledge and experience, not only of schools but of men and women, breadth of mind, liberal culture, and the capacity to discriminate between the essential and the unessential, and to attach a quite modest importance to personal views. The question is how to get men with these qualities without narrowing the field of choice. We do not believe the problem is insoluble. We see no reason why the able University man who wishes to be an Inspector of elementary schools should not qualify himself by three years' teaching in such schools. If he has not grit enough to go through that mill, he might well be left to seek another avocation. A brilliant University man who would prefer an inspectorship in the secondary branch to a college tutorship or professorship would never expect to receive a nomination within a few months of taking his degree.

NOT many words of ours will be needed to recommend the scholarship fund which is being founded by the Assistant Masters' Association as a memorial of the attainment of its majority. The Assistant Masters' Scholarship Scheme. The scholarships are to be for the benefit of the orphan children of members of the Association, and are to be tenable at secondary schools giving a liberal education at moderate fees. The maximum for any one scholarship is to be £50, a rather surprising figure, and one which certainly indicates a very optimistic feeling amongst the masters. We are inclined to think that it would have been better to limit definitely the possibilities of help to the payment of day-school fees. However, that is a detail. The essential point is that secondary teachers are less helped by their own comrades than the members of any other profession, and this scheme will do something to remove the stigma. Is there any other body of craftsmen which has not its orphanages and its benefit societies? It is remarkable, too, how little favour teachers get from schools in the education of the children. Doctors and nurses attend one another without charge. In Germany special terms are granted to the sons and daughters of schoolmasters, but in England the number of schools which take the children of teachers at reduced fees is very small indeed. The clergy probably get quite as much from educational institutions as those who work them.

THE Deptford School Clinic, the second annual report of which has just been published, is doing a great pioneer work under the management of Miss Margaret McMillan. Not only are the suffering children of what is one of the gloomiest and unhealthiest parts of London being advised and treated to the number of about 6,500 every year, but an open-air day school and an open-air night camp have now been instituted for the benefit of those who live in the worst surroundings. Such cases constitute the hardest problem for those who are fighting the battle against disease amongst the very poor. Anæmia and debility—the result of bad air and insufficient nutrition—cannot be cured by anything except a lengthy stay in healthy surroundings. Space is the first requisite, and space is not easily obtained in Deptford. A vicar has, however, granted the use of a churchyard for the open-air school—an example which we hope may be extensively followed—and a bit of waste land afforded a site for the night camp. The work is still in the experimental stage, but the results so far have been very satisfactory, all but two of the thirty-seven children treated having increased in weight during their stay.

OF the cases of disease treated at the Clinic about three-quarters are maladies of the eye, ear, throat, nose, or skin. The work is, therefore, as closely connected with education as with hygiene. The Parents. senses are the earliest instruments of learning, and how can a child learn who sees and hears with eyes and ears that are dulled by disease? Curiously enough, the parents are very attentive to any indications of anything being wrong inside a child, but are heedless of disorders that lie on the surface. It is, however, pleasant to read that even the poorest are, as a general rule, as much concerned for their children's health as well-to-do people are. The Northern farmer's doctrine that "the poor in a

loom is bad" finds no support amongst Miss McMillan's helpers. Their chief sins are ignorance and poverty. In Deptford, indeed, it is not the love of money, but the want of it, which is the root of most, if not all, evil. The only real remedy, say the authors of the Report, for this mass of child-disease is a big increase in the wages of the Deptford working man.

MORE than one indication has come from the Civil Service Commissioners lately of a distrust of the value of scientific education. In the Class I examination the marks for certain scientific subjects have been reduced, and in the examination for certain junior appointments (ages eighteen to nineteen and a half) a readjustment of subjects is announced, to come into force in 1914, which will handicap boys from schools specializing in science as compared with boys from schools specializing in the classical languages. We are not told whether these decisions are based on the considered views of the Commissioners as a body on the relative value of scientific or linguistic training for Civil servants, though Mr. Leathes's personal opinions on the question are well known. This is one of those contentious questions on which complete agreement must not be expected among teachers; but all teachers will join in regretting that no machinery has hitherto existed by which their opinions could be represented on practical proposals affecting so closely the work and organization of schools. We trust that the Teachers Registration Council may be able to do this important work in the future.

ARE there any professional men who are so grossly misrepresented by popular writers as teachers? We have just been turning over the leaves of the pamphlet issued by the *Daily Mail*, called "What the Worker Wants," in which many eminent persons air their views about education. Here are two particularly bad displays of either ignorance or mendacity. Mr. Galsworthy writes on the spirit of "caste" in public schools. What he says has an element of truth in it, but the exaggeration is gross, as may be judged from such a typical sentence as "The public school presents a practically solid phalanx of the fortunate, insulated against any knowledge of, or sympathy with, the less fortunate." Has Mr. Galsworthy never heard of school missions? Even more reckless is Mr. Norman Angell, in speaking of elementary schools. "We make the future citizen," says this popular pamphleteer, "memorize the counties of England and their capitals, the names of kings and the number of their wives, and the heights of the mountains of Asia, the names of the capes and headlands on the other side of the world, and the 'parts of speech.'" This is not even a decent caricature. If professions could sue for libel, Mr. Norman Angell would be a ruined man to-morrow.

NEED a museum be a synonym for dullness? This is the question suggested by Lord Sudeley's letter to the *Times* Educational Supplement on the uses to which the national collections might be put. His lordship rightly thinks that we do not do nearly enough to utilize our museums as educational influences. Something has been done in this direction, as we showed in a recent article.

Lectures are given in the British Museum and the Natural History Museum, and parties of adults and school children taken round under competent guidance; but our other collections are still given up mainly to people who wander aimlessly about and look with ignorant eyes at objects which have revealed the secrets of Nature to understanding minds. The art galleries provide no teaching whatsoever. What a pitiful waste of opportunities for stimulating interest in pictures, improving taste, and showing people how to use their minds as well as their eyes in looking at paintings! In Berlin courses of lectures are given every winter in front of the works of art in the great galleries. Why should it not be so in London? This is the case in which the University Extension system might be still further extended.

THE Committee of the British Association appointed to investigate the subject has not found much to condemn in the overlapping of schools and Universities.

Overlapping. Their view seems rather to be that a certain amount of such overlapping is both inevitable and harmless. There will always be clever boys and girls who reach the level of University learning before they are old enough to go to college. A good Sixth Form must always be far ahead of a class of passmen in their first year. The teaching of the beggarly elements by University professors is, however, less defensible; but the Committee appear to think that it is not avoidable, though they deprecate Universities preparing students for matriculation. Their final suggestion is for two school-leaving examinations—one suitable for pupils of about sixteen, the other fitted for those of eighteen or nineteen.

MR. OSCAR BROWNING has taken not only all languages but all education for his province, and he sets forth, appropriately, his views in *Everyman*.

**Mr. O. Browning
on Modern
Languages.**

"I have an intimate knowledge of French, German, and Italian. I can talk them fluently, and am well acquainted with their literature. I wrote the articles on Dante and Goethe in the tenth edition of the 'Encyclopædia Britannica.'" Moreover, he is perfectly certain that this marvellous proficiency in modern languages is due entirely to the strictest classical diet on which he was brought up to the age of three-and-twenty. Consequently, he is a devoted supporter of "compulsory Greek." He thinks it a fatal mistake to suppose that, by giving less time to Greek and Latin, we shall advance the study of French and German. "It is admitted that the knowledge of German, which fifty years ago was the mark of a scholar, is rapidly dying out; that Italian, which a hundred years ago was studied by all cultivated English men and women, is now entirely neglected; and I doubt whether French is as familiar to Englishmen as it used to be." The future *Everyman* will know Latin and Greek as a matter of course, and all other languages shall be added unto him.

MR. BROWNING, in his modesty, suppresses the fact that he also wrote for the same work the article "Education," but he gives us his views in a nutshell. There should be one public education, which might be termed **Greek the Corner-Stone.** "Civic." "Secondary" denotes nothing, and connotes merely a higher social standard and a

greater devotion to sport. Nowhere is the distinction between primary and secondary more senseless than in training colleges. "The only difference between these two departments is that the secondary training is much more expensive and far less effective." *Experto crede*: Mr. Browning was for eighteen years the Principal of an elementary training college. By passing intending teachers from the primary to the secondary school we only corrupt their morals and teach them habits of idleness. That is Mr. Browning's experience. How, then, is our national education to be reorganized? The panacea is a universal State Leaving Examination of three kinds: one including Latin and Greek, one Latin without Greek, one with neither Latin nor Greek. "These examinations should also include, in different degrees, a certain amount of history, mathematics, and science, and should exhibit a power of writing English." We only report, and do not presume to criticize; but we may suggest that "exhibit" is hardly *le mot juste*; that the third kind of leaving examination needs a little more definition, and would ask whether Mr. Browning's Civil School of the future will admit English literature and modern languages as facultative studies, or insist on Greek as the one foundation of culture—"an essential part of the higher school education."

THE London Education Committee has entered a formal protest against the decision of the Board of Education to allow bursars to become uncertificated teachers, as indicating that, in the opinion of the Board, uncertificated teachers should be permanently recognized as forming part of the staffs of elementary schools. The result of this policy, if adopted, must be to render more precarious the chances of employment for trained certificated teachers and thus to deter "the more intelligent members of the younger generation" to go through a course of training which tends to become longer and more arduous. The report presented to the Committee brings out the striking fact that the number of uncertificated teachers on the staffs of elementary schools in England has actually increased in recent years. Their number in 1910-11 was more than forty thousand. Statistics of this kind are more eloquent testimony of the progress—or, perhaps we ought to say, the stagnation—of education than printed reports or ministerial statements.

BY means of a question in Parliament, Sir Philip Magnus has elicited the fact that the fee of one guinea paid by teachers for registration in Column B of the old Register of Teachers has been refunded by the Board of Education in 4,581 cases out of 11,660. Only six months were allowed by the Board for applications to be received, which cannot be regarded as a generous allowance—at any rate, in the case of teachers living in the colonies. No formal advertisements were issued to newspapers announcing the intention to refund the fees; nor, apparently, was any attempt made to communicate directly with the teachers concerned. If the Board recognize a moral obligation to refund the fees, their consciences must be uneasy when they realize that the Treasury has retained more than half of the money. We learn as we are going to press that the limit for repayment of Registration fees has been extended by the Board of Education to 28th February, 1913.

LOCAL AUTHORITIES.

Agricultural Education. LOCAL Education Authorities will be well advised to proceed with extreme caution in subscribing to the proposals of the Board of Agriculture for the formation of Advisory Councils for Agricultural Education. One

of the chief merits of the Education Act of 1902 was that it placed upon the bodies responsible for local government the provision and maintenance of educational facilities. The system of Joint Advisory Councils is a revival of the discredited method, favoured by Government Departments, of avoiding dealings with statutory rating authorities and creating special bodies for special purposes. Thus the Joint Advisory Councils, it is proposed, shall be of a hybrid constitution, the controlling influence in which may easily be out of sympathy with the views of the statutory Education Authorities. The Councils, it is proposed, shall be invested with various duties of inquisition and interference—duties harmless enough perhaps as they stand, but readily convertible into powers.

The Course of Secular Instruction. THE Education Act of 1902 is commonly supposed to have conferred upon Local Authorities some powers of direction as to the secular instruction to be given in the schools, and the Code for 1912 implies that the prescribed curriculum may be varied when the Board is satisfied

that the modification is justified. Although this means that any proposals of an Authority must be approved by H.M. Inspector, it is probable that any Education Committee dissatisfied with the indefinite consequences of the present system will be permitted to embark upon "judicious and well considered experiments." If they think "too many subjects are being put before the little minds of to-day," there appears to be no reason why they should not propose a simplification of the timetable.

Plain Speaking. MR. WALTER DIXON, the President of the West of Scotland Iron and Steel Institute, has ventured to express some plain opinions on the work of elementary schools, based upon inquiries among those who control

collectively about two hundred thousand men. He says that, while some form of education is a national necessity, the system as carried out to-day satisfies nobody and renders most people dissatisfied. He declares that any book-learning outside the rudiments of the "three R's" is outside the requirements of 90 to 95 per cent. of the usual manual workers, and that the tendency of industrial development is to depend upon automatic or semi-automatic machinery and automatic or semi-automatic workers. We do not gather that Mr. Dixon has any desire to deprive the child of the manual worker of educational opportunities or to restrict any rational attempts to render the school process effectual in producing good men and useful citizens. His point is that the present system has for its object results which are not required, and fails, as regards a large proportion of the scholars, in certain essentials.

The "Three-R Man" and Mr. Holmes. "THE man in the street, generally a 'three-R man,'" said the President of a local Association of Teachers the other day, "was apt to set up his standard as the acme of perfection and contrast the present-time scholar with the product of the 'good old

days.'" It is natural for the man in the street to adopt this attitude, for he is aware that expenditure is constantly increasing, and he is unable to detect any tangible improvement in the products of the system. He is inclined to believe, therefore, with the Education Committee for Wolverhampton, that the school curricula has become so extended that the large number of subjects taken are crowding out the important subjects of reading, writing, and arithmetic. The time may come perhaps when efficiency in those branches of knowledge will not be regarded as the best, or only, evidences of mental development and school discipline. Mr. Edmond Holmes, approaching the question from an entirely different standpoint, believes the present system of education to be fundamentally erroneous. He told the Surbiton Branch of the Parents' National Educational Union, recently, that the child, instead of being helped to win its way to knowledge, was overburdened with items of information. Instead of being encouraged to reason things out for himself, he was burdened with formulae and tips of various kinds. The result was that he became largely mechanical. Not his reasoning faculties alone, but the whole range of his perceptive qualities, were starved and forbidden to exercise themselves except within the narrowest possible limits.

The President of the Board. MR. HOLMES, as the advocate of "what might be," requires for the satisfactory application of his principles a world where the economic, social, and industrial conditions are what they are not. The Local Authority wants

to know what should be done under existing conditions to render the work of the schools more productive. Speaking at Rotherham recently, the President of the Board of Education agreed that the subjects to be taught in schools should be so selected as to make the best preparation for life's duties, having special regard to the industries in the district in which the child might be situated. Mr. Pease did not suggest the particular subjects which would be likely to afford the best preparation for the duties of life, nor did he venture to indicate how far it is practicable to modify the curriculum so as to provide a preliminary training suitable for varying industrial requirements.

Views in Wiltshire. THIS question has recently been carefully considered by a special Sub-Committee in Wiltshire. While recognizing that it is their duty to prepare the majority of boys and girls for manual occupations, they have no

desire to overlook the special wants of the minority. "They also remember that schooling should not be solely concerned with a preparation for wage-earning pursuits; children must be taught how to live good, happy, and healthy as well as useful lives; they must learn how to occupy their leisure as well as their working hours. . . . The real test of the educational value of a subject in an elementary school is whether, and to what extent, it can be made to help to the realization of the aim of developing the highest qualities of body, mind, and spirit suitably to the age of the children. Nor is it to be realized by making the curriculum ideal only and not also practical." The Wiltshire Committee is to be congratulated upon its careful consideration of the problem and upon its well balanced conclusions.

The Advocations of Rural Children. BEFORE dealing with this matter, the Wiltshire Committee collected statistics of the occupations pursued by children after leaving the schools. Information was obtained from forty villages with reference to boys and

girls who left school in the years 1904 to 1908; and from twenty villages regarding the present employments of boys who left school in the years 1896 to 1900. The former return dealt with 1,467 girls and 1,525 boys, and the latter with 854 men. It was found that, in the case of girls, 82 per cent. undertake domestic work, and, of 9.7 per cent. who follow industrial pursuits, nearly all are engaged in work involving knowledge of domestic matters. Of the boys, more than half commence agricultural work when they leave school, but many drift into other occupations after the age of twenty. Some, it is stated, return to agriculture later in life. More than a quarter of the boys eventually undertake industrial work, 11 per cent. join the public service, and about 9 per cent. find commercial occupations. The number who become clerks or follow other literary pursuits is small.

Proposals in Wiltshire. THE general conclusion of the Committee is that teaching in the rural schools has not been sufficiently adapted to the environment of childhood and to the needs of country life. It has been too exclusively connected

with the study of printed matter and too little concerned with the child's personal observations and difficulties. If sufficient attention is given to handwork, encouragement should be given to other subjects which have a direct bearing on the future occupations of the children. They should be taught habits of cleanliness and order and the principles of health. More attention should be given to the study of Nature.

Leicestershire. THE report of Mr. W. A. Brockington, the Director of Education to the Leicestershire Authority, upon visits of inspection during the past year contains matter of considerable interest. He says: "One is tempted

to emphasize afresh the importance of 'foundation subjects' and to deplore any tendency to neglect these subjects in favour of more conspicuous 'accomplishments.' In a highly civilized community there are other fundamentally useful methods of self-expression than the dexterous manipulation of clay or the colouring of pretty flowers. That school is best which does not supersede, but properly co-ordinates (or, may we say, subordinates) such studies to the more solid parts of learning. In schools where 'show work' is apt to be over-emphasized, one frequently observes that the ordinary teaching methods are wanting in strenuousness. . . . Especially is there an insufficient appeal to the faculty of memory which is most active at an age when the judicial and reasoning faculties are comparatively dormant."

Teachers in Leicestershire. A STATISTICAL table giving the number of teachers of each grade employed in the schools on the appointed day July 1, 1903, and on the corresponding date of 1912 shows that the number of adult teachers has increased from 884 to 1,103; certificated assistants have nearly doubled in number, and the uncertificated have increased from 232 to 389,

while the supplementary have decreased from 212 to 148. Mr. Brockington points out, as a sidelight upon the prospects of recruiting for the teaching profession, that in 1903 the number of pupil-teachers employed provided a supply of about 70 teachers per annum. The total possible number of regular recruits in the year 1911-12 was 39.

THE Derbyshire Education Committee, with a view to obtaining a better supply of pupil-teachers, has resolved to try the experiment of engaging probationers who, from fourteen to sixteen years of age, will serve half-time in school, study under the general direction of the head teacher, and receive a small salary. The Committee also records an important decision given by the Board of Education with reference to the employment of married women teachers. The Board holds that it is not competent for a Local Authority to regard a woman as disqualified, by the mere fact of marriage, from holding, or being appointed to hold, the post of teacher in a voluntary public elementary school.

THE County Borough of Brighton, it appears from the report for the twelve months ended March 31, 1912, is in the fortunate position of not having had to increase its education rate by more than a little over 1d. in the pound since the appointed day in 1903. The total cost of maintenance per child in average attendance is £3 8s. 7d., of which £1 8s. 9d. is derived from the rates. The Committee states that the number of candidates for the teaching profession in Brighton, as in the country generally, still falls considerably below the normal supply. The Committee's scheme makes provision for fifteen boys and forty girls annually. The numbers for the past three years being as follows:—1909-10, 12 boys, 27 girls; 1910-11, 10 boys, 19 girls; 1911-12, 6 boys, 24 girls.

A HIGHER Education Exhibition of the work of secondary art and technical schools in the County of Warwick was held recently, and proved to be of considerable interest and value. The exhibition included drawings and paintings from art and secondary schools; engineering exhibits; cabinet work, metal work, jewellery and enamelling from technical schools; examples of domestic handicraft and garden produce. The work was carefully reviewed by competent judges, and their reports are encouraging. About five thousand persons visited the exhibition.

SCIENCE NOTES.

ASSOCIATIONS of science teachers do much good by bringing together workers with a common aim who would otherwise remain in depressing isolation. As regards the help afforded to its members by the Association of Public Schools Science Masters, it is obvious to all who have attended its meetings that much is learnt in those matters of detail which influence the degree to which the teaching is effective. By narrowing the range of the schools from which members are drawn, there has been a considerable gain in the similarity of the problems and conditions with which each member has to deal in his professional practice. The newly formed Association of Science Mistresses, which held its inaugural meeting last Saturday, will be in a position to offer corresponding opportunities for discussing science lessons suitable for girls in secondary schools, and we wish it a successful career—it undoubtedly should fill a too obvious lacuna.

WHEN provision has thus been made for meeting and debating the problems of particular sections of science teachers, there yet remains the necessity for bringing together the workers in different types of educational institutions where science forms part of the curriculum. Only by this means can we rightly attain a proper realization of the function of our individual occupation viewed as part of national education. The British Association helps some of us, but only a minority, for many cannot attend its meetings, on account of the difficulties of time, distance, and expense. We are very glad, therefore, to see that the Teachers' Guild has taken, in a quiet and modest but thoroughly sound way, a step towards bringing together all kinds of science teachers by forming a Science Section of the Guild Education Society, for which the chief credit is due to Mrs. White, D.Sc. The first meeting was held last month, and Mr. R. H. Adie chose a subject which certainly asks for treatment on broad lines.

MR. ADIE has had much experience as a lecturer at Cambridge, and as inspector and examiner of schools, and it is not surprising that his theme was "The Training of the Science Teacher." His own vacation courses at Cambridge have helped teachers in acquiring technique and in the valuable art of selecting suitable material. For teaching science to "specialists," Mr. Adie thought training less important; but he laid stress on the necessity of training teachers who were to work in schools where science was properly prized for its educational value, and where, in consequence, the work began with young pupils on experimental lines. Many college advisers persuaded the science undergraduates to take the second year's course without going through the work of the first year, and this was regrettable, as the first year's course contained material suitable for schools. A difficulty connected with training being concurrent with a degree course arose from the fact that many science graduates only determined to become teachers when they found, at the end of their course, that more attractive posts were out of their reach. Mr. Adie rightly insisted that such graduates should be obliged to train, but did not enlighten us as to how this should be effected.

THE London Branch of the Mathematical Association is keeping up the reputation for fresh and vigorous work which it so quickly established. But it seems that mathematicians are as keen at play as at work—which is saying much. We judge thus from the delightful social gathering which took place at the Regent Street Polytechnic, when Mr. and Mrs. Abbott received a large number of visitors; and cinematography rivalled kinematics and mathematic was mated with music.

IN his Huxley memorial lecture last month on the antiquity of metals, Prof. Gowland dealt with a subject of particular interest to those who teach chemistry by the historical method, or, as some prefer to say, in the order of discovery. Of the commoner metals, gold, iron, and copper occur native, and were doubtless the first to be known; but the use of native metals was insufficient to affect appreciably the old stone-age culture. Gold, as found in the sands of rivers, was practically useless. The oft-quoted suggestion that the earliest used iron was native, whether of meteoric or telluric origin, has no evidence on which to stand. The fact is that iron ores are reduced to metal at a considerably lower temperature than the ores of copper. (Any schoolboy with a blowpipe and charcoal can verify this.) There is evidence of iron-smelting at a remote date in Asia and Africa, long before the first European smelting was practised near the head of the Danube. Nevertheless, copper, or its alloys with tin, antimony or arsenic, was the first metal to be put to practical use, and the discovery of the smelting-furnace dates from the camp-fire ringed with stones, among which there chanced to be a lump of copper carbonate, tin stone, or hematite.

THE KNELL OF FORMAL TRAINING.

By CHARLES J. WHITBY, M.D.

FROM the days when Plato lived and wrote, nearly four hundred years before Christ, until quite recently, it has been held that in education the formal element was of infinitely greater importance than the substantial—in other words, that it matters comparatively little what in particular is taught but a very great deal *how* it is taught. This theory was based upon a conception of the mind which regarded it from a metaphysical rather than from a physiological standpoint. It was thought of as consisting of a number of distinct faculties—attention, perception, memory, reflection, and so forth; and the idea was that these faculties might be strengthened by exercise, just as the body or its limbs can be strengthened by gymnastics. And then it was supposed that these faculties, once developed and strengthened to the requisite degree of general vigour, might be employed with equal success upon any and every subject. Among students of scientific pedagogy this theory of education is technically known as that of "formal discipline"; and it is the theory which underlies the traditional method of our great public schools and Universities. It is also, consciously or unconsciously, implied by the arguments of all those who advocate the retention of Latin and Greek among the compulsory elements of the public-school curriculum as against those

who would substitute modern languages or science on the ground of their greater utility.

The distinctively modern view of education—a view which, under the stress of new economic needs and conditions, is every year growing stronger and more confident—is altogether opposed to the theory of “formal discipline.” In the first place, the modernists regard the psychology upon which the traditional view is based as obsolete and, in the main, fallacious. The mind is not rightly to be regarded as a set of abstract faculties capable of being used with equal success upon any and every subject. This view is much too general—it leaves out of account the infinite diversity of mental tastes and aptitudes.

Thus the mind of a given individual, instead of a general faculty of attention, will have a tendency to attend, or a habit of attending, to certain things (which interest or attract him), and of disregarding many, or indeed most, other things. Instead of a general faculty of memory, this mind will have a great power of remembering certain facts or orders of fact, and a great power of forgetting others. Instead of a general faculty of reflection, it will have a decided aptitude for thinking keenly and fruitfully upon certain subjects and a decided disinclination to think at all about others. If the old-fashioned “faculty” psychology were true it would be quite impossible to account for the fact, which even its most zealous adherents must admit, that a man may be a phenomenally brilliant classic scholar and yet almost an imbecile in the sphere of mathematics. On the other hand, many a senior wrangler has proved himself perfectly inept in regard to the study of Greek and Latin. So far from the mental powers being as a rule general, they are then, as a rule, markedly specific: the vast majority of minds have decided affinities for certain orders of knowledge and equally decided aversions to others. And, such being the case, it follows that, if the best and most fruitful results are desired, education must be based upon due recognition of this fact of idiosyncrasy, and must not waste itself in the fruitless task of treating all minds alike, or in the vain effort to make silk purses out of sows’ ears.

The contest between the old and the new theory of education is not a mere matter of argument. Many investigators have devised and carried out ingenious experiments with a view to testing the points at issue. Some of these experiments are described in a little book recently published by the Professor of Education at the University of Virginia*—a book which gives a very clear and accurate account of the present position of this important controversy. The main question to be decided—the question upon whose correct answer depends the choice between the old and the new doctrine—is that of the transferability or otherwise of the effect of training from one bodily or mental function to another. Thus, to take first a very simple case, five University students were practised for a time in keeping two solid rubber balls going with the right hand, catching and throwing one while the other was in the air. When a certain degree of skill in doing this with the right hand had been reached, the skill of the left hand was tested and compared with what it had been before the training of the right hand had begun. It was found that in all cases the training of the right hand had produced some increase of skill (by “cross education”) of the left hand also, and even that the subjects were more skilful at the balls with their unpractised left hands than before the training they had been with their right hands. At first sight it might seem that this result supports the doctrine of “formal discipline” by proving that local education has general value. But the catching of balls is a very specific activity, and the right hand, which has had a great variety of training, that on the formal theory ought to make ball-catching come quite naturally, nevertheless needs a good deal of special practice before the maximum of efficiency is attained. That the knack, once acquired, is to a considerable extent shared by, or easily transferred to, the left hand, is probably attributable partly to some common mental factor and

partly to the training of some nerve centre involved in movements of either hand.

Experiments conducted by Squire and others to determine whether the habit of producing neat working in arithmetic will affect the neatness of written work in general resulted in an “almost startling” failure to produce any such result. On the other hand, Ruediger found that, by emphasizing and continually discussing the *ideal* of neatness in connexion with one subject exclusively until decided improvement therein had been produced, it resulted that a lesser, but still definite, improvement in regard to neatness was evinced in other subjects also. The moral of these two sets of experiments is obviously that, whereas a mere habit is unlikely to be transferred from one function to another, a conscious ideal has a far better chance of such transference.

Further experiments described by Prof. Heck tend to show (1) that proficiency in mathematical reasoning has no necessary relation to ability in practical reasoning; (2) that 50 per cent. of the best of a number of students in law were conspicuous for their poor performance in mathematics; (3) that accuracy in spelling is independent of accuracy in multiplication; (4) that it is inaccurate even to speak of arithmetical ability, because the study of arithmetic makes demand on a plurality of abilities: a conclusion which negatives the complete transfer of abilities from one phase of the *same* subject to others; and (5) that “it seems possible to improve the accuracy of numerical computation *without any certainty* that we shall thereby increase the accuracy of arithmetical reasoning.” All these results favour the modern claim on behalf of idiosyncrasy, to be taken into account in education much more seriously than has been hitherto done. For they warrant Prof. Heck’s assertion that “we are more or less a bundle of specific abilities and of specific inabilities”; and show the absurdity of the formalist’s desire to force all minds into one mould or pattern.

Since “the training of the mind in regard to one subject results in a specialized ability to deal with this subject rather than with other subjects,” it is obvious that, in the choice of the subjects for a given individual’s curriculum, it will be to his advantage to include matter as closely as possible allied to, if not identical with, that with which he will have to deal in subsequent life. Otherwise he will certainly find himself handicapped in the economic arena, as against those who are so equipped. On the other hand, the claims of culture must not, of course, be ruthlessly sacrificed to those of a narrow specialism or a sordid utilitarianism. While insisting, as against the traditionalists, that for the vast majority, if not for all, utility must be the principle of the selection of subject-matter for education, we can agree with them that the teaching must not be, in the narrow sense, utilitarian as to form. Rule-of-thumb teaching must be avoided; what we have to aim at is not the production of creatures of habit, however skilful, but intelligent, high-principled, and competent citizens.

MR. T. E. PAGE ON THE DECAY OF CLASSICS.

ON November 8, at King’s College, Strand, the London Branch of the Classical Association was formally constituted, and officers were elected. Sir Frederic Kenyon presided, and called on Mr. T. E. Page to give the inaugural address.

Mr. Page said that the object of the Branch, as it appeared to him—not to listen to learned discourses by professors, but to bring together men of the same calling for social intercourse and interchange of opinions—would best be carried out if he gave them, not a lecture, but a little of his personal experience. During the last fifty years he had noted two coincident but contrasted facts. In the study of classics by specialists there had been a vast increase. To the classical student of fifty years ago epigraphy, philology, archaeology were scarcely known. The inspired gospels of his schooldays, the old Oxford texts, Arnold’s “Thucydides,” Blakesley’s “Herodotus,” Paley’s “Aeschylus” were as dead as Potts’s “Euclid” or Colenso’s “Algebra.” But during the same period there had been an equally rapid decrease in the number of boys who learned classics and of grown-ups who cared for them. As

* “Mental Discipline and Educational Values.” By W. H. Heck, M.A. (John Lane, 3s. 6d. net.)

a boy of twelve he had stood in class repeating from Wordsworth's "Greek Grammar" (written in Latin) the irregular verbs, a stroke of the cane marking each mistake. The democratization of education was the popular cry of to-day, and were an attempt made to restore the old classical discipline they would see Ministers of Education promoted with a rapidity greater even than what they were accustomed to. He then passed to Shrewsbury under Kennedy, the greatest head master of the last century, and there did absolutely nothing but classics. In the time-table mathematics was set down for Saturday morning, but that day they reckoned as a whole holiday. For thirty-seven years he was a master at Charterhouse, and in his time Greek was regarded as an absolute essential in entrance examination. When he left, the Modern Side outnumbered the Classical, and on the Modern Side there was no Greek and the modicum of Latin was a farce. And yet Lord Haldane, in his speech to the British University, had given his opinion that a literary, and *par excellence* a classical, education was the best training for the Higher Civil Service.

The fault lay mainly with the teachers. The number of good classical teachers was steadily diminishing, and the standard was deteriorating. Honourmen to-day knew all the metrical evolutions in the prefaces to Jebb's "Sophocles" (they reminded him of skating figures), but they could not, to save their lives, write a Greek verse. If it were not for our schools the study of classics would become extinct. Two causes were co-operating in the same direction—the enormous increase of wealth acquired by commerce, and the growth of scientific knowledge in every department. In spite of Dr. Leaf, who had been telling us that Troy was taken in the interests of commerce, and of a French critic, who had proved the Odyssey to be a Guide to Phœnician mariners, commerce and a study of literature were not likely to be found in close alliance.

In elementary schools the demand was more and more for technical and manual instruction to the exclusion of letters. In grammar schools Greek and Latin were being driven out, and soon no literature would be left. Twenty years ago rich parents did tolerate Latin and Greek, now they demanded paying subjects and soft living. No mother would now dream of sending her son to the Shrewsbury of his day, *τραγέια ἀλλ' ἀγαθὴ κουροτρόφος*. The cult of head masters, the best of weather-cocks, had become the cult of the average boy, and ten years hence Greek would not be set in any entrance examination.

It was assumed that the defenders of classics have a contempt for all other studies, but nothing could be less true. Greece was the nurse and foster-mother of science, and the noblest tributes to science and men of science are to be found in Lucretius and Virgil. To meet the difficulty caused by the conflict of old and new studies, the head masters, after a period of complete torpor, have produced a scheme which has received the very dangerous approval of the daily press. It was, in fact, a pyramid with the mother tongue as a basis, rising by steps of French and Latin to Greek as the apex, with (Heaven save the mark!), as an alternative, German. How many, he wondered, would reach the pinnacle?

Ladies were the one gleam of hope he had seen in his lifetime. They had taught classics effectively. Would they communicate to us men the secret of interest? We wanted teachers who would inspire, and teaching in public schools was at a discount. Our present head masters were appointed not for their teaching powers, but for their merits as hotel-keepers and experts in sanitation. Fifty years hence none but doctors and cooks need apply. If for the future classics must be taught in half the time, we must teach them as literature and jettison all the learned lucubrations beneath which the Homer of our boyhood is buried. According to Dr. Leaf, the Catalogue is the most interesting part of the "Iliad," and your up-to-date teacher sees in Helen not

"the face that launched a thousand ships
And burnt the topless towers of Ilium,"

but debates whether the brooch unearthed at Hissarlik is of the true Mycenaean pattern. If his edition of Horace had any merit, it was because when he wrote it he was totally ignorant of what is now called Horatian scholarship.

UNIVERSITY CORRESPONDENCE COLLEGE.—On Friday, the 22nd ultimo, University Correspondence College held its annual Reunion at the Holborn Restaurant, when nearly a hundred tutors and students foregathered. A reception by the Principal preceded the dinner in the Throne Room, and an enjoyable program of songs and speeches followed it. In returning thanks, the Principal stated that for nine consecutive years the total of University Correspondence College successes at London University had exceeded a thousand. At the September Matriculation, the College students had formed 25 per cent. of the List, and at B.A. more than half with 76 per cent. of the Honours in Modern Languages. At B.Sc. the successes had numbered 120, with 18 in the recently founded Faculty of Engineering. During the last twenty-five years 4,337 degrees had been obtained at London University by the College students.

GIFT BOOKS.

Sallie's Children. By MARGARET BATCHELOR. (3s. 6d. Chambers.)—Sallie's children are certainly startling young people, and it says much for the peppery grandfather that he put up with them at all. Sallie herself seems to have enforced discipline by means of her second best umbrella or a slipper, and, in the hands of a quick-tempered person, these might be persuasive; but the girls' manners leave much to be desired. The story is full of impossibilities, e.g. the stealing of the baby, and the way in which the grandparents always speak of each other to the children as "Julius" and "Lucy"; but it is brightly written, and girls will find in it plenty to amuse them. Gordon Browne's illustrations are very good, but he has apparently mistaken Bunny and Rachel on page 87.

Peggy from Kerry. By L. T. Meade. (6s. Chambers.)—The story of how a very wild little Irish girl was partly tamed in an English school. Peggy is a warm-hearted girl, but at first all her strength of character shows itself in passionate love for everything Irish and equally passionate hatred for anything English, so that those who are well disposed to her find her rather impossible. One of her schoolfellows, beautiful in person, but fiendish in disposition, tries to work Peggy's downfall, and is actually instrumental in giving her a broken leg; but virtue triumphs in the end. The immaculate head mistress strikes us as rather feeble; and why are we told on page 98 that she had taken two girls "practically without payment" and on page 198 that "there is to be no abatement of terms in any case whatsoever"? It seems a little inconsistent. There are eight coloured illustrations.

The Pirate Aeroplane. By Captain GILSON. (5s. Henry Frowde and Hodder & Stoughton.)—A thrilling story of the adventures of a young subaltern, a sergeant, and a private of the Wessex Fusiliers in Central Africa. They are sent out on patrol from Endani, on the skirts of the desert of Khiba, to search for tracks of slave caravans, and their troubles immediately begin. They are attacked by a mysterious tribe, their Arab guide deserts with all their provisions, and they then fall into the clutches of the Yankee, de Flood, and barely escape with their lives. In their flight from him and his ruffians through the bush they come on Manwaring's uncle, a professor much learned in Coptic and ancient Egyptian lore. He is searching for the Asmalian nation and their capital Aësis. De Flood is also searching for it and the priceless treasure it contains, and it is here that the pirate aeroplane comes into play. It is odd that no one guessed the nature of the iron balls Willis saw in the waggon, since they were aware that de Flood would stick at nothing to gain his end. How they all fared we shall leave our readers to discover, and need only add that the interest never flags and the character drawing is excellent. Christopher Clark's coloured illustrations are effective.

The Motor Scout. By HERBERT STRANG. (3s. 6d. Henry Frowde and Hodder & Stoughton.)—Shows the feats that can be performed by a motor bicycle in the hands of an expert. Tim O'Hagan and his father are mixed up, much against the will of the latter, in a revolution at San Rosario in the Peruvian Andes. Between the extortions of the Government officials on the one hand and the brigands on the other, each prepared for the most high-handed action, it is not easy to steer a safe course, and Mr. O'Hagan is driven to join the brigands as the least objectionable of the two. He has seen some service in the struggle between Peru and Chile, and so is made commander of the brigand forces. It is needless to say that Tim thoroughly enjoys the situation. He and his father's Japanese workmen seize the town of Rosario in the absence of the Prefect, an independent republic is proclaimed—these sort of changes happen quickly in Spanish America. Tim and his bicycle do the most astonishing things and get off scatheless. He is a cheery person, full of fun and mischief, and the account of his doings makes a delightful book. There are some spirited coloured illustrations by Cyrus Cuneo.

The Youngest Sister. By BESSIE MARCHANT. (Blackie, 5s.)—Bertha Doyne has been a sort of "ugly duckling," supposed by her two energetic sisters to be incapable of any useful work. She is shaken somewhat curiously out of her dreaming ways and soon finds herself a very hard-working member of her cousin's family at a farm in Manitoba. She has many difficult tasks to do there, but comes triumphantly through them all. Some uncut diamonds which, by a mistake, have fallen into Bertha's hands are the cause of her most exciting experience—a night journey on a "freighter" on a newly constructed line. We should doubt even Bertha's capacity for climbing down among the trestles of a railway bridge, with a furious wind blowing and a blanket round her neck, but Miss Marchant writes her stories very well, and we are prepared to

believe a good deal. She gives a good picture of the life and customs in the great wheat lands. W. Rainy's illustrations are good, with one or two exceptions, and the picture on the loose paper cover is most attractive.

A City Schoolgirl. By MAY BALDWIN. (5s. W. & R. Chambers.)—This is one of the stories where the heroine is suddenly plunged into adversity, only to have things immediately made smooth for her by the most unlikely people. We take it for granted that Stella is better looking than the pictures represent her to be, but she makes herself so extraordinarily disagreeable to those who go quite out of their way to be kind to her, that we doubt whether the junior partner in Baines, Jones, and Co. would have had any wish to marry her. He is, indeed, much nicer than she deserves. As a former admirer tactfully observes to her sister, "he is a splendid fellow and quite a gentleman."

Peter the Powder Boy. By WALTER WOOD. (3s. 6d. W. & R. Chambers.)—Peter has any amount of pluck and, we may add, unbounded "cheek." However, it appears to answer. He has the luck to be pressed for the "Victory" and to serve under Nelson at Trafalgar; afterwards, when the ship anchors at Gibraltar, Peter is sent on an errand to an officer, and, being much interested in the galleries, he stays too long and the "Victory" sails without him, and thus starts him in a fresh set of adventures on his own, both on land and at sea, so that there is plenty to excite interest. In the frontispiece Peter looks more like a girl masquerading in boys' clothes. The other illustrations are much better.

The Book of Saints and Heroes. By MRS. LANG. Edited by ANDREW LANG. Illustrations by HENRY FORD. (6s. Longmans.)—There are here no "magic windows opening on the foam," and we pass into the light of common day, from fairyland to hagiology. The early Christians still told fairy tales about their saints and heroes, but these are mainly echoes of old Greek and Norse mythology, and, as the editor puts it, "some pretty and some not at all nice." Mrs. Lang gives us only the pretty ones—St. Jerome and his lion, St. Elizabeth of Hungary and her lilies and roses, St. Columba and the magical stake. Better even than these is the true history of Margaret of Scotland, with the sign-manual "A. L." Sometimes, as in "Richard the Bishop," there is too much matter of fact, and the youthful reader will hardly detect the heroic element. As an illustrator of books Mr. Henry Ford has no living superior.

(1) **Pioneers in Australasia**; (2) **Pioneers in India.** By SIR HARRY JOHNSTON. (6s. Blackie.)—Sir Harry Johnston has not, as far as we are aware, ever visited Australasia, but he possesses all the other qualifications for compiling such a volume. He is a botanist, a zoologist, and an archæologist and, we need hardly add, himself a pioneer. He begins with a regional geography of Australasia, the geological formation, the fauna and flora of the continent and islands, and an account of the aborigines, their race, manners, and customs. Then we have the more familiar narrative of Spanish, Portuguese, and Dutch explorers; of Dampier, Cook, Bligh, Rajah Brooke, and that ill-used English hero, Flinders. It is a book for men as well as boys, and we are grateful, *inter alia*, for the bibliography, for the photographs of natives, for a pencil sketch by Huxley, no less than for the handsome coloured illustrations. "Pioneers in India" covers in part the same ground as the volume by Mr. Herbert Strang, noticed elsewhere, but the two books differ as a cinematograph differs from a picture gallery.

For the White Rose. By HERBERT STRANG and GEORGE LAURENCE. (1s. 6d. H. Frowde and Hodder & Stoughton.)—The Wars of the Roses, as teachers know to their cost, are the duller chapter in English history, and they will be grateful to Mr. Herbert Strang for gilding the pill. Historical novels for the period are rare, and the only ones that occur to us are Lytton's "Last of the Barons" and Stevenson's "Black Arrow." In Mr. Strong's novel kings, queens, and the king-maker are kept well in the background and move in a mysterious way, but the hero is a very living character. Snatched from death when his house was sacked and his father killed by a band of Lancastrian marauders, he is brought up by a worthy London wool merchant and passes as his nephew. He has already made his way in life and become page to Queen Elizabeth before he learns the secret of his birth. How he baulks the diabolical plots of the usurper of his estate and the Iago in his service and avenges his father, the reader must learn for himself. The story of the old farmer's wife who binds together with green rushes two ladders long enough to reach a turret window savours of the miraculous, and it is not quite plain why the hero was landed in an empty pork barrel; but these are the only improbabilities we have noticed. The "Historical Summary" as an appendix is a happy notion.

Russian Wonder Tales. By POST WHEELER. (6s. A. & C. Black.)—Mr. Post Wheeler, Secretary of the American Embassy

at St. Petersburg, has given us free versions of twelve Russian *Shazki*, with reproductions of the famous Bilbilit illustrations in colour. In his preface he says truly that Russian folk-lore deserves to be better known in England, but he does not seem aware that, besides Mr. Ralston's "Russian Folk Tales" and Mr. Nisbet Bain's translations, many have appeared in Lang's fairy books. These are redolent of the soil—"Cupid and Psyche" and the "Arabian Nights" transplanted to the Steppes. To a grown-up the repetitions are a little tedious; but, like the burden of a ballad, they are an integral part of the story. The Russian Minister of Education warrants the accuracy of the rendition, and we can testify to the good English style. We have noticed only one or two carelessnesses. Thus, a note explains *kwass* = beer, and, a page or two on we read that they quaffed *kwass* and beer.

In the Lion's Mouth. By ALFRED H. MILES. (5s. Stanley Paul.)—Some two score tales of peril by land and sea with wild men and wild beasts, contributed by as many authors, as wonderful as the Thousand and One Nights, but all true.

History of Romance. By A. R. HOPE-MONCRIEFF. (7s. 6d. net. Gresham Publishing Company.)—Mr. Moncrieff has here essayed a harder task than in the previous companion volume of "Classic Myths." There he had to deal virtually with one language, for Roman mythology is but a faint reflection of Greek, but the romances here told live dispersedly in many lands. Mr. Moncrieff, however, does not trouble himself about origins. "Much vain controversy has been waged as to whether the tales of chivalry were in origin classical, Scandinavian, Arabian, or what not." The book is in two parts, the history of romance and stories of chivalry, but thin partitions do their bounds divide, and under "history" we have in full the pretty tale of "Le petit Jehan de Saintré." What Mr. Moncrieff has attempted and effected is to give "the distilled extract of the spirit of chivalry." There is none of the false glamour of Tennyson, and he knows how to pick out the heart of a story. The coloured and monochrome illustrations from the paintings of great modern artists set off a very handsome volume.

The Girl's Realm Annual. (8d. Cassell.)—We note a good many changes in this year's annual. The serial story seems dying a natural death, while there are in its stead sixty or more short stories. Also there is a substantial increase in thoroughly practical articles on every sort of handicraft—dressmaking, embroidery, crochet, basket-weaving, framing, and so on. These changes we consider all to the good. There are also some sensible articles on careers for girls, and among the regular monthly articles notes on new books and Nature notes, altogether making up an excellent 1912 volume.

The British Girl's Annual. (5s. Cassell.)—This is a kind of modified Girl's Realm with one serial, short stories, and one or two articles. Plenty of variety is to be found in the stories. We must protest against a most uninspired coloured photographic reproduction of Joan of Arc, a singular contrast in style to Mr. Brock's charming frontispiece.

The Romance of Woman's Influence. By ALICE CORKRAN. (3s. 6d. Blackie.)—This new edition of "The Romance of Woman's Influence" should prove of interest to many young people, for it contains stories that are inspiring and that are far too little known. There is bathos in such sentences as "Did Lady Huggins lose her interest in science after her marriage with Dr. Huggins, now Sir William Huggins, President of the Royal Society?" The comment on "Dorothy read Italian with her brother: he handled the spade meanwhile," that "Dorothy was a poet in prose as remarkable as William Wordsworth was a poet in verse" is, to put it mildly, pedestrian; but the stories are sympathetically told and with a living interest. There are some interesting portraits.

The Song of Frithiof. Retold in Modern Verse by G. C. ALLEN. Illustrations by T. H. ROBINSON. (2s. 6d. net. Henry Frowde and Hodder & Stoughton.)—Dr. Allen has followed the tradition of William Morris, and he could not have chosen a better master. The poem, no less noble in its way than "The Story of Sigurd and Fall of the Niblungs," is well represented in the six-foot ballad metre. The normal rhythm—

"But she is a great king's daughter, thy sire is a great king's thrall.

Can the eagle mate with the mavis, or stoop to the sea-mew's call?"—

is varied so as to avoid monotony, sometimes so as to become a different metre—

"But have I not heard my father's word full many a time declare

'A man is what he makes himself, not what his fathers were'"—with more freedom than pleases our ear or than Morris allowed

(Continued on page 816)

Christmas Gifts & Prizes

MASTERS and Mistresses confronted with the problem of selecting suitable Prizes and Christmas Gifts will find that the List of Books for Boys and Girls issued this season by Mr. HENRY FROWDE and Messrs. HODDER & STOUGHTON affords a very wide field from which to make a choice. It includes books of all kinds, at all prices, suited to children of all ages and tastes.

The most dainty little person will find that her preferences have been provided for by Lilian Price Hacker, whose book "**Susan**," with twelve plates in colour, is a thing of pure delight. So also is the "**Book of Baby Birds**," for which Mr. E. J. Detmold has drawn a set of colour plates, showing with great charm and delicacy the babyhood of many species of birds.

Quite different are the illustrations which Mr. Noel Pocock has done for "**Grimm's Fairy Tales**." These are daring, and full of vigour and high spirits.

Boys will be satisfied with nothing less than High Adventure. Mr. Herbert Strang has anticipated their wishes in "**The Air Patrol**," which sheds light on the possibilities of modern warfare; and in "**The Motor Scout**," a stirring romance of South America. Mr. Joseph Shaylor, of Messrs. Simpkin, Marshall, in an article on books for young people which appeared recently, placed Mr. Herbert Strang first among present-day writers for boys.

All that a boy wants to know about the Aeroplane is told by Mr. Grahame-White in "**With the Airmen**"—a practical and informative book. In "**The Pirate Aeroplane**," Captain Gilson brings to bear upon a modern subject the same literary skill and boldness of conception that marked his earlier historical stories.

"**The Unwilling Schoolgirl**," by Marjory Royce—a new writer—is a girl's story of unusual merit; and Brenda Girvin's "**Girl Scout**" recounts a succession of exciting adventures that will rivet the attention, not only of girls, but of their brothers. "**The Capel Cousins**," by Violet Bradby, makes its appeal to younger children. It describes in a pleasantly humorous style the everyday life of a lively family of boys and girls; and the author is happy in being able to see things from a child's standpoint.

The Peek-a-Boos have evidently come to stay. Here they are this year—as quaint and as irrepressible as ever. "**The Peek-a-Boos' Holiday**," "**The Peek-a-Boo Japs**," and "**The Peek-a-Boos Among the Bunnies**," all contain a number of Miss Chloë Preston's inimitable drawings.

Mr. Cecil Aldin has never produced anything more artistic or humorous than "**Mac**," the Adventures of a Scotch Terrier; and his "**Merry Party**" is full of the exuberant fun and high spirits for which his work is always noted.

These books are obtainable of all the chief Booksellers; and the Publishers will have pleasure in forwarding an Illustrated List on application to The Managers, Oxford Press Warehouse, Falcon Square, E.C.

himself, but, what is far more important, the translator has preserved throughout the spirit of the original. The introduction and notes are scholarly, but never pedantic.

The Green Book for Children. Edited by Mrs. HERBERT STRANG. (2s. 6d. Henry Frowde and Hodder & Stoughton.)—This is above the average of collections of short stories, verses, and pictures for small children. There are some slight but well written papers about birds and beasts—the illustrations to these, by the way, are very indistinct—and some graceful verses; there is a reprint of Blake's Nurse's song, and of verses of Ann Taylor's. There are rather too many "quite harmless" stories and pictures, but the print is good and there are some really good illustrations, and the only obvious blot in the book is the illustration to the Teddy Bear Plant which may easily be torn out.

The Children's Longfellow. Stories from the Poet's Works told by ALICE MASSIE. Illustrated by E. S. FARMER. (2s. 6d. net. Henry Frowde and Hodder & Stoughton.)—Modernizations are all the fashion; but it seems to us that so simple a poet as Longfellow needs no interpreter even to children. The illustrations are the best part of the book.

The Romance of India. Edited by HERBERT STRANG. (6s. Henry Frowde and Hodder & Stoughton.)—The editor, who knows India well, has selected from the works of historians, memoir-writers, travellers, and great shikaree the most striking scenes and incidents connected with our rule in India. The first section carries us from the invasion of Alexander to the foundation of the East India Company; the second describes the great fight for India, from the siege of Arcot to the retreat from Kabul; the third is devoted to the Indian Mutiny, with a long extract from Sir G. Trevelyan's "Cawnpore"; and the fourth is a miscellany of sport and adventure. The missing links in the narrative are skilfully supplied by the editor, and the boy who has mastered these romantic tales will have a more vivid picture of the foundation of our Indian Empire than if he had read in school James Mill's "History."

The Zoo Conversation Book: Hughie's Second Visit. By EDMUND SELOUS. (5s. Mills & Boon.)—Mr. Selous brings out of his full treasure house things new and old, and his second Zoo Book is as good as the first. His animals have what is often denied to them by man's conceit—a strong sense of humour; but that, as Hughie is often reminded, is due only to his own lack of imagination. At times, too, they talk too much like a book, as when the wapiti describes the annual growth of his antlers; but this is a rare offence. The illustrations by J. C. Shepherd are cleverly dashed off with a few strokes of the brush, after the style of Phil May.

The Oxford Illustrated Tennyson. With two coloured pictures and ninety-one illustrations in black and white. (4s. 6d. net. Frowde.)—This complete edition of Tennyson's poems down to 1870 makes a handsome volume of 882 pages, and the reproduction in colours of the portrait by G. F. Watts and of the illustrations by Millais, &c. of the 1857 edition enhance its value. The introduction by the President of Magdalen is a worthy tribute to an honoured friend, who feels that this was no place for criticism. We doubt whether it was *tanti* to exhume doggerel like "The Skipping-rope."

Shakespeare's Complete Works. In 3 vols. (3s. net per vol. Frowde.)—Thanks to its speciality of india paper, the Clarendon Press have been able to produce an ideal pocket (or, as Mr. Watts-Dunton prefers to call it, outdoor) edition of Shakespeare. The general introduction is Swinburne's, and Prof. Dowden contributes introductory studies of the several plays. The text is Craig's, and to each volume there is a glossary. For indoors the "Globe" will hold its own, but ageing eyes, as well as those who "love to lie with me under the greenwood tree," will prefer the Oxford three-volume edition.

Grant, the Grenadier. By WALTER WOOD. (3s. 6d. Routledge.)—Grant has been born and brought up in the army, and it and its generals have his entire allegiance and devotion. Spells of inaction have no charm for him; all his desire is to be facing the enemy and keeping up the credit of his father's name. His best chance of lovemaking he utterly neglects. The enemy is always the French, for the story is of the Peninsular War, and opens at Corunna. Grant has his share of fighting and imprisonment, the scenes are vividly described, and the tale is full of interest. The illustrations are by Gordon Browne, admirable in drawing; but it is a pity that, with the exception of the first, they are all on such a small scale.

The Red Hussar. By REGINALD HORSLEY. (3s. 6d. Chambers.)—A spirited story of the Franco-German War. The character of the Red Hussar—Antoine de Hauteville—is well drawn:

METHUEN & CO., LTD., 36 ESSEX STREET, LONDON, W.C.

an excitable, boastful, and rather touchy nature, joined to great courage and other good qualities. He and his distant cousin, Will Trevor, go through some startling adventures outside Antoine's service in the field. Will's chief enemy is a German officer, who has been spying out the land before war is declared, and who nearly succeeds in hanging him on a false charge. This man is the villain of the piece; otherwise the Germans are fairly represented, and Bismarck appears in quite a kindly light. The coloured illustrations, by H. L. Earnshaw, are very unequal, but the first and fifth are good.

The Air Patrol. By HERBERT STRANG. (6s. Frowde and Hodder & Stoughton.)—A splendid story of how a great invasion was checked by a couple of young Englishmen with a handful of miners, chiefly Pathans, and a few armed Sikhs behind them. Mr. Strang sees with the prophetic eye the vast changes that may result from the fall of the Manchu dynasty. One of these is an attempt on the part of the Mongols to establish a new Empire extending from China to the Caspian. The two Appletons have joined their uncle in the Hindu Kush, and near to his mine is a narrow cleft in the hills leading to the Afghan country. The boys have brought with them an aeroplane, which they put together with the help of a little Gurkha, who proves himself a most valuable henchman, and they take many trips in it, perfecting themselves in its management and learning how to negotiate difficult turning places in the valleys. Thus, when the growing unrest culminates in a joint movement of Mongols and Afghans against the Punjab, the aeroplane is able to play an important part in delaying the advance of the enemy. The siege of the mines, the manœuvres with the Kalmuck aeroplane, and the many separate adventures of the two boys are described with the greatest spirit and success. Cyrus Cuneo's coloured illustrations are excellent.

A Pair of Schoolgirls. By ANGELA BRAZIL. (2s. 6d. Blackie.)—Dorothy Greenfield, the heroine, overhears a not too amiable schoolfellow say that she is "a waif, a nobody who is being brought up for charity." This unpleasant piece of news naturally clouds her life, both at school and at home for awhile, but in the end everything is satisfactorily cleared up. Mrs. Clarke's affection was of a curious sort, since she deliberately deprived her dearly loved sister's child of her inheritance and left her to be brought up by strangers. The monochrome illustrations are well drawn.

The Sea Monarch. By PERCY F. WESTERMAN. (3s. 6d. Black.)—An exciting story of a cruiser, equipped not only with the latest products of science, but with those still undiscovered. Her mission is to put a stop to war by the ingenious process of annihilating any vessels that persist in acting on the offensive. Unlike "The Iron Pirate," which declared war against the shipping of the world, the "Olive Branch" proclaims universal peace, under compulsion. The varied experiences that fall to the lot of the naval lieutenant who is detained on the cruiser are capitally told. E. S. Hodgson's black-and-white pictures are extremely good, and the coloured outside wrapper should certainly be preserved.

Under the Flag of France. By DAVID KER. (3s. 6d. Blackie.)—A good story, with Du Guesclin for its hero. It begins in Bertrand's boyhood, and recounts many of his most wonderful exploits. The fortune of two English knights runs as a second thread through the story. There are some well drawn illustrations by Stanley L. Wood.

The History of the Hoppers. Verses by B. PARKER. Illustrated by N. PARKER. (3s. 6d. net. Chambers.)—One of the tribe of animal books. The coloured pictures of the kangaroo family are clever and humorous. The pen-and-ink work is not so successful, and the verses are much like the rest of their kind—neither better nor worse.

Tales from Hans Andersen. With coloured illustrations. (Nelson.)—It seems a pity to mix beautiful and delicate colour work by Mr. Edmund Dulac with coloured work of an inferior kind. Perhaps, though, we should be grateful for any of such good work in a cheap book.

The Rose Fairy Book. Edited by Mrs. HERBERT STRANG. (6s. Frowde and Hodder & Stoughton.)—This is a very prettily got-up collection of 23 tales, and includes such old favourites as "Beauty and the Beast," "Rumpelstiltskin," and other stories that will be new to many readers, such as "Nuchie Lal" and "The Gloves of Turlupin." Of course one can always find some fault with the telling of well known stories. Why, for instance, are we deprived of the second transformation scene, a repetition dear to children, in "Cinderella"? But the tales are well and simply told. The illustrations, by L. A. Govey, vary considerably in merit.

RALPH, HOLLAND & CO.

JUST PUBLISHED.

THE PSYCHOLOGY OF EDUCATIONAL ADMINISTRATION AND CRITICISM.

A Sequel to the "Holmes Circular."

BY

F. H. HAYWARD, D.Lit., M.A., B.Sc.

WITH A PREFACE BY

JOHN ADAMS, LL.D., M.A., B.Sc.,

Professor of Education in the University of London.

Crown 8vo, cloth gilt, 608 pp. Price 7s. 6d. net.

Mr. Holmes (of "Circular Fame") would draw future school administrators mainly from the ranks of non-teachers; Dr. Hayward regards this policy as fatuous, and outlines a scheme by which every teacher may have a chance of rising to the top of the ladder.

The author is a strong believer in extending the power of educational officials—themselves to be drawn almost wholly from the teachers' ranks—and he sees no alternative to this except sloppiness and ineffectiveness of administration.

But he is equally emphatic on the dangers of officialism, and has actually formulated, in some detail, the various types of egoism to which officials are liable.

The Story Thread.

By EDITH KIMPTON, M.A., A.K.C. A series of interesting stories from English Literature starting with the Legend of Beowulf, and covering broadly the whole of the ground down to modern times. Suitable as an introduction to the study of English Literature for children in the lower forms of Secondary Schools and the middle standards of Elementary Schools. Illustrated with 21 line drawings by PETER CAMPBELL. Crown 8vo, 155 pp., cloth. Price 1s.

"Miss Edith Kimpton has not only a sound knowledge of her subject, but taste in selection, and a style of writing which is excellent for her audience. . . . As a reading book in schools or as a gift book for a child we can imagine nothing better."—*Westminster Gazette*.

Business Geography.

By J. HAMILTON BIRRELL, M.A. Crown 8vo, cloth, 208 pp. (containing 50 Maps and Diagrams). 1s. 6d. net; post free, 1s. 9d.

"We thank Mr. Birrell for this excellent handbook, which is informing from beginning to end, and must be of very great service both to teachers and students of Commercial Geography."—*The Schoolmaster*.

Questions and Exercises in Geography.

(Based on Heaton's "Scientific Geographies.") By ROBERT I. FINCH, F.R.G.S., Senior Geography Master, Hornsey County School. I.—*The World*. General, Mathematical, Physical and Economic Geography. Price 6d. net. II.—*The British Isles*. Price 3d. net. III.—*Europe*. Price 4d. net. Just Published. IV.—*North America*. Price 4d. net.

Concurrent Practical and Theoretical Geometry.

By W. J. POTTER, M.A. (Cantab.), Second Master, The Roan School for Boys, Greenwich. Containing the substance of Euclid, Books I to XI, treated both practically and theoretically; in four parts; strongly bound in cloth.

Part I. . . . Cr. 8vo, 188 pp., price 1s. 6d. net; post free 1s. 9d.
.. II. . . . Cr. 8vo, 249 pp., price 1s. 9d. net; post free 2s. 0d.

.. I, II, and III Cr. 8vo, 704 pp., price 4s. 6d. net; post free 4s. 10d.
Answers to the Exercises in Parts I, II, and III. . . . Price 1s. 0d. net.

THE LONDON
Central Institute for
Swedish Gymnastics,
16, 17, & 18 Paddington Street,
Marylebone, W.

Telephone: 872 Mayfair.

The School World of January 1912 says: "This college for men students . . . will provide a first year's course fitting students for posts in elementary schools, and a second year's course enabling the graduate to take charge of any school of whatever standing. Anatomy, physiology, theory of movements, hygiene, and kindred subjects necessary for a complete grasp of physical training will be taught by experienced teachers. This will be a noteworthy addition to the facilities for training in this subject. . . . this new college has been

most cordially welcomed by the Parliamentary Secretary representing the Board. . . . As a sign of progress, and in the hope of a better future for the physique of the youth of the nation, the new 'Central Institute' will be cordially welcomed."

PUPILS ARE NOW RECEIVED.

The Institute also undertakes the instruction in Physical Exercises on the Swedish System for Schools in the neighbourhood. Recreative Classes—Gymnastics and Fencing—are held in the afternoons and evenings. For particulars apply to the Principal—

ALLAN BROMAN,

Some are very pleasing, others mediocre. The Beast, alas! has none of that dignified ugliness and fierceness he used to have in old picture books. The paper is good and the print excellent, and very pleasant to the eyes.

Blackie's Popular Nursery Rhymes. Illustrated by JOHN HASSALL. (3s. 6d. Blackie.)—Mr. Hassall gives us a delightful treasury of nursery rhymes. It is hard to name the best pictures among so many excellent ones, but the ease and grace of the boy in "Lady-bird, Lady-bird," are very attractive, as is also the dignity and serenity of "My Son John"; while for a beautiful bit of landscape in line-work we turn with pleasure to "Little Boy Blue." We are sorry that in "Ride-a-Cock-Horse" a mis-quotation of "old lady" for "fine lady" has given us an ugly rendering.

Baby Birds at Home.—By RICHARD KEARTON, F.Z.S. (6s. Cassell).—We always hail with pleasure the appearance of a new book by the Kearnton brothers. In this case a new name is added for the illustrations, which are no less fascinating than their predecessors. In turning over the pages we began by marking every photograph which seemed deserving of special notice, but the result was a volume so starred that this method had to be abandoned. For clearness and delicacy the cuckoo and foster parent, the groups of willow wrens, common whitethroats, mistle-thrushes and carrion crows would be hard to beat. There are delightful portraits of many single birds—the fieldfare, coletit, jackdaw, owl, tree pipit and dipper. The chaffinch and heron are set against beautiful backgrounds, and we must not forget the hooded crows with their wide beaks, constantly "asking for more," and the starling with his fluffy head and great bill almost filling up its hole in the tree. The account of these birds and their ways cannot fail to interest children all over the country. The coloured pictures of the jay and song thrush are excellent.

Messrs. Cassell send us also a new edition of *Nature's Carol Singers*, by RICHARD KEARTON, with photographs by CHERRY and R. KEARTON. The brown tint for the photographs in the earlier edition was more attractive, otherwise the books appear to be identical.

Chums, 1912. (8s. Cassell).—*Chums* has surely changed its ways a little, and now devotes itself almost entirely to stories. Eighteen serials of varying lengths and over a hundred "complete" stories do not leave much room even in a handsome volume of 948 pages for other things. There are a few short papers or notes on boys' amusements or occupations; otherwise fiction reigns supreme. Familiar names, such as S. Walkey and Captain Frank Shaw, appear in the serial stories, and a host of others seem to vie with them in the construction of ingenious plots, dramatic situations, and unexpected and startling changes of fortune. Their scenes are laid all over the world and deal with all sorts and conditions of men. The volume will enthral its readers for many a holiday hour. There are a large number of illustrations by Paul Hardy and others, and some full-page coloured ones. "An Alarm at the Outposts" is one of the best.

Little Folks. (Boards, 3s. 6d.; cloth, 5s. Cassell).—"Little Folks" flourishes as healthily and persistently as the proverbial bay tree, and, to judge by its contents, it is still the favourite "young people's magazine." The Nature Club and Library Club are excellent institutions, and other less fortunate little folks are remembered in all that is done for the sick and convalescent by readers of the magazine. Lighter moments are not forgotten, for there are plenty of good stories and illustrations.

Cassell's Annual for Boys and Girls. Compiled by the editor of "Little Folks." (3s. 6d. Cassell).—An attractive annual full of short stories, verses, and coloured illustrations, suitable for the littler folks.

The Green Book for Girls. Edited by Mrs. HERBERT STRANG. (2s. 6d. Henry Frowde and Hodder & Stoughton).—A delightful book, full of stories old and new, grave and gay, of things near and far. The illustrations reach an exceptionally high level on the whole.

Herbert Strang's Annual. (5s. Henry Frowde and Hodder & Stoughton).—A capital volume, which will rejoice the heart of any youngster who is lucky enough to get it. It opens with a thrilling story of Isandhlwana by Captain Gilson. Others follow, all of interest in their different ways, for the subjects are well chosen and the stories well written. There are good articles on various subjects, among which, of course, the aeroplane takes its place; but coast defences, torpedoes, lightships, have their share; and the Canadian Mounted Police show a splendid example of pluck equal to any fictitious hero. The whole get-up of the volume is excellent, many of the large coloured illustrations are extremely good, and the numerous black-and-white pictures are above the average.

VERY EARLY in the **XMAS VACATION** for best results.

"Florigene" is an aid to the prevention of throat and other diseases, and has been awarded the **BRONZE MEDAL** of the **ROYAL SANITARY INSTITUTE**.

It costs little, and is easily applied. Not sticky—the ordinary daily dry sweeping alone required to clean, without sprinkling of any kind—scrubbing being optional.

MEDICAL and OTHER UNDENIABLE TESTIMONY

A well known **COUNTY SCHOOL MEDICAL OFFICER** reported 18th March, 1912, to his Education Committee on "Florigene" as follows:—

"I cannot help feeling, however, that as a matter of sanitation, as well as a matter of economy, it would be very desirable to utilize in some of the larger schools one of those substances now sold for the diminution of dust. I may call your attention to the fact that I presented a Report to your Committee on the use of the preparation known as '**Florigene**,' and I should be glad to see the larger Schoolrooms and Classrooms treated with this substance, as is customary now in so many Secondary Schools, so that less dust would be raised by the ordinary Educational use of the Premises."

Two well known **SCHOOL MEDICAL OFFICERS** have jointly reported on the advantages of "Florigene" as follows:—

1. Economy of labour in cleaning the room.
 2. Prevention of the rising of dust once deposited; hence a healthier atmosphere for breathing.
- They also favour its more general adoption, especially in rooms where drill is carried out.

"Florigene" is also strongly recommended by other expert authorities.

A Head School Mistress writes:

"I am glad to have the opportunity of recommending 'FLORIGENE.' We have used it regularly on both wood and linoleum, and found its effect most beneficial, both in laying the dust and preserving the surface. The linoleum scarcely shows wear after six years."

(Repeat orders since received.)

A Grammar School Head Master writes:

"We have used your 'FLORIGENE' for upwards of two years in this School, and we have found it excellent in keeping down dust, which is now never to be seen anywhere. I believe the health of this School has been better since. The air is certainly more pleasant to breathe when movements are going on, there is also a great saving of labour in cleaning."

(Repeat orders since received.)

Numerous other Testimonials can be produced if desired.

"Florigene" has been used for many years on the floors of **The Royal Naval Colleges and other important Government Buildings**; also in **numerous Colleges, Schools, Laboratories, Museums, &c.**, throughout the United Kingdom and Colonies with approval.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for 2 to 12 months, according to the traffic, not only during each sweeping, without sprinkling, but also throughout all the intervening periods—which is even of greater hygienic importance.

Send for particulars, Medical Reports and Testimonials to the Sole Manufacturers—

THE "DUST-ALLAYER" CO.

Contractors to Admiralty, War Office, H.M. Office of Works, L.O.O., &c.

MR. EDWARD ARNOLD'S NEW BOOKS

Electricity and Magnetism. By C. E. ASHFORD, M.A., Head Master of the Royal Naval College, Dartmouth. 3s. 6d.

Guardian.—"A thoroughly sound textbook. It is suitable to every grade of student from the beginner to the candidate for a University Scholarship."

Inorganic Chemistry for Schools. Covering the Syllabus of the London Matriculation Examination. By W. M. HOOTON, M.A., M.Sc., Chief Chemistry Master at Repton School. 3s. 6d.

The Journal of Education.—"The author has produced an excellent textbook, in which is embodied the experience of many years; it is admirably suitable for the upper forms of Secondary Schools. The style is clear and lucid, and the diagrams are excellent."

NEW AND REVISED EDITION.

The Elements of Inorganic Chemistry. For use in Schools and Colleges. By W. A. SHENSTONE, F.R.S. Revised and partly rewritten by R. G. DURRANT, M.A., Assistant Master at Marlborough College. 5s.

An Introduction to Practical Physics: for Colleges and Schools. By E. H. BARTON, D.Sc., F.R.S.E., Professor of Experimental Physics, University College, Nottingham; and T. P. BLACK, M.Sc., Ph.D. 55 Figures. 3s. 6d.

Educational Times.—"A very useful laboratory companion, that can be recommended to students working for examinations of Intermediate Degree Standard."

Exercises in Chemical Calculation. By H. F. COWARD, D.Sc., Chief Lecturer in Chemistry, Municipal School of Technology, Manchester; and W. H. PERKINS, M.Sc., Assistant Lecturer in Chemistry, University of Leeds. 2s. 6d. net.

Chemical News.—"Candidates for examination should find this book very useful."

Outlines of Inorganic Chemistry. With Special Reference to its Historical Development. By E. B. LUDLAM, D.Sc., F.C.S., Head of the Chemical Department, Clifton College. With an Introductory Note by Prof. Sir W. RAMSAY, K.C.B., F.R.S. 4s. 6d.

Westminster Gazette.—"Under the supervision of a skilled teacher, the course laid down by Dr. Ludlam seems to us to be admirable."

The Storied Past. Illustrated. 1s. 6d. This book, which is designed as a Literary Reader for Junior Forms, consists entirely of selected passages from English literature illustrative of historical events or of the life and customs of bygone days.

Education Office Gazette.—"Well-chosen literary passages illustrative of English history. Uniform in its get-up with 'The Greenwood Tree,' 'Chips from a Bookshelf,' &c., and like them finely illustrated."

The Tree of Empire. A reading book for middle forms. 256 pages. Illustrated. 1s. 6d. Uniform with "In Golden Realms," &c.

Secondary School Journal.—"This is one of the best readers it has been our fortune to handle: the unnamed compiler deserves the highest praise for his catholic taste, and whole-hearted patriotism."

Selected Essays from English Literature.

Edited, with Introduction and Brief Notes, by ELIZABETH LEE. 2s.

The Essayists drawn upon include:—Bacon, Cowley, Steele, Addison, Fielding, Johnson, Goldsmith, Lamb, Hazlitt, De Quincey, Leigh Hunt, Mitford, Thackeray, and Carlyle.

Athenaeum.—"A well-chosen volume: we commend the inclusion of Leigh Hunt, and the choice of personal revelation rather than criticism and dissertation."

The Poets' Realm. An Anthology of Verse for Schools. Edited by H. B. BROWNE, M.A., Assistant Master at Hymers College, Hull. 224 pages. 1s. 6d.

Educational News.—"For the selection of pieces we can only have the highest praise."

Arnold's Shilling English Composition. By E. J. KENNY. Cloth, 1s.

School World.—"A compact, well-arranged book, which should prove very useful."

Exercises in Composition. By E. J. KENNY, Author of "Arnold's Shilling English Composition." In Three Parts. Manila paper covers. 4d. each.

Athenaeum.—"These little books contain nothing unnecessary, but consist of well-graded exercises of almost every conceivable type, and may be confidently recommended."

THE JOURNAL OF EDUCATION. A MONTHLY RECORD AND REVIEW.

SCALE OF CHARGES FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page	... £5 10 0	One Column (½ page)	£3 0 0
Half Column (¼ page)	1 15 0	One-Eighth Page	0 17 6
Per Inch in Column, 8/-.			

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.; *prepaid rate*.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s.; each 8 words after, 6d.; *prepaid rate*.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed.

"The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE LONDON COUNTY COUNCIL AND HIGHER EDUCATION.

BY the Education Acts of 1902 and 1903, the London County Council was given the power "to supply or aid the supply of education other than elementary and to promote the general co-ordination of all forms of education." On the strength of these words, the Council has been for the last few years building up a great system of interference with—it would hardly be too much to say control of—secondary schools, polytechnics, and even the University of London. It is gradually dragging all these institutions into its net, seeking to regulate their fees, the salaries paid to their teachers, and even, in some cases, the work which is done by those teachers. Its power of assigning grants has given it this opportunity. It holds the purse-strings. If a body makes grants it can lay down the conditions on which it will make those grants, and this claim, which cannot in the abstract be denied, may reach the point of dictating what the work of an institution shall be and how it shall be carried on. Hence, in London, we are reaching the anomalous position that a body elected primarily to manage tramways, drains, open spaces, and the Fire Brigade is exercising a large influence over the whole of higher education. It would certainly appear to be peculiarly ill fitted for such a work. On its Education Committee there are two or three ex-teachers and a few persons who have made a study of educational administration; the remainder are Town Councillors, without any particular knowledge of the intricate subjects which they are called upon to discuss.

A few instances will make the position clearer. One of the conditions attached to the grants to University Colleges is that the Council must be consulted before any extension is undertaken by a college "or any new policy adopted which would affect the system of education in London." This means that the Council claims the right to veto any educational development which a University College think is needed. The ground of the claim is the aid given to the college. But, in some cases

at least, the grant is not aid at all—it is simply the payment of the fees of a certain number of students. In the case of University College, Bedford College, and King's College the annual grants only cover the fees of students. At the School of Economics and the East London College the same grants are in excess of the fees, but not in excess of the cost of the students to the schools.* In these cases, therefore, the Council does not help the colleges at all, except in so far as an increase in the number of students may be an assistance. It is rather in the position of parents paying fees than of a public body aiding education. It is also much in the position of parents as regards its knowledge of higher education. How many members of the Higher Education Sub-Committee are qualified to form an opinion on a question of University education? But they are quite prepared to deal with even such a question as the institution of new professorial chairs. Nine new professorships have just been instituted at the University, the salaries for which are to be provided by the Council. Of course, the Council required that its approval should be given in every case. It will probably require that the professors be likewise approved by itself.

Let us take next the secondary schools. Here it is more difficult to give chapter and verse, but there can be no doubt that the Council is gradually worming itself into the position of managers of the aided schools. It claims the right to inspect them, because it gives them annual grants, though, as in the case of the colleges, the grants are in many cases nothing more than the payment of the fees of its scholars. A body which inspects can hardly refrain from making suggestions based on the results of its inspection, and the partition between suggestion and demand is a very thin one indeed. An inspector may advise the introduction of new methods, changes in the curriculum or the time-table, the dismissal of a teacher, and, if he is supported by the Council, the authorities of the school find it difficult to reject the advice.

We admit that the question here is not so simple as it is in the cases of University education. The government of secondary schools presents a difficult problem. The old method was very simple; it was summed up in the terse phrase of an eminent head master, "Get a good head master, and then get out of his way." But with the increasing complexity of modern education this simple rule is found inadequate. The ablest heads are not competent to supervise the teaching of more than one or two subjects, and are generally strongly biased in favour of their own branch of the curriculum. The power over their assistants of professional life and death, vested in the chiefs, has resulted in a number of grave scandals, and it cannot be doubted that in a vast number of unknown cases an inefficient man has been retained because he suits the chief's idiosyncrasies and an efficient man sent away because he does not. Retention and dismissal have gone far too much by favour. Governing bodies are not more capable of criticizing school work than are Local Authorities, and they have no means, except the reports of the Board of Education inspectors made at long intervals, of getting an independent opinion of that work. No one will deny that in the past the policy of leaving head masters and governors unfettered liberty resulted in many cases in laxity, neglect of important subjects, and often actual inefficiency.

But, if all this be granted, it does not follow that the London County Council is justified in assuming the functions of a governing body to each school, or that it is the right body to manage secondary schools. It is difficult to suppose that when Parliament inserted in the Act of 1902 the words quoted at the beginning of this article, it contemplated Local Authorities interfering in the details of the work of the old endowed schools. It is still more difficult to believe that in the long run the close supervision of the Council, whatever stimulating effect it may have had in particular cases, will work for the good of the schools, since the government of the Council will inevitably tend to become a bureaucratic government. It

will regard the secondary schools of London not as a number of individual institutions, each with its own idiosyncrasies, its own particular bias, its own peculiar ambitions, but as a system the units of which should be made to conform to type. Its members will find it hard to understand that it is practically impossible for all schools to be good all round, and where there are specially strong points, there are likely to be weak ones. Educational institutions cannot be carried on like tramways, in accordance with a set of rules drawn up in an office, nor can they be successfully managed by a central authority which, in the nature of things, cannot be in close touch with each one. A head master can meet his governors and discuss things with them face to face. He cannot meet a Higher Education Sub-Committee. At most, he may be granted an interview with an official—a very different thing. And the time seems rapidly approaching when a head master who wants a new laboratory or an additional master will have to go, cap in hand, to an official of the County Council to ask his permission.

But it is with the Polytechnics that the Council has stretched furthest its claim to control administration. The Report of the Higher Education Sub-Committee, adopted by the Education Committee on July 3, and since then by the Council, states in detail the salaries to be paid to the principals and heads of departments. A certain teacher of chemistry has £470 a year; he is to be allowed to retain it, but the maximum salary of his successor is not to be more than £400. There are several cases of this kind. Governing bodies are not to be allowed to appoint the teachers, a privilege conferred upon them by their schemes. The Council declares that it cannot recognize, as head of the Women's Department of the South-Western Polytechnic, the candidate nominated by the governing body, and it refuses to allow the governors of the Sir John Cass Technical Institute to appoint a separate head of the Women's Department. Certain social activities contemplated by the South-Western Polytechnic must await the sanction of the Council. All proposed expenditure upon equipment, except what is of a purely routine nature, must be submitted to the Council for approval. No loan may be negotiated without the Council's consent. In one case the Council proposes that a whole department of a polytechnic shall be removed to its own Arts and Crafts School. The question of fees stands over for the present, but the Council "is not committed to approval" of the scale now in force. Scales of salaries for assistant teachers are not to be considered in this "the initial stage" of the block grants system—a most suggestive phrase. The existing local scholarship schemes are to be allowed to die out, as being unnecessary "in view of the Council's comprehensive scholarship system." Consultative Committees, established by the Council, are to advise the governing bodies on the work of the Polytechnics.

The tendency and aim of all this is quite clear. The policy of the Council is to reduce the governing bodies to shadowy phantoms and substitute its own Education Committee as the central authority for the Polytechnics, which will practically nominate the teachers, fix their salaries, and control the working of the whole institution. The suggestion for the elimination of the local scholarships is particularly instructive in this respect. The Council will see to it that there are no scholars except their own in the Polytechnics—a sure means of tightening their grip upon the administration.

The legality of this policy is clearly doubtful. The governing bodies of the Polytechnics are as much statutory bodies as the County Council, their functions are regulated by the law, and these include most of the matters on which the Council claims to have the final voice. It is upon them that Parliament has laid the duty of administering the Polytechnics. It is theirs to fix salaries, appoint and dismiss teachers, sanction the purchase of equipment, and contract loans. The Council proposes to take these things out of their hands. The result, so far as we can see, is that the governing bodies will either disappear or become phantoms. The central authority will be the direct administering body in every case. And who will be the actual ruling forces? The Council acts on a report

* See evidence of Mr. R. Blair before the Royal Commission on University Education in London.

received from its Education Committee, which acts on a report received from the Higher Education Sub-Committee (the report discussed above was passed in less than two minutes), which acts on a report received from a section of itself. On what does the section act? How does it know what salary each head of a department in the London Polytechnics ought to receive? Probably it acts on the advice of the officials, and so we reach finally the point that the officials are to manage the institutions for higher education.

All that has been said about the want of contact between schools and the Central Authority applies equally to technical institutions. True, the Section of the Higher Education Sub-Committee concerned has received deputations from the Polytechnics. But it has merely heard what they have got to say; it has discussed nothing with them, returned no answer, and given no reasons.

So stands at present the question of the relations of the Council to higher education. Obviously things cannot remain as they are. The Council will not be content with the position it has won. Its aims and policy are not concealed: it means to control and govern the Polytechnics and the schools and to have a very large share in the management of the University. Unless these institutions are prepared to accept its domination, it appears to us that the matter will have to go to Parliament for settlement.

THE JAQUES-DALCROZE EURHYTHMICS.

M. JAQUES-DALCROZE, though announced by no flourish of trumpets, fairly took the town by storm. In London, Leeds, Manchester, and Cheltenham there were overflowing and enthusiastic audiences. We cannot improve on a happy heading of a contemporary, "The Dryads come to Town." The Dryads were not show performers, but six Genevese schoolgirls ranging in age from eleven to sixteen, without any other preparation beyond the two, or at most three, lessons a week. Last year, when the intended visit to England was cancelled at the last moment on account of the railway strike, we gave some account of the method, and will here confine ourselves to the performance. Suffice it to say that the Eurhythmic Method is a combination of musical and physical training, a revival, as a correspondent points out, of the Greek *μουσική*, as expounded by Plato. From the musician's point of view these children had acquired a singular mastery of time, tune, and harmony, and, more than that, they were able to express by movements of head, arms, and legs their appreciation of music. They named instantly any note struck on the piano and the key of various short improvisations; they read at sight from the blackboard a difficult melody handed up by one of the audience, and, having sung it twice, repeated it from memory.

Similar feats of sight-reading have been performed by Tonic Sol-fa pupils, but, as M. Dalcroze pointed out, his pupils have besides a sense of absolute pitch, which is essential to the perfect musician. Their dances and games show a feeling for rhythm that many a past master in the art might have envied. One of the six acted in turn as conductor, and each child interpreted the music according to her own bent; the rest followed their leader. But words cannot convey the grace, the charm, the perfect ease of the different movements, some of them extremely complex and difficult, as a combination of different times, two with arms, three with feet, and so forth. One could not help contrasting M. Dalcroze's "hopp," the waving arms and "many-twinkling" feet with the drill-sergeant's word of command like a pistol shot, the jerky movements and military precision of Swedish drill. The Dalcroze Method has a great future, and we hope that this English exhibition will send many young teachers to learn the art at Hellerau.

JOTTINGS.

A SCHEME is well launched, and has been approved by H.M. the Queen, for purchasing the site of College Hall (University of London) and erecting on it a new hall with accommodation for sixty students. The total sum required is estimated at £30,000, including £7,500 for the site on the Bedford Estate, towards which £8,400 has already been promised or received. The cause needs no advocacy of ours. Contributions may be sent to the Hon. Secretary, Miss A. Lindsell, College Hall, Byng Place, W.C.

WE dealt fully at the time with the British Association Report on the Influence of School Books upon Eyesight—perhaps the most valuable outcome of the Dundee meeting—and need only add that it can now be obtained from the offices of the Association, Burlington House, W. Price, single copy, 4d. It is a pity that, on page 5, example does not follow precept; but we are informed that this is only an emergency edition.

"SCHOOL IDEALS, by S. J.," in last month's *Oxford and Cambridge Review*, is a *Nachklang* of the article on "Public Schools," by "Custos," on which we recently commented. "S. J." we gather from the article, was educated at Harrow, and is, or has been, a master in a Catholic school, presumably Stonyhurst. He hopes that the public schools are better than "Custos" will have it; he believes the Catholic schools are no worse. He indignantly repudiates the charge of espionage, and points to the advantages of devotion to Mary and the Confessional as a safeguard against impurity. Incidentally he breaks a lance for "subordinates." We hear too much of head masters like Arnold and Thring, and too little of assistant masters like E. F. Bowen and E. W. Howson.

IN the same number Mr. F. E. Smith deals with "State Toryism and Social Reform." With politics we have no concern, except as they touch education, but when Mr. Smith tells us that what the public demand of Government is "to give them security and prosperity in the state in which it has pleased God to call them," we must warn him that this war cry will carry no popular election. His ideal leader is Disraeli, and *Sanitas Sanitatum* is a better watchword; but we cannot help asking whether he will endorse an equally famous saying of his great leader, "Protection is not only dead, it is damned."

THE Exhibitions offered annually by the Associated Board of the Royal Academy of Music and Royal College of Music, which entitle their holders to free tuition at the R.A.M. or the R.C.M. for two or three years, have been awarded to the following candidates:—Elizabeth Gluckstein, London (pianoforte), Elsie Watson, Huddersfield (singing), and Dorothy M. Davies, Cardiff (harp), at the R.A.M.; and Hubert A. M. Marno, Croydon (violin), Hyman Grunbaum, Brighton (violin), and Leonard S. Jefferies, Bristol (pianoforte), at the R.C.M.

THE League of Empire announces the subjects for the Essay Competitions for 1913. These may be obtained on application to the Hon. Secretary at the Offices of the League, Caxton Hall, Westminster.

"AN Indignant High School Mistress" writes to us protesting against the practice of answering applications for posts, and even returning testimonials in unclosed envelopes, to save the extra half-penny. Head masters and mistresses who pay no commission to agents should not be guilty of such meanness.

THE Council of the Girls' Public Day School Trust have appointed Miss M. M. Berryman, M.A. Lond., Mental and Moral Science Tripos (Girton College), at present Assistant Mistress of Clapham High School, to be Head Mistress of Notting Hill and Bayswater High School.

THE Society of Antiquaries have provided funds for a Studentship in Archaeology in memory of Sir A. Wollaston Franks, K.C.B., sometime President of the Society. It is of the value of £50, and will be tenable by a student carrying on investigations in the British Isles. A Board of Studies has been constituted in Sociology. The study of this subject in the University, under the encouragement of the benefactions of Mr. Martin White and Mr. Ratan Tata, has made good progress in recent years, and the subject is now accorded full recognition by the constitution of a special Board of Studies.

THE Principal (Sir Henry Miers) has been appointed to represent the University on the Organizing Committee of the Central University Bureau which has been established as a result of the recent Congress of the Universities of the Empire.

MISS HILDA JOHNSTONE, M.A. (Manchester), Senior Assistant Lecturer at Manchester University, has been appointed to the University Readership in History tenable at King's College for Women.

THE School Journey Association held its second Annual General Meeting at the Passmore Edwards Settlement on the 22nd ult., the President, Lady St. Helier, in the chair. The membership during the past year has more than trebled, and fifty-five Journeys have been conducted from London, besides others in the provinces. An address on "Books v. Experience" was delivered by Prof. John Adams.

ON Monday, December 2, at 3.30 p.m., the English Folk Dance Society will give a demonstration of Morris, sword, and country dances at the Savoy Theatre, under the direction of Mr. Cecil Sharp.

THE Board of Education is effectively carrying out the recommendations of the Imperial Education Conference. An Advisory Committee, consisting of the accredited agents of the various Governments and representatives of the Board and other Home Offices concerned, has been formed, and held its first meeting on November 18. They were welcomed by the President of the Board of Education and proceeded to discuss a statement drawn up by the Office of Special Inquiries with regard to the collection and interchange of information. It was recommended that the Conference should be quinquennial. Dr. Hill has published a full report of the Conference, including all the papers submitted and taken as read.

AN Association has been formed for securing higher education for Scottish Rural Schools, and a manifesto has been issued signed by the President Emeritus, Prof. G. G. Ramsay, and the Hon. Secretary, Prof. Harrower.

GENERAL SIR R. S. BADEN-POWELL has written a eulogistic preface to Eustace Miles's "Fitness for Play and Work," published this month by Messrs. Murby.

THE *Journal of the Royal Society of Arts* (November 15) has a leader on the Society's examinations for 1912. The occurrence of a grave scandal exposed in the Law Courts has been prevented by placing the superintendence of examinations in the hands of the London County Council. The total number of candidates examined in 1912 was 28,057. The slight decrease is accounted for by the removal from the list of a London centre which averaged 2,000 candidates. The most popular subjects are in order: Bookkeeping, Shorthand, French, Typewriting. At a long interval come Arithmetic and German. French is apparently the only modern language for which a *viva voce* has been held, and only one in five of the candidates passed in *viva voce*. An essay is set for the highest section, but there is no "free composition." The "remarks" of one foreign examiner would furnish a good question for correction in the next English paper. There should surely be an age limit for candidates. Without this safeguard a R.S.A. certificate is, if not misleading, at any rate open to abuse.

UNIVERSITY OF LEEDS.—The Joint Committee on University Extension and Tutorial Classes report that four classes have now completed the three years' course for which they were established, and that 58 out of the total enrolment of 130 have taken the whole course. The subjects taken have been Political Science, Economics, Theory and History of Political Institutions. Extension lectures have also been delivered on "The Law of Contract," "Shakespeare," and "The Leaders of the Renaissance." The expenses have been defrayed by grants from the University, the West Riding County Council, and the Board of Education. An additional grant of £75 was made by the County Council to cover the deficit.

"ETON IN THE SEVENTIES," by the Hon. Gilbert Coleridge, is a book to read, for, unlike some recent memorials of Eton, it is clearly written *sine ira aut studio*. The impression it leaves on the reader is that Eton in the seventies was a democracy tempered by a feudal aristocracy, who governed by a judicious admixture of *force majeure* and epigram. Mr. Coleridge advocates the universal use of the rod in schools on the ground that without the appeal to physical force a master is powerless.

HERE is his account of a novel form of booby-trap invented in one of the houses. A canister of powder was placed under a bath on which the furniture of the study was piled. As the occupant entered it was exploded by a fuse.

HIS verdict on the chapel services of his day is "intolerable boredom." A popular hymn or chant was bawled; otherwise there was

dead silence. Their favourite was Psalm cxxxvi, and Dr. Hornby, to stop what had grown to be a scandal, substituted for the old chant a staid Gregorian. At first the school were fairly cornered, but some bold spirit struck up the old tune, and while the battle between the choir and the school raged there was pandemonium. The organist turned the day by putting on the full swell and drowning the opposition.

THE other side of Eton we have not touched on. Our sole object in picking out a few of the blots on the greatest of our public schools is to show, first, that training is essential for all teachers, or, as Simon Laurie put it, there is no reason why Eton boys should be worse taught than Board School children; secondly, that clerical masters are no security for religious education; and, lastly, that the liberty and elasticity which head masters claim may be stretched too far.

"A. S. D.," in the *Morning Post*, expresses a hope that we shall not rashly import the Montessori method into England. In her book, Dr. Montessori contrasts her methods with those of the Italian common school, which seems to resemble our infant school of thirty years ago. If compared with the English kindergarten of to-day, "I fancy that the advantage is with us."

IN the Montessori schools, says "A.S.D.," there are no nursery rhymes, no fairy tales, no acting, no make-believe, no imaginative drawing. "I would as soon feed the child of four upon Dr. Montessori's 'bread boiled in salt water and abundantly seasoned with oil' as deprive him of all the colour of pretence."

MISS WORDSWORTH, late Principal of Lady Margaret College, in a lecture delivered at Queen's College, Harley Street, on "Ourselves," said that unattractive women were more in evidence than they used to be. In the Middle Ages they went into convents. The inalienable characteristic of womanhood should be beauty. No one cared to know what sort of looking man Euclid was; but when we thought of a woman we thought of her face, her tones, her colouring, her little acts and movements.

MESSRS. MACMILLAN will publish the remains of H. B. Garrod, portraying his work as Secretary of the Teachers' Guild and including his lectures on Dante.

MR. C. R. HODGSON has signified to the Council of the College of Preceptors his intention of resigning the office of Secretary which he has held for thirty-eight years. We shall have later on an opportunity of recording the services that Mr. Hodgson has rendered to the College.

THE Westminster Play this year is Terence's "Famulus." Performances are fixed for the 12th, 16th, and 18th of the month.

THE seventeenth L.C.C. Conference of Teachers will be held at Birkbeck College on January 2, 3, and 4, at 11 a.m. and 2 p.m. each day. The subjects, in order, will be the Montessori Method, Reading and Writing, Attention, School Hygiene, Educational Experiments (two sittings).

SCHOOLS MUSICAL AND DRAMATIC ASSOCIATION.—A new title, the "Schools Musical and Dramatic Association" has recently been adopted by an admirable Society to whose work we should like to call attention. The name "London" was formerly prefixed to "Schools," but the Association from the beginning was desirous of extending its scope beyond the limits thus implied, and the omission of "London" will be, let us hope, the first step in wider activities. The Association is also desirous to invite the affiliation of similar societies, especially of Old Girls' or Boys' Clubs. The aim of the Association is to maintain a high standard of choice as well as of performance in school music and drama. All teachers who are ambitious in this regard are aware of the many difficulties that confront them in the selection of suitable material. The S.M.D.A. has just published a leaflet (No. 14 of their series) containing a list of plays suitable for school performers of all ages. We note in the Historical Section Miss Amice Macdonell's excellent chronicle plays; in the Literary Section a number of adaptations from Dickens, Miss Fogarty's carefully edited series, adaptations from "Cranford," "Chaucer," and so on. Further are sections of miscellaneous, classical, fairy, French, and German plays. The labour involved in the preparation of the leaflet is well worth the modest sum of 2d., for which it may be obtained from the Hon. Secretary, Mrs. Millington, 42 Hampstead Way, London, N.W.

REVIEWS AND MINOR NOTICES.

The Rise and Fall of Nations. By W. J. BALFOUR-MURPHY, LL.D. (5s. net. Allen.)

We have serious doubts whether the author was wise in attempting, to use his own words, "to handle so vast a subject within the covers of a brief work." Without in any way championing the cause of what is throughout these pages derided as the "theory of mechanical evolution," we feel driven to assert that so comprehensive an argument touching the fate of nations cannot be adequately presented in so small a space; that it is not merely not helpful, but positively harmful, to the anti-mechanical theory of social progress to attack the evolutionary school with so slender an armoury as that displayed by the author in these pages. To say that, "in fact, we can find no evidence in history which would justify the belief that historic man has varied in any way in his intellectual capacity; nor is there the slightest justification for the statement that, as regards mental capacity, there is any difference among the various races inhabiting the earth," shows such a crude understanding of evolutionary doctrines that any conclusions founded upon such premises must necessarily be unconvincing. The rapid growth of Mohammedan power and the sudden development of Japan not only may be, but have been, satisfactorily accounted for upon principles which the author stigmatizes as being those of "mechanical evolution." Again, the example adduced to refute the doctrine of the "struggle for existence" as a factor in social progress is based upon a misconception. The survival of the fittest does not "become meaningless" because children subjected to the ordeal of life in the slums are inferior to their more fortunate brethren, but is actually illustrated in that very fact. Within the slum the "fittest" will survive. In the social organism, taken as a whole, the "fittest" of the slum may succumb to the members of superior classes who happen to be still better equipped in the general struggle. Again, the author's reasoning concerning the doctrines of the evolutionist upon the topic of the religious progress of men and nations is fraught with many fallacies. Evolution connotes dissolution; it is untrue to state that development is, according to the theory of evolution, "always from the simple to the complex." Indeed, such a statement is so obviously erroneous when made concerning that theory as it stands to-day as scarcely to call for refutation. And, furthermore, we deem it most unfortunate, from the point of view of the author himself, to suggest that the only true ideals concerning God are those of primitive man; for, if ignorance be good and the fullness of knowledge be evil, then we may indeed despair of attaining to earthly happiness. In this respect the author is throughout the work in error in limiting his view to "historic" man in the most narrow sense of the word. In that sense the "history" of man is so minute a fragment of the knowledge which we possess concerning his development that it cannot serve as a criterion of his comparative progress. Nor, again, is the author justified in supposing that the suddenness of an historical phenomenon renders it any the less a natural and explicable effect of precedent causes. May we not justly inquire why "the intellectual aridity of the Doric Spartan and the exuberant mental activity of the Ionic Athenian, at the same period of time, with the same clime and under similar physical conditions, must make us alive to the inherent weakness of the evolutionary theory"? The facts appear to us to afford a striking illustration of the evolutionary doctrine that man is the creature, not so much of his environment as of his antecedents.

We are completely at one with the author in many of his conclusions, not least in his condemnation of the evils of priesthood when it seeks to quench or obscure the light of reason. At the same time we disagree with him fundamentally in respect of the methods by which he arrives at those conclusions. As for his statement at the beginning of Chapter IV, that "we must infer *a priori* that advance will be made in inverse ratio to the amount of priestly influence exerted," not only is an "inference *a priori*" a contradiction

in terms, but the author begs the question by refusing to allow that priestly influence can ever be exerted for good. The truth that man may modify his own environment does not justify the assumption that that environment is "altogether a product of his own creation." Man may fashion his own destiny, but woe to him who ignores the limitations which, according to the scheme of things, are imposed upon him. And from what we have already said it must be clear that there is nothing "humiliating" in the thought that we are not capricious units, but the "inevitable product of the past." Rather let us strive to make ourselves worthy stepping-stones of the future. But in the history of the intellectual development of mankind a thousand years are but as yesterday, and the author is reasoning upon a false basis when he makes any comparison between races separated from each other in point of time by such a period.

We have emphasized the points on which we disagree, but we can endorse and commend the author's views on education and hold with him that man is master of his fate.

Introduction to Experimental Education. By ROBERT R. RUSK, M.A., Ph.D. (4s. 6d. net. Longmans.)

This work is proclaimed by its author to be based upon Meumann's "Lectures on Experimental Pedagogy," so the reader may wonder why the title runs "Experimental Education." The probable explanation is that the title "Experimental Pedagogy" has been already appropriated by the translators of Prof. Claparède's "Psychologie de l'Enfant et Pédagogie Expérimentelle." The translators of Claparède transposed his title, and gave the explanation: "This was thought desirable so as to distinguish it from other books on Child Study." Very probably Dr. Rusk resents this transposition of the sub-title and the principal title, but in any case he will content many readers who have a rooted prejudice against the term "pedagogy."

At the British Association meetings this year, it is said that the members of sections other than L went about asking members of that section: What is experimental pedagogy? Dr. Rusk has deserved well of his profession by supplying in his book a clear answer to this question. There is first the categorical answer supplied by the two chapters, dealing respectively with the standpoint and with the methods of experimental education, while the rest of the volume is given up to exemplifications that should secure the intelligent comprehension of even the dullest inquirers. The book is far from being a slavish exposition of Meumann. It conveys rather the impression of a work in which a young writer is chivalrously eager to acknowledge his indebtedness to a master who has won his respect. Certainly it is more satisfactory to find less of Meumann than one is led to expect than it would be to find everywhere traces of an author who was not acknowledged. It is because Meumann bulks so largely in this department that his influence is so apparent in the volume: it is because Dr. Rusk is an independent investigator who has mastered the floating literature of the subject that the text so frequently ranges beyond the lectures on which it is nominally based.

Dr. Rusk necessarily treats of a great many of the subjects that find a place in the ordinary textbooks on the Principles of Education, but this implies no duplication of work done elsewhere; the new point of view fully justifies the re-presentation of accepted principles. Any reader who wishes an example of the different form of treatment has only to compare the chapter on "The Aesthetic and Ethical Development of the Child" with what he finds in the recognized textbooks. The whole tone of the book breathes that newer spirit of scientific inquiry that marks present-day educational investigations. Mere opinion is no longer the force in educational writing that it has been in the past. With the progress of experimental pedagogy, the plain man who has hitherto had so much to say on education will find it well to hold his peace, or else to qualify himself for speaking by mastering the technicalities that necessarily arise in a subject that is making real progress. Opinion must in future be supported

by facts, and these facts must stand the test of rigorous experimental verification.

Dr. Rusk rightly lays great stress upon what he believes to be a branch of educational theory that stands in much need of development, the technique of learning. That this matter should come into prominence is only the natural outcome of the increasing tendency to recognize what Dr. Stanley Hall calls "paidocentricism." The whole of the present book has a bearing on the learning process from the pupil's point of view, but the matter is worked out specifically in the excellent chapter on "The Mental Work of the Child." In the conclusion, our author evolves from his considerations of the technique of learning a new meaning of the term "formal education," which, if accepted, would go far to reconcile the differences of opinion on this thorny subject.

But, while always recognizing the paramount importance of the point of view of the pupil, Dr. Rusk, from the nature of his book, must deal with education as it appeals to the teacher. His sections on general didactic are excellent, but they will probably make less appeal to the practical teacher than do those on special didactic. What our author has to say on the teaching of reading, spelling, handwriting, and arithmetic will go far to reconcile those teachers who maintain that they can see no practical good in books *about* teaching. Here they will find theoretical speculations definitely correlated with practical applications, under conditions that admit of, and indeed demand, control tests. Dr. Rusk is fully alive to the possibilities of error. He admits that even the sacred process of apperception has its defects (page 78), that many experimental investigations have merely negative results (page 167), and that not infrequently the results of experiments overturn the cherished opinions of even progressive educationists (e.g. page 270). The scientific spirit is manifest throughout, as indeed is to be expected in the work of a man who has himself done a great deal of successful experimental work under the most rigid control tests.

As to style, the book is well written. It is true that on page 57 our author appears to exclude England from Europe, and (certainly to our surprise) his treatment of the term *empathy* on page 140 was found confusing by some students to whom we referred the book by way of test. But the volume as a whole is not only clear, but strikingly so. It will be found extremely attractive to all those who have any real interest in education. It is the only book in English that gives a systematic account of the whole field of experimental pedagogy. It is thoroughly well suited to serve as a textbook, while its copious references to English and foreign literature on the subject make it invaluable to the advanced student.

History of English Prose Rhythm. By GEORGE SAINTSBURY. (14s. net. Macmillan.)

Difficilis, facilis, iucundus, amarus es idem;
Nec tecum possum vivere nec sine te.
We read, we relish, reprobate, and flout thee;
There is no living with thee or without thee.

It seems but the other day that we were reviewing Prof. Saintsbury's "History of English Prosody" and his "Historical Manual," and here we have from the same fountain pen (if we may parody the author's style) a goodly treatise of some five hundred pages on Prose Rhythm. On scansion, or the metric of verse, we have had in the last ten years as many or more distinct treatises, but the prosody of prose is almost virgin soil, and the only forerunners whom Prof. Saintsbury has discovered are Bishop Hurd, who attempted to scan a *Spectator* of Addison's, and a certain eighteenth-century Minister, John Mason, who wrote a tract on Prosaic Numbers. Hurd is commended as a pioneer but "he sticks in the bark." In our judgment the Bishop gets nearer to the core of the matter than the Professor. "In our language," he writes, "quantity is determined by the accent." Here the foot is assumed as the rule and measure of English prose rhythm, and Quintilian's dictum that all prose can be scanned after a fashion, analysed into feet which are combinations of longs and shorts, stands as the motto of the book. Hurd contents himself with iambs,

trochees, and possibly anapæsts. Saintsbury ranges from the monosyllabic (anonymous as Aristotle would call it) to the dochmiac of five or possibly six syllables. *Shē* is a foot (elsewhere *shē*); *possibility, the imagination, mater lachrymarum, in the dishonourable*, are feet. Of accent, in theory, there is no account, and with such a Lesbian rule it is, of course, possible to scan law reports or the present review. In fact the author only half believes in his own theory of longs and shorts. He allows that it hardly affects rhythmical effect whether in early English *oak* was pronounced as *awk* or *ock*, and holds that Greek and Latin literature can be best enjoyed by Englishmen when mispronounced as English.

The bulk of the book consists in the scansion of typical passages from our leading prosists—division into feet, each syllable marked long, short, or doubtful; and it would seem to follow that the verdict of a critic who holds that English scansion depends primarily on accent and only subordinately on quantity, and that in prose the unit must be the *colon*, not the foot, must needs be *infelix operis summae*. And yet from a critic who has read the five hundred pages, not as a duty, but as a pleasure, such a sentence is impossible. The book is good in spite of its theory, and the judicious reader will pay no more regard to the quantification than the school-boy does to Greek accents, and, when the Professor resists the temptation to scan the whole of the eleven pages of De Quincey's "Dream Fugue," be thankful for large mercies. Prof. Saintsbury knows English literature as few know it: he has read and re-read the best books, and, in spite of his perverse theory, he has an ear for harmony and rhythm. He does not pretend to be himself a maker of prose and "I or Cluvianus" is a favourite tag; but, if we may say so without offence, his own style has vastly improved. When he talks of "prudish critics who gasp and jib" at coinages such as "xenomania" we are forced to fit the cap; but here they are less plentiful, though "publicaturience" and "vernacularity" will hardly pass as coin of the realm. With dry humour he tells us: "I do not hate parenthesis and epexegesis"; but here he dissembles his love for brackets within brackets; and such a sentence as that on page 378 is comparatively rare. Here is a challenge which some of our readers may be tempted to accept:—

"Becky was always good to him, always amused, never angry." Anybody can do that. The Atlantes of the twentieth century could do it, in a posture vernacularly well known, but for the peril of disturbing the literature that they carry? Perhaps; but please find something like it for me before 1845, and out of Thackeray, if you will kindly do so. In him it is everywhere.

Science and Religion in Contemporary Philosophy. By EMILE BOUTROUX. Translated by JONATHAN NIELD. (5s. Duckworth.)

This book was originally published in 1912 and is now re-issued by Messrs. Duckworth in their excellent Crown Library. Prof. Boutroux's book ought to appeal to a wide circle of readers at the present day. M. Boutroux is not, perhaps, a great original thinker, but he has something of that power of sympathizing with and stating clearly very different stand-points which was so marked in William James. The conflict between science and religion is regarded as expressing itself in two tendencies, the naturalistic and the spiritualistic. As representatives of the first tendency, Prof. Boutroux takes Comte, Herbert Spencer, and Haeckel; as representatives of the second, Ritschl, Le Roy and his school, and William James. Each chapter contains a clear and sympathetic account of the view which is being examined, followed by a criticism which develops the main argument of the book and prepares the way for Prof. Boutroux's account of his own conception of the relation between the scientific spirit and the religious spirit in the last two chapters. It is part of his answer to the problems raised by the strife between religion and science that the struggle is not really between religion and science, but between the religious spirit and the scientific spirit, and that each of these is developing and becoming more and more capable of being reconciled with the other.

Most interesting, perhaps, are the chapters on the attempt to reduce religion to psychology and sociology, movements which are better known in France than in this country, but which are well worthy of attention; the chapter on "Religion and the Limits of Science"; and the chapter on "The Philosophy of Action." The last chapter contains an illuminating account of Pragmatism as a philosophy of religion both sympathetic and wisely critical.

Education: a Survey of Tendencies. By A. M. WILLIAMS, M.A. (3s. net. Maclehoose.)

We are told in the preface that this book "is intended to meet the needs of young students and also offers to the general reader an account of the evolution and nature of a great public service." It certainly succeeds in its first purpose. It does not profess to break new ground at any point, but it presents a general view of the whole subject that is much more attractive than usual. It avoids psychology on the one hand and mere school management on the other, and is quite free from all philosophical subtleties. The intelligent student will gather from its pages a better general view of the practical aspects of his profession than can be obtained from any of the other textbooks at present available. Naturally, it will have to be supplemented by other books that deal with the various branches in greater detail. The book is well written. Mr. Williams has a clear and pleasant style that cannot but attract the student. It may, perhaps, be objected that he allows his love of letters to tempt him to use more literary illustrations than are quite needful. But, in a first book on education, it is an error on the right side to make the text attractive. The students will undoubtedly find enough counterbalancing dullness in their other treatises. Not only is the style pleasing, but the general tone of the argument is cheerful. On all the controversial points, Mr. Williams unhesitatingly takes the optimistic side; and since the orthodox views are, fortunately, swinging in that direction, he can do so without misleading his readers. He is singularly broad in his sympathies and is remarkably fair in his statement of positions that he cannot himself accept. It is probably because of his desire to meet the needs of the ordinary argumentative reader that he introduces more figures than are good for the young student. Why trouble that student, for example, with the price of the site of a school for defectives in Duncan Street, Edinburgh? So far as it goes, the book is accurate as well as thorough. There is an error on page 80 in the relation between pints and litres, and on page 120 the thoughtful student will have some difficulty in determining exactly how Mr. Williams stands regarding the derivation of the word "education." But the only serious fault we have to find with the book is its neglect of experimental education. Surely, in a survey of tendencies, it is necessary to take note of the striking development in experimental methods. Whatever may be thought of Meumann and his work, they cannot be neglected by any one who professes to cover the whole field of current educational tendencies. Indeed, it would be difficult to find a tendency in education more characteristic of the present day than that towards experimental methods. Nothing shows this more clearly than the reception accorded to Dr. Rusk's recent book. Mr. Williams treats incidentally with the results of the experimental method—as, for example, in dealing with fatigue; but in his next edition he will be well advised to add a separate chapter on this vital subject. All the same, we welcome the book as it is and recommend it as an excellent introduction to the study of education.

Mental Discipline and Educational Values. By W. H. HECK. (3s. 6d. net. John Lane.)

Though this book is dated 1912, it bears no indication of being a third edition, and on comparing it with the second edition dated 1911 we find no trace of additions or differences. It may, therefore, be regarded as a reprint of the second edition with the omission of the preface. The important thing is that a book of this kind should so rapidly have reached this stage. It certainly deserves to be widely read, as it gives an excellent résumé of what is after all the fundamental problem of modern educational theory—the problem of Formal Training. Mr. Heck supplies all the matter that is necessary to enable a fair-minded reader to come to a just conclusion on this vexed question. There is, first of all, a review of the discussions; this is followed by a very full and thorough account of the relevant experiments. Then comes a general treatment of the present condition of the problem, illuminated by the author's own contributions, of which the most important are to be found in the chapter on Localization of Function. The *pros* and *cons* are set forth with the greatest fairness, though the author is not at all afraid to make it quite clear what his own views are. From the nature of the case the work is largely made up of quotations, but

the reader will certainly not object to this, as it places within his reach in a very handy form all that is essential to understand the development and present state of a problem that has given rise to more confused thinking than is common even in educational writing. The English reader, in particular, will find here sufficiently full quotations from writers who are not easily accessible on this side of the Atlantic. It is a little ungracious to complain of omissions where so much is given, but we think that Dr. Hayward's contributions to this subject deserve at least a mention in the valuable bibliography with which the volume concludes. Further, a book bearing the date 1912, and dealing largely with "Educational Values," should certainly have included in its bibliography W. C. Bagley's valuable book with that title.

Matter, Form, and Style. By HARDRESS O'GRADY. (2s. Murray.)

The title gives promise of some departure from the orthodox manuals of composition which continue to flood the book market, mostly from the American press, and the contents do not belie the title. Mr. O'Grady acknowledges his obligations to Dr. Sadler, Mr. P. J. Hartog, and others, but the conception of the work is wholly original. Instead of building up the theme, story, narrative, or essay, word by word, sentence by sentence, period by period, he starts with the whole and works down to the parts. Of grammar, figures of speech, punctuation, errors in English there is not a word, and a London matriculant who had been prepared on this manual might get full marks for his essay, but would probably be plucked on the rest of the English paper. The author starts by relating an incident of his life in Natal—first in the rough draft, then as worked up. Next we have a page from the "Vailima Letters" and the story of the cat that swallowed the lace from "Cranford," and the pupil is instructed, after studying these specimens of successful narrative and considering why they are interesting, to try his hand at a similar composition. Again we start from a personal experience—a letter received by the author: "We shall be pleased to see you and shall try to make you feel at home," and the pupil is required to express in natural language that he would "prefer his eccentric aunt not to embrace him in public"—an awkward request that taxes even the author's grammar. We can only guess at the right answer:

"Kiss me, sweet Aunt, in private, but forbear
In public, and your nephew's blushes spare."

We have given enough to show the scope and method of the book. The various exercises are contrived to bring home the difference between good and bad writing. They are all ingenious, but the fault is that they are not sufficiently graduated, and reminiscent of missing word competitions. An intelligent teacher will hail it as a godsend, but your dull teacher will say that it needs a key. "Metaphore" and "a genii" are eccentricities—probably of the printer.

Circumstances or Character? By CLEMENT F. ROGERS, M.A. (3s. 6d. net. Methuen.)

Some twenty addresses and articles—studies in social work the author calls them in a sub-title—which have been delivered before important Church Conferences or have appeared in leading Church organs from 1902 to 1910. The author is first and foremost a Churchman, and in the next place, a convinced supporter of the Charity Organization Society. He appears to think that if only he could instil the Church, so far as its charitable efforts are concerned, with the spirit and methods of the Charity Organization Society, the millennium would have dawned. He certainly does not spare the Church, of which he is a devoted servant, and his indictment of slipshod and demoralizing charities is scathing. The perils that dog the steps of an indiscriminate charity could not have been more glaringly exposed; the C.O.S. itself could not have got together more convincing lists of cases, most of them derived from the author's personal experience, where charity, instead of aiding and elevating, proved fatally demoralizing and destructive. The author's reply to the question formulated in his title is that "character, and not circumstances, is the prime factor for good or evil in social life." As Socrates says to Glaucon in the "Republic": "My belief is, not that a good body will, by its own excellence, make the soul good; but, on the contrary, that a good soul will by its excellence render the body as perfect as it can be." The author holds that he and the C.O.S. have proved this to the hilt. His own ultimate remedy is in the education of the people in the widest sense, but especially in the education of character, such education to be based on religion, and such religion to be that of the Church of England.

Virgil. By T. R. GLOVER. (7s. 6d. Methuen.)

We welcome a new and revised edition of Mr. Glover's "Virgil." Our own copy of "Studies in Virgil" (1904) is well thumbed, scored, and annotated, and we would not exchange our old lamp

for a new one. The book is virtually the same, but it has been thoroughly overhauled. There are few corrections—a testimony, in this case, to the accuracy of the author; but there are many additional notes, and translations of the quotations are given. In reviewing the first edition we suggested that a chapter on Virgil in literature might have been added. Mr. Glover replies that this subject had already been treated by Comparetti in his "Virgil in the Middle Ages"; but we were rather thinking of later times—of Charles I and Newman and the "Sortes Virgilianae," of Fox, Pitt, Gladstone, and quotations in the House, of Virgilian echoes in English poets from Shakespeare to Tennyson. The renderings here given are eclectic, but mostly from Conington. This is not the place to discuss the merits of rival translators (a subject that might furnish another chapter), but we may say that Conington's version rarely impresses us as inevitable—e.g., *Florentem studiis ignobilis otii*, "embowered in pursuits of inglorious leisure." Tennyson, in "Be mine a philosopher's life in the quiet woodland ways," has caught the spirit, and "the humble scholar's life of blissful ease" would be nearer. In single lines and brief extracts no one has equalled Myers, and James Rhoades and Fairfax Taylor might have been drawn upon. A short bibliography would be helpful. Mr. Glover errs with M. Arnold in supposing that Goethe ever said of Heine that he was wanting in love.

The Wars of Greece and Persia. Selections from Herodotus in Attic Greek. Edited by W. D. LOWE. (2s. 6d. Clarendon Press.)

This makes an excellent first Greek reader—far more interesting to boys than extracts from the "Anabasis." A similar experiment was made some thirty years ago by Mr. J. S. Phillpotts, of Bedford, and we have often wondered why it was not more favourably received. Notes and vocabulary give all needful assistance.

"Ora Maritima Series."—*En Vacances.* By Miss M. I. EBBUTT, M.A., and Prof. ANATOLE LE DU. (2s. Kegan Paul.)

We fear that the authors of "En Vacances" have over-estimated the learning capacity of small children, for whom this book is presumably intended. The number of words alone to be mastered in the first chapter would tax their powers to the uttermost, and they are asked to learn in addition the singular and plural of verbs, nouns, and adjectives. The third chapter introduces the imperfect tense, and before the end of the book, which is only twenty chapters long, we have the rules for the agreement of the past and even the present participles. The text consists of an account of a French family on its summer holiday in the country. It is pleasantly written and attractively illustrated. All grammar and exercises are reserved for the second half of the book and, except for the *questionnaire*, are in English. From the very first English sentences are provided for retranslation. The difficulty of the text and exercises is counterbalanced by excessive help given in vocabularies and "Notes" on each chapter, which last consist simply of translation of verb forms or groups of words. The terms used in the grammar rules are those recommended by the Joint Committee on Grammatical Terminology. In our judgment this book is more fitted for a backward form of older pupils than for actual beginners—at least, in schools where French is the first language to be taught and the beginners, therefore, of very tender years.

Le Mouron Rouge. Adapted by Mme LA BARONNE D'ORCZY. Edited by W. M. POOLE and E. L. LASSIMONNE. (1s. 6d. Murray.)

Many young people will be delighted to recognize under its French name their favourite "Scarlet Pimpernel," the final incident of which has been adapted for school use by the author. There is no doubt as to its being a story to catch and hold their interest, though one regrets the loss of the first part if only to serve as an explanation of the relations between husband and wife as we find them at the opening of this extract. The editors have been sparing in their notes, which are in French and adequately explain any unusual words. The exercises which face the text on each page consist of *questions de sens* and *questions de grammaire*. We are doubtful as to the advisability of an interleaved *questionnaire*, as it is thereby rendered practically useless for written work, and there must be few teachers who do not make their own questions for the oral lesson. Of the grammar questions some are certainly suggestive, but there is too little method in them and they are often rather pointless or too obscure to be practical. We notice on the same page, for example, "Donnez le singulier de trente gentilshommes," and "Son propre mari = son mari + préposition + pronom," neither of which seem important enough for print. What is needed in a book of this kind is rather a series of systematic exercises on different grammatical points, giving the pupil some well defined sum of acquirement for his term's work.

From the Librairie Larousse we have received an attractive series of anthologies, published under the direction of M. de Gautier-

Ferrières, Laureate of the French Académie. The sixteenth, seventeenth, and eighteenth centuries have each a volume of prose and verse, and the nineteenth century has two volumes of prose and two of verse. To each author there is a short introduction, giving the main facts of his life and work, and also (a novel feature) his portrait and autograph, often a holograph in the case of the more distinguished moderns. The price of each volume is 1 f. 50 c. There are also two larger volumes (each 6 f. in cloth) of Victor Hugo's prose and poetry, edited by Léopold-Lecour. The former tears the heart out of the novels—"Les Misérables" runs to 160 closely printed pages. The second includes the dramas in verse. The portraits of Hugo at each climacteric of his life are of special interest. The selection is made with fine taste and judgment, but it seems to us a mistake to have given Victor Hugo the lion's share in the nineteenth-century anthology.

Messrs. Blackie send us another instalment of their "Little French Classics" and "Little German Classics." The combination of cheapness with excellence of type and get-up and of editing makes this series unrivalled, and we need only call attention to what seem to us the most suitable of the present volumes. *Mémoires de Saint-Simon* gives eleven characteristic specimens of the prince of memoir writers. This is new ground. *Le Lac de Gers* is an extract, all too brief, from Töpffer, an old favourite with boys. Thiers's *Austerlitz* might serve for an Army class, but it needs a map as well as a plan of the battle, and the editing leaves something to be desired. Thiers speaks of "the hillock which the troops who had served in Egypt had called 'Santon,'" and Mr. Dyson annotates: "The word recalls Napoleon's exploits in Egypt, and was probably so called after a similar hill there." Why did he not look out the word in Larousse? *Et du mieux mérité*, "and the better merited," is a mistranslation. Among the German classics we welcome Benedix's *Eigensinn*, a one-act play, and Stern's *Die Flut des Lebens*. Zahn's *Der Geiss-Christel* seems to us less suitable. The atmosphere and, in part, the vocabulary are Swiss.

L'Année Pédagogique publiée. Par L. CELLÉRIER et L. DUGAS. (7.50 fr. Paris: Felix Alcan.)

We welcome the first appearance of what promises to be a hardy annual, a publication as indispensable to the educationist as "Hazell" is to the general public. The bulk of the book is a Bibliography, giving not only the titles but a description or résumé of educational books, pamphlets, monographs, and articles in *Fach* journals that has appeared during the year in France, England, Germany, and the United States. This is preceded by four *articles de fond* by the two Editors, M. Emile Boutroux, the Academician, and one anonymous on primary instruction. With such an *embarras du choix* it would seem ungrateful to point out omissions; but we have failed to discover any reference to events that have loomed large in England during the past year—the Conference of Universities of the Empire and the Teachers' Registration Council. The name of Montessori is not in the Index, though under "Ecoles des Enfants" we find one book on her method.

Elementary German Grammar. By E. C. WESSELHOEFT. (2s. 6d. Heath.)

For those who favour the old discipline this is a well arranged introduction to the study of German, in which grammar plays the *Hauptrolle* and exercises and translation the *Nebenrollen*. The full index and paradigms of verbs add to its value.

La Jeune Sibérienne. Par XAVIER DE MAISTRE. Edited by CHARLES WESLEY ROBSON. (1s. 6d. Ginn.)

An up-to-date edition of an old favourite that has fallen out of fashion, with all the modern accessories of question, retranslation, &c. The notes give all that can be desired, and in our opinion something more. Thus, we do not see the use of giving the reason of every subjunctive, or appending to it a "Why?"

A School Algebra. Parts II and III. By H. S. HALL, M.A. (2s. 6d. Macmillan.)

These two parts, which are here included in one volume, complete the "School Algebra." They maintain the high level set in the first part, and, when compared with the latter half of the well known "Elementary Algebra," show many improvements in detail, the natural results of an experience gained during a period of nearly thirty years. The volume begins with progressions, indices, and surds, and ends with the binomial, exponential, and logarithmic theorems. Two main principles seem to have guided the author in this revision of his earlier work. With the first we agree entirely. Graphs are used freely, but as a means of illustration only, except in one chapter in which the graphs of somewhat complicated functions are considered. They thus occupy their proper place in an intermediate course of algebra. With regard to the second principle, we are in less cordial agreement. No proof at all may be preferable to an unsound proof, but a proof need not be omitted merely because it is difficult. The simpler

tests of convergency ought to be within the range of pupils who have advanced as far as permutations, and we should rather see proofs, if only for the benefit of a few readers, than to take for granted theorems so important as the binomial theorem for any index and the exponential theorem. Some of the chapters are of exceptional interest and value. Logarithms are taken in their natural place after indices and surds, and are amply illustrated by graphs. "The Theory of Quadratic Equations and Functions" is the title of another good chapter; but, in proving that a quadratic equation has two (and only two) roots, the author gives the old-fashioned reasoning, which merely shows that such an equation cannot have more than two *different* roots. The chapter on variation and a chapter on difficult factors and the remainder theorem also seem above the average. As in all the author's textbooks, the examples are a notable feature, and the collections of miscellaneous exercises will be found most useful. The type is clear when looked at closely, but rather too small for school use, and the lines are too close together. The diagrams are excellent.

Elementary Geometry. By A. E. LAYNG, M.A. (3s.; or, in two parts, 1s. 6d. each. Murray.)

Mr. Layng has done good work in the past as a writer of mathematical textbooks, and we can only regret that he has not added to his reputation or usefulness by the publication of his "Elementary Geometry." In many of the theorems the reasoning is loose, and in some (such as Euclid I, 18 and 19) the remodelled proofs are made more difficult without any corresponding improvement. The exercises are, of course, good and well arranged, as in all Mr. Layng's other books.

The Mustard Tree. An Argument on behalf of the Divinity of Christ. By O. R. VASSAL-PHILLIPS. (Pp. xxxii, 530. 5s. net. Duckworth.)

To those who enjoy rhetorical discourse, flavoured with a strong controversial element, this volume, by Father Vassal-Phillips, a popular Roman Catholic preacher, may be commended. The author takes the Roman Catholic Church, the Papacy, the Sacraments, and the devotions, and proceeds to argue that these, in their entirety, and as a living whole, can only be explained on the hypothesis of a divine origin. Now, quite an impressive apologetic argument could be constructed on these lines, if opponents were treated fairly, and modern points of view discussed with respect. Unfortunately, the author's favourite method is to indulge in cheap sneers and contemptuous comment in place of reasoned criticism. The following passage may be cited as an example of the author's rhetorical style: "The thought of the first book that ever sprang from the brain of a man must always possess a fascination for mankind. It may be that we find ourselves in some great library, where the ideas of humanity lie stored. Perhaps it is the British Museum. We look around, and as we gaze upon the hexagonal, cylinder-shaped volumes of old Babylon, or examine the yet more ancient clay-baked cones covered with archaic characters, written—as we are told—about six thousand five hundred years ago, they thrill us with the romance of the mighty past. Once more we look, and now, only a few yards distant, autograph manuscripts of Scott, Macaulay, Tennyson, George Eliot, Cardinal Newman—famous names of yesterday—arrest the eye. . . . But of the books of the whole world there are four which stand out, pre-eminent in their tremendous import for every one of us. To those who love them they are known as the Holy Gospels." It should be added that, when allowance is made for the rhetorical form, the argument, as a whole, is very skilfully constructed, and sometimes—as in parts of the chapter headed "Difficulties"—the discussion is really valuable and impressive. Mr. Hilaire Belloc, who provides an "epilogue," confesses that it was nothing but "admiration for the arguments presented and the order in which they are enforced" that overcame his natural hesitation "to venture into a field" which he thinks himself "quite unfitted to enter." The volume has a distinct value as illuminating the Roman Catholic point of view, both generally and incidentally, on many interesting topics. Father Benson contributes a preface.

"The Smaller Cambridge Bible for Schools."—(1) *Judges and Ruth*. By J. S. BLACK, LL.D., and A. W. STREANE, D.D. (2) *Joel and Amos*. By J. C. H. HOW, M.A. (3) *Proverbs*. By the Rev. J. R. COATES, B.A. (4) *The Acts of the Apostles*. By H. C. O. LANCHESTER, M.A. (Each volume 1s. net.)

The text commented on is that of the Authorized Version as given in Dr. Scrivener's "Cambridge Paragraph Bible." A map is provided in each volume.

(1) Dr. Sutherland Black's "Judges," which is now bound up with Dr. Streane's "Ruth" in one volume, is a reissue, with slight additions, of his earlier small commentary, published in 1892. It is a masterly little treatise, useful alike to professed scholars and general students. The occasional corrections of the text are

especially valuable, as also is the Introduction. Dr. Streane takes a conservative view of the date of Ruth, regarding it as a pre-Exilic composition. Its "real object . . . may well have been to present a charming picture or idyll of earlier days, which should at the same time be in immediate connexion with the ancestry of David." This view will hardly commend itself to most modern scholars, who see in the little book a counterblast to the measures taken by Ezra and Nehemiah against mixed marriages.

(2) Mr. How's volume on Joel and Amos is careful and painstaking. After a judicial survey of the evidence he inclines to the post-Exilic date for Joel. In the introduction to Amos there is a useful section on "the prophetic ministry." The volume forms an excellent book for class use, and ought to facilitate the study (which is much to be desired) of these important prophetic writings in schools.

(3) Mr. Coates's "Proverbs" is also a useful volume, though the Introduction might well have been somewhat fuller. The post-Exilic date is, on the whole, accepted.

(4) In his volume on the Acts, Mr. Lanchester has produced a good working commentary for class purposes. It would have been well, however, if more information had been given on such important Jewish parties as those of the Pharisees and Sadducees.

Thessalonians I and II, Timothy, Titus. Edited by H. W. FULFORD, M.A. (1s. 6d. net.)

This is one of the excellent series of small commentaries on the Revised Version. It provides a handy commentary, with introductions to the several Epistles—all adequate for the purpose in hand. The notes are carefully done. Among much that is useful, the discussion of the question of episcopacy in relation to the Pastorals may be singled out (pages 65-69). The conclusion reached is that "while the appointment of Timothy and Titus was probably for life, and while they certainly exercised what would now be called 'episcopal' functions, yet 'the monarchical episcopate' of the days of Ignatius is not yet established. There had been a considerable growth in the fifty years between St. Paul and Ignatius." The volume is provided with a useful map.

"The Cambridge Bible for Schools."—*Galatians*. Edited by A. LUKYN WILLIAMS, B.D. (1s. 6d. net.)

This volume contains an Introduction and Commentary on the English text of the Epistle (Authorized Version). It corresponds in substance with the commentary on the Greek text, which has already been noticed in our columns as one of the best and most valuable contributions to the Cambridge Series. The Introduction is an especially fine piece of work.

The Making of Western Europe. I: The Dark Ages, 300-1000 A.D. By C. R. L. FLETCHER. (7s. 6d. net. Murray.)

This is an interesting and amusing as well as an able book. It lacks the *abandon* of Mr. Fletcher's work on English history, but is none the worse for the loss. Like the earlier book, it has been written because the author enjoyed the prospect of writing it, and therefore it contains a great deal of information which our scholars in schools and Universities do not find in their ordinary textbooks. The reader of this book will really know something about the later Roman Empire and Gregory of Tours and feudalism, and, as the author has allowed himself plenty of space, he will get his knowledge in an understanding way. Even such a good little book as Bémont and Monod's "Histoire de l'Europe au moyen âge" cannot teach him in this way without the aid of a teacher. Moreover, Mr. Fletcher has added intelligible summaries and genealogical tables.

Whether this book would leave an accurate general impression of the Dark Ages upon the mind of a boy or girl who was beginning the study of European history is another matter. There are a great many facts and stories which do not especially illustrate the Middle Ages. The frequent asides and quotations, which fall so pleasantly on the ear, give the book an artificial literary flavour. One feels, also, that a little more care and research might easily have made some pages more useful—e.g. on the Colonate, or Papal Rome, or the Frankish counties. But, after all, Gibbon has the same qualities, and if Mr. Fletcher induces his young friends to read Gibbon the most ardent of scientific historians need not grumble. The intimate understanding will come later. And this reminds us that Mr. Fletcher writes frequently and charmingly upon the original authorities.

A First Book in English Literature. Part VI: Wordsworth to Tennyson. By C. LINKLATER THOMSON. (2s. 6d. Horace Marshall.)

As the stream of literature broadens, it is harder to select names and still harder to illustrate by extracts. Miss Thomson does well in wholly ignoring the small fry, and her appreciations of the great masters are solid and sensible. We doubt whether it is worth while to give the plots of Jane Austen's and Walter Scott's novels and the merits and defects of "Don Juan," the plot of which

cannot be adequately treated in a book intended for the young person. We have noticed a few misprints or mistakes—"Sidney Smith" (for Sydney), "Meg Merilees," "Baillie Nichol Jarvie," "Burlie of Balfour," "Bright star, would I were *pensive* as thou art." The date of Scott's marriage to Miss Carpenter is here 1798; in "The Dictionary of National Biography," 1797; in Lang's "History of English Literature," "to Miss Charpentier, 1799." Which is right? "The picaresque novel reached perfection in Dickens" is a strange saying. The volume does not include Tennyson, though Tennyson's poems and Browning's "Paracelsus" appear in the chronological tables.

Old Favourites from the Elder Poets. By MATILDA SHARPE. (3s. 6d. Methuen.)

"The plan of this little volume is to give poetry of all kinds, trying to give the choicest of each, which, indeed, are always to be found among those best known." The preface does bare justice to the scope and variety of this extraordinary anthology. It begins with Chaucer and ends with the editor, including, by the way, Horace, Thomas of Celano, Habakkuk, Lord George Byron (*sic*), and scraps set down from memory. "The pieces have been shortened, sometimes only for shortness' sake." Kingsley, for instance, has only two lines:

"Be good, sweet maid, and let who will be clever;
Do noble things, not dream them all day long."

It is hardly fair on Tennyson to give "From the Higher" as the title of a poem or as a specimen of his lyrics:

"Tears, idle tears, I know not what they mean,
Thinking of the days that are no more."

Swinburne, too, might complain that he appears under Edward Falkner in four lines entitled "Translation of the Antique." The translation of Horace (anonymous) is a literary curiosity: "So long as the Capital the High Priest climbs I shall be spoken, . . . and where, poor of water, the Daunus over the country people reigns out of his humility, powerful." The volume concludes with an original poem. We have space only for one extract:

"Then one relates with graphic saw
The thrilling tale of Franco-German War,
The panting horse-scapes that they choose,
Who bare hot tidings to the *Daily News*;
And he, now head of our Royal Academy,
Would, with his lovely wife, enliven the company."

Wonders of the Sea. By F. MARTIN DUNCAN and L. T. DUNCAN. (Henry Frowde and Hodder & Stoughton.)

The titles of the six small volumes of which this series consists will be found under "Books of the Month." They are attractive in appearance and in print and paper satisfy all the requirements of the British Association. The description of the common objects to be found on the seashore is clear and entertaining, but it proceeds *per enumerationem simplicem* and is professedly unscientific. The love of collecting is the root of all natural history, and the young collector will not find much assistance. Shells, for instance, deserve a volume to themselves, but in the volume of which they form a chapter there is a pretty plate of eleven shells, unnumbered and not easy to identify.

Le Livre Rouge. Par E. MAGÉE. (1s. 6d. net. Blackie.)

"A picture-book giving a large vocabulary of words which little children use every day." The first lesson on the classroom contains some fifty names of objects and is doubtless intended to furnish matter for ten lessons, though this is not indicated; the second gives the ordinals up to a hundred, with addition, and so on. In the hands of a skilled teacher we doubt not that the book will be found an effective instrument, but we should deprecate its use as the one French primer. The pictures are crude, but serve their purpose. Those under the months do not always correspond to the text. "Savez-vous planter les choux?" is a capital song. Why are there not more like it?

With the Airmen. By CLAUDE GRAHAME-WHITE, in Collaboration with HARRY HARPER. (Frowde and Hodder & Stoughton.)

Mr. Grahame-White tells the tale of air-flying as he told it, or a part of it, to some boy friends who visited his aerodrome at Hendon. After reading his book through, he thinks the plan works out well, and so do we. To judge by the newspapers, there are as many fatal accidents as successful flights. The misses are recorded, but not the hits. This book comes as a corrective. It shows that, with reasonable precautions, there is little more danger in an air flight than in a motor ride, and Mr. Grahame-White hopes to see the time when aeroplanes will be as common as motors, and warns our War Office against the imminent danger of a fleet of aeroplanes, each ship capable of dropping 1,600 lb. of explosives upon London. He speaks of what he knows, and men, no less than boys, will delight in his lively narrative.

The Crock of Gold. By JAMES STEPHENS. (5s. net. Macmillan.)

Mr. Fortescue himself would find it hard to classify "The Crock of Gold"—on the face of it a fairy story with Leprechauns in the first chapter and the Thin Woman of Dun Gortin as the heroine. We turn the page and find a dissertation on life and death between the Two Philosophers. It is a thinly-veiled philosophical treatise. But, no; a typical Irishman intervenes to seek counsel of the Philosopher how to recover his wife's lost washing-board. It is an extravaganza after the manner of George Birmingham's "Spanish Gold." Well, it is all or none of these. The scene is Ireland and the characters are Irish, but realism and mysticism, the natural and supernatural, are so cunningly intermingled as warp and woof that we have at once a philosophy of life and an exquisite fairy tale. We are reminded now and again of Thomas Love Peacock, of George Meredith, and of Algernon Blackwood; but it is the most original *Dichtung* (there is no English equivalent) that we have seen for many a day.

Animals around us. By MARTIN MERRYTHOUGHT. With Illustrations by EDITH B. HOLDEN. (Henry Frowde and Hodder & Stoughton.)

The commonest of British mammals are here described in doggerel. The author disarms criticism by announcing himself as a poet made, not born, and has succeeded in portraying the features and habits of our wild animals in pleasantly rimed prose, aided by Miss Holden's well drawn illustrations.

Insect Workers. By W. J. CLAXTON. (1s. Cassell.)

"How the insects carry out their trades as tailors, scavengers, divers, cigar-makers, basket-makers, locksmiths." Such is the attractive playbill, and the performance in seventeen short scenes does not disappoint us. The coloured plates are too gaudy, but the full-page photographs are good.

Stories of Old. By E. L. HOSKYN. Illustrated by J. TENNANT. (Black.)

This is a medley. We start with the patron saints of the United Kingdom; then we have the true histories of Robert Bruce, Joan of Arc, and Peter the Great, and end with Thor and Trolls, with Browning's "Pied Piper" as an interlude. The illustrations by J. Tennant are well drawn and spirited, but they are stretched on maps of the different countries, reminding us of the Signs of the Zodiac.

Mythological Rhymes. By Sir REED GOOCH BAGGORKE. (4s. F. Hodgson.)

For the benefit of "the man in the street" the author has presented in rime a "succinct and entertaining account of the principal legends." As a fair specimen, we may quote the first stanza of "Zeus."

"Rhea was 'mother of the gods' by Cronos, spouse and brother
both;
Six deities of heaven and hell from Phrygian Cybele had their
growth,
Of gods those mighty ones she bore, Poseidon, Zeus, and
Hades,
While Hera, Hestia, and Demeter were the Olympian ladies."

Beating to Port, and other Poems. By T. P. B. (3s. 6d. net. Methuen.)

These poems, we are informed, are by an army officer, the author of "Sutor ultra Crepidam," a book of common-sense reflections upon religious subjects. They show a rare facility of rime and mastery of technique, but the message they are intended to convey, that there is no real distinction between secular and religious literature, is in parables not always clear to interpret. There is a striking variation of Uhland's "Der Snger." The worldly king, offended by the heavenly strains, smites, not the minstrel, but his harp, and the pious queen, whose ear is in tune, dies of rapture. Even more striking is the story of the Jew who sells a cross for Jesus with the moral:—

"If the Father again His Son to earth,
In the form of man, should send,
We'd purchase the manger that saw his birth
For a show—and a dividend."

The motive of "Parted," "Apparent Failure," and "The Sisters" is not clear; but here is a Christmas carol with the true lilt:—

"The lame shall leap as a hart,
And the tongue of the dumb shall sing;
And the eyes of the blind have part
In the sight of the Child born King."

Mr. Lancelot: a Comedy of Assumptions. By MAURICE HEWLETT. (6s. Macmillan.)

Homer, had he lived in the days of circulating libraries, would, doubtless, have named his "Iliad" "Helen of Troy," and a truer,

(Continued on page 834.)

BOOKS FOR THE CAMBRIDGE JUNIOR AND SENIOR LOCALS.*

THE success of the series of books specially issued for the Cambridge Senior Local Examinations induced the University Tutorial Press to prepare a similar series for use in schools that work on the lines of the Junior Local Examination. All of these, with the exception of the *New Junior French Course* and *Junior Geometry*, have now been published.

These books are, in nearly every case, the work of practical teachers, who have been for some time engaged in the preparation of pupils for the Junior Local, and, having met with a great measure of success in their work, may be considered to have a thorough knowledge of the requirements of the Examination. The books are intended, however, to be something more than mere Examination Text-Books: they are designed to be complete, practical, though elementary, works, and will, it is hoped, reflect in matter and arrangement and in manner of presentation the accepted views of educational experts at the present time. In other words, they will be thoroughly up to date.

The series covers nearly all the important subjects in the syllabus. In Religious Knowledge editions of the *Gospel of S. Mark*,¹ and of *The Acts of the Apostles*,² Chapters i to xvi., suitable for use by both Seniors and Juniors, were published early in May of this year. The notes are brief and, it is hoped, not overloaded with useless learning, while their length has been kept down by the insertion of full Introductions dealing with the topics of general interest arising from the text.

In English a *Junior English Composition*³ and a *Junior English Grammar, with Parsing and Analysis*⁴ have been published. *Junior English Composition* is by the same author as *Senior English Composition* and, as was expected, has had as favourable a reception as the more advanced work. The *Junior English Grammar* endeavours to correlate accidence and syntax from the beginning, and is mainly based on inductive methods.

In addition to these books covering the permanent part of the Junior Local Syllabus in English, Junior editions of Scott's *Marmion*, Milton's *Comus*, Shakespeare's *As You Like It*, and *Macbeth* have been prepared.

In Latin a *New Junior Latin Course*⁵ has been issued, covering the requirements of the Examination in grammar, parsing, and translation of English into Latin. This book makes the reading-lesson the basis of the teaching and provides for oral practice in answering questions in Latin. It is supplemented by the *New Junior Latin Reader*,⁶ which consists of a number of extracts carefully graded and suitable for junior pupils, each extract being complete in itself. There is an oral exercise on each extract. Editions of the prescribed Latin Classics for 1913,⁷ with introductions, notes, and full alphabetical vocabularies, are also ready.

In French a *New Junior French Course*⁸ is in prepara-

* Published by the University Tutorial Press, Ltd.

tion. It bases the teaching on the extracts for reading, and contains grammar, exercises, *questionnaires*, and a vocabulary. It will be ready in time for next term. The *New Junior French Reader*⁹ has already been issued; it contains a number of extracts each of which is complete in itself, and should be found interesting to learners. There are notes and a vocabulary.

The requirements of the Junior Local Syllabus in History are fully met by the *School History of England*,¹⁰ published last year—a book which has been very widely adopted.

Junior Geography 1913,¹¹ containing the outlines of Physical Geography and covering the British Isles and Europe, has been prepared by Mr. C. G. Fry, M.Sc., author of the well-known *Text-Book of Geography*. The general plan of this book is simple: the description of physical features and of climate is made to lead on to the study of economic and political Geography. The first five chapters deal specially with the Outlines of Physical Geography, and cover completely the requirements of the new syllabus in this part of the subject. There is a large number of diagrams. Asia¹² and South America¹³ and the section on Physical Geography, with the British Isles,¹⁴ are issued separately.

In addition to these books for the Junior Local, a separate issue has been made of the portions of Mr. Fry's *Text-Book of Geography* dealing with Principles of Physical Geography, the British Isles, and Europe. This issue is intended for the use of school candidates, and is published under the title of *Senior Geography 1913*.¹⁵

*Junior Arithmetic*¹⁶ is already a book of established reputation, being a version of the well-known *Tutorial Arithmetic*¹⁶ specially adapted to the requirements of Junior Students. In this subject adequate practice is of the greatest importance, and accordingly a volume of *Additional Exercises in Junior Arithmetic*¹⁷ has been prepared. This contains about 1300 exercises arranged under subjects, followed by 90 short papers of six questions each.

A book on *Junior Geometry*¹⁸ is in active preparation; this is intended to embody the reasonable ideals by which Cambridge examiners are evidently inspired, and to avoid the extremes so often advocated in connection with this much discussed subject.

A text-book on *Junior Heat*,¹⁹ by Dr. J. Satterly, has recently been published. In this the treatment throughout is of strictly elementary character, and every effort has been made to bring it into line with the best methods of science teaching. The student is encouraged to experiment for himself and to think for himself, but the book is not heuristic in the strict sense of the term. A book of the same type on *Junior Sound and Light*²⁰ has also been issued.

Magnetism and Electricity is a subject that presents many difficulties to the young student, owing chiefly to the mysterious nature of the phenomena and the abstruse mathematical conceptions involved in the explanations. *Junior Magnetism and Electricity*²¹ endeavours to overcome these difficulties by providing a full course of easy experimental work with clear practical directions, and by basing the explanations of electrical phenomena on the theory of potential and potential gradient, which is, for elementary students, the only possible foundation for a logical account of the subject.

but less attractive, title for Mr. Hewlett's last novel would be "The Great Duke." The prototype is unmistakable, and the fact that the Duke of Devizes began life not as a soldier, but a diplomatist is insignificant. The character—an aristocratic Tom Jones, a blend of Lord Palmerston and Lord Salisbury—is well conceived and admirably worked out. The heroine is his Egeria, and all but his Aspasia—thin partitions do their bounds divide. The Euripidean prologue introduces her to us—"that tender, conscientious, pale, and slim woman, caring, of the four of them, most for England, listening now to her heart, now to her conscience, distracted, pitiful, but always lovely and kind." The other two are "a luscious and perfervid young poet" and Mr. Lancelot. The latter is an insufferable prig, and, to use an ugly word—now almost obsolete—at heart a ponce. At the very start he shows his worst side, and that Egeria, even at eighteen, should have fallen in love with him and taken two years to find out her mistake, is incredible. Her patriotism, too, has to be taken on trust. The Duke's politics are well sketched, but Egeria is his pillow, never his bolster. In the love scenes she reminds us too much of Pamela. The poet who, like Perseus, cuts the knot and delivers the maid is a clever caricature, but his parting thesis and the husband's collapse are too much in the style of Euripides.

Messrs. Cassell again send us specimens of their *Letts's Diaries*. We recommend for choice No. 3, giving eight lines to a day (2s. 6d. cloth); and, for a waistcoat diary, No. 77 (1s. net limp leather). Messrs. Cassell wish it mentioned that they are sole publishers of the original Letts's Diaries.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but "The Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

The Council met on Friday, October 18, 1912. Present: Miss H. Busk, Chairman, in the absence of the President; Mr. J. Campbell (Worcester), Dr. Cowan (Southampton), Mr. G. F. Daniell, Miss F. Edwards, Miss Flear (Ipswich), Miss Foxley (Manchester), Miss Green, Mr. Hinton, Mr. Holman, Miss Holmes, Mr. Humberstone, Miss Kyle, Miss Martin (Cork), Miss Newton, Miss Stevens, Mr. Storr, Mr. Walsh, and Mr. Winch.

The vote of condolence with Mrs. Garrod and her family passed at the last meeting of the Executive Committee was affirmed.

The minutes of the last meeting were read and confirmed.

As the representative of the Southampton Centre had come up to support a letter from the Hon. Secretary of the Centre, and asked for this business to come up early, the matter was taken as arising out of the minutes of the last meeting. Dr. Cowan spoke supporting the view that since the Council had, according to the original rules, allowed the Local Centres full liberty to decide what their own subscription, should be, fixing only the capitation fee to be paid to the Central offices they should rescind their decision on the question as recently issued to the Centres in the regulations for subscriptions and capitation fees. The Southampton Centre would be very seriously affected if the subscription were raised, and Dr. Cowan begged on the members' behalf that the capitation fee alone should be determined by the Council, it being left to the Local Centre to settle the amount of the subscription according to the local needs.

The Chairman pointed out that, according to the constitution, the Council were compelled to fix the minimum annual subscription which carried with it voting powers, and that, in order to compensate for the admission of Associates on whose accounts a lower capitation fee would be paid, it had been felt necessary to ask those who could afford to do so, to increase the capitation fee to 5s. as full members, it still being open to others to become Associate members, and for them the capitation fee of 2s. 6d. as hitherto would be payable.

After a good deal of discussion it was felt that, the question being one of such vital importance, it would be advisable to reconsider the whole position, and on the proposition of Mr. Daniell, seconded by Mr. Campbell, it was agreed that the whole question be referred to the Organizing Committee to frame a scheme which would, if possible, meet the objections of the Local Centres, and to report to the Council. The General Secretary was instructed to write at once to the Local Secretaries asking them to send up any criticisms that their Committees had to make on the circular which had been issued, and also to send up representatives, if they found it possible to do so, who would attend the meeting of the Organizing Committee.

The Report of the Hon. Treasurer was received.

Thirty-eight applicants for membership were elected—namely, London Centre, 36; Brighton and Hove, 1; Cork and Munster, 1.

It was agreed to invite Mrs. Fannie Fern Andrews, Special Collaborator of the United States Bureau of Education, to be present at a reception to be given by the Executive Committee, the members of Council and the Vice-Presidents of the Guild being asked to meet her.

The Report of the Executive Committee was received and adopted.

The Political Committee recommend, regarding pensions for secondary teachers, that the Council support an attempt to obtain a larger contribution from the State, and suggest that, since the teacher in the primary school is to obtain £1 per year's service for a contribution of £3. 10s. per annum, the secondary teacher should, for a double annual contribution, receive £2 per year's service from the State. The Committee propose discussing the teacher as a civil servant during the winter. The report was referred back with the instruction to take into consideration the question as regards women.

The Education and Library Committee have drafted resolutions on the permanent qualification for registration. It was agreed that at the present time it is inadvisable to send these forward as they might confuse the issue and cripple the hands of the representative of the Guild upon the Teachers' Registration Council.

The Education Committee were asked to formulate a series of resolutions upon the broad principles of Registration. Mr. Daniell agreed to draft these resolutions and place them before the Education and Library Committee.

The following report of the Sub-Committee on the New Code was adopted:—

The Sub-Committee appointed by the Education and Library Committee to consider the New Code with special reference to continuation schools has met twice, and report that the New Code contains no specific reference to continuation schools. They have, however, considered the Code for 1912, especially as regards the principal alterations as set out in Circular 800. These changes are explained in the Circular under three heads, which the Sub-Committee considered in detail, and report as follows:—I. *Freedom for Educational Experiment*.

—With regard to the modification in Art. 2, Paragraph 1, the Sub-Committee recognize the value of the suggestion for increasing the liberty for educational experiment in the schools, but at the same time are of opinion that due safeguards against premature vocational specialization should be provided. II. *Devolution to Local Education Authorities*.

—Art. 7 (b): The Sub-Committee are of opinion that the fullest liberty to modify the time-table for good and sufficient reasons should be entrusted to the head teacher, such reasons to be entered in the log book at the time. Art. 44 (b): They welcome the additions made to this article and also the suggestions contained in Paragraph 6 of Circular 800, which, in their opinion, are of great value, and would further urge that opportunities of taking part in Excursions under this article should be granted to children solely on educational grounds. General approval was given to the alteration in Art. 44 (f) transferring the approval of the arrangements for organized games from the Board to the Local Education Authorities. They regard the alteration in IV 1 (a) as advantageous, as increasing the value of the log book.

III. *General Administration*.—They regret that, when Art. 11 (b) was redrafted as 12 (c), the opportunity was not taken of reducing the period during which the recognition of a temporary teacher would be allowed. They wish to draw special attention to the passage in which the Board's reasons for altering this article are explained, being of opinion that Local Education Authorities in general should be encouraged to maintain a staff of "supply" teachers with high qualifications.

Generally, they are of opinion that the alterations in the Code mark a step forward in that they tend to give more power in matter of detail to the Local Education Authorities. They ask that their reference may be discharged, but think that a specially qualified Sub-Committee should be appointed to discuss the recent changes in the regulations for further education, with particular reference to the new scheme of examinations for technical schools and schools of art.

The Education and Library Committee are considering the question of tenure both for heads and assistants in secondary schools, and recommend that a circular letter be sent to each Local Secretary asking him to watch for the issue of draft schemes for new schools and amending schemes for old schools, and to send up copies immediately to the office in order that they may be considered and representations made, if necessary, to the proper authorities.

The Organizing Committee recommend that all the Associations represented on the Federal Council be admitted as constituent Associations of the Insurance Society.

Efforts are to be made to form new centres at Wycombe, Redhill and Reigate, Maidstone, and Bedford.

The Annual General Meeting and Conference are to be held at the London University on the occasion of the Conference Week of Educa-

A Striking Testimonial

(PUBLISHED BY SPECIAL PERMISSION).

Telegrams:
"College, Ellesmere."

S. OSWALD'S COLLEGE,
ELLESMERE, SHROPSHIRE.

24th May, 1912.

Dear Sirs,

We have completed a period during which 'DUSMO' has been severely tested, and I am now convinced of its efficacy, though I was at first sceptical as to its merits. YOU WILL NEED NO BETTER TESTIMONIAL THAN THE ACCOMPANYING ORDER FOR SIX MORE BAGS.

Yours faithfully,

(Signed) D. R. EVANS,
Secretary.

A Free Trial will be granted to any Public School for One Month without obligation.

DUSMO CO., L^{TD} STRATFORD, LONDON, E.

tional Associations from January 6 to 11, 1913; the Annual General Meeting on the evening of Monday, January 6, and the Conference during the whole of Tuesday, January 7. The subjects for discussion at the Conference will be: (1) "The Educational Issues raised by the Report of the Royal Commission on the Civil Service"; (2) "The Teaching of English, with special reference to the recent Memorandum of the Board of Education." After the Business Meeting on January 6, Dr. Rouse will deliver his Presidential address, the subject being "Education and Life."

The Modern Languages Holiday Courses Committee report that the courses have been entirely successful, and that at each of them special attention has been paid to Phonetics. There is a small credit balance on the working of the courses.

The recommendation of the "Holiday Resorts" Committee that 2s. 6d. be charged for the insertion of new continental addresses was approved.

At a special meeting of the Council held at 74 Gower Street, W.C., on Friday, November 22, 1912, to consider the difficulties brought forward by the representatives of the Local Centres as to the working of the new scheme of the Council regarding subscriptions and capitation fees. Present: Dr. W. H. D. Rouse (President, in the chair), Miss H. Busk (Vice-Chairman), Mr. R. F. Charles, Miss M. Cocking, Mr. G. F. Daniell, Rev. H. V. Dawes (Salop), Mr. G. P. Dymond (Three Towns), Miss F. Edwards, Mr. R. W. Hinton, Miss M. R. N. Holmer, Mr. H. A. Nesbitt, Miss E. Newton, Mr. J. Oliphant (Glasgow), Miss K. Stevens, Mr. F. Storr, and Mr. J. Wise.

In the absence of the President at the beginning of the meeting, the Vice-Chairman took the chair.

The financial position of the Guild was very carefully considered, and it was felt that something like £80 a year more income ought to be in some way assured to carry on the work of the Guild even on its present lines. The total indebtedness of the Guild, rather over £300, has been accumulating during the last six years. Several small economies were suggested by members of the Council, but, even if effected, these would not appreciably lessen the annual deficit; moreover, it was generally agreed that the present is an opportune time for the Guild to develop on the lines suggested by the achievement of a Conference week of Educational Associations to which the Teachers' Guild has largely contributed. This development would, it was felt, necessitate some additional expenditure, and an increased income of £150 a year was estimated as being necessary to carry out this idea.

Eventually the following resolution was proposed by Mr. G. F. Daniell, and seconded by Mr. J. Oliphant: "That the officers of the Centres be informed of the precise financial position of the Guild and of the suggestions made to the Organizing Committee by local representatives, and that the officers be asked to bring that position and those suggestions before the Centres. That the Chairman of the Organising Committee be asked to send a letter to accompany the above information." The resolution was carried unanimously.

Mr. Daniell proposed, and it was duly seconded and carried *nem. con.*: "That the new regulations regarding subscription and capitation fees be postponed until the replies had been received from the Centres."

Mr. Hinton moved, and Miss Stevens seconded, and it was carried *nem. con.*: "That the term 'minimum annual subscription' in the Articles of Association be taken to mean the capitation fee payable to the Central Office."

It was referred to the Organizing Committee to draft a Scheme of Alliance with the Sectional Associations.

COLONIAL AND FOREIGN NOTES.

FRANCE.

The length of the vacations in England is a subject on which it were indiscreet to dwell. As to France, a circular

Holidays.

lately issued fixes with precision the allowance of holidays for boys and girls in *lycées* or *collèges*. The Long Holidays (*grandes vacances*) are to begin on July 13, 14, or 15, as the *recteur* shall determine after proposal by the head master; the resumption of work (*reentrée des classes*) is on October 1. Again, there are certain *jours de congé*, days when work is suspended; these are All Saints' Day, Christmas Day, New Year's Day, the three and a half days that precede and the six days that follow Easter Sunday; also Ascension Day and Whit Monday. Lastly, there are eight movable *jours de congé* distributed by the *recteur* upon the advice of the *Conseil académique*. No exceptional holidays can be granted except by the Minister of Public Instruc-

tion. In France it is not possible for the Chairman on Speech Day to sadden the teachers by asking for an extra day or an extra week of grace for the school. And the girls get their holidays at the same time as the boys.

We wrote last month of Syndicalism and the Syndicates. Before October closed, the Tribunal Correctionnel pronounced a judgment by which the Syndicat des Instituteurs et des Institutrices de la Seine was dissolved, the members of its Council being each fined a sum of 50 f. The teachers, acting on legal advice, have decided to appeal.

The issue between the local and the central administration of education has been brought into prominence by recent events in France. Under the First Republic administration of primary schools was local. The decree of 29 frimaire-5 nivôse, an. II (December 19-25, 1793) stated expressly: "Les instituteurs ou institutrices sont sous la surveillance immédiate de la Municipalité, des pères, mères, tuteurs ou curateurs, et sous la surveillance de tous les citoyens."

It was the Second Empire that placed the *instituteur*, or primary teacher, under the central power. As representing the State, he began thenceforth to assume a certain position of mastery in the commune. The situation was and is somewhat paradoxical. The primary school belongs to the commune, which pays for the maintenance of the building, for heating and lighting it, and so forth. The primary teacher is the officer not of the commune, but of the State—he is, as we say, a Civil Servant. The ensuing conflict of right was brought out lately by the question whether the *maire*, representing the Local Authority, was or was not entitled to enter the classrooms. It has been settled that he may enter in order to perform specified duties of *surveillance*; but he may not require the lessons to be continued in his presence, or books or exercises to be shown to him. Because England has not central administration she is derided as being half-barbarous. It is comforting to learn that our neighbours have not yet reached the ideal state in which friction is unknown and amendment impossible. For the rest, we hold a detachment of the elementary school from the local community, conscious of its own particular wants and capable of supplying them, to be an evil thing.

AUSTRIA.

In Hofrat Dr. Theodor Gomperz, who died at Baden, near Vienna, on the 29th August last, Austria lost a son of whom she was proud, and Europe a scholar at whose feet her learned had loved to sit. Gomperz was in his eighty-first year. He went to the University of Vienna as a student in 1849, and it was as Professor in it that he earned his fame. The volume of his work, contained in books and scattered papers, was vast; he translated Aristotle's "Poetics" into German, published fragments of Callimachus from the "Papyrus Erzherzog Rainer," and with his "Griechische Denker," which summarized, as he said, the labours of a lifetime, made to philosophy a contribution of permanent value. In the "Festschrift" offered him on his seventieth birthday were contained papers by the Frenchmen, Théodore Reinach and H. Weil; by the Englishmen, H. Jackson, Ingram Bywater, and F. G. Kenyon. His knowledge of England and his interest in English affairs were great. Intimate with John Stuart Mill, he wrote a "Nachruf" in praise of the philosopher; and he relates in it how the two discussed "Dinge zwischen Himmel und Erde" as they made tours through English Kent or the Austrian Salzkammergut. Gomperz received innumerable honours in his life, much valued among them being degrees from Cambridge and Dublin; now that he is dead, his name will be written large in the history of scholarship.

UNITED STATES.

We are always suspicious of the "specialist," who is often a specialist only when no other specialists are at hand, just as certain "unrivalled experts" are unrivalled experts only in the eyes of a layman. Let us see how they obtain their specialists in the United States. "Specialists in Rural Education" are wanted by the Bureau of Education; they will be employed—at a salary of 3,000 dollars a year—in the collection of information respecting the condition of rural schools in the United States and in foreign countries, and in the furnishing of information and advice to education officers in the United States for the improvement of rural schools. To get the most highly qualified men the Bureau of Education will hold an open competitive examination. But this will not be of the ordinary sort. Candidates will not appear at some specified place in order to submit themselves to oral or printed tests; they will send

"The undertaking bids fair to prove of real value as an educative influence. . . . The information that they give, far from being scrappy, is wonderfully complete and clearly presented."—*The Times*.

"Really marvellous volumes and it will be a long time before the enterprize they represent will be surpassed. It would be easy for the teacher to select half a dozen volumes for class use throughout the year."—*The School World*.

Just Published.

A HISTORY OF THE BRITISH NATION

By **A. D. INNES,**

Sometime Scholar of Oriel College, Oxford. Author of "England under the Tudors," &c.

AN EXTRAORDINARY VOLUME.

1,000 Large Pages (Size 9 by 6½), 400 Illustrations and Maps, **3/6 net.**

Equal in extent to four ordinary volumes costing 30s.

BOUND IN CLOTH.

The Collection of Illustrations from authentic sources is absolutely unique.

No dry-as-dust chronicle this, but a brightly written narrative of the growth of the British Nation from the earliest to the present time. The characters of the makers of Britain stand out from its pages; the customs and social development of the people are described as well as the dramatic events which thrill the blood.

"The book is fairly comparable with Mr. J. R. Green's 'Short History of the English People,' and perhaps avoids some of the weaknesses of that great work."—*The Contemporary Review*.

"This is a most encouraging book. When we remember the sort of work that did duty for a popular history of England thirty, and even twenty, years ago, the progress achieved gives every cause for satisfaction."—*The Athenaeum*.

Please send for our Colour List of Christmas Books.

London: T. C. & E. C. JACK, 67 Long Acre, W.C.; and Edinburgh.
And all Booksellers.

in statements of their qualifications, and will be rated upon the following subjects, which will have the relative weights indicated: (1) General education and training, 15; (2) special training or instruction in the theory of education, 20; (3) practical experience in education, and fitness, 50; (4) publications or thesis, 15. Moreover, a competitor may, if he wishes, present as an optional subject the results of any original study, or survey of rural life, rural economics, agriculture, or rural industries in any given locality, with suggestions for improvements. Be the mode of appointment good or bad, it is different from that by which we procure our "unrivalled experts," whose function it is to thwart progress and keep the children in the gutter.

Vocationalism continues to be the central theme of discussion in educational circles. Textbooks with specific application are being published—"Vocational Algebra," for example. A pamphlet entitled

Vocational Guidance.

"Opportunities in School and Industry for Children of the Stockyards District" (published in England by the Cambridge University Press) contains much suggestive matter germane to the subject, the result of investigations by the University of Chicago Settlement. We are told in it that the testimonies of principal, teacher, child, and parent unite in the conclusion that the public school is not meeting the needs of adolescence and adjusting the child to his future work. The inquirers found that most children left school at about fourteen, and that few of them went to a high school or trade school, or kept up their education in any form afterwards. It is recommended that the period from fourteen to sixteen, "the seed-time of possibilities," should be spent in school under the direction of a competent educational adviser. Sixteen as the school age seems to us *utterly impracticable* for England. As for vocational *guidance*, let us by all means have as much as possible, the teacher being brought more and more closely into touch with the national life, and so enabled to inform and counsel the young. With regard to vocational *instruction*, we would fain save the secondary school, and, if we are to vocationalize any schools, it is easier to foresee difficulties of organization than the means of surmounting them.

We need hardly say that we regard the principle of vocationalism with no hostility. It will probably be found to be the most vitalizing that has ever influenced the methods of education. But we ask for caution, and for a recognition of the fact that "vocation," which means here simply the section of a man's activity by which he earns his food, is not the whole of life or the highest part of it. And the mission of the secondary school is, we take it, to supply the broad basis of liberal education on which higher vocational teaching should properly rest. Columbia University, New York, has adopted a significant and instructive attitude towards the new movement. It has established another college, said to be the first of its kind—the School of Practical Arts—which will offer to high school graduates a four-year combined academic and technical course in preparation for definite vocations. Here they may get preparation for such varied callings as those of the painter and decorator, the costume-designer, the metal-worker, and the draftsman; or they may learn, for vocational purposes, domestic science, the management of households or institutions, music and choir-training, and even nursing and gymnastics. The combination of academic and technical instruction (we are at present without details) should furnish some useful empirical results.

NEW ZEALAND.

The New Zealand Minister of Education's Report for 1911 shows that at the end of that year the number of public schools open was 2,166, an increase of 70 in twelve months. On the rolls of these schools were 84,562 boys and 77,086 girls, whilst the percentage of attendance to enrolment was 89.3. (To be compared with 97.1 in Switzerland, 92.0 in Japan, 89 in England, and 88.2 in Scotland.) The State pays a large sum annually for the conveyance by rail of children in outlying districts to some convenient school, and it provides free class-books for all standards. The proportion of women teachers to men teachers is not excessively large, and does not increase materially. We observe that New Zealand is conscious of the necessity, felt in older countries, of making separate provision for feeble-minded children, and recognizes that the responsibility of the State knows no age-limit. "Six years is fixed by the Education Amendment Act, 1910, as the age at which young people of this kind shall come under instruction, and, unless they have been previously exempted by the Minister of Education by reason of ill health, or because they have developed sufficiently to earn their own living, the instruction must be continued until they are twenty-one years old. When an inmate of the School for the Feeble-

minded reaches that age, and it is considered that he has not the capacity to guide his life either in his own or the public interest, he may, on the order of a magistrate, be kept under control for a further period of four years, and, by similar procedure, extensions of the currency of the order may be made from time to time, so as to secure lifelong guidance where it is deemed advisable." The number of children now requiring separate treatment is estimated at 300, and a heavy expenditure must be incurred to provide for them.

Secondary education was carried on in 28 endowed schools; in addition to which there were seven endowed schools providing suitable secondary education for Maori boys and girls, and a considerable number of private secondary schools. It has long been expected that New Zealand would make secondary education entirely free. What the State has done has been to create free places in the secondary schools on a liberal scale: indeed, there are now only 13 pupils in 100 who pay for admission to such schools. An arrangement is made by which the school gets for each free pupil under instruction an annual income, from public sources and from endowments taken together, of not less than £12. 10s. per pupil, which sum is estimated to be sufficient to cover the necessary expenditure.

In the field of higher education the chief event of 1911 seems to have been a raising of the standard for matriculation. We turn, then, rather to look how the Maoris are faring. At the end of 1910 there were 99 Native village schools in operation; at the end of 1911 the number was 104. In addition to these schools, there were five mission schools giving primary instruction to Maori children, and 551 public schools at which Maori scholars were in attendance. Moreover, there were nine boarding schools affording secondary education to Maoris. In all classes of schools the number of children in attendance has slightly increased. Three of the Native village schools are in charge of teachers who are themselves of the Maori race, and the Inspectors speak highly of their efficiency. Several Maori girls who have completed their course in secondary schools are employed as assistants and are doing satisfactory work. From the boys' secondary schools candidates have been presented for the Civil Service Junior Examination, and have acquitted themselves creditably. One girl was also successful in the examination. But the girls, in general, become pupil nurses or go into domestic service, their amiable dispositions fitting them well for such employments. The Report contains some charming pictures of native children.

CAPE OF GOOD HOPE.

France is returning to a sense of the value of competitions between schools, and in the United States the field of emulation includes even pig-breeding. An interesting example of this educational method is reported from the Cape of Good Hope. The Middelburg Agricultural Society has decided to include a Nature-study competition in the juvenile section of its annual show, which will take place in March 1913. On this occasion insects will form the subject of the competition, and all schools in the Middelburg, Colesberg, Hanover, and Steynsburg districts are invited to take part in it. Schools that compete will submit two collections—one containing representatives of each of the large orders of insects, the other insects of some selected order. Moreover, notes must be sent in on the food, habits, and modes of life of the insects collected, as well as drawings of them at their various stages and of special parts.

PRIZE COMPETITIONS.

The Translation Prizes for November are awarded to "Chingleput" (prose), and "Nutcracker" (verse). *Proxime* for verse "Constantine," "Hasta."

Winners of Holiday Prizes are: Mrs. F. H. Hall ("Cornelia"), Oaklands, 42 Collegiate Crescent, Sheffield; William Newbold, Esq. ("Duavon"), Highbury, Yardley Park, Tonbridge.

The winner of the Translation Prize for October is Miss E. K. Rendall, Redland High School, Bristol.

Sie stiegen Arm in Arm über den Graben an der Strasse und sofort tiefer in die Tannendunkelheit hinein, die, sehr bald bis zur Finsternis verdichtet, nur hin und wieder von einem Streifen Sonne

(Continued on page 840.)

JUST OUT.**TALES ALL TRUE:
TOLD FOR RE-TELLING.**By **J. B. MARSHALL, B.A.****Crown 8vo (7½ in. by 4½ in.), 216 pages, with
9 illustrations. Net 1s. (postage 3d. extra).**

This book consists of **original and authentic narratives**, the facts of which have been ascertained from very various sources, ranging from Hakluyt's *Voyages* (1598) to present-day newspapers. Each narrative is complete in itself; and the time required for careful reading is from ten to fifteen minutes. The stories are grouped in the following sections:—**About Young Folks; Noble Women; Voyagers; The Romance of the Elizabethans; The Life Adventurous; Heroisms of our Day; The Life of Service.** Most of these true tales are quite new to the average boy or girl.

The primary purpose of the work is to provide *fresh, interesting, and instructive material for English Composition* by young folks from 11 to 14 or 15 years of age. To further this end, a synopsis is appended to each narrative.

The work is also designed for use as a "*reader*," written in a quite fresh and original style. It will serve, further, as a very pleasurable and useful auxiliary to the ordinary lessons in *History and Geography*.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

auf sammetnem Moosboden grell durchbrochen ward. Die erquickliche Frische, im plötzlichen Wechsel gegen die ausserhalb herrschende Glut, hätte dem sorglosen Mann ohne die Vorsicht der Begleiterin gefährlich werden können. Mit Mühe drang sie ihm das in Bereitschaft gehaltene Kleidungsstück auf.

"Gott, welche Herrlichkeit!" rief er, an den hohen Stämmen hinaufblickend, aus. "Man ist als wie in einer Kirche. Mir deucht, ich war niemals in einem Wald, und besinne mich jetzt erst, was es doch heisst: ein ganzes Volk von Bäumen beieinander! Keine Menschenhand hat sie gepflanzt, sind alle selbst gekommen und stehen so, nur eben weil es lustig ist beisammen zu wohnen und wirtschaften. Siehst du, mit jungen Jahren fuhr ich doch in halb Europa hin und her, habe die Alpen gesehen und das Meer, das Grösste und Schönste, was erschaffen ist: jetzt steht von ungefähr der Gimpel in einem ordinären Tannenwald an der böhmischen Grenze verwundert und verzückt, dass solches Wesen irgend existiert, nicht etwa 'una finzione di poeti' ist, wie ihre Nymphen, Faune und dergleichen mehr, auch kein Komödienwald, nein aus dem Erdboden herausgewachsen, von Feuchtigkeit und Wärmelicht der Sonne grossgezogen. Hier ist zu Haus der Hirsch mit seinem wundersamen zackigen Gestäude auf der Stirn, das possierliche Eichhorn, der Auerhahn, der Häher." Er bückte sich, brach einen Pilz und pries die prächtige hochrote Farbe des Schirms, die zarten weisslichen Lamellen an dessen unterer Seite, auch steckte er verschiedene Tannenzapfen ein.

By "CHINGLEPUT."

Arm in arm they stepped across the ditch by the roadside, and plunged at once into the darkening shade of the fir trees. As they penetrated into the denser forest growth the gloom soon became actual darkness, pierced only at intervals by a vivid ray of sunlight falling on the velvety, mossy ground. The refreshing coolness, coming in sudden contrast with the intense heat prevailing outside, might have proved dangerous to the absent-minded man but for the precaution taken by his companion. She induced him, with some difficulty, to put on a wrap that she held in readiness. "How glorious!" he exclaimed, looking up at the towering stems. "One feels as if one were in a church. It seems to me as if I had never been in a forest before, and that I realize now for the first time in my life the meaning of a whole population of trees

growing together. They were planted by no mortal hand, they sprang up of their own free will, and there they stand merely because it is a pleasure to them to live together and fulfil their allotted task in company. You see, when I was a youngster I roamed over half Europe. I have seen the Alps and the sea, the greatest and most glorious work of creation. And now, forsooth, the simpleton is standing in a quite ordinary pine forest on the Bohemian border, lost in amazement, and enchanted that such an object can exist—not a figment of the poets, like their nymphs, fauns, and creatures of that kind, nor a painted forest scene; no, a forest that has sprung from the earth, nurtured into maturity by the moisture of the air and the warmth and light of the sun. Here is the haunt of the deer, with his wonderful, branching antlers, of the frolicsome little squirrel, of the grouse and the jay." He stopped, broke off a fungus, admired the beautiful rich red cap, with its lining of delicate whitish gills, and then he put some fir cones into his pockets.

We classify the 103 versions received as follows:—

First Class.—Shakspeare, Lambda, Chingleput, Tannenbaum, Emu, Chiltern, Katty Ann, Greenfinch.

Second Class.—St. Ivel, M.E.C., Menevia, Tirailleur, Le Quennevais, Hasta, Abacus, Avon, Rubezahl, Amarylles, Agricola, Nessko, Garnet, Niederwald, Eftersay, J.K.M., Horaire, Corncrake, Deravilla, Iva Roggenfeld, Glenleigh, Dunboy, Woodstock, Willamicus, Treb, Francesca, Atossa, G.A.C.H., Actonian, Cairngorm, Olga von Stena, Savilian, X.Y.Z., A.C.L., N.W.N., S. E. Woodward.

Third Class.—Heidenröslein, Rory I, Merrybent, J. M. Fowler, Hibernia, Lavengro, Girton Girl, O.T.T., Rosa, Armer Ritter, E.M.L., Howadji, Sarah Jane, A.B., Edlitam, Locust, Pechvogel, Ivy, Bayardo, Saville, Coon-Can, Brenda, Toby, Kern, Desmond Fellingham II, Ursula, Gaelic, Argentoratium, M.G.M.S., M.A.F.T., Lorna Doone.

Fourth Class.—M.J.R., Marcella, Châteauroux de Jonsac, Sinn Fein, St. Germain, Moriendo Vivo, Incredulous, W.H.J., F.G.B., Ros, Frühling, L.A.R.

Fifth Class.—Finster, Flapper, Heide, S.A., U.R.T., T.O.G., Wald, Unda, Tis, L.O.T., Lirg, Acro, Polly, M.A.T.

(Continued on page 842.)

250 MEDALS AND PRIZES!!!

STUDENT'S ELEMENTARY BOOK-KEEPING

By ARTHUR FIELDHOUSE, Accountant,

Commercial Lecturer, Technical College, Huddersfield,

who will forward copy **Index** and **Specimen Pages** on receipt of Post Card addressed to **Box D 50, Huddersfield.**

358 Pages. 17th Edition. Post free 2/-.

100 Exercises. 350 Questions.

Teacher's Specimen Copy, from Author only, 1/-.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all Elementary Examinations in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Society of Arts, West Riding County Council, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.**

The exercises and the principles introduced therein are so carefully graded in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The Questions will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers** of the **Society of Arts, the W.R.C.C., and College of Preceptors** are included.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

THE STUDENT'S BUSINESS METHODS and Commercial Correspondence.

By ARTHUR FIELDHOUSE, Technical College,
Huddersfield,

who will forward **Specimen Pages** and **Index** on receipt of Post Card addressed to **P.O. Box D 50, Huddersfield.**

Fifth Edition. 350 Pages.

2/6 Post free.

**80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.**

This is the only **practical, up-to-date** book on **Commercial Correspondence** and **Office Work**, and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well **graduated**, and the teacher is **saved the drudgery** of preparing **Test Papers**, one of which follows every chapter, in addition to numerous **Examination Papers**. **PRACTICAL work** is provided in the **Series of Business Transactions** included in some of the Test Papers. It is the only **Complete Guide**, covering all the **Elementary Examinations**. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. **Efficiency** should be the first consideration. It is an excellent **Hand-book** for the **Junior** in the **Office**. **Teacher's Specimen, from Author only, 1/3 post free.**

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

LONDON: WILLIAM RICE, 8 BROADWAY, LUDGATE HILL, E.C.

The extract from Mörike presented few difficulties, and the common defect was a stilted style, which marred the natural grace and charm of the original. "The careless man," "the garment held in readiness," "my God, what magnificence!"—no one would write so in English. Mozart was not a botanist, and would assuredly have spoken of the cap and gills of a fungus, not the pileus and lamellæ of an agaric. Just as we confuse rook and crow, so in German the same word is applied to very different species of birds. It is only the context that can determine the meaning. Here *Auerhahn* may mean capercaillie, blackgame, or wood-grouse, but not the common grouse, nor probably woodcock. So *Häher* is certainly jay, not jackdaw. *Tannenwald* is a fir- and not a pine-wood. *Den Graben an der Strasse*: most translated "the ditch at the roadside" (a few "the graves" and "to the high road"). I rather take it to mean the fosse or canal. *Sofort* is not "immediately," but "and so (by this bypath) plunged deeper and deeper." *Grell*: the glaring contrast between the patches of sunlight and the darkness was generally slurred. *Dem sorglosen Mann*: "the reckless invalid." *Gott* is better omitted, but the Wordsworthian "dear God!" is preferable to the commonplace "by Jove!" *Was es heisst*: *es*, of course, refers to what follows, not "what the word 'forest' means," but "what it means—a commonwealth of trees." *Wirtschaften*: "forgather" will keep up the metaphor; "work" is absurd. *Das Grösste*: many failed to see, or to show, that this refers only to the sea. *Komödienwald*: "stage forest." *Feuchtigkeit*: "rain and dew" is an improvement on "moisture."

MAILED.

Der Schnee zerrinnt,
Der Mai beginnt,
Die Blüten keimen
Den Gartenbäumen,
Und Vogelschall
Tönt überall.

Pflückt einen Kranz
Und haltet Tanz
Auf grünen Auen,
Ihr schönen Frauen,
Pflückt einen Kranz
Und haltet Tanz!

Wer weiss, wie bald
Die Glocke schallt,
Da wir des Maien
Uns nicht mehr freuen:
Wer weiss, wie bald
Sie, leider, schallt!

Drum werdet froh!
Gott will es so,
Der uns dies Leben
Zur Lust gegeben.
Geniesst die Zeit,
Die Gott verleiht!

By the PRIZE EDITOR.

Snows disappear,
Lo, May is here;
In holt and hurst
The new buds burst,
And song of bird
Far, near, is heard.

Then dance a round,
With garlands crowned,
Each pretty lass,
On the green grass;
Dance in a round
With garlands crowned.

Ah! who can tell
How soon the bell
Will toll for staying
Your merry Maying—
How soon the bell
Will toll your knell?

So take your fill,
As is God's will,
Of mirth to-day
While yet 'tis May.
The hours employ
He meant for joy.

By "NUTCRACKER."

Snows melt away,
Now comes the May;
In garden bowers
Spring forth the flowers,
And aye is heard
The tuneful bird.

A garland weave,
And dance till eve
In verdant glades,
Ye beauteous maids!
A garland weave,
And dance till eve.

For who can tell
How soon the knell
From us shall sever
May joys for ever?
Ah! who can tell
How soon that knell?

Then let mirth grow!
God wills it so,
Who life from heaven
For joy hath given.
Enjoy God's day
While still ye may.

We classify the 77 versions received as follows:—

First Class.—Hasta, Nutcracker, Woodstock, Dunboy, Kern, Toby, Constantine, Coon-Can, Iva Roggenfeld, Chiltern.

Fourth Class.—Desmond Fellingham II, Abacus, Flapper, T.A.K., M.G.M.S., F.G.B., Carpate, Hero, Mus, L.A.S., Eno, Marie, A.T., Phil, O.R., S.A.P.

The only comment needed on the "May Song" is that it is essential to preserve the metre of the original. The only doubt is whether it is permissible to substitute a single for a double rime in the second couplets.

"Jack Brown" is good enough to correct a comment of the Prize Editor on last month's Prize Translations. The godmother died and was buried at sea, and was not, as there stated, seen by her godson laid out for burial. The Editor apologizes for a slip of memory and a confusion of persons. "Jack Brown," however, has even less grounds for insinuating that the Prize Editor is a lady who recommends books she has never read than the Editor has for suspecting that "Jack Brown" is an unsuccessful lady competitor.

A prize of Two Guineas is offered for the best translation of the following extract from Sainte-Beuve:—

Plaisir désintéressé de la curiosité critique! dernière jouissance de ceux qui ont beaucoup vécu dans leur chambre, qui ont peu agi et beaucoup lu! Quoi de plus doux et de plus innocent, en effet, que de s'occuper dans un détail exact et avec une attention comme affectueuse d'une existence disparue, de ressaisir une figure nette et distincte dans le passé, de donner tous ses soins, pour la recomposer et la montrer aux autres, à celle qui ne nous est rien, de qui l'on n'attend rien, mais dont je ne sais quelle grâce, quelle bienveillance souriante nous attire et nous a charmés? L'esprit, le cœur, voilà ce qui survit à tout, ou ce qui devrait survivre; le retrouver, le montrer est une véritable joie; y ajouter même au besoin un peu du sien n'est pas défendu; on supplée ainsi à ce qui nous échappe. C'est le cas pour Mme de Verdelin. Après l'avoir étudiée de si près et dans ses propres confidences, je crois quelquefois, en vérité,

qu'elle est là devant moi, intelligente et parlante; je me la représente en personne, avec cette physionomie pêtée de tendresse, de finesse, de douce malice et de bonté; l'amour a passé par là, on le sent, non point précisément celui qui enflamme et qui ravage, mais celui qui brûle à petit feu et qui, toutes peines éteintes, laisse après lui une réflexion légèrement mélancolique et attendrie; arrivée à cet âge où l'on n'espère plus et où l'on a renoncé à plaire, sans pour cela se négliger dans sa mise de bon goût et simple, tout en elle est d'accord, tout se nuance et s'assortit; elle ne craint pas de laisser voir à son front et à ses tempes la racine argentée de ses cheveux où il a neigé un peu avant l'heure; elle ne cherche pas à prolonger une jeunesse inutile et qui ne lui a donné que des regrets; elle est aussi loin de l'illusion sentimentale et de l'éternelle bergerie d'une Houdetot, que de la sécheresse mordante et polie d'une Luxembourg; elle a gardé la seule jeunesse du regard, l'étincelle aimante; elle continue de sourire à cette vie qu'elle n'a guère connue que triste et amère; elle rêve fidèlement à ce passé qui lui a valu si peu de douceurs, elle a le culte d'un souvenir, et si elle tient encore dans ses mains un livre à couverture bleue usée (comme dans ce portrait de femme attribué à Chardin) je suis bien sûr que c'est un volume de la Nouvelle Héloïse. En un mot, Mme de Verdelin, qui n'est pas un esprit supérieur ni une âme brûlante, est et reste pour nous une très-aimable femme, une agréable connaissance, et il nous semble à nous-mêmes que nous l'ayons eue pour voisine autrefois.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by December 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

Those in the First Class are entitled on application to a copy of "Essays, Mock Essays, and Character Sketches."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

Translations will not be returned unless both these conditions are complied with.

GIRLS' SCHOOL TRANSFERS.

Messrs. GABBITAS, THRING & Co.,
36 SACKVILLE STREET,
PICCADILLY, W.
(Established 1873.)

TRANSFERS OF AND PARTNERSHIPS
IN GIRLS' SCHOOLS.

Messrs. GABBITAS, THRING & Co. have a large number of Girls' Schools on the books of their Transfer Department, but issue no list of such Schools. On learning a Purchaser's qualifications and requirements, they will send to her notices of opportunities likely to suit her.

The following are a few of the Schools now on their books:—

IN AND NEAR LONDON.

No. **TRANSFER** of upper middle-class 4,997. Boarding and Day School, and a middle-class Day School, belonging to the same Owners, but separately worked, in a rising residential district. In the principal School about 10 Boarders and 25 Day Pupils. Prospectus fees 47 to 60 guineas, and 6 to 15 guineas respectively. Gross receipts from the combined Schools over £1,800, and profits about £200. Receipts increasing. Goodwill of both Schools £500.

No. **TRANSFER** of old-established School 4,978. for gentlemen's daughters, with a Kindergarten Department, in a London Suburb, established about 40 years, and conducted by the present Principals for over 20. Receipts of about £600, including those from subletting. Total profit about £275. Goodwill, £300.

GIRLS' SCHOOL TRANSFERS.

No. **PARTNERSHIP**, with a view to **succession**, or **TRANSFER** of School for gentlemen's daughters. Old-established and successful. Containing from 30 to 40 Boarders. Prospectus fees 90 to 120 guineas. Average gross receipts about £6,000.

IN THE SOUTH OF ENGLAND.

No. **OPENING** for starting a Boarding House 4,995. in connexion with a High School in a country town in the Home Counties, suitable for a lady with some capital and connection.

No. **PARTNERSHIP** or **AMALGAMATION** 4,992. **TRANSFER** suitable for a lady who has a few pupils and who can join another who has a well established School, and who is moving into larger premises, at a South Coast Health Resort.

No. **TRANSFER** of Boarding and Day 4,986. School for Gentlemen's daughters in favourite South-East Coast Resort. Vendor about to be married. Containing 7 Boarders and 16 Day Pupils. Strictly for Daughters of Gentlemen. Fees for Boarders from £50 to £60. Gross receipts over £700. Profits £200.

No. **TRANSFER**, owing to the illness of the 4,954. Principal, of an old-established and profitable School at a South Coast Health Resort. Fees for Boarders from 30 to 60 guineas, and for Day Pupils 9 to 18 guineas. School strictly for the daughters of gentlemen. Gross receipts over £900, and profits about £250. Goodwill £400 or capitation fee.

No. **TRANSFER** of old-established, large, 4,890. and flourishing Boarding School for gentlemen's daughters at South Coast Health Resort. Principals retiring. Full with 60 Boarders. Prospectus fees 60 to 75 guineas. Gross receipts of last twelve months considerably over £4,000, and profits over £1,200. Goodwill, £2,000.

IN THE NORTH AND MIDLANDS.

No. **TRANSFER** of, or **PARTNERSHIP** 4,988. **TRANSFER** with a view to **succession** to, a very successful Boarding and Day School, at a North West Coast Resort. Full with about 30 Boarders and the same number of Day pupils. Gross receipts over £2,000, increasing. Profit £300. For whole Goodwill £600. Half or one-third share with a view to succession.

GIRLS' SCHOOL TRANSFERS.

No. **TRANSFER** or **PARTNERSHIP** to 4,977. **succession**. Seaside School strictly for gentlemen's daughters, established over 40 years. Excellent educational standard. About 30 Boarders and 30 Day Pupils. Fees 63 to 66 guineas and 9 to 27 guineas. Receipts and profits nearly £4,000 and about £800.

No. **TRANSFER** of Day Connexion close to 4,976. an important City. Nearly 100 Day Pupils. Prospectus fees 6 to 12 guineas. Now nearly 30 Boarders, of whom a few might remain. Prospectus fees 60 to 70 guineas.

No. **TRANSFER** or **PARTNERSHIP** to 4,912. **succession** of School for daughters of gentlemen at a bracing Inland Health Resort, containing about 15 Boarders and the same number of Day Pupils. Prospectus fees of £60, and 9 to 21 guineas respectively. Receipts about £1,000 and profits about £150. For the whole goodwill and school and household furniture, £1,000.

No. **PARTNERSHIP** in Boarding and Day 4,874. School, close to an important City, containing 6 to 8 Boarders, and over 20 Day Pupils, at fees of 60 to 75 guineas and 15 to 22½ guineas. Gross receipts about £1,000. For half-share of goodwill £250.

ON THE CONTINENT.

No. **TRANSFER** or **PARTNERSHIP** 4,993. **TRANSFER** to **succession**. School established 40 years, in important educational centre. Gross receipts over £2,600. Goodwill and furniture £2,000. Good opening for a GERMAN LADY who would take a Partnership.

No. **TRANSFER** of old-established Home 4,985. School of high class, in a Continental Capital, usually containing 10 or 12 Girls. Prospectus fees, 100 guineas per annum. Gross receipts, over £1,200, and showing an advance. Goodwill £500.

Further information will be sent to applicants, but Messrs. GABBITAS, THRING & Co. will require **full particulars** before arranging introductions to their clients. No charge is made to Purchasers.

By FRANCIS STORR, B.A. Camb., Officier d'Académie,

Occasional Inspector to Board of Education, Scottish Education Department, and Central Welsh Board; Examiner to: Oxford and Cambridge Joint Board, Cambridge Higher Locals, Scottish Education Department, Civil Service Commission, University of London, &c., &c.

EIGHTH EDITION. With Supplementary Easier Exercises. Fcap. 8vo, cloth, interleaved.

Price One Shilling.

HINTS ON FRENCH SYNTAX.

[May be used with advantage with **any** French Grammar.]

The following appears in

LE COURRIER: Bulletin de l'Institut Pédagogique International.

dated March 30, 1912:—

L'auteur disait dans la Préface de la 1^{re} édition: « Mon but a été non de développer, mais d'alléger l'étude de la syntaxe. » Le succès de l'ouvrage, dont on donne la 8^e édition, prouve évidemment que ce but a été atteint.

Les « notes sur la syntaxe » de M. Storr, remarquablement claires et précises, peuvent rendre de grands services non seulement aux Anglais qui apprennent la langue française, mais aussi aux Français qui étudient l'anglais. Nous n'hésitons pas à les recommander aux uns et aux autres.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

These School and Teachers' Advertisements are continued from page 845.

ADMINISTRATIVE COUNTY OF LONDON.

THE LONDON COUNTY

COUNCIL invites applications for the position of ASSISTANT MISTRESS, to teach French and German throughout the School at the County Secondary School, Eltham. The minimum commencing salary will be £120, rising to £220 a year by yearly increments of £10, in accordance with the Council's scale for Assistant Mistresses in Secondary Schools. Candidates must have passed a final honours examination for a degree held by a recognized University and must have had experience of class teaching by modern methods. In special cases the degree qualification may be relaxed provided that a candidate is otherwise specially qualified.

Applications must be on the official forms, to be obtained, with particulars of the appointment, by sending a stamped, addressed foolscap envelope to the EDUCATION OFFICER, London County Council, Education Offices, Victoria Embankment, W.C., to whom they must be returned by 11 a.m. on Saturday, 11th January, 1913.

Every communication must be marked H 4 on the envelope.

Canvassing, either directly or indirectly, will be held to be a disqualification for appointment.

LAURENCE GOMME,

Clerk of the London County Council.

Education Offices,

Victoria Embankment, W.C.

German Mistress for high-class Boarding School in London. English School experience essential. Res. £50.—F 33820.

STUDENT-TEACHERS.

Messrs. TRUMAN & KNIGHTLEY always have on their books a large number of Vacancies for **Student-Teachers** on mutual terms or at moderate premiums.

LADY MATRONS AND HOUSE MISTRESSES.

Messrs. TRUMAN & KNIGHTLEY assist qualified **Lady Matrons, Housekeepers, and House Mistresses** to find appointments in Boys' and Girls' Schools.

Ladies desiring further information of any of the above and of other suitable Vacancies should write fully to Messrs. TRUMAN & KNIGHTLEY, stating their age, qualifications, &c., and enclosing copies of their testimonials. **NO CHARGE OF ANY KIND** is made to applicants unless an engagement be secured through this Agency, when the terms are reasonable. Prospectus, terms, &c., will be forwarded on application.

SCHOOLS FOR SALE and PARTNERSHIPS.—See page 801.

BLACKIE & SON'S LIST

A "REGULAR" LATIN BOOK.

For Beginners. With terminations printed in red. By **R. A. A. BERESFORD, M.A.**, Head Master of Lydgate House Preparatory School, Hunstanton. **1s. 6d.**

A GREEK BOY AT HOME.

An original Greek story specially written for use with Rouse's "First Greek Course." By **W. H. D. ROUSE, Litt.D.**, Head Master of the Perse School, Cambridge. Crown 8vo, cloth, price **3s. 6d.** net.
N.B.—This book is in use at Eton.

A FIRST LATIN GRAMMAR.

By **E. H. SCOTT, B.A.**, Late Head Master of Boys' Secondary School, Barberton, Transvaal; and **FRANK JONES, B.A.**, Assistant Master, King Edward's School, Aston, Birmingham.
Crown 8vo, cloth, **2s.**

A LATIN COURSE.

By **E. H. SCOTT, B.A.**, and **FRANK JONES, B.A.**
First Course, cloth, **1s. 6d.** Second Course, cloth, Illustrated, **2s. 6d.**

SCIENTIFIC METHOD.

ITS PHILOSOPHY AND ITS PRACTICE. By **F. W. WESTAWAY, B.A.** Super-crown 8vo, **6s.** *Just published.*
This résumé of philosophic principles and review of the development of Scientific Method should be found invaluable by all who are interested in the methodical procedure of scientific investigation.

A NEW SPANISH READER ON MODERN LINES.

Edited by **R. D. MONTEVERDE, B.A. (Madrid)**, Examiner to the London County Council; Lecturer at the Birkbeck College, West Ham Municipal Technical Institute, St. George's College, &c. **2s. 6d.** *Just published.*

A book of some 200 pages prepared by an experienced teacher, giving specimens of Spanish as it is spoken and written to-day by masters of the language. The selection covers a wide range of subjects and style, and includes poetry as well as prose. For students preparing for examinations and for commercial life, a list of Spanish idioms is provided, and also certain legal documents which will be found useful.

A TEXTBOOK OF ORGANIC CHEMISTRY.

English Translation from the German of **A. BERNTHSEN, Ph.D.**
New Edition.

Edited by **J. J. SUDBOROUGH, Ph.D., D.Sc., F.I.C.**, Professor of Chemistry in the University College of Wales, Aberystwyth. **7s. 6d.** net.

AN INTRODUCTION TO PRACTICAL CHEMISTRY.

By **G. B. NEAVE, M.A., D.Sc.**, and **J. WATSON AGNEW, F.I.C.**, Lecturers and Demonstrators in the Department of Chemistry, Glasgow and West of Scotland Technical College. **2s.** net.

Primarily intended for the use of First Year Students of Chemistry before they proceed to a course of qualitative and quantitative analysis.

A COURSE OF PHYSICS.

PRACTICAL AND THEORETICAL.
By **CHARLES H. DRAPER, B.A., D.Sc.**, Author of "Heat and the Principles of Thermodynamics," "Light, Heat, and Sound," &c.
Super-crown 8vo. 424 pages. Illustrated. Price **4s. 6d.** *Just published.*

TILLAGE, TRADE, AND INVENTION.

AN OUTLINE OF INDUSTRIAL HISTORY.

By **GEORGE TOWNSEND WARNER.** Crown 8vo, cloth, **2s.** *Just published.*

"It is hardly necessary to point out that this outline of industrial history, by the present Master of the Modern Side at Harrow, is an extremely useful and much needed textbook, and very well done. Altogether it is a most interesting book, and one which in a secondary school, used by a well read and competent master, would be invaluable."—*Morning Post.*

SYSTEMATIC INORGANIC CHEMISTRY from the Standpoint of the Periodic Law.

A TEXTBOOK FOR ADVANCED STUDENTS.

By **R. M. CAYEN, D.Sc.**, and **G. D. LANDER, D.Sc.** **6s.** net.

ELECTRICITY

and its Practical Applications.

By **MAGNUS MACLEAN, D.Sc., M.Inst.C.E., M.I.E.E.**, Professor of Electrical Engineering in the Royal Technical College, Glasgow. Demy 8vo, cloth boards, **10s. 6d.** net.

A new work for engineers and science students.

BLACKIE'S CAUSAL GEOGRAPHIES.

REGIONALLY TREATED.

By **H. J. SNAPE, M.A.**, Senior English Master, King Edward VII's School, Sheffield.

Supplement to THE JOURNAL OF EDUCATION.

No. 521.

DECEMBER 2, 1912.

Cambridge University Press

A Source Book of English History. For the use of Schools. Edited by ARTHUR D. INNES, M.A. Volume I, 597-1603 A.D. With 31 illustrations. Crown 8vo. **4s 6d** [Vol. II will be ready shortly]

This book consists of a series of extracts taken entirely from the work of contemporary writers. It is intended for use in schools, and its primary purpose is to attract the interest of the student by presenting history to him as it presented itself to the men of the time. The extracts are illustrated throughout by reproductions of authentic portraits, by illustrations taken from old MSS., and by photographs of historic scenes.

Lord Chatham and the Whig Opposition.

By D. A. WINSTANLEY, M.A. Demy 8vo. **7s 6d** net

"Mr. Winstanley has composed a very careful and well-informed study of an intricate period of English history—that comprising the formation of the Administration of 1776 with Chatham as its real, though not its nominal head, the unhappy existence of that Administration, and the consolidation of Lord North's Government. Though he treads in the footsteps of Lecky, he has gone much more deeply into manuscript authorities. . . . Nothing could be clearer than Mr. Winstanley's analysis of the various elements that made up the Whig Opposition."—*Athenaeum*

A History of Geographical Discovery in the Seventeenth and Eighteenth Centuries. By EDWARD HEAWOOD, M.A., Librarian to the Royal Geographical Society. With 59 illustrations. Crown 8vo. **12s 6d** net [Cambridge Geographical Series]

Evolution and the Need of Atonement.

By STEWART A. MCDOWALL, M.A., Assistant Master at Winchester College. With an introductory note by the Dean of Westminster (Bishop Ryle). Crown 8vo. **3s** net

"I cannot help thinking that Mr. McDowall's treatment of Evolutionary Science will be to many readers strikingly original and suggestive: while the theory, which he advances in connexion with his general scheme of thought, upon the Origin and Nature of Sin, and upon the subject of the Atonement, is, I am sure, entitled to the thoughtful consideration of the theologian, as well as of the scientist."—*Extract from the introductory note*

The Philosophical Works of Descartes.

Rendered into English by ELIZABETH S. HALDANE, LL.D., and G. R. T. ROSS, M.A., D.Phil. In two volumes. Demy 8vo. **10s 6d** net each.

"It is safe to say that students of Descartes have all been using the first volume since its appearance. The present volume completes the edition, and it is translated in the same accurate and idiomatic way. . . . Now for the first time in all these centuries, Descartes is accessible in our tongue in such a way that we can read him with pleasure, and at the same time feel sure that we are reading him and not a translator's misunderstanding of him. The authors have enriched the literature of philosophy; they have also enriched English literature."—*Expository Times*

James Thomson: Collected Papers in Physics and Engineering. By JAMES THOMSON, D.Sc., LL.D., F.R.S., Professor of Engineering in Queen's College, Belfast, and afterwards in the University of Glasgow. Map Projections. By ARTHUR R. HINKS, M.A., Chief Assistant, Cambridge Observatory. With a frontispiece and 19 text figures. Demy 8vo. **5s** net

Erckmann-Chatrian: Waterloo. Edited, with introduction and notes, by ARTHUR R. ROPES, M.A., late Fellow of King's College, Cambridge. New and cheaper edition with vocabulary. **2s**

[Subject for the Oxford Junior Local Examination, 1913]

The text of this edition, which is complete and unabridged, is taken from the small illustrated edition of Messrs. J. Hetzel & Co., by arrangement with Messrs. Hachette & Co. The present edition contains, in addition to the text, a plan of the Battle of Waterloo, a map of the district, an introduction of seven pages, eighty pages of notes, and a vocabulary of fifty-six pages.

Exercises and Questionnaire on Erckmann-Chatrian's Waterloo By A. WILSON-GREEN, M.A., of Radley College. **1s**

This can be used either with the above edition or with Messrs. Hachette's edition, the pagination of the text being the same in both. Each theme deals with four pages of the text. All the more important words and idioms are introduced in such a way that the pupil may not only gain a real acquaintance with *Waterloo*, but also add to his general knowledge of French.

About: Le Roi des Montagnes. Edited, with introduction and notes, by A. R. ROPES, M.A. Re-issue with vocabulary. **2s**

Saintine: Picciola. Edited, with introduction and notes, by A. R. ROPES, M.A. Re-issue with vocabulary. **2s**

THE MONTESSORI METHOD.

THE "CASA DEI BAMBINI" AND A FREE KINDERGARTEN.

MR. EDMOND HOLMES has discovered an Italian Egeria, and in a pamphlet issued by the Office of Special Inquiries has made public his discovery. The Board of Education commends Mr. Holmes's account of an interesting experiment to all who care for problems of early education, but is careful not to endorse the opinion expressed by the author. The caveat in this case means something more than the common form of official documents, for an adoption of the Montessori method would more than treble the cost of our infant schools. No teacher, we are told, can do justice to more than twenty children; nearly double the floor space per child is required and a set of apparatus, exclusive of the special furniture, would cost at present over £12. This, however, is a detail which we do not wish to press. During a stay in Rome in the spring of last year Mr. Holmes visited five schools in which the Montessori method is to a greater or less extent practised, and, by aid of an interpreter, he conversed with Mme Montessori herself. He went as a visitor, not as an inspector, and, apart from a general testimony to the interest of the scholars and the orderliness that he observed in all the schools but one, the sole fact recorded from his personal observation is the truly remarkable feat performed by a girl of seven. She entered the school a perfect ignoramus, and at the end of five weeks' instruction wrote to dictation, without a mistake, short sentences, such as "il gas è aeriforma." (We wonder whether the child had a notion of the meaning.)

For facts Mr. Holmes depends mainly on Mme Montessori's book, the English translation of which we recently reviewed, and it is only with principles and with Mr. Holmes's deductions from them that we are now concerned. The contrasts that Mr. Holmes draws between Froebel and Mme Montessori, between a Casa dei Bambini and an English kindergarten, make us suspect that Mme Montessori knows nothing and Mr. Holmes himself but little of the later developments of Froebel's doctrines or their applications in approved kindergartens. Apparently he judges by the Government schools that he has inspected, in which "kindergarten work" plays much the same part that "English" does in an unreformed public school.

Before starting an English Montessori Society we would urge the Committee to visit a free kindergarten in the Canon-gate, Edinburgh, or at least to read the record of it in an unpretentious little volume that has just reached us.* St. Saviour's Child-garden has no pretence to be a model or show school. It has no funds or grants, and lives from hand to mouth, maintained by the devotion of one "mother in Israel" and the offerings of the faithful.

To realize the atmosphere of the school, its influence not only on the children but on the parents, the whole book must be studied, but the bare outline of a day's work will serve to show that Rome has at least as much to learn from Edinburgh as Edinburgh from Rome. The children, some forty, assemble at 9. After donning the uniform "pinnies" in the long lobby, which serves as a cloak-room, they pass on to be inspected one by one by Nurse, who sees to minor ailments, and encourages them to talk about small happenings at home. There is considerable hubbub, but gradually a long line forms and marches into the kindergarten-room to sing good-morning greetings. The eight oldest children then go off to their class-room for formal lessons. The rest, after a march, a run, or a romp, to restore circulation and let off steam, sit down to "Home Lore." Each child for a week at a time is made responsible for some little service for the good of all—dusting, sweeping, washing plates, feeding pets, or watering flowers. At 10 prayers are said round a little altar or oratory table, which "stands in the midst of all the work and play as a symbol that

everything is in religion and religion in everything." Then for half an hour the whole school, in three classes, has "lessons": but these include picture chats, stories, nature talk, and finger play. At 11 comes lunch in the garden shelter. The monitors set the table for the little ones, and the rest of the upper school have physical exercises. After lunch there is free play, in the garden if it is fine, and indoors, with balls, sandbags, &c., if it is wet. They make as much noise as they wish, provided no one's rights are disregarded. "And the hubbub is a hubbub." Lastly come musical games and kindergarten occupations. "With bricks, sticks, chalk, clay, paper—any plastic material—they express the impressions they have gained."

So ends a morning "which fools think has been spent in 'only play,'" but, as the writer sums up the theory of which St. Saviour's Child-garden is the outcome, "In childhood there is only one true means of reaching self-expression, and that is play. Organized play is, in the child-stage—*work*." At least in this school there is nothing to suggest Mr. Holmes's picture of the kindergarten teacher standing in front of the class and doing her best to vitalize them. "Organized play": in this epithet lies the radical difference between Mme Montessori's theory of education and Froebel's. Few who have studied children in the nursery as well as at school can doubt which is the more excellent way, unless, indeed, like Rousseau and Mme Montessori, they are "maintaining an hypothesis." Leave a children's party to its own devices, without a grown-up to start games and direct them, and at the end of an hour there will be a pandemonium or glum silence, though each child be furnished with a twelve-guinea set of Montessori apparatus. Individualism is the corner-stone of the Montessori system. Froebel insisted no less emphatically on self-development, but he insisted also (though Mr. Holmes considers him unscientific) on the Aristotelian ethics that man is a social animal, more social than any ant or bee. Mme Montessori's motto is "Fais ce que voudras," with the proviso that you must not harm your neighbour. The charity she teaches is purely negative; there is no co-operation in games or play, no mutual aid, no service to elders. Again, we are old-fashioned enough to believe that a child, from the very first, must be taught, and, if needs be, constrained to obey. Of course, the less compulsion the better, and no one would wish back "the Quaker rule that doth the human spirit cool," but *entsagen sollst du* is a lesson that must be learnt in the nursery, and even in the best regulated families occasions will arise when the parent or teacher must say to the child, "Do as you're bidden, or you'll be punished." We do not doubt that, under a born teacher and a commanding personality, such as Mme Montessori, insubordination may be rare, and to be put in the corner may be sufficient punishment, but no amount of training will produce an adequate staff of Egerias, Italian or English, and the experience of Tolstoy at Yasnaia Poliana, or even of Pestalozzi at Neuhof, shows the probable fate of a Thelema school under a teacher not to the manner born.

Lastly, in the Montessori schools there is no "altar or oratory table," nor anything, as far as the book or the pamphlet shows, to take its place. It is strictly an education of the senses, in which not only the symbols of religion but poetry finds no place. For the absence of drawing, modelling, and dancing from her curriculum Mme Montessori may fairly plead *rerum novitas*, but for the exclusion of nursery rimes, of fairy stories, and of acting or action games, she offers—and can offer—no excuse. We should ourselves add to these omissions Bible stories, but we do not wish to enter on the debatable ground of religious instruction.

That we have something to learn from the Montessori method, especially in the matter of reading and writing, we should be the last to deny. What we have attempted here to show is that the New Gospel is, as far as it is true, at least a century old; that it is partial and incomplete, neglecting or disregarding one side of child-nature. The human plant, in the language of Froebel, must be set where it can grow and flourish, under the influences of sun and shower and the free airs of heaven; but it must also be trained and pruned if it is to bear good fruit in season. "Acting on this theory

* "The Diary of a Free Kindergarten." By Lileen Hardy. (2s. Gay & Hancock.)

[of non-interference] Blake always refused to prune the vine that grew in his garden, with consequences that did not recommend the theory to others."

CORRESPONDENCE.

PHYSICAL TRAINING AND THE RESPONSIBILITY OF THE SECONDARY-SCHOOL MASTER.

To the Editor of The Journal of Education.

SIR,—I have read with keen interest the letter by Miss L. E. Crowdy on a similar subject in your last issue, and take this opportunity of expressing my entire concurrence with her views. Not only do her remarks apply to the mistresses, but, in a more acute form, to the masters in secondary schools, where the inclusion of games is taken as the "be-all" and the "end-all" of their responsibility in this respect. The advent of the specialist in physical training does to a certain extent relieve them of the greater strain, but by no means does it do so entirely. He or she has, as a matter of fact, but more clearly emphasized the existence of the physical defects caused by school life in the children of to-day. It is the duty of all teachers to lessen the cause of the defects. The secondary-school master and mistress have the children in their charge for the greater part of the week. Miss Crowdy's figures—"out of a week of twenty-five hours, the gymnastic teacher has the child in her hands for not more than four"—are generous. It is my experience that, out of a week of twenty-seven and a half hours, only one and a half to two hours are given to physical training. Games take place out of school hours. Are these two hours and the games under the supervision of the house master sufficient? Evidently not.

All that the gymnastic master can do is to arouse a certain amount of interest regarding good carriage and body care in the boys, by example, by a few periodical and by no means regular chats, and the one or two lessons in physical exercises each week. This interest, inherent in every child, is very real, as one may see in the eager faces and searching questions. But the child's school life is a swiftly moving kaleidoscope of studies to which the subject of physical development stands in a ratio of 1:9. This interest soon gives place to others. As soon as the gymnastic lesson is over, he is switched off to another subject to wait three to seven days before he is again reminded that he must not slouch. A few exercises done in an hour or so cannot be expected to nullify the malpositions of a week. It is my experience that unequal carriage of the shoulders increases as one goes up through the school, and almost invariably, in these cases, is the left shoulder higher than the right. This, of course, is due to the natural habit of carrying school bags in the right hand and of resting the left elbow on the desk whilst reading and writing. Mark you, where the right shoulder is the higher, with surprisingly few exceptions, the child is left-handed. The child is warned that he has such and such defects at the annual or biannual compilation of the anthropometrical chart at least, and that he should do so and so to reduce them. These defects cannot possibly be overcome without daily promptings—or rather, these defects cannot possibly be prevented without daily correction of bad attitudes. It is very necessary, then, that the work of the form master and gymnastic master be closely in touch. Thus, then, is the master of academical subjects involved in the physical development of the child. I have taught form subjects and found it not too heavy a burden to allow the class to sit comfortably back in their seats and to correct individually pupils who habitually fall into a bad attitude. I strongly denounce the stony discipline that demands that every child shall sit without movement, and I do not intend to lay down fixed rules for posture in the several lessons or to inflict a code where there are so many.

While conscious of the evil, I recognize that there is no efficient antidote under the present régime. Nevertheless, it is true that every effort in the right direction brings in its trail its mite of success. If teachers in every lesson, whether to one form or different forms, will but correct those outstanding bad positions—the twisted body, that errant elbow creeping to the desk whilst writing, that slouching attitude in morning assembly—there will be fewer round backs and twisted spines. The natural tendency after a lesson is to stand up and stretch. Why check it, when it is Nature's remedy after long sitting? The rules of convention and etiquette are formed for the common welfare and comfort. Let the child stretch after every lesson—even foster it.

Should any secondary-school master read this—and I hope many will—I know he will expressively shrug his shoulders and murmur, "Another straw for the overburdened camel." This is not another straw, but one that is being replaced whilst gradually slipping from the load. These are days of universal specialization, when the tendency is to pass on the responsibility of everything outside one's own subject. One asks, "Who is responsible?" Everyone is responsible for the correction of the worst attitudes at least—during every lesson.

A much hackneyed but very true *mot* is that the child reflects the teacher. This is most certainly true from the standpoint of carriage with respect to physical training. The responsibility will not be lightened until the day dawns when gymnastics and hygiene are taught by the same master.—Yours, &c.,

A. CLAUD WRIGHT,
Teacher of Physical Training, Middlesex County Council.

JAQUES-DALCROZE AND PLATO.

To the Editor of The Journal of Education.

SIR,—M. Jaques-Dalcroze's lecture and demonstration on Eurythmics has placed the Greek idea of music and gymnastic—always a difficult combination for the modern mind to grasp—in a new light, and will, I think, enable us to understand more completely why rhythm held so high a place in Greek theories of education.

May I call your readers' attention to "The Republic," Book II (Davies and Vaughan's Translation): "Is it then, Glaucon, on these accounts that we attach such supreme importance to a musical education, because rhythm and harmony sink most deeply into the recesses of the soul, and take most powerful hold of it, bringing gracefulness in their train, and making a man graceful if he be rightly nurtured, but if not the reverse; and also because he that hath been duly nurtured therein will have the keenest eye for defects, whether in failures of art or the misgrowths of nature; and, feeling a most just disdain for them, will commend beautiful objects, and gladly receive them into his soul, and feed upon them, and grow to be noble and good . . . and when reason comes he will welcome her most cordially who can recognize her by the instinct of relationship and because he has been thus nurtured?" "Gymnastic will hold the next place to music in the education of our young men." "Those who establish a system of education in music and gymnastic . . . probably introduce both mainly for the sake of the soul. Those who have devoted themselves to gymnastic exclusively become ruder than they ought to be, while those who have devoted themselves to music are made softer than is good for them. . . . Then must they not be mutually harmonized? . . . To correct, then, as it would appear, these two exclusive temperaments, the spirited and the philosophic, some god, as I for my part shall maintain, has given to men two arts, music and gymnastic, not for soul and body exclusively . . . but expressly for those two temperaments, in order that, by the increase of relaxation of the tension to the due pitch, they may be brought into mutual accord. . . . Then whosoever can best blend gymnastic with music, and bring both to bear on the mind most judiciously, such a man we shall call perfect in music and a master of true harmony. . . . Then will not some overseer be always needed in our State, Glaucon, if our commonwealth is designed to endure?" "Yes, indeed, such an office will be quite indispensable."—I am, yours truly,

M. G. JONES.

Ladies' College, Cheltenham, November 19, 1912.

WELSH CIRCULATING SCHOOLS.

To the Editor of The Journal of Education.

SIR,—I have read Miss Knox's article in the current number of *The Journal of Education* with interest. As I have made a study of the

Welsh Circulating Schools I venture to point out a few small errors. (1) The Christian name of Jones was "Griffith," not "Griffiths." (2) He lived at "Llanddworor," not "Llandowror." Nearly all the English and some of the Welsh biographies are wrong on this point. (3) The hamlet is not "near Tenby." Tenby is over sixteen miles away; the nearest town is Carmarthen, ten and three-quarter miles. (4) Jones was ordained at Ahermarlais, not at St. David's. (5) The Baronets of Picton Castle spell their name "Philipps." (6) Jones married the sister, not the half-sister, of the Baronet of his day. All the biographies say "half-sister," but it seems that they are all wrong. (See the "Transactions of the Cymmrodorion Society," 1903-4, page 92.) (7) Mr. Arthur Bevan was Recorder, not Rector, of Carmarthen.—Yours faithfully,
DAVID SALMON.
Training College, Swansea, November 6, 1912.

WOMEN WORKERS AT OXFORD.

To the Editor of *The Journal of Education*.

SIR,—In the October issue of *The Journal of Education* appeared an article on the Workers' Educational Association in Oxford, which struck me as singularly misleading. In describing the Summer School held this year at Balliol College, mention was made of the number of men who were able to enjoy its advantages, and the account concerned itself only with men. As a matter of fact, the Summer School received 165 men and 50 women students, while at least 10 of the 46 tutors who gave their services were women. Both men and women students were assigned indifferently to men or women tutors as best suited the work which each individual wished to do. These facts seem to me worthy of being stated, as the Workers' Educational Association is essentially a society which stands for equality of opportunity between men and women. I believe I am right in saying that no W.E.A. tutorial class can be formed from which women are excluded. Economic reasons account, to a large extent, for the smaller number of women both at the Summer School and in the provincial classes. Preparatory classes for women are, however, being organized in many districts, and the proportion of women students is rapidly increasing.

Hoping that I may be allowed thus to supplement the interesting account of the W.E.A. given in your last issue.—Yours faithfully,
ONE OF THE TUTORS.

A TEST FOR TASTE.

WE promised to return to Mr. Ballard's article on "The Appreciation of Poetry." It was a new experiment, and we hope he will repeat it in a modified and improved form. The eight extracts that he chose are so far satisfactory that no *φρόνιμος* or judicious person could well fail to distinguish the sheep and the goats. Further, we think that he does prove his point that literary taste can be directly trained. The schools that come to the top have a comprehensive scheme of literature, devote much time to the subject, and encourage home reading. But it is well nigh impossible to devise a text that will gauge the æsthetic sense—the *Dichtungsempfindung* both of children and adults. "Jewels five words long are rare," and most of them familiar. Matthew Arnold has been commonly condemned for using them as a touchstone of poetry. Divorced from the context, the best poetry loses half its beauty, and the worst—e.g. the stanzas set from Wordsworth's "Idiot Boy"—may be half redeemed by the context. Again, in No. 1, a ripe critic would pick out the epithet in the last line, "the impracticable hours," as the sign-manual of poetry, but no child could be expected to appreciate or even to understand it. In No. 4, "By the North Sea," a child whose ear had been trained would be captivated by the Swinburnian lilt and subtle alliteration; but if he commented, "'Of marsh-blossoms fruitless as free' is nonsense, made to rhyme with sea," we should be inclined to give him a good mark. Lastly,

as Mr. Ballard himself is aware, it is hard to discriminate appreciation of form and of sentiment. We have all of us—at any rate, those of an older generation—passed through a Longfellow stage, and we should regard an appreciation of "Evangeline," or even of "The Psalm of Life," as a healthy sign in a child, though with proper training he sheds it like his first teeth. In No. 2, the first stanza, "Do not despair, though clouds dark are gathering," &c., conveys in tolerable verse a true sentiment to children not staled by use, and for its sake they will overlook or condone the halting rhythm and slipshod English of Stanza 2. We certainly should differ from Mr. Ballard, and class No. 2 above No. 7:—

The snowdrop, pure, repels despair
 Our garden to adorn.

Our criticisms have been purely negative, and their only object has been to assist Mr. Ballard in perfecting his test, and applying it on a larger scale *in pari materia*. In a pamphlet noticed elsewhere Mr. Holmes pleads for the Montessori Method, on the ground that perfect freedom of action and absence from constraint are the only conditions on which experimental pedagogy is possible. If this were so, we should be forced to regard child study as the anti-vivisectionists regard experiments on animals; but in this case no such dilemma arises, and we are grateful to Mr. Ballard for a first essay and a quantitative analysis of the most subtle and elusive of all mental elements—taste.

CONFERENCE WEEK OF EDUCATIONAL ASSOCIATIONS.

THE Conference Week of Educational Associations will be held in the University of London from Monday, January 6, to Saturday, January 11, 1913. The following is the program:—

January 6.—2.30 to 2.50 p.m.: Address of Welcome (Sir Henry Miers). 2.50 to 5 p.m.: Open Discussion, "Should Teachers be Civil Servants?" (Michael E. Sadler). 5 p.m.: The Secondary, Technical, and University Teachers' Insurance Society (Gerald T. Hankin). 8.15 to 10 p.m.: Teachers' Guild Presidential Address, "Education and Life" (W. H. D. Rouse).

January 7.—10 a.m. to 1 p.m.: Teachers' Guild, "The Educational Issues raised by the Report of the Royal Commission on the Civil Service." 3 to 5 p.m.: Art Teachers' Guild. Teachers' Guild, "The Teaching of English, with special reference to the recently issued Memoranda of the Board of Education" (W. H. D. Rouse). 7.30 to 9.30 p.m.: Froebel Society, "The result of an inquiry into what is desirable in Equipment and Apparatus of the School" (Claude G. Montefiore).

January 8.—12 noon: Modern Language Association, Presidential Address (Reginald W. Macan). 11 a.m. to 1.30 p.m.: Private Schools Association, "Educational Value of History" (Rev. Canon Masterman). 2.30 p.m.: Modern Language Association, "The Literary Element in the Teaching of Modern Languages." 4.15 p.m.: "Rostand" (Sir Hubert Jerningham). 3 to 5 p.m.: Private Schools Association, "The Child's Share in his own Education" (Hon. Mrs. Franklin); "The Influence of School on the Manners of the Child" (Rev. G. H. Moore).

January 9.—11 a.m. to 1 p.m.: Geographical Association, "The Geographical Cycle" (C. W. Fawcett); "Historical Geography for Schools" (H. J. Mackinder). 10.15 to 1 p.m.: Modern Language Association, "Modern Language Courses at the University, with special reference to Teachers" (Prof. Cazamian, Miss Fowler, Prof. Milner Barry). 3 to 5 p.m.: Geographical Association, Presidential Address (Douglas W. Freshfield). Modern Language Association, "Suggestions for Improvements in the Teaching of Modern Languages" (Cloudesley Brereton). 3 p.m.: National Home-Reading Union, "The Work of the N.H.R.U." 8 to 10.30 p.m.: Soirée.

January 10.—2 to 5 p.m.: College of Preceptors. 5.15 p.m., Historical Association. "Some Lessons of the War in the Balkans" (Prof. Spenser Wilkinson).

January 11.—10.30 to 11.45 a.m.: Historical Association, "The Standardization of History Teaching" (G. G. Coulton); "How Public Libraries may be made more useful to Students and Teachers of History" (Miss C. A. J. Skeel). 10.45 to 1 p.m.: Association of Teachers in Domestic Subjects, "Recent Development of the Correlation of Science with Domestic Economy" (J. Wilson); "The Household Economics of the Poor" (Hon. Mrs. Pember Reeves); "The Home of the Poor" (T. Holmes, Mrs. Pillow). 3 to 4.30 p.m.: Association of Assistant Mistresses in Public Secondary Schools.

UNIVERSITIES AND SCHOOLS.

LONDON.

Dr. A. C. Headlam's resignation of the principalship of King's College has caused some stir in academic circles in London. Several reasons, personal and official, are advanced by Dr. Headlam for his decision, the chief of which appears to be that the College has not received fair treatment from the Board of Education or from the University. He suggests that the Board have issued a mandate that the College must be removed to a more suitable site without any full investigation of the question. Mr. Pease, in reply to a question in Parliament, states that Sir William McCormick and other members of the Advisory Committee of the Board on University grants spent "many hours in investigating on the spot the position of the College," and discussed the question with Dr. Headlam. Whatever opinion may be held on the particular question, the action of the Board must be regarded as introducing a novel and disturbing idea into the relationship between Government departments and Universities. Of the more domestic questions raised by Dr. Headlam's resignation, it must suffice to say that the co-ordination of University education in London which has resulted from the reconstitution of the University, and especially from the incorporation of University and King's Colleges in the University, has involved some hardships. Dr. Headlam finds fault with the constitution of the University which gives the professors of a rival college a strong influence in determining questions relating to the organization of King's. A question of such wide implications cannot, however, be discussed here and now. The Royal Commission on University Education in London is to report early in the new year; and, until then, at any rate, nothing more need be said.

WESTFIELD COLLEGE.—Miss McDougall, M.A., Classical Lecturer at Westfield College, is spending six months in India to investigate women's and girls' education there, as a member of the Education Committee of the Edinburgh Conference, 1910. During her absence, Miss P. Mudie Cooke, formerly of Girton College, Cambridge, and Miss K. Curtis, B.A., of Bedford College, London, have been appointed to lecture in the Classical Department. The following assistant lecturers have also been appointed for this session:—Miss B. M. Daunt, English Honours, Oxford; Mr. J. H. Grattan, B.A., University College (to lecture in Old and Middle English); Miss M. Long, B.A. Dublin, of Girton College, Cambridge (Assistant Lecturer in Mathematics). Miss E. M. Delf, Lecturer in Botany, has been awarded the degree of D.Sc. for a thesis on "Transpiration and Stomatal Behaviour in Halophytes," and also the Gamble Prize, awarded by Girton College, for an essay on "The Biology of Transpiration." Sixteen students of the College have obtained appointments as head and assistant mistresses and University lecturers.

OXFORD.

After half a term with very little legislation or controversial business we are having a series of conflicts every week. The old quarrel between Arts and Science was almost revived again last week over a proposal to give sites in the parks for a chemical and an engineering laboratory. Each side spoilt its case by abusing the other in fly-sheets—the lovers of the parks making a reckless attack on engineering and an indignant scientist replying that students of such useless subjects as philosophy had nothing better to do but walk round the parks and listen to the birds. The real cause of the trouble was that the Curators of the parks had selected for the engineering laboratory a site entirely removed from the main block of science buildings. In Congregation the decree providing a site for the chemical laboratory was passed, though a large minority voted against it; while the other decree was thrown out by a large majority. The debate, however, made it quite clear that the opposition was not to engineering or even to engineering having a site in the parks contiguous to the existing museum buildings, but to the site chosen by the Curators. A memorial is being extensively signed by members of Congregation asking Council to introduce a decree for a site for the engineering laboratory near the other buildings.

Before *The Journal* appears Congregation will have voted on the preambles of the statutes for the reform of Council and Congregation, and for making possible a poll of Convocation. The first statute proposes to abolish the three orders in Council, doing away with heads of houses and professors, and leaving a Council of five *ex-officio* members, the Chancellor, Vice-Chancellor, Proctors, and the *ex-Vice-Chancellor*, and eighteen members of Convocation elected by Congregation. No one, I imagine, will want to retain the heads of houses, but there will be much more difference of opinion as to whether professors should not be specially represented.

The proposal for the reform of Congregation will probably meet

with more opposition. It proposes "(a) that residence shall no longer be a qualification for membership, (b) that in future the Congregation shall consist of the teaching and administrative elements in the University and the colleges." A fly-sheet has been issued complaining that the preamble is too detailed and leaves too little room for amendment. However, the history of the Faculties Statute did not show that Congregation's powers of amendment are of much value in statutes of this kind.

On the following Tuesday, December 3, we are to consider proposals brought forward at the instance of the Theological Faculty for abolishing the limitation of examiners in the Honour School of Theology to "members of Convocation in Priests' Orders," and the similar limitation of candidates for the theological degrees. The good example of Cambridge ought to make it certain that the statutes should pass. They are more likely to be in danger when they come to be voted on in Convocation. An attempt seems to have been made to placate someone by the rather petty proposal in the statute that, where at present the words "Sacra Theologia" occurs in the statutes, they shall be struck out and the word "Theologia" substituted.

The Committee of the National Memorial to Mr. Gladstone has offered the University a sum of about £6,000 for the purpose of making the present Readership in Political Theory and Institutions into a Professorship with an increased stipend. The Readership was instituted a few years ago with the help of the Endowment Fund of All Souls College and the Reader who will be the new Professor. Mr. Adams has already done a great deal to develop and co-ordinate political studies in the University. Political Theory is at present taught in three different schools, and there is great need of co-ordination of all the work done in the subject. The Committee for Economics and Political Science have just presented their annual report showing an admirable record of teaching and investigation. They hint that it may be advisable to revise the present scheme of examination. The subject has grown so much that it is difficult to cover it properly in a diploma course.

The University, on November 26, conferred the honorary degree of D.Litt. on Prof. Saintsbury, and the honorary degree of M.A. on Mr. Albert Mansbridge, Secretary of the Workers' Educational Association. The latter degree is particularly interesting as showing the University's recognition of the services of the W.E.A. and the tutorial class movement to Oxford. Mr. Mansbridge, though himself a graduate of no University, has done more for University education in England in the last ten years than any man in England, and the University honours herself in honouring him.

The Association for the Education of Women has presented its annual report, which is of particular interest this year in that it shows the effect of the new Delegacy for women students. The official recognition given to women students and women teachers by the Delegacy has had the effect your correspondent predicted when it was established. The place of women in the regular work of the University is becoming regularized in many little but significant ways. Little has been heard since the publication of the Chancellor's memorandum and Council's report of the granting of degrees to women, but it ought soon to follow as a matter of course.

CAMBRIDGE.

Your readers will, of course, have seen a week before this letter reaches them the result of the great vote on the opening of Divinity degrees. I may remind them that, in February last, the Vice-Chancellor published a letter from the Divinity professors inaugurating the movement, and that shortly afterwards the Council of the Senate drafted a report embodying the changes involved in Statute A if the enfranchisement was to be made effectual. In my letters in your May and June issues I dealt lightly with the controversy as it reached the public, and made the obvious prediction that there would be real opposition. In the interests of peace, and for the sake of afterthoughts, the Council postponed the whole matter to this term.

The points upon which controversy settled were these: First, is it fitting that laymen and Free Churchmen should be admitted to Divinity degrees? Second (as put by the Master of St. Catharine's), should "non-Christians" be admitted to them? Third, should the new graduates in Divinity be eligible to the Lady Margaret and Regius Professorships of Divinity, or allowed to vote with the existing class of graduates in Divinity when next either Professorship has to be filled?

The Council met the last difficulty by including in the Grace proposed to the Senate a clause holding up the application for the change in Statute A till the two chairs should have been dealt with by the Senate. Most of us thought this gave all the security needed, but in some quarters a doubt was expressed that the words "until

the Senate have decided by vote what amendments, if any, shall be made in the Statutes," dealing with these two chairs, meant nothing very definite. The concession, however, won support for the Grace.

On the other points, play was made with the "non-Christian" D.D.; red-herrings were drawn across the track—the Council was guilty of blundering and doing all sorts of things—the question on the 22nd would be "purely one of procedure"—and so on. Yet conversation reveals something else, and here I quote a clerical and non-resident friend whose position, I think, was typical: "In a Roman Catholic country a Protestant expects to be at a disadvantage, and a Nonconformist must take as much for granted in the University." In other words, the University is essentially an affair of the Church—the old story dating back to 1662, but not quite the view taken by most of those responsible for its teaching and administration.

As the day of the voting drew near, it was more and more clear that the preponderating view among residents of all ways of thought—one school excepted—was *Placet*. Various estimates were hazarded—three to one, or four to one, of the residents would vote *Placet*—the *Placet* majority among residents would be two hundred. Everything thus depended on what numbers of clergy Archdeacon Cunningham and the Master of St. Catharine's could bring up. At 2 o'clock on the 22nd there was a good show of them in the Senate House; but, as a shrewd observer suggested, the country voters would be more liable to be there before the hour than residents; and so it proved, for after 2 o'clock as men came in the accessions were mostly to the *Placet* side. The voting was taken as usual by cards, and the two streams flowed parallel up the Senate House to the Proctors on the right and left of the Vice-Chancellor, and united to ebb down a middle channel when their cards were handed in. Generally, one can see at a glance which is the larger stream. This afternoon it looked very doubtful. By and by it seemed as if the *Placets* had rather the longer crowd, but the two drew level, and the result grew thrilling. It was remarked that the Proctors on the *Placet* side were quicker at taking cards than on the other, and a majority of 25 to 30 was still looked for by some bold prophets. At last the stream stopped; a few late voters hurried up—one on this side, two on the other, another here—and then ceased altogether. In a few minutes the Senior Proctor announced the result to the Vice-Chancellor, stepped forward, raised his cap, and said "*Placet*," and then in English added: "The numbers are—*Placet* 435, *Non-Placet* 326." The result was greeted with loud cheering. Nobody had expected anything like it—unless, indeed, the organizers on the *Non-Placet* side knew that they were not getting enough friendly answers. It may be noted that not all the clergy who came up were *Non-Placets*. The contrast between the two sides of the House was very remarkable—I have never seen it so. On most great issues resident opinion is divided. On this occasion all the familiar faces—a dozen perhaps excepted—were on the *Placet* side, while the other was packed with strangers.

What results is briefly this—a great step forward has been taken—there may be blocking work done on the future report of the Council as to the two chairs. I suppose there may be even recourse to obstruction when the revised Statute A is submitted to the King in Council, but in any case progress has been made. What is more, the residents—whom the Reformers wanted to make into a "House of Residents"—have carried the reform—and a real one this time. What might have given an enormous lift-forward to the appeal for a Commission has been averted. If the degrees had been refused, a great volume of public opinion would have been enlisted in that demand. It will not be. Cambridge has shown what it can do for itself in reform, where a real and a clear issue is given.

The Divinity Chairs are all of separate origin and foundation and under different rules—and very strange anomalies are found among them. Only two are mentioned in the Grace. The Lady Margaret received lately new ordinances regulating a little the method of election, but not altering the main point—election of graduates in Divinity. To the Regius only B.D.'s and D.D.'s are eligible, but the electors are the Council, as in the case of the Regius Hebrew and Greek Chairs. To the Norrisian the Heads of Houses elect; to the Hulsean the Vice-Chancellor, the Masters of Trinity and St. John's, and the other from Divinity Professors (with the Greek Professor, if either of these Masters is Vice-Chancellor); to the Ely—a board of the modern type—eight electors and the Vice-Chancellor. Now the curious thing is that the next Regius Professor will be elected by a body—the Council—on which only two or three of the electors will ever be clergy—unless it is proposed to disfranchise the Council. The Heads of Houses, again, number only five clergy among their seventeen, and the other elective boards have all lay elements. In some of these cases there is no guarantee and no likelihood that the electors know or care anything about Theology—they will, of course, be interested in getting the best man, but a seat on the Council is given to people of every opinion on religion. So we have had for years a body of

electors to the Regius Chair, among whom have been avowed and active Free Churchmen and perhaps other people. But a Nonconformist B.D. must not be allowed to vote for a Margaret Professor. England is a land of inconsistency. However, we have to wait and see.

WALES.

Prof. Sir Ed. Anwyl, M.A., presided over the half-yearly meeting of the Board, which was held at Shrewsbury on November 15. A considerable amount of time was spent in the ordinary routine work of discussing the reports of examiners, the recommendations for grants, and changes in the examination schedules. There was an interesting discussion on the refusal of the Board of Education to amend the Central Welsh Board Scheme to enable the Board to examine schools which are not established under the Welsh Intermediate Education Act. Urged on chiefly by the Glamorgan Education Committee the Central Board has repeatedly sought for the power, and the Board of Education has persistently refused it, mainly because it considers that the grouping of all the secondary schools under one examining body would ultimately tend to reduce them all to one type, which the Board would strongly deprecate. The question, however, has very little interest for the other Education Committees of the Principality. There was another instance, during the course of the discussion, of the want of harmony between the two authorities. When the annual report of the Welsh Department was under review, the Vice-Chairman, Lord Sheffield, gave utterance to the caustic comment that it could be compared only to the curate's egg—"good in parts"—and that if anyone sits down to write thirty pages of matter he must occasionally write a sentence or two with sense in it! But the Board as a whole was not inclined to resurrect the buried controversies of previous years, and the report, unsatisfactory as it may be in parts, was accepted without serious criticism.

In the year 1911-12 there were 13,217 pupils on the roll of the intermediate schools—6,449 boys and 6,768 girls. This total represents a decrease of 118 pupils as compared with the total for the preceding year. The highest total was reached in the year 1908-9, the figures then being 13,760 pupils. Since that year there has been a downward tendency in the numbers, but there are now some indications that this has been arrested. One of the salient features of the statistics for the past year is the decrease in the number of pupils over seventeen years of age. This has been so marked that some explanation of it appeared to be necessary, and this gave rise to an excellent debate in which many of our prominent educationists took part. The trend of opinion was in the direction of regarding the policy which the Welsh Department has recently been pursuing, of advocating the establishment of higher elementary schools in close proximity to the intermediate schools, as responsible for the decrease. Naturally, our Education Authorities are anxious that no steps should be taken which will in any way interfere with the growth and progress of the intermediate schools, so that in many quarters the new development is regarded with some misgiving. The Denbighshire Authority in particular seems to be hesitating very much as to the proper course to follow with regard to new schools. After a prolonged and keen discussion it was felt that the urgency and importance of the question were such that a special conference should be summoned at an early date to consider it fully. It is surely a very refreshing sign that our authorities are realizing that it is high time that our haphazard methods of settling our educational policies should be abandoned and that some comprehensive and definite plan should be followed. Though there has been a decrease in the older pupils, it is satisfactory to note that there has been an increase of 50 per cent. in the number of pupils admitted under twelve years of age during the last triennial.

The general report has some interesting statistics besides those relating to the numbers of pupils. The average salary paid to assistant masters is £153. 6s. 8d.—a rather serious difference. Of the 351 assistant masters there are 82 without a degree, and of the 346 mistresses 108 are without a degree, which seems a high percentage.

Welsh Education Authorities are grumbling loudly at the expense of education within their areas. At a recent conference of the Monmouthshire Teachers' Association, Mr. T. G. James, the Director of Elementary Education, stated that his county was the highest rated county in England and Wales for the repayment of principal and interest on new buildings. They had to levy a sixpenny rate for the purpose. He believed that the levying of local rates had well-nigh reached breaking point, and that, unless they got Treasury assistance, further developments, in spite of their urgent need, would be impossible. The chairman, however, pointed out that the Treasury grants ultimately came from the same pockets as the local rates, so that he doubted the efficacy of the proposed remedy.

This Association met under the presidency of Mr. W. Lloyd Parry.

Cost of Education. The general report has some interesting statistics besides those relating to the numbers of pupils. The average salary paid to assistant masters is £153. 6s. 8d.—a rather serious difference. Of the 351 assistant masters there are 82 without a degree, and of the 346 mistresses 108 are without a degree, which seems a high percentage.

This Association met under the presidency of Mr. W. Lloyd Parry.

Welsh County Schools Association.

B.A. Mold, at Shrewsbury. In his presidential address, Mr. Parry dealt exhaustively with the relationship between the ideal and vocational training. It was refreshing to hear a president casting aside the time-honoured method of dilating upon our grievances—real and imaginary—and boldly daring to deal with a really interesting question. On the whole, he seemed to deprecate the modern tendency to make the school a training ground for the different careers a boy might pursue; Mr. Clendon, of Handsworth Grammar School, on the other hand, basing his opinion upon some definite experience, held the contrary view—so that there seems no chance of attaining finality in any educational discussion. A special sub-committee to consider the Central Welsh Board Examination in French made several important suggestions for its improvement. As already indicated in these notes, there has been a deal of grumbling at the French Examination in recent years. The extent of the schedules and the character of the papers in the higher stages are criticized strongly and continuously, but it cannot be said that there has been any marked improvement in them. In the Report of the Examiner for the year 1911-12, Mr. J. G. Anderson, B.A., is, however, on the whole, encouraging, though the oral section of the work comes in for a good deal of criticism. His final verdict, however, is satisfactory. "Still, on the whole, the Welsh schools are still ahead of others in the matter of French conversation." The Association endorsed the opinions of the sub-committee, and they have been forwarded to the Central Welsh Board for its consideration and enlightenment.

Lord Kenyon, the Senior Deputy Chancellor, presided over the annual collegiate meeting at the University College, Cardiff, on November 22. A recommendation of the Senate was adopted, "That in the case

of science departments in which laboratory work is involved it is desirable that the notebooks of practical work be available for the inspection of the Examining Board; and, further, in cases where the Board is uncertain whether a candidate's name should be included in the pass list or as to his place in the class list, the opinion of the Internal Examiner concerning his work during the session should be taken into account." The University has, by this resolution, given effect to one of its fundamental principles that the teacher should have a definite share in the examination of his pupils. There was some opposition to this resolution from the professors in the Arts departments, but the final majority in its favour was a very substantial one. The most interesting discussion arose out of a motion by Sir Isambard Owen, "That if University representation be given the University of Wales should take steps to secure that its claims for such representation be recognized." Sir Isambard disclaimed any intention of introducing politics into the Court. Several members, including Sir T. Marchant Williams and Alderman Hopkin Morgan, strongly opposed the resolution as being contrary to the democratic spirit of the age. But Sir D. Brynmor Jones, M.P., on one side of the House and Colonel Pryce Jones, M.P., on the other, were equally strong in support. After a short debate, the resolution was carried by 17 to 12.

The number of candidates who entered for the Matriculation Examination of the University was 261 in 1912; being 128 below the number in the preceding year. For the September Examination there was also a decrease of 94. The number of awards in

Honours for the B.A. degree in 1912 was 95, against 125 in 1911. For the B.Sc. degree, 31 in 1912, against 18 in 1911. For the Pass degrees, 89 obtained the B.A. degree and 49 the B.Sc. degree. 26 obtained the M.A. degree and 7 the M.Sc. degree. The D.Sc. degree was conferred on Mr. T. Campbell James, M.A. Aberystwyth, and Miss Muriel Smith, of Bangor College. The D.Litt. degree was conferred on Mr. E. Arthur Lewis, of Aberystwyth College. Two candidates also obtained the degree of Bachelor of Music—both from Cardiff College.

Lord Kenyon, Principal Harris (of the North Wales Training College), Mr. F. P. Dodd, and Mr. Edgar Jones, were appointed to represent the Court on the Central Welsh Board. The Vice-Chancellor, Sir Harry Reichel, and Mr. D. Sleifer Thomas, M.A., were appointed on the Central Joint Advisory Committee on Tutorial Classes. For the three vacant Fellowships, Miss Marian Jones, B.Sc., of Bangor College; Miss Nesta Thomas, B.Sc., of Bangor College; and Mr. David J. Jones, M.A., Cardiff College, were elected.

SCOTLAND.

The opponents of inclusive fees have persuaded some of the Scottish members of Parliament to put questions in the House of Commons to the Secretary for Scotland and to the Treasury, and the matter has also been discussed on the motion for the adjournment of the House. The only result of the discussion has been the information that the Treasury asked for the observations of the Scotch

Education Department on the report of the Scottish Universities Committee, 1909, that the Department gave its opinion that "the institution of a composite fee for specific courses of study is one that has very much to recommend it on educational grounds," and that the Department did not interfere or advise in any other way. The questioners were also informed by Mr. Masterman that the Treasury has no claim to interfere with the internal arrangements of the Scottish Universities, but they are charged with the duty of laying down such principles as seem advisable as a condition of asking Parliament to vote grants of public money. The inclusive fee was accepted in principle by the Scottish Universities, and no representations were received from the Carnegie Trust in the matter. In spite of this, the Glasgow General Council has resolved, by a majority, to communicate to the Treasury a resolution in favour of making the inclusive fee optional. This resolution has already been considered by the Courts of the four Universities in conference, and has been unanimously rejected as inconsistent with the principle of an inclusive fee. The action of the Glasgow Council and others is therefore futile and can only lead to waste of time and trouble. The only serious difficulty remaining is the refusal of Edinburgh University to institute at once an inclusive fee in medicine. This makes it impossible for the present to fulfil entirely the Treasury requirement of uniform inclusive fees for the four Universities. But Edinburgh runs the risk that the Treasury may decide to pay the grants to the other Universities and in the end to require Edinburgh either to institute the fee fixed for medicine by the other Universities or to renounce the grants.

The dispute between the Council of Dundee University College and the St. Andrews University Court has been revived, and, unfortunately, it seems likely that it will not be settled without some litigation. The Court has drafted an Ordinance for the institution of a fee fund at University College, Dundee. Hitherto, the fees of the Dundee students have been collected by the Secretary of the Dundee Council and paid to the respective professors and lecturers. The Council maintains that it is entitled to administer the fees; but the Court holds that the Secretary of the Council has collected the fees only for convenience and as the agent of the Court. This year the fees have been collected by the Secretary of the Court, and the Council has allowed this, under protest, in the interest of the students, who would otherwise have been refused enrolment. The Council also maintains that the proposed new Ordinance will cancel in some of its most important provisions the agreement for union between the college and the University and will set aside the deed of endowment of the college, so far as regards the administration of the class fees. On the other hand it is contended by the University Court that the original agreement was set aside by a judicial decision of the House of Lords, and that the University Commissioners practically incorporated Dundee College in the University, in consequence of the judgment of the House of Lords. Since 1897 the College has received large financial benefits under this arrangement, which it welcomed at the time. It is also contended that under the new Ordinance drafted by the Court the College will lose nothing in fees and will gain in financial security. The Ordinance proposes that the Court should receive all the Dundee fees (about £2,000 a year) and that it should allocate an annual sum of £1,500 to improve the salaries of the Dundee staff. It also proposes that the security of the St. Andrews fee fund (which has a large surplus) should be used to guarantee the College against loss from fluctuation in the number of students. It also provides that the College shall share in the surplus of the fee fund, after salaries have been paid, in proportion to its contribution of fees. The Court's financial proposals seem to be perfectly fair. The trouble is that the Dundee Council desires to have all the advantages of incorporation and at the same time of independence. In the meantime the Council proposes that a friendly action at law should be raised to decide the legal question. The Court has not, so far, given any answer to this proposal; but it has obtained an opinion of counsel in favour of its contention, which has been transmitted to the Dundee Council.

University Hall, the residence for women students at St. Andrews, has been enlarged by the addition of two new wings, at a cost of £10,000. The Hall is the property of the University. It was opened sixteen years ago with accommodation for twenty students. Since that time overflow houses have been hired, and the enlarged building now provides for more than seventy residents. The new buildings were formally opened at the end of October by Lady Balfour of Burleigh, and among the other speakers were Miss Dobson (Warden of the Hall), and Miss L. I. Lumsden, J.L.D. (a former Warden). At a meeting of St. Andrews University Court, it was announced that, as the result of an alteration in the Army Council's regulations for University candidates for commissions, there would no longer be allotted to the Scottish Universities each half-year a commission in the Indian Army and a commission in the Royal Artillery. It would consequently be useless for the Scottish Universities to continue the instruction of University candidates. It was agreed to take steps to-

wards the reconsideration of the regulations. An additional sum of £600 has been received towards the erection of a graduation hall in commemoration of the five-hundredth anniversary of the University. The total subscriptions received amount to £4,500. The annual report of the Council of University College, Dundee, discusses at length the dispute with the University Court. The total number of students for the year was 206, of whom 203 were matriculated in the University, being a decrease of 20 as compared with the previous year. The revenue from class fees amounted to £1,740, as compared with £2,255 in the previous year. The degree examination fees have also decreased by £146, about 25 per cent.

The General Council of Glasgow University, in addition to its discussion of inclusive fees, considered the draft Ordinance affiliating the Royal Technical College to the University. The main matter of discussion was the proposal, approved almost unanimously by the Technical College, that only the day classes at the College should be reckoned as qualifying for the University degree. An amendment was proposed and carried by a majority in favour of allowing evening classes also to be reckoned as qualifying. This decision was submitted to the University Court, which resolved by a majority to adhere to the terms of the draft Ordinance. The General Council has made a representation to the Court in favour of instituting the teaching of Chinese in the University. The report of statistics of Glasgow University for the academic year 1911-12 shows that the teaching staff consisted of 35 professors, 65 lecturers, and 81 assistants and demonstrators. The total number of matriculated students was 2,794, including 681 women, an increase of 4 from the previous year. Of these 1,299 (including 548 women) were enrolled in the Faculty of Arts, 467 (including 39 women) in the Faculty of Science, 63 (including one woman) in the Faculty of Theology, 727 (including 82 women) in the Faculty of Medicine, and 194 (including 2 women) in the Faculty of Law. 481 degrees were conferred. The number of members of the General Council was 8,245.

The Aberdeen Technical College has received from the Education Department £25,000, being the first instalment of the Department's contribution towards the cost of erecting and equipping new buildings. The University Court of Aberdeen has appointed a Committee to confer with the governors of the College as to the institution of a school of engineering.

The General Council of Edinburgh University discussed the question of inclusive fees at its autumn meeting. A resolution was passed to the effect that the Council was of opinion that, in seeking to impose conditions upon the payment of Parliamentary grants (as exemplified in the recent action in regard to the inclusive fee), the Treasury was interfering unwarrantably with the freedom of the Scottish Universities. It was also resolved to make a representation to the University Court in favour of enabling students who have taken the degree of LL.B. to proceed, under suitable conditions, to a doctorate in the Faculty of Law, under such designation as might appear to be most convenient. An effort is being made at Edinburgh University to raise a fund of £20,000 to £25,000 for the purpose of endowing a second chair of Natural Philosophy in the University, as a memorial to the late Prof. P. G. Tait. The Misses Dalgety and Mrs. Wilson have bequeathed £10,000 for the endowment of bursaries and prizes in the Faculty of Law at Edinburgh University, in memory of their brother, Mr. Harry Dalgety, who died in 1872. The German Emperor has conferred the *Ordre Pour le Mérite* on Sir William Turner, K.C.B., Principal of Edinburgh University. Prof. Saintsbury has received the honorary degree of D.Litt. from Oxford University.

The conference of representatives of the four University Courts has now completed a draft of a new Ordinance dealing with the Preliminary Examination, and it is expected that this will soon be submitted to the Universities for their consideration.

IRELAND.

The amendment brought forward in Parliament by Mr. J. H. Campbell, M.P., on October 21, excluding Dublin University from the scope of the Home Rule Bill, has had some interesting developments. At a meeting of the Board of Trinity College, on October 26, a resolution was adopted approving the amendment. Two of the Senior Fellows present, the Rev. T. T. Gray and Dr. Mahaffy, voted against the resolution; one (Mr. Cathcart) abstained from voting. No steps had been taken by the Board before the meeting to ascertain the views of the Junior Fellows and the teaching staff in general on the question; but immediately afterwards a statement appeared in the Press, with the signatures of ten out of the twenty-eight Junior Fellows, which, while expressing no opinion on the merits of the Home Rule Bill as a whole, repudiated the Campbell amendment, and at the same time a protest against it appeared signed by two hundred undergraduates. Other adverse expressions of opinion have since appeared in the Press from members of the University. Prof. Culverwell, one of the most active among the dissentients, proposes

that, if the amendment be not withdrawn, a public meeting of the members should be held in Dublin to protest against it. It is understood that the Provost has seen Mr. Birrell on the subject and extracted from him an assurance that the amendment will be incorporated with the Bill on the Report stage. From a statement made by Mr. Herbert Samuel, in the House, on November 5, it appears that one necessary consequence of the amendment would be that Dublin University would have no representation in the Irish Parliament.

The past month has been a busy one for all the college societies. The inaugural meeting of the College Historical Society was held on the evening of November 6, Mr. Justice Ross being in the chair; a paper by the Auditor, Mr. J. M. Henry, on "Economic Independence for Ireland" was read (in his absence), and was followed by speeches from Prof. Kettle, Captain Bryan Cooper, and Mr. A. W. Samuels, K.C. On the evening of November 9 the Classical Society opened its session with an address from Prof. W. A. Goligher, on "The Greeks and some Present-day Problems," followed by speeches from Mr. Justice Ross and Prof. Browne, S.J. The Theological had its meeting on November 11, when the Auditor, Mr. E. H. Campbell, B.A., gave an address on "Intellect and Faith," and the Bishop of Ossory was the chief speaker. The Gaelic Society followed on November 12, with an inaugural address on "The Ireland of To-day," followed by speeches from Mr. F. J. Bigger, Canon Hannay ("George Birmingham"), and Prof. Culverwell; the Campbell amendment coming in for a vigorous attack from lecturer and speakers. The University Philosophical opened its session on November 15, when Lord Killanin presided and the Auditor, Mr. Herbert White, read an address on "The Literature of Social Unrest," followed by a paper (read in his absence) by Mr. Gilbert Chesterton; and speeches from Mr. Allen Upward, the Rev. Dr. Murray, and Dr. Mahaffy.

The examinations for Moderatorships are now over, but the full results are not yet to hand. Prof. Culverwell is at present delivering a series of weekly afternoon lectures on "The Education of Children up to Seven Years of Age: being an account of the Montessori Method."

The opening of the academic year at University College, Dublin, was celebrated on November 3 by a solemn religious ceremony in University Church, St. Stephen's Green, followed by a luncheon given in the University College by Dr. Coffey, the President. The Chancellor, Archbishop Walsh, in his speech at the luncheon, said that the success of the Dublin College during the two past years exceeded all expectations, and the number of students now in actual attendance at its lectures was greater than that in any other University or University College in Ireland.

As a result of the autumn examinations, travelling studentships of £200 a year, tenable for two years, have been awarded to Agnes Cuming, M.A. (University College, Dublin), in Philosophy; and to Annie Power, B.A. (University College, Dublin), in Celtic Studies. Special prizes of £100 for distinguished answering were awarded to Robert McKernan, M.A., in Philosophy, and Elizabeth Deane, B.A., in Modern Languages.

A meeting of Convocation of the National University was held on the afternoon of November 12, at which the principal business was the passing of a resolution brought forward by Dr. McWalter, asking the Senate to institute evening lectures, leading up to the University degree, for the benefit of such students as were unable, through the necessity of earning a livelihood, to attend the ordinary University lectures. A memorial, signed by 121 persons, was laid before Convocation in support of the resolution.

University College Literary and Historical Society opened its session by a meeting on the evening of November 7, when the Auditor, Mr. Arthur Cox, B.A., read an address on "The University and the Nation," and Prof. Culverwell was the chief speaker. The future destinies of both the Universities in Dublin and their relation to the country were discussed in paper and speeches.

The Birrell Scholarship Scheme is still to the front. At a meeting of the Executive Committee of the Irish County Councils General Council, held in Dublin, on October 25, a report was adopted which, while expressing gratitude for Mr. Birrell's efforts on behalf of Irish Education, recommended the Councils to refuse the grant under the conditions at present imposed, on the following grounds:—(a) That these conditions would render nugatory the agreement entered into between the Senate of the National University and a deputation from the General Council, whereby the Senate appointed Irish as an essential subject for matriculation from 1913 onwards. (b) That the National University was the only University which provided representation of the Councils on its governing bodies; and (c) that it was also non-sectarian in character, the principle of proportional representation being fully observed in the composition of Senate and teaching staff; further, (d) that the proposals were unsatisfactory from a financial standpoint, inasmuch as for each £10,000 of free

(Continued on page 866.)

grants the Councils must provide £20,000, allocated on a more extensive scale than their own scholarship scheme, which had been framed with a view to encourage studies in scientific agriculture and other subjects of importance to the country; and (c) from an educational standpoint also, inasmuch as the candidates were selected at too early an age, and there were not sufficient guarantees to ensure that they would fulfil their promise of ability. Some of the County Councils—Roscommon, North Tipperary, Sligo, and Galway—have already declared against the scheme; on the other hand, Wexford has agreed to make its scholarships tenable at any Irish University.

In answer to a question from Captain Craig, in the House of Commons, Mr. Birrell stated his determination to abide by the conditions of the grant, whatever might be the attitude of the Councils. An Irish correspondent writing in the *Times* on the questions raised, points out that, whereas twenty-four of the twenty-seven Nationalist County Councils, and also the two county boroughs of Dublin and Waterford, have either already founded or undertaken to found University scholarships (which, in three cases, are tenable at Trinity College or Queen's University as well as the National), the six Unionist Councils of Ulster and the city of Belfast have so far taken no steps to provide scholarships or give endowment to Dublin University or Queen's University.

The claims of National school teachers, including the monthly payment of salaries and other matters, formed the subject of a meeting held in the Mansion House, under the auspices of the Dublin National

Teachers' Association, on October 25, at which Mr. William Field, M.P., was in the chair, and Prof. Culverwell was the chief speaker. One matter before the meeting was the dismissal of Mr. Edward Mansfield, Vice-President of the Irish National Teachers' Organization, which is exciting a good deal of interest at present. Mr. Mansfield, the principal teacher of Cullen National School in Co. Tipperary, who is admitted to have been an excellent teacher, was dismissed by the Commissioners on account of a speech which he made at Clonmel on July 13, calling for the removal of a certain Senior Inspector and criticising the whole system of inspection as it obtains at present, and also referring to Dr. Starkie's recent pronouncement on the financial outlook of Irish education under coming legislation as an "attack on the Treasury on the eve of Home-Rule." Mr. Mansfield's cause has been vigorously espoused by his own colleagues in the National Teachers' Organization, who have issued a manifesto and initiated a presentation to him; also by various local bodies, and by Dr. Douglas Hyde, who has been conducting an active controversy in the Press with the National Board. Dr. Hyde brings other charges against the Inspectorate, accusing them of unfair treatment of Irish in the schools. Mr. Mansfield's case was brought before the House of Commons on October 31 by two of the Irish members, who asked for an inquiry, which, however, the Chief Secretary declined to grant. On November 5 a deputation from the Irish teachers waited on Mr. Birrell at the House of Commons, to lay before him their grievances. Their speakers, Miss Mahon (President of the National Teachers' Organization), and Mr. Elliott, (who represented the Protestant Teachers), complained very strongly of the present system of inspection, under which teachers were often terrorized or exasperated and had little power of appeal, and asked for an inquiry into the whole administration of the National Board. Mr. Birrell, while deprecating an examination into the whole administration of the Board, promised an inquiry into the inspection system, saying that he would consult the National Commissioners as to the terms of reference, and take no final step without consulting educational authorities on all sides.

SCHOOLS.

CLAPHAM HIGH SCHOOL FOR GIRLS.—Seven girls passed in Matriculation in June, two being placed in Class I. Four girls were successful in Intermediate Arts. M. Kerr was awarded a St. Dunstan's Medical Exhibition of £60 for three or five years. In the Cambridge Higher Local Examination E. Sauerbeck passed Class I, with distinction in spoken German and written German. Training Department.—Seven students obtained the Cambridge Teachers' Certificate given by the Teachers' Training Syndicate, two being placed in Class I. The following seven N.F.U. students passed in Part I of the Higher Certificate. Art Training Department.—Thirteen First Class Certificates were obtained in the Board of Education Examinations, and one King's Prize was won for Water-Colour Painting by E. Crapper. Four students completed the Art Teacher's Certificate.

CROYDON, WHITGIFT SCHOOL.—Speech Day was on October 15, when the prizes were given away by the Master of Trinity. The Head Master reported that the distinctions for the year included five open scholarships (among them a major scholarship and an exhibition at Trinity College, Cambridge), two First in Classical Moderations at Oxford and two in Classics at London, and numerous successes in the Public Services, including places in the Home Civil,

India Civil, India Forest, and India Police Services, and three at Woolwich and Sandhurst. The school was third in the competition for the Ashburton Shield at Bisley, and had the distinction of being placed in all the events open to schoolboys. Dr. Butler afterwards addressed the school in an eloquent speech, taking as his text three well known sayings of the founder, who was Master of Trinity 345 years ago.

HAILEYBURY COLLEGE.—The following scholarships have been awarded:—Classical Side, Senior—J. S. Wright, R. H. W. Upton; Junior—C. J. Radcliffe (A. G. Radcliffe, Esq., Fonthill, East Grinstead), L. B. Winter (L. T. Thring, Esq., The Wick, Brighton), G. W. P. Fennell (Messrs. Slater and Pidcock, Bramcote, Scarborough), B. C. L. Barton (Rev. W. R. Phillips, South Lodge, Lowestoft), G. H. Critchley (Rev. H. C. L. Tindall, One Court, Rye), F. E. Vining (St. Neot's, Eversley, Winchfield), G. J. V. Crosby (G. E. Rudd, Esq., Stoneycote School, Leicester). Modern Side, Senior—H. C. L. Heywood, J. F. Woolcombe, G. L. Troughton; Junior—G. M. Knocker (J. Cruickshank, Esq., Lee-on-the-Solent, Hants), N. H. K. A. Coghill (Rev. E. Earle, Bilton Grange, Rugby), F. F. Sapte (J. Cruickshank, Lee-on-the-Solent, Hants). We have sustained a severe loss in the death of Mr. R. W. Evers, who was drowned while bathing off the Cornish coast, on September 4. He joined the staff in January 1911, as Upper Fifth Form Master, and he had already made his mark in the school by his scholarship, his power of teaching, his skill in games, and especially by an unaffected kindness of nature, which will live long in the recollection of his many friends. Mr. S. R. K. Gurner, of Merchant Taylors and St. John's, Oxford, has been in charge of the Upper Fifth Form this term; Mr. C. H. Fair, of Marlborough, and Pembroke, Cambridge, has been taking the work of Mr. C. A. Ronald, who is abroad for the term.

NEWPORT INTERMEDIATE SCHOOL FOR BOYS.—November 21 was Speech Day. Sir Garrod Thomas presided, and the prizes were distributed by Lady Thomas. The Head Master (Mr. F. E. Battersby, M.A.) reported that the school had gained two Honours, two Higher, fifteen Senior, and twenty-seven Junior Certificates in the Central Welsh Board examinations. Nine pupils had passed the London Matriculation Examination in the year, and one pupil (F. W. Pinkard) had won the Sir Alfred Thomas Scholarship at the Cardiff University College. The successes of Old Boys included a First Class in the Final Honour School of Natural Science at Oxford. The chief speaker was the Bishop of Birmingham, who congratulated the school on its all-round successes, and the *esprit de corps* which it shared with English public schools, without their narrow curriculum.

ST. SAVIOUR'S AND ST. OLAVE'S GRAMMAR SCHOOL FOR GIRLS, S.E.—On Friday, November 8, the tenth annual Prize Distribution was held, when the prizes were presented by Miss Burstall, Head Mistress of the Manchester High School. The examination results of the last school year's work are as follows:—E. Bartlett gained an exhibition of £20 a year for three years at Somerville College, Oxford; and E. Edgley gained a scholarship of £50 a year for three years at Westfield College, and an L.C.C. Senior Exhibition of £40 a year for three years. E. Drew and E. Edgley passed London Intermediate Arts, and seven girls received London University School-leaving Certificates. The following leaving scholarships were awarded by the governors:—E. Bartlett, £90 a year for three years; E. Edgley and J. Lunn, £40 a year for three years; E. Ward, £60 a year for three years; E. Drew, £55 in two years. L.C.C. Intermediate Scholarships were gained by four girls. Four girls passed London Matriculation, and twenty-one the Senior Oxford Local (seven with Honours). There are sixteen student-teachers this year, whereas last year there were only four. Two hundred and thirteen certificates were gained on the result of the Royal Drawing Society Examinations, including one Full Honours Certificate; and at the last annual Royal Drawing Society Exhibition, nine awards were received, including one Gold Star and one Bronze Star. One hundred and thirty-five certificates of the London School of Plain Needlework were gained, and twenty-three Pitman's Shorthand Certificates.

UNBRIDGE COUNTY SCHOOL.—The chief successes of 1912 include an open Science scholarship of £120 at the East London College, gained by Ruth King, who also passed the Intermediate B.Sc. Examination in July. H. F. L. Cocks and Gladys Gregory passed the Intermediate B.A. All the candidates in the Senior School Examination (London Matriculation) obtained distinctions in Chemistry, and several gained distinctions in French. Elsie Thurmort obtained a Civil Service Clerkship and F. A. Hewens won a scholarship worth fifty-four guineas at the Regent Street Polytechnic. The co-educational principle is applied throughout with pupils and staff. The Hon. C. T. Mills, M.P., on Speech Day this year, emphasized the Head Master's appeal to parents to keep their children at school beyond the age of fifteen or sixteen. The numbers this term are 192 in a school built for 150.

TEXT-BOOKS SUITABLE FOR MIDDLE AND LOWER FORMS.

MATHEMATICS and SCIENCE.

Arithmetic, The Junior. Being an adaptation of *The Tutorial Arithmetic* suitable for Junior Classes. By R. H. CHOPE, B.A. (With or without Answers.) *Second Edition.* 2s. 6d.

"The book has our fullest appreciation."—*Schoolmaster.*

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. *Second Edition.* 2s. 6d.

"The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature.*

Heat, Junior. By J. SATTERLY, D.Sc., M.A. 2s.

"A good practical course. The diagrams are very clear, and the subject-matter all that could be desired."—*Schoolmaster.*

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and J. SATTERLY, D.Sc., M.A. 2s. 6d.

"A capital book for the beginner."—*Journal of the Assistant Masters' Association.*

Science, Junior Experimental. By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. 2s. 6d.

"An excellent and workable two-years' course in Experimental Physics and Chemistry."—*Educational News.*

LANGUAGES.

English Composition, Junior Course of. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 1s. 6d.

"A thoroughly practical work."—*Schoolmistress.*

English Grammar with Parsing and Analysis, Junior. By A. M. WALMSLEY, M.A., Senior English Master, Middlesbrough Boys' High School. 1s. 6d.

This book seeks to reproduce the best methods of language teaching.

"The work of a teacher who knows the value of compromise between the new and the old methods."—*Journal of the Assistant Masters' Association.*

French Course, New Junior. By G. A. ROBERTS, M.A., Senior Modern Language Master, Royal Masonic School, Bushey. 2s. 6d. *Ready December, 1912.*

This course combines the "direct" and "formal" methods. The reading lesson is the basis of the teaching, and each lesson contains grammar and a *questionnaire* for oral practice.

French Reader, New Junior. By J. P. R. MARICHAL, L. és L., and L. J. GARDINER, M.A. 2s.

"Well-selected extracts in prose and poetry."—*Schoolmaster.*

Latin Course, New Junior. By J. V. THOMPSON, M.A., Senior Classical Master, Strand School; and LL. M. PENN, M.A., Classical Master, Beckenham County School. 3s. 6d.

In this book accidence and syntax are correlated from the beginning, and the reading of continuous passages of Latin is made the basis of the teaching in each Lesson. There are oral exercises on each passage.

Latin Reader, New Junior. By A. J. TATE, M.A., Assistant Classical Master, Owen's School, Islington. 2s.

There is an oral exercise on each extract, and notes are supplied on subject-matter. There is also a full alphabetical vocabulary.

Copies of Keys supplied only to Teachers.

Complete Catalogue of Books post free on application.

STORIES OF THE ENGLISH FOR SCHOOLS. By F. Vol. I. *For Junior Scholars.*—From the Coming of the English to the Armada. Illustrated, 1s. 6d.
Vol. II. *For Senior Scholars.*—The Struggle for Power and Greater England. Illustrated, 1s. 6d.

Scotsman.—"If history can be given a form likely to make it palatable to young folks, 'F' has succeeded in doing so in these 'Stories of the English.' It is no exaggeration to say that the book represents not only a masterpiece in literature for children, but a work of no slight value for the national good."

THE STORY OF THE WORLD.

Full Educational Catalogue sent post free on application to—

WILLIAM BLACKWOOD & SONS,

45 George Street, Edinburgh; and 37 Paternoster Row, London, E.C.

MR. JOHN MURRAY

"Quite unlike anything that has appeared before."

Matter, Form, and Style.

A Manual of Practice in English Written Composition. By HARDRESS O'GRADY, Lecturer at Goldsmiths' College. 2s.

"It is with quite unusual pleasure that we welcome this book. It is, so far as we know, the first attempt to teach English composition as an artistic expression of original thought on a thoroughly scientific and graduated system. This may sound exaggerated praise; we believe it to be sober truth. We are much mistaken if Mr. O'Grady, who, by the way, makes full acknowledgment of the sources of his inspiration, does not by the publication of this unpretentious little book revolutionize the teaching of composition in English schools; at any rate, no one will ever be able reasonably to say again that English composition cannot be taught."—*The School World*.

Ante Limen.

Compiled, under the guidance of Professors WALTERS and CONWAY, by Miss R. H. REES, B.A. 1s. 6d.

Ante Limen has been written in response to requests received from teachers who are using *Limen* and approve of its methods, but desire as well a book suitable for younger beginners. The lines of the parent book have been closely followed, though the arrangement is different: the Reading lessons, Exercises, and Vocabularies have been arranged in three parallel divisions. The oral method is employed from the start, and the simple nature of the earliest questions ought to disarm any teacher who is diffident about his powers of using it.

Professors WALTERS and CONWAY'S "LIMEN" continues its successful career, and the third (revised) Edition, completing 22,000 copies, is being rapidly exhausted. This book, though modern in method, provides a 'via media' for those who have not been satisfied with the old style of teaching Latin, yet are not prepared to go to the lengths advocated by some reformers.

Though the oral method is recommended, it is not a 'sine qua non.' Additional oral practice, in the shape of Latin plays, will be found in the Appendix, price 6d. The Plays can be obtained by themselves, price 1s. for twenty-five.

The recommendations of the JOINT COMMITTEE ON GRAMMATICAL TERMINOLOGY have been followed throughout the book, except in three small points.

Elementary Geometry.

By A. E. LAYNG, M.A., late Head Master of Stafford Grammar School. Part I, 1s. 6d.; Part II, 1s. 6d. Complete, 3s.; with Answers, 3s. 6d.

As regards the fundamental part, this book follows the lines indicated in the Circular on the Teaching of Geometry issued by the Board of Education in 1909.

The Theorems and Constructions enunciated in the Syllabus on Elementary Geometry issued by Cambridge University constitute the "book-work."

The order in which theorems are placed has been chosen with the view of grouping together, as far as possible, closely allied theorems: for instance, the three fundamental theorems relating to congruent triangles. Among the exercises are included nearly all the questions set in the Cambridge Local Examinations during the last eight years.

"Clari Romani."

A New Series of Simplified Latin Texts, with Exercises and Vocabularies.

"Here we have something new, intelligent, and practical. We cannot help hoping that the day of the stereotyped edition of Latin authors, with so many pages of text, so many pictures, and so much vocabulary, will soon be over. . . . We congratulate the publisher and editors on producing a series that marks a distinct advance in the evolution of Latin textbooks."—*Educational News*.

Six volumes are now ready:—*Agri-cola, Metellus and Marius (Jugurthine War), Julius Caesar, Camillus, Aemilius Paulus, and Augustus*. Price 1s. 6d. each.

A pair of remarkably successful books.

English Grammar.

For Junior Forms. By R. B. MORGAN, M.Litt., Whitgift School, Croydon. 1s. 6d.

"I have put it down for use by 100 boys."

"The best I have seen; I am teaching from it now."

"What attracts me most is its simplicity. Have ordered 80 copies."

"It is now in use. The examples are particularly well chosen, and help to make a difficult subject interesting."

English Composition.

For Junior Forms. By E. E. KITCHENER, M.A., Whitgift School, Croydon. 1s. 6d.

"We are using it . . . both interesting and well arranged."

"I was attracted to the book directly I saw it. 60 copies are in use."

"Forty-five copies are now in use. I find it most useful . . . it has certainly helped individual children."

A New Work by C. R. L. FLETCHER.

The Making of Western Europe.

Being an attempt to trace the fortunes of the Children of the Roman Empire. By C. R. L. FLETCHER, sometime Fellow of All Souls and Magdalen Colleges, Oxford. With Maps. **The Dark Ages.** 300-1000 A.D. 7s. 6d. net.

Lesestücke mit Fragen.

By A. S. WILSON, B.A., Winchester College, and A. G. DENNISTON, B.A., R.N.C., Osborne. 2s.

The first 24 pages contain a digest of elementary grammar. Following this are 40 reading pieces with numerous questions (in German) facing the page of text to which they refer.

Grammaire Française

Elémentaire.

Avec Exercices. By W. M. POOLE, M.A., Head of the Modern Language Department, R.N.C., Osborne. 3rd (Revised) Edition, 2s. 6d.

In the new edition the Terminology recommended by the Joint Committee on Grammatical Terminology has been adopted.

Textes et Questions.

By W. M. POOLE, M.A., and E. L. LASSIMONNE, *Officier de l'Instruction Publique*. I.—Classes Élémentaires, 1s. 6d. II.—Classes Avancées, 2s. 6d.

These two volumes contain a varied selection of anecdotes and short extracts of an interesting and instructive character, carefully graduated in difficulty, and a large number of questions (in French).
